

## MH370 New Detail and Evidence - YouTube

<https://www.youtube.com/watch?v=dXPKOT73fLk>

### Transcript:

(01:28) the 12 F SW all the bells out the box I just hit a I with the Box had to put the steak in the Box P up the whole damn SE I'mma get [Music] [Applause] [Music] laid what up what up what up with it hey everybody okay that sound just Auto changed that's cool hope everyone's doing great tonight welcome to the live stream everybody uh it's popping off today guys so thank you everyone for being here I appreciate you guys sorry let me fix up my headset thing here this is all messed up okay guys um this is a impromptu uh

(02:10) stream so we're just going to be chilling we're gonna be asking questions uh answering questions we got no martinis tonight I gotta wake up early tomorrow I have a interview tomorrow morning uh pretty early uh it's gonna be with uh I think Gareth yeah Gareth like tonight uh who's a UK uh UK uh I I guess Entertainer maybe is the way to put it um so what I wanted to do here tonight was go through some of the recent updates that we had going on today uh go through some of the evidence and potentially go through some of the

(02:47) key points uh tomorrow's interview will be about 45 minutes long so I want to answer any questions that newcomers might have or anything that anyone has about what what's been going on recently uh regarding uh the videos and the investigation and what have you yeah the sign will go up on the wall at some point that's a really good question um sign will go up on the wall pretty soon uh unfortunately I'm not really handyman person and I was waiting for my dad to come help me out and then he uh got deployed uh out for a project

(03:20) so he probably won't be back for a little bit which sucks I was like I think he's not even coming back for maybe almost two weeks so hope or a little less than two weeks so hopefully it won't be out there too long because it's kind of annoying but anyway there's the sign again pretty awesome okay guys uh I'm not my name's not Austin either I don't know a lot of people say that it's Ashton uh you can see it right at the top of the screen like right here so really not a lot of reason to spell

(03:52) my name incorrectly just like right there where can we find or watch the letter to Ashton Forbes uh you can go through my Twitter profile you can find it my uh highlights so one thing I want to say like I don't know why a lot of people don't just like look scroll through people's content but like I don't post like 20 times per day I usually post between four and eight posts per day so uh and I only put highlights up regarding MH370 so if you go through my highlights it's only MH370 stuff in my highlights so you literally

(04:23) don't even have to scroll that far you can find all the videos you can find the Diego Garcia whistleblower letter ashon Forbes if you have any questions about **debunks** you can find

all of that there as well uh that's all you have to do so if you're new to this case and you have a question that you don't you don't know that the answer is you can just go to my highlights and you can find all the answers that you want everything every single thing you could possibly ask has been answered uh so just check it out

(04:47) right there and I will do my best to repeat some of the stuff that I haven't addressed although I haven't really mentioned this which is have I spoken to the family members uh no no family members have ever ever reached out to me over the last nine months uh and I haven't really actively reached out to them either uh I think there's one exception that I reached out to one of them uh but I didn't get a response back so no I've never had anybody come back to me either you know asking me to look

(05:13) at you know wanting to talk more and I've never had anybody telling me to stop talking about the videos nothing like that um okay let's see what else we got it's almost a full-time job Ian says Harding every single Ashton post every day I appreciate you man I appreciate you guys out there in the front lines Harding all my posts and retweeting stuff it's really nice uh maybe a book one day uh I'm things are like crazy right now guys like I I barely have enough time to stream I'm so tired from

(05:43) doing everything and like working eight hours a day and then and then coming on to this as well so it's pretty tough man I appreciate it though man uh yeah the amount of followers is huge a lot of people have asked me to set up um subscribers both on YouTube and on Twitter um and I've avoided that for the most part but I may send up set up some subscriber stuff uh at least on Twitter for exclusive content just I don't know I just don't really care that much about I don't really need excess money or

(06:13) anything like that so I haven't really tried to monetize stuff or optimize monetization or anything like that and I think that's what pisses off the people who are the detractors the most because they they want to try to find a way to discredit me but there's no real way to discredit me because I've never asked anybody for money so when you hear people say like person is doing it for money or grifting or whatever those are all objective lies uh there's literally no evidence of that whatsoever um and

(06:38) and it just goes to show that like when they can't address the evidence they usually attack the person uh that seems to be the big play right now the play right now seems to be to uh try to find a way to discredit me because the evidence is overwhelming at this point uh which is too bad oh this was the this right here I guess is supposedly maybe the letter Dash and Forbes post so if you you want to see that uh if you're an X you can find that you can also just Google Diego Garcia whistleblower letter

(07:03) to Ashen Forbes and you can find the original YouTube channel as far as I know it's still out there it's not like I check every day uh yeah so this was one thing I was going to bring up here as well Savage one says I just want to know why they're claiming to have found the plane all of a sudden on Google Maps it was trending on Google today yeah uh you know what I'll go

ahead and pull that up for you guys um so this post yeah here it is let's let's see MH370 theories is doomed jet spotted on Google Maps on Cambodian

(07:36) jungle you actually let me pull this up so this is funny uh because this is actually like the very literal definition of fake news when I see stuff like this it actually makes me wonder if the AI haven't actually just straight up taken over the world uh because these are these are fake articles like what you're seeing here is literally fake um the content that's in here is fake and it's been reposted like every six months uh this whole thing about using junk using Google Maps like this actually blows my mind how this is even

(08:14) real how this is even been posted on here because this exact same thing was posted back in like August when the investigation first started the exact same claims we're about to see here that's how I already knew before I even clicked on this that this is they're going to Source somebody named Wilson that person doesn't even exist it's not even a real human being the first thing when I saw this in August about these like pictures usually when you see this stuff about finding something on Google

(08:39) Earth or finding something on Google uh Maps or whatever it's all fake because those images are years old it's not like you're looking back 10 years ago um and uh so when you when you look back at those images like you're not seeing that most of the time they're seeing planes that are flying over stuff as well which like the whole Cambodian jungle thing that's what that was it was just a plane on Google Earth like from years later flying over and it's not even a 777 so I end up looking up and

(09:06) we'll dig in this in just a second here sorry you guys are are going fire in the chat right now um so here let me just click on one of them for you and I'll just prove to you that that's exactly what's going on it makes me wonder whether or not like AI is literally just pulling old news articles and then regurgitating them as new when they're not uh and this and like I would guess that Ashley pton is not a real person either like you guys have to realize like how much news is actually literally fake out there like

(09:32) and I don't mean like fake news like Donald Trump says it I mean like literally this is fabricated like there is there may not even be an Ashley pton like Ashley pton might just be like some kind of like writing name for an AI that produces the stuff amateur investigators are convinced they've cracked the case you would think that this would be related to me because I'm the number one investigative journalist related to MH370 on the planet like no one's even close to what I've been doing uh but

(09:59) it's not how this isn't about me which blows my mind oh actually no this is the wrong this is the one about the uh this is actually the real this one is real this one's actually about the Cardiff University this is about the paper the scientific paper that we we posted about uh but where's the one with the Ian guy okay so this article is not the one I want hold on wait that so what is going on with this it maybe it is like linked in here somewhere there it is right right here yeah British Tech expert Ian Wilson was

(10:33) so convinced the plan's remains are scattered in a deep jungle that he and brother Jackie flew to the country to track it down themselves so if you guys Google around you'll find out there is no Ian Wilson there's no they don't have any social media footprint anywhere I looked around like six months ago and this isn't even like the right image like there's a different image that they claim is like the plane but it turns out it was just flying over uh and I know this because it fooled uh Patrick jacks

(11:00) the orb expert uh and I actually think I have that let me see if I can find it I did I even did a news explainer video my God I what where's the type news explainer H why can't I find it it's so hard to find my stuff guys I have so much content it needs to be better categorized uh anyway there's a news explainer video out there somewhere and you'll see that I actually have like a screenshot in it from this Cambodian Jung B picture that fooled Patrick T Jack Q Jackson Who supposedly some kind

(11:42) of orb expert but anyway what they do is they just like pull old articles up and then they just combine them together now I do want to talk uh in a second about the actual scientific papers that was one of the things I want to mention which actually in this article at least fairness to this article they do mention it right up here this Cardiff University paper uh and this Cardiff University says that uh this is kind of weird because yeah yeah this is it's very misleading here it says that the way that this reads

(12:13) here it says our analysis shows clear pressure signals from previous aircraft crashes were detected on hydrophones even at distances exceeding 3,000 kilometers this is important because the seventh Arc where they claim that the plane crashed is only 1,600 kilometers away from the hydrophones so what that means is the hydrophones would have the plane crash Beyond any shadow of a doubt and so there's a scientific paper that was published in nature that proves that they would have been able to detect this

(12:38) Beyond any shadow of a doubt so let me uh switch over real quick I'll answer a couple other questions while I'm pulling that up there it is um any idea what caused the videos to resurface uh they have occasionally been reposted that we found them posted in January of 2023 and then they had been dismissed and ignored and then when they got posted again in end of July or early August uh on on **Reddit** all like the whole UFOs **Reddit** blew up for like 11 days or 12 days that's all anyone he was talking about everyone was

(13:17) investigating them because people knew they were real like a lot of people knew they were real and you could actually even see back then the disinformation effort to hide the MH370 videos people are posting a lot of fake **debunks** and stuff like that CLA cling that this didn't look right that didn't look right and then people would come back and snap back and go nope this this is like actually confirms it's real even more so there was like an actual war going on where like people knew the videos were

(13:40) real and the disinformation Agents were trying to get people to stop looking at them and that's when I saw that I was like this is weird like I'm going to start amplifying this researching it

and that's when I did my own research started MH 370x which you guys are all part of and been uh digging around a lot uh I don't know what this is most credibility in the field for emitting the obligatory background prop guitar yeah I think isn't that one guy uh Jay or whatever his name is Project Unity

(14:12) he's always got this guitar like I can't stand people that are that that pretentious like I just I play the guitar on the side and you have to have my guitar in the background so that I can uh you know show you how like uh you know multi-talented I am [REDACTED] is just the worst man I honestly can't stand the just the UFO community in general like most of these people you probably saw me going back and forth one of these people that claims that like you're hurting the UFO Community like what the what the

(14:40) hurting the UFO Community like a the UFO Community has never had any credibility ever in the history of the world they still don't have any credibility uh the UF like the UAP like hearings in Congress have been a joke and nobody in the UFO committee except for like maybe a couple people has even looked into the science like there's no way to hurt the UFO committee because it doesn't have any credibility to begin with and the fact that more people just want to talk about aliens and uh you know being sexually assaulted

(15:09) by aliens instead of like actual science goes to show like there's they were never going to accomplish anything like this this does sound egotistical but it's absolutely true is that I've literally accomplished more for the UFO community in nine months than everybody in the UFO Community combined over the history of ufology that's just the truth like I've pushed envelope way further pushing into areas where nobody would have ever figured out without this investigation coming forth uh and that's

(15:35) just the hard truth man like whether or not people want to accept that that that is the truth um and I did it in a way where like I didn't have to even dig into the woo or any of this stuff you know um so here's the thing if it had been teleported to Diego Garcia no I I don't think this plane crashed anywhere into the ocean but yes if it crashed anywhere in the ocean the Sosa system would have heard it the Sosa system is the US military's surveillance system so we're going to look at this paper right

(16:02) now so what I want to say with respect to the science and then we'll look at some Twitter posts right after that is that we can now prove that the plane didn't crash into the ocean at least in the South Indian Ocean maybe prove that it didn't crash anywhere into the ocean okay uh and this I've been on the record saying that there was no acoustic detections consistent with the plane crashing into the ocean for nine months I've been saying that on almost every single podcast in fact if somebody can

(16:27) find a clip from like Glenn back where I bring this up that'd be great because what I want to do is I want to make a clip where I literally predicted the future said that there was no acoustic detections and now at the end of May which you guys are going to see this a brand new scientific report just from the beginning of the month here that we're going to look at proves

that I am 100% correct proves me Beyond any Shadow of Doubt scientifically that I am correct there is no Acoustics this means that is impossible for the plane to have

(16:55) crashed in the South Indian Ocean they did the math they showed the math that says we would have heard the plane no doubt there's no denying the evidence whatsoever even the CNN brain people can't deny the evidence and I have been saying that for nine months I'm not a psychic guys I just know the **truth** that's all there is to it um and this is like how this is going to start getting really awkward guys this going to start getting really awkward because I'm GNA persistently get proven to be true and uh you know

(17:26) scientifically proven to be true and more and more and more people are going to have to are be are going to be in like complete and utter denial about it which is what we saw happen a lot like am I over the target much yes absolutely we are we are so far over the target um it's it's wild let's see what else we got okay so here we go let's take a look yeah and we'll get into some of the **mick** West stuff guys we literally destroyed the number one **debunker** on the planet today like absolutely destroyed him and and

(17:59) people spammed him like we've been spamming him with the evidence and he refuses to address any of it like these people are just in complete denial they're in a catonic state of denial at this point uh and there's not much we're gonna be able to do about it the **truth** is we're not gonna be able to convince everybody even someone like **Mick** West looking at literal scientific reports in nature look at this right here Revisited MH370 scientific reports nature this is like the number one one of the number

(18:22) one journals for scientific reports in the entire world here's your your article scientific paper published May 2 2024 uh you know this is this is called science this is hard science and they do the math this is not like some situation where they're just speculating here uh so what I'm going to do let me see uh any other big question guys there's so many comments it's GNA be hard for me to keep up so what I'm going to say is I'm going to read the nature article and then if you have questions

(18:55) and I missed them put them in the chat again also oh isn't ugly American aren't you the one yeah you were the one who said you could help us prove stuff right I think like I yesterday I think this is the person that yesterday said something about I can't remember what it was but reach out to me ugly american9 uh I wantan to or or put your Twitter CH handle in the chat so I can follow you so you can DM me because I think you had some evidence you wanted to show me which would be great okay data analysis from Hy hydroacoustic

(19:32) Stations of the comprehensive nuclear test band Treaty Organization have unveiled distinctive pressure signals linked to aircraft crashes in various sizes in the ocean notably these signals were detected at distances ranging from 2 to 5,000 kilometers highlighting the efficacy uh uh uh uh of underwater acoustics technology in the event in in the event identification and classification in Marine environments in this study we investigate the plausibility of an aircraft such as Malaysian Airlines flight 370 crashing into the sea leaving

(20:10) a discernable pressure signal at distant hydrophones consequently we focus on recordings obtained from the AC hydroacoustic monitoring stations located at Cape Luen and Diego Garcia within a few minutes of the last satellite ping of the seventh Arc associated with the assumed crash time and location among the available data only one relevant signal has emerged as a potential candidate albe it recorded at a signal station out of the or albe it recorded at a s single sing uh single station out of the two stations

(20:43) available so what they're saying there is they only found one that was even remotely close and only one of the acoustic detections picked it up which pretty much shows that that's not it either um to ensure comprehensive analysis we also examine the time frame and location of the airplane along its initial route though no corresponding signal was observed so they also looked at the time frame along its route they found nothing nevertheless the findings in this study narrow down the range of possibilities

(21:11) and present a novel scientific approach to investigate such incidents okay so we got give me a second I'm gonna follow you ugly American you can send me whatever the information was that you wanted to send me give me just one sec oh so we're going to go ahead and retweet that too uh Hodge twins just retweeted me 17 minutes ago so if you guys want to I just retweeted that if you guys want to reply in there please do thank you very much to the Hodge twins Hodge twins are [REDACTED] awesome guys by the way I've uh been following

(21:44) their stuff recently they are funny as hell man they've been doing some really funny interviews and so I just want to give them a shout out because it's nice when you have like just cool people being cool and they're not asking anything and they're just uh you know retweeting the content spreading the content so I want to real quick okay so I went ahead and followed ugly American you can uh send me a DM if you want appreciate you man uh actually let me switch over to this so you guys can see

(22:13) because I think that just showed up my on the top here well I don't know where it's at but here it is I just retweeted the Hodge twins here let's see what should we tell the Hodge twins real quick and then we'll go back to that guys pretty awesome though they're they're super cool man they they like the UFO stuff too that's awesome I didn't know that they did UFO stuff I've never seen them retweet or talk about any other UFO stuff I'll go ahead and just link the videos

(23:18) in here for them give me just one sec chat [REDACTED] where's the put link to them down here I'll just get rid of this here let's move this around now you you can see a quick inside about how I do Post sorry I just wanted to make sure I make a post on this let's do prayer hands okay cool uh yeah I probably should have said men should we let's let's redo that let's redo that you're right does sound a little

(24:24) sketch good call guys good call thanks for being on my thanks for being on my back slay it guys okay cool okay let's go back to our acoustic stuff now so yeah those guys are awesome man much appreciated yeah they bring a lot of Comedy you know they do bring a lot of Comedy

as well and they do it in a way where uh guys every now people want me to say guys instead of instead of men it's it's whatever man it's not that big a deal I'm busy but I appreciate them okay so where were we at in this acoustic thing

(25:10) so basically long story short here they've got two acoustic detectors neither of them detected anything related to MH370 this is really important because they can reach two to 5,000 kilometers um which means that they basically say well what they want to do is they want to do some explosion to help try to figure out like where the the detections could be but what they're saying behind the scenes is they're saying like there's no chance that the plane crashed along the seventh Arc that's what they're trying to say but

(25:39) they're being very this this paper is being pretty diplomatic about it oh okay I want to listen to this um this is good I love the detractors it's impossible to share information with Ashton he's 100% wrong about Diego Garcia and it's not aliens I don't know what that means that means I'm not I'm not saying it's aliens that's why he's allowed to carry on with only mild noises he's stuck on one thing right about the craft wrong about aliens wrong about where the plane

(26:08) ended up yeah well you know what man if you've got information and you know like why don't you just go ahead and just tell the world brother I think there's it's funny there's a lot of people out there that they like they think they know all the answers right and then they want to play like this like moral superiority cards like yo bro if you got the answer just let it let the world know man stop [REDACTED] footing around it stop hiding it this reminds me when the debunkers are like I know who made the videos and I'm like

(26:36) okay who made the videos and they're like they start crying on the stream it's like Jesus Christ man yeah a lot of people too are so obsessed with it being aliens like they there's a lot of people out there that are adamant that it must be aliens because there are these weird UFO people that like they're like it's got to be aliens and I'm like well we can explain everything that we see unless the United States government is working with the aliens like it's obviously an operation like they didn't just deploy

(27:08) this drone in this satellite to watch the aliens take the plane guys like come on man like I and I'm not even against the idea of aliens I'm just telling you you gotta use logic and Common Sense here like and then there's people out there as well where they're like some people be like oh it's unknowable we can't understand what's going on therefore it must be aliens and I'm like well I L can understand everything about what's going on and I'm a dudee who knew nothing about electrical engineering six

(27:32) months ago and we can like actually explain like every aspect of the video scientifically now so or at least like pretty much every aspect so I'm pretty sure we don't need aliens to explain anything going on on the videos and also who knows what the whole situation with non-human intelligence even is like listen to my interview with Ian Carroll like it could be like future humans going on like it could be some underwater atlantans no one knows what to situation

with like aliens even is man so don't get me wrong I'm I'm

(28:03) keeping an open mind on that stuff but what we see in the m370 videos does a there's no aliens inside those orbs like I know there's no aliens inside those orbs there's nobody inside those orbs those things are being remote controlled so uh yeah okay let's get back to the goods get back to the goods okay so really I'm going to skip through this stuff but you can see it shows all the locations of These acoustic detectors and it goes through other plane flights where they crash and they were able to detect the

(28:30) acoustic detections so they show like a bunch of different examples where they're like we were able to detect These acoustic detections this far away like look how far away some of these are and they're able to figure out and pinpoint these locations of these crashes like they all these detectors heard all these uh so they go through all that evidence really the end is the best though um so the unsolved case of MH370 there's a two acoustic detectors that were in range Diego Garcia and the one in uh Western Australia so here is

(29:01) the seventh Arc they're showing the seventh Arc here or this is yeah sixth and seventh Arc this down here h01 W is the acoustic detector for Western Australia and this is the situation where uh they want to do experiments to try to like do the acoustic detections and see how they work out um and then do they not show the Diego Garcia one I guess they don't show the location of the oh is the h8s the Diego Garcia one I think this might be the Diego Garcia one anyway we know where the location of Diego Garcia is is literally on this

(29:37) tiny Island um so I'm just going to skip down to the end here because the end has got the the goods jez it's kind of long oh wait where is it uh one says something about the methodology possible impact wa where is it oh right up here okay here we go right here I think this is it yeah okay discussion practical suggestions here we go we're going to read this part next okay and I don't know if that Bob guy or whoever it was was something about posting the links yeah these guys man okay I'm not I'm not going to deal with larpers

(30:34) anymore guys I'm done with the larpers there's also people out there they're like there's like this Cabo guy or whatever who says like the palladians stole the plane or whatever you guys gotta be very careful about people making up stories like this is why early on I said that I would I'm not gonna let anybody set the narrative around these videos everybody want had their own opinion some people wanted me to convince me it was aliens other people wanted to convince me it was fake everything in between and I said I'm

(31:00) going to come to my own opinion based on what the evidence says and there's even people out there like I know that the aliens took the plane and sent it to the zenu dimension you're like yeah shut the hell up man like I'm tired of it uh you know a lot of people just want attention and [ ] like that the de they're the same as the debunkers like and that's why like I in early on people would get mad because I would boot people out of Discord that would come into my DMs and try to tell me what the thing they tell

(31:23) me it's aliens or people try to tell me it's fake and everybody hated me because I was like I'm just not listening to any of these people like just everybody get out of my face uh okay so discussion and practical suggestions let's just read the whole thing The Limited number of analyzed signals from aircraft crashes in the study hinders a comprehensive examination of acoustic signatures arising from various modes of aircraft crashes occurring under complex conditions including diverse topography

(31:47) and the presence of natural and man-made noise sources nevertheless nonetheless it is implausible to imagine that a significant crash of an aircraft on the ocean surface would fail to generate a discernable pressure signal even at distant hydrophones let alone in closer proximity so this right here is probably the kill shot right here so they're like okay well even though you could make up some arguments about how the plane like had a smooth sailing it's completely implausible to imagine that a significant crash of an aircraft in the

(32:21) ocean would fail to generate a pressure signature even at distant hydrophones water carries sound or water carry sound uh very well so again the official investigation of MH370 supports the conclusion that a substantial crash should have taken place near the seventh Arc in this case the acoustic signal would have traveled approximately 1,600 kilometers to reach the nearest hydrophone station that's the one off Western Australia a considerably shorter distance than any other acoustic signal analyzed here so they literally found a

(32:58) bunch of other acoustic signals that are further away from this much further away and they found them all and yet there's nothing for MH370 which is much closer to the acoustic signal an aircraft with a mass of 200 tons impacting the water surface at a velocity of 200 meters per second possesses a kinetic energy of 4 gigajoules equivalent of 956 kg of TNT or an earthquake of magnitude 3.

(33:28) 2 even considering just half that velocity the release energy would still be large one GJ equivalent of 239 kilograms of TNT or an earthquake of magnitude 2.8 even with even with a significantly lower impact velocity of just 30 meters per second which is very slow compared to 200 meters a second the resulting energy release would be 89 megajoules equivalent of 21 kg of TNT or an earthquake of magnitude 2.

(34:01) 1 evidently such earthquakes can be detected by distant hydrophones just as M27 earthquake which is one of the ones in their figure was detected therefore it is highly unlikely for MH370 to have crashed near the seventh Arc without leaving a discernable acoustic signature within the constraints imposed by the official search team only one signal has been identified at h01 w s suggesting the potential impact location as illustrated in figure 10 however this same signal wasn't even observed at Diego Garcia at h8s and they need to reanalyze that so

(34:42) there is literally no possible way that MH370 could have crashed anywhere near the seventh Arc there's not any acoustic detections consistent with the plane crash this scientific paper proves it Beyond any doubt they've done the math they've shown the math the reason why they're adding this one about only 30 meters per second is because they know that people

are going to say that oh no the pilot like they ran out of fuel and then the pilot like smoothly landed the plane on the ocean [ ] like that

(35:13) right they know that debunkers are going to try to claim that so they even got ahead of that claim and we like even with the slowest possible Landing this plane is still going to leave an acoustic detection so there's nothing crazy right uh for people like Charles no it doesn't necessarily require that so I think that what you for people like Charles and people that think that oh it's impossible we can't possibly have this technology uh yes we do we do I'm just going to tell you straight up I'm just

(35:44) going to be honest with you like I we have this technology the technology you see in those videos we have it the military is so far Advanced beyond what the public has this is the reason why people in the public with the CNN brains don't don't comprehend the situation the military is in my opinion probably 50 to 100 years more advanced than what the public would get if this investigation hadn't come along if I hadn't started pushing this forward we would not be getting the technology the military

(36:09) already had 10 years ago for like another 40 years that's just the truth of how this is working out and the way the military is so Advanced is they're taking all the smart Engineers everybody who figures out gravity manipulation they suck them in there's literally a arms race going on between China Russia and the United States for control this technology right now that's why the public doesn't know about it and it's to the point and i' I've talked to some of these Engineers where they some of them

(36:36) want to get it out and because it's been so suppressed they can't even figure out like how to reveal it to the public without breaking the Public's minds and as and having way too many questions get asked like why the hell have we been hiding this for decades and how how are we like a hundred years more advanced than where the public is because it's people's minds are going to break like literally break that's why like people like Charles and I'm not trying to put you down but like you have no concept of

(37:02) how much further Advanced the military is the military knows that there are laws of physics not that we have to be Rewritten yes they actually technically might have to be Rewritten law of conservation of energy and thermodynamics are going to have to be Rewritten because the military knows it and the private contractor Labs like Lockheed Martin Boeing uh Phantom Works Bigelow Aerospace north of Grumman said all these people they have super Advanced Labs where they know this stuff is real they have air gapped networks

(37:34) that they have the scientific papers impr proof that's only on the airgap networks it's not on the internet and there's literally disinformation teams that look and scour the internet to make sure the information isn't leaking out and when it is they discredit those people and sometimes pull the scientific papers off the internet which is why you don't see a lot of them that's why the DIA papers are so important so if you don't think it's possible please go read the defense intelligence agency papers

(37:57) about wormholes warp drive manipulation of extra Dimensions Dark Energy negative energy Etc guys it's out there I guarantee you it's out there and what I've been told as well is the key is being able to piece it together like I've been doing in this investigation with your guys' help you know finding super conductivity finding all the connections between plasma physics that explain what we see in those videos that's why the MH370 videos are the most important videos of all time they allow

(38:25) people to pull all this information together and figure it all out like we've been doing and you may say well why haven't you been killed yet and I would say that's a good question I would say literally if I was doing this 10 years ago when the plane first disappeared a nobody would have believed it B people would have said oh well they'll find the plane pretty soon and now they can't say that because it's 10 years later and we found nothing uh and c I would say I might have been killed

(38:48) 10 years ago like I think we're at the point now where there's a significant number of people that want the information out that realize there's no path to get the information out it's locked up in so much bureaucratic red tape at this point where they're afraid that there's no way to actually release the information to the public so when someone like me comes along and just starts spilling the beans about it and I've figured it all out from publicly available sources they're like okay just

(39:13) let this guy do do it you know let this guy do it see let's see how far he goes right let's let's see how far he can take this so that's what's going on guys uh this is a good question no uh we looked around for like earthquake signals I don't think that this event had like an earthquake detection you need like a gravitational wave detector where only the military and special access programs have those I have it on good authority as well that they actually have gravitational wave detectors that are like scanning the

(39:44) entire United States maybe the whole earth for like when people accidentally produce gravity waves uh because some people do figure it out on their own and then when that happens they go because they don't want somebody to make a super weapon and when they don't want them to make a super weon they go and they suck them in like they did with ning Lee and they pull ning Lee into the black the black world is this a SC up no I don't think it's a scup sadly it's it's just the real deal so a lot of people think

(40:09) well this has got to be a SC up then we can't be that advanced nope we are that advanced we're just that advanced guys like the military if this was a SC up the government would have been pushing this I'm I'm the guy pushing this and I'm not controlled by the government I have no connection to the CIA any organization I've literally just been promoting this information because I want the world to know know the **truth** and I want to I want to push science forward because I'm tired of the

(40:31) [ ] um and that's why my plan is to start getting into overunity because over Unity I think will show us that um that this stuff is real if we can prove that you can make a free energy

device an overunity device well then that proves all the science that I've been talking about proves it's all real and then I hope that gets people to believe like okay well this guy literally came out and was like yeah MH370 got teleported away the science is suppressed and that we can make free energy devices and now he's just selling

(41:00) them to people for the record I do not make the devices I'm trying to partner with people that know how to do it I've had several people reach out to me claiming to know uh and I'm not going to say anything more about that at this point until there's something more official in the works or whatever and I will not sell any device that I have not personally seen with my own eyes uh it's not going to be enough to like just show me some videos or explain the concepts like I need to see it with

(41:27) my own eyes when I see the device that is running stuff without being plugged in and no battery or whatever you know that then that's when I'm okay let's start doing this right um and my side of it is is what I've been doing like I'm a guy who's been explaining the science explaining how it's possible uh I have I'm I'm an influencer I guess now and so that's where that's why people who are like the engineers uh of this stuff are interested in working with me because on their side they're the ones

(41:55) who can produce the stuff I'm the one who can talk about it explain it to people uh people that not everybody but many people trust me because I honestly just tell the **truth** every time uh to people and that's that's a great combination right somebody that's out there explaining how it works getting people on board with the idea being **truthful** about it uh and then you know builds trust and then the people that are engineer people are like yeah I've developed this but I don't want to get

(42:20) you know silenced in the background so it's a it's a win-win situation um let's see how could a conspiracy be kept secret at that scale good question the way it's kept secret is actually a people don't believe it so what you have to realize in order to understand this level of conspiracy is that most of the world will believe whatever is put on TV and this is like even I was a former CNN brain so this is how I can understand this is that many people just believe whatever they're told on TV and now

(42:58) we're at a point where alternative media has gotten so big that it threatens that like it's not a coincidence that the United States military uh the United States I mean not the military uh has banned **China** from owning Tik Tok because they know the power of social media they know that you can control people's minds and I'm not talking mind control I'm talking brainwashing and this is part of the reason now the other parts of the reasons why how you could keep this type of Technology secret is that some of the

(43:27) scientists that know like the people that you want to talk to are the engineers I personally believe and I've said this many times that Hal Poff is probably one of the people that wants the information to get out there I've just I've gleaned that from watching his interviews I can say honestly I've never spoken to him personally um and then people like Eric Davis i' I've

seen this guy basically like discrediting people and lying some of these people just get off on the idea that they work with

(43:50) magical technology and other people have no clue some of the people out there believe that keeping this secret from the world is benefit that we might destroy ourselves and I tend to agree David grush Lando the guys that are former military they have ndas so they've seen the **truth** but they can't say it because they would go to prison if they did this is how the stuff is kept secret a lot of these Engineers you guys have no idea how much money they're making think like Millions okay so we're not talking we're talking like the

(44:24) equivalent of like some company CEOs make so you're getting paid millions of dollars why would you come out and start spilling the beans when the military in the and the way it works too is the people that are going to potentially kill you are not going to be the military it's going to be the private contractors and their own military force they're going to send a guy to just take you and your whole family out if you start spilling the beans about the secret special access programs that they're working on so nobody wants to

(44:49) risk it because of their families that's how they're able to keep this stuff secret again I'm just telling you the honest **truth** take it or leave it um and that's the scary part and a lot of people like why did **China** and **Russia** not blow the whistle on the United States warping the plane away and the reason is because no one's going to believe them the same reason why Vladimir **Putin** told Tucker Carlson why did you not get into a propaganda War about the nordstream pipeline you know the United States

(45:14) destroyed the norm Street pipeline or at least the five eyes countries did and they tried to blame it on **Russia** which is like **Russia's** like why would we destroy our own pipeline uh and the answer is because it's not cost effective like the United States has the best again at apparatus in the whole world if **China** or **Russia** said that we warp the plane away all Western media is going to come out and say it's disinformation and every CNN brain person out there is going to go it's **Russian** disinformation it's **China**

(45:39) disinformation they're going to laugh and go you can't warp technology what that's the reason why and it's a covert war going on it's a covert arms race behind the scenes and then people are probably gonna ask as well well like what about why are we not using this technology because you don't play your trump card when you don't need to all the wars that are happening out there are just for show they're just for money the war in Ukraine is a joke if you guys haven't figured that out yet the whole

(46:05) point of the war in Ukraine is to weaken **Russia** it's a proxy war we're risking nothing we're just giving them weapons and money and ukrainians are dying fighting **Russians** and it weakens both of them like just that's how geopolitics plays out the reason why **Russia** is not attacking us directly is because we would just [ ] warp Vladimir **Putin** to the moon like that's that's the reality Vladimir **Putin** knows that we could take him out at any moment anytime we want simple once you see that those

(46:32) videos the orb videos of MH370 being orbed away and you're a foreign leader you know that your plane that you get on at any moment could go down whenever the United States wants it to Anytime and why don't we well because that doesn't solve anything then somebody worse takes his place and then they maybe retaliate you know so that's how geopolitics plays out guys yeah corporate greed is another reason as well so uh yeah Batel Institute is another one I'm probably like several hundred comments behind

(47:03) already guys on some of this and then people usually ask me at this point like are you afraid for your safety not really am I at risk yeah probably a little bit maybe even more than a little bit uh but at the end of the day the reason why I did this is because I don't have like children that I have to worry about uh I have a security clearance so it's very difficult to for people to make up disinformation about me because my background was vetted by the United States government so anything that people say about you know me any type of

(47:34) fake stuff people push well the unit States government already vetted my whole background so kind of rules out all the things where they could say like you're crazy you've psychological problems blah blah blah well there's no crime in my my background nothing like that right they've already been vetted by the most extensive background search in history I could even go into details about how the background stuff works but I choose not to because I don't want to push the limit um Chaine what books are

(47:59) you recommending reading honestly like if you're trying to get into the science you should definitely check out Thomas Bearden but you want to start at the basics like you literally when you when you dig into this stuff you start with the basics of electrical engineering until that starts to make sense and then you work your way up and you can kind of skip ahead and start looking at the good fun stuff but you need to really understand the basics but I what I like to tell people is everybody can learn this this is not a situation where you

(48:23) have to be some special super smart PhD the great part about the physics when you dig into it it's actually very simple the physics is actually pretty simple um and you may say oh no it's very complicated it's actually not like you don't once you start to learn it you realize oh it's aluer warp drive it's Star Trek warp drive it's like literally wormholes like very similar to Stargate the TV show and you start to think about that you're like oh okay well that's something I can wrap my brain around you

(48:49) know and the idea of the ether is just like the fabric of canvas of a painting it's the concepts are not that difficult to understand and once you start to see the world the right way then you'll begin to understand the science a lot better because once you realize there's a canvas underneath that's where you have this idea of like oh okay well now if there's a canvas now I can understand if I just bend the canvas now I can make a wormhole and I can just puncture through it because all points in space and time

(49:15) are actually connected they look like they're not connected because we see them like this but all points in space and time are actually connected through the ether where light moves

faster than what we imagine is a speed limit okay so is there anything else in this paper I think that's it for that paper let's go take a look at what we got going on popping off here okay and thank you for the words of support and encouragement I appreciate it a lot of people have also asked me to that they want to donate to the cause

(49:51) and I would say don't worry about that at the moment save your money for yourself I'm not in a financial straight situation that was another reason why I wanted to do this because I was afraid that one of the ways they would pressure somebody who talks about this is financially either incentivize them or try to like take their job away make them very desperate for money the good news is I've been working very uh I've had a great job for 20 years so I've got a decent amount of money like I'm not

(50:17) going to be on the home I'm not gonna be homeless if something were to go wrong uh and also I invested in nxpi I'm on the record saying that I invested in nxpi which is company that bought freescale semiconductors after I learned that superconductors are like the magical technology and you can see that they've done very well so I'm I'm in good enough shape now I'm not wealthy I'm not I wouldn't say that I'm like I'm not an elite person or whatever but I'm not going to be on the Street Homeless

(50:43) if I were to lose my job um so you don't need to donate money to me although I greatly appreciate the people that have a lot of people have messaged me that um and if we do get into a situation where I am able to start a new business uh in the over Unity business the free energy device business then I would want you to save your money so that you can buy some of these devices so that we can become energy independent because the **truth** is these devices are not going to be cheap that much I don't know exactly how much

(51:10) they're going to cost but I know they're not going to be cheap uh it's going to be like trying to buy a car probably that's what that's the only thing I can equate it to I don't have any exact numbers or anything like that and when I do I will let you guys know but I want I want to set the expectations for you it's not going to be even it's not even going to be like buying an iPhone you know even though these are pretty damn expensive these days I think this iPhone was like \$1,500 or something like that

(51:31) which is wild to me it's going to be significantly more but there will be benefits Associated to it for sure and so what ma says I think they're slowly releasing it yeah 100% it may be that 2024 is the time where they were waiting for somebody like me or like you guys to come forward who has the reach who can figure out the science to just disclose it for them you have to realize in government there's a lot of red tape so for a lot of this science there's no path for anyone to disclose it without

(52:00) going to prison so when somebody comes forward and figures it out from the public standpoint if you're one of the white hats that wants information out there then that's great but even the white hats are afraid of this technology because they know it can end the world so even there like a little bit like oh should we let people know about this like it's tough so that's

the situation we're in right now um let's see what else we got um I don't know much about ning Lee but I have had it on pretty good authority

(52:33) that she went and worked with locki Martin she didn't go back to China Joe Rogan talks about this she didn't go back to China she got sucked into the blackbot project world uh I'm I'm like 100% sure that semiconductors superconductivity superconductors can achieve anti-gravitational effects and I've talked about that a little bit I just we're actually going to look at that in a minute here related to that hey I said I'd even I said that I would shut up for \$10 million so the joke has been guys give me \$10

(52:59) million and give me a scarjo clone scar Scarlet Johansson clone because I mean if we can teleport planes we better be able to tell uh clone people I mean Seem doesn't seem that crazy compared to teleportation cloning that seems like you know sure we can have that um truth is guys like I'm not what I tell you too is like uh everybody's corruptible anyone who says they're not corruptible they're lying to you right so you can prob you can tell that I'm being honest and open with you about everything

(53:29) because I'm even telling you that I'm corruptible uh you would be able to tell right away if something in my personality changes like if I get forced into a situation where I have to sign an NDA or I took a deal you're gonna see a drastic change in the way that I'm talking to you most likely and I probably would tell you straight up like guys I have to stop talking about this or that I would probably just tell you guys that um but honestly the government should have paid me the \$10 million early on they'd be in a lot less

(53:53) [ ] than they're in right now which tells me that maybe they're like you know maybe they want this stuff to get out there because \$10 million to hide the biggest conspiracy in the history of the world is that's a cheap by comparison the lawsuits that are going to be com against the United States government from the families of the victims are going to be in the billions billions and billions uh so yeah I don't know yeah free energy is available now so the other thing too just I say this a lot I want to address it again is that

(54:19) free energy is already available I have a pretty good authority that people have already produced free energy devices that are out there the difficulty is f finding the ones that aren't going to scam you the ones that actually work that aren't that aren't a trick and this is where like that's why I say I need to see it with my own eyes because I need to vet the people and figure out like this can this actually are you one the ones that figure out how to really do it uh and what are going to be the

(54:41) liabilities like I don't want something with a lot of moving Parts in there because that's going to break I don't want something that's gonna like give somebody cancer or any [ ] like that but this is why the best I can do for you guys I'm I'm not going to be the one that tells you exactly how the iPhone works like I said I'm not the one building it either so I can't reasonably ask somebody else who I would partner with to like hey give away all your knowledge and your your information for

(55:02) free let everybody else steal your idea it's not really how it's going to play out what I can do is I can tell you about the concepts The Ether how you can extract it how Maxwell's equations have been incorrectly re written we can review Thomas beard and stuff so that people that are inspired out there can find their own way to do it what I've also believe is that there's more than one way to produce overunity like there's multiple ways to extract the energy from The Ether from the environment and the other idea is like

(55:29) that power doesn't flow through wires sorry I hear some noise we're just going to ignore that um Power doesn't flow through wires so if power doesn't flow through wires then you can begin to understand this idea of like how you could extract energy from the environment um so and just for the record guys I'm going to do my own thing and whatever I want to do Rel to free energy everybody else who's out there is free to do it however they want I've got an idea in my head for the way to get it to the World

(56:04) um and it's not going to be the way that everybody else wants and expects but I support everybody else doing whatever you want if you want to figure out how it works and make a device that you can prove that works and you want to go try to get CNN to show it and you want to put it on the blockchain or whatever go nuts man go nuts I want to create an industry where there's competition where there's multiple people producing them where everybody in the in the future like let's say 25 years down the line

(56:31) everybody in the world can afford a free energy device and that we completely remove our dependence on fossil fuels with respect to Conventional energy to me that would be amazing that's that's like the libertarian [REDACTED] dream that's so that's what I'm trying to do chat okay yeah let's let's not dig into Anthony fouchy but let's just say I'm not a huge fan of him in general um what else do people say could you see a scenario where this attch is public In Our Lifetime yes so basically just I

(57:02) said I think there is a scenario I think that we can put laws into place that will protect people from making doomsday weapons uh and that we might be able to use like gravitation wave generators to monitor the country and make sure that nobody's producing them similar to how we prevent people from making nuclear weapons right now with respect to uh like plutonium and uranium uh some of the the key aspects or key things that are required to produce them you just you could you you track the supply and you can potentially have detectors that

(57:33) can detect like big anomalies um but it is going to be risky 100% um what to use to manipulate energy yeah there's a whole aspect about Computing as well related to free energy like what's that going to do to like Bitcoin and and cryptocurrencies uh I don't know that's a that's a good question really good question I mean just imagine um yeah and compartmentalization is one of the ways where they keep the information secret so one of the things we found out recently was that some of the technology

(58:03) is so secret that it doesn't even get classified because just classifying it would make it so

that more so many more people are exposed to it that it starts to leak out so that's the ways that they kind of hide this stuff okay that's outside I was wondering what that loud noise was okay um okay I'm going to try to skip ahead here Eric Weinstein has not commented on anything out there which is surprising I think he's been very quiet ever since I caught him on the super conductive I asked him

(58:38) about super conductivity in a space and he was like he wasn't interested that's all he said was not interested which was the weirdest response for a physicist to not understand the implications the super conductivity was pretty mindblowing to me he he lumped it into like esoteric stuff where it is absolutely not esoteric um I don't think that Eric Weinstein is controlled I just don't get that vibe from him I just think that he is old school and the old school people don't understand how this information

(59:09) has been kept secret from the rest of the world uh they think that everything that you read in everything you read in the in scientific journals that come out is like the latest breaking stuff when it's not that stuff's like 20 years old uh at best uh the stuff about the AIDS journalist I think this is mh17 so some people confuse mh17 with MH370 there's no Aid scientists on MH370 uh the patent thing related to m370 is also false uh those people weren't even on the plane but the the free scale semiconductor employees are

(59:42) are definitely the uh they're definitely the ones who are the uh um the motive legit physicist I'm trying to get other physicist on board it's hard because a lot of them are stuck in this idea of particles and not waves and a lot of the physicists don't understand it the engineers are the ones who understand it because they actually work with it and they see it with their eyes uh but Roy D Herbert is a theoretical physicist who is pretty good following on Twitter um but the science influencer

(1:00:09) guys like I don't know I don't know like that would be the thing that would push this over the limit when the science influencers the ones that have hundreds of thousands of followers that go on the TV shows whatever when they get on board then this whole thing is going to blow wide open um I don't know how many of them are controlled or not to be honest with you okay I'm going to skip down and try to catch up on the questions guys uh because you guys so many questions are flying through the chat and I want to

(1:00:36) dig through some of the uh Twitter post stuff before I log off tonight as well yeah so you have to realize all mainstream media is controlled by the government they're not going to post it for one of two reasons what number one reason is uh all like the TV stuff is 100% controlled by the government they not allowed to post a lot of stuff like this they're going to be told not to uh I think it was a Project Paperclip or one of the ones where like the CIA literally has like plants all throughout all mainstream media that's almost

(1:01:06) certainly true and then the other side is there's certain people that this is like just too far beyond it's too far beyond the Paradigm for them and it threatens their worldview too much so lot like much like the **debunkers** they're just never going to be able to accept that it's real uh

and that's what a lot of the media is as well and this is part of the reason why the uh mainstream media is mostly Dead uh mostly Dead uh yeah t wolves trying not to get swept I have I do have invested interest in

(1:01:32) that I was planning on watching it but instead I'm hanging out with you guys so I do see that we're winning but it's probably best I don't watch because every time I watch we freaking lose uh so it sucks uh and the whole investment thing the investment thing wouldn't happen right away but we're way ahead of ourselves guys like we got to got to start a business before we start talking about investing and stuff like that but um when you guys get into it uh yeah and also just save as much money as you can

(1:02:01) man not enough people save money and you should invest your money in the stock market it's much better than having it in your bank account sitting around uh ideally you want to diversify but if you do have Insider information like you know what industries are going to be great then put your money in those and and the younger you are the more risk you should take if you're older and you you can't afford to lose the money then you should take less risk if you're younger and you can afford it you've got

(1:02:25) 20 40 years ahead of you put it in some of the riskier stuff because you might get lucky and shoot up guys yeah 3D printers are going to end up changing some of the world um how would the technology end the world well if you imagine infinite power then you can begin to understand how it's possible some of the people earlier on were saying we can't generate enough power for what we see in there but once you realize we have access to unlimited energy from The Ether free energy then you can begin to imagine how it is 100%

(1:02:55) possible um and then it's a matter of taking those orbs that we see and scaling it up you scale it up to a point where you create a black hole like a real black hole even Crea like this is why people are freaked out from like CERN and stuff like that uh but the thing about these Technologies are like the way that Dave Rossi said on the Tim pool podcast he's like you turn it sideways and now you have I think he said like a rail gun you know so the same the same way where nuclear power leads to nuclear bombs

(1:03:22) this type of scaler physics free energy leads to of mass destruction beyond our comprehension that that's just the **truth** of it uh imagine so like a taser the tasers that the cops use those can kill people imagine a taser times like a trillion that could take out like everybody and inside entire country Mass death instant death uh and that's just from like using it as like electricity as opposed to creating like a destructive weapon out of it so absolutely there's very very dangerous aspects to this this oh Charles Al media

(1:03:58) thank media thank you the day we discovered the complete formula for relativity which at certain limits becomes Quantum and difficult to understand mathematically do you think about this yes I think it's already been discovered unification theories the unification of quantum field mechanics uh Quantum field Theory and general relativity H sorry you can't see me do my hand movements here uh yes but I think that these have already been discovered

multiple times over and this is the thing that is really being suppressed because once you

(1:04:26) start to get these Quantum effects on the macro level that's when the literal magic happens and that's when people are going to realize that the holographic principle is true that there is an extra Dimension that the space-time ether that we don't perceive uh that's where we can get unlimited energy uh and this is why all of that's been suppressed is because again it then leads uh logically to the situation where we have doomsday weapons uh and free energy and and this is all like socioeconomic impact military

(1:04:54) impact National Security impact people's greed and power there's so many like competing narratives and motives going on at once and that's how it's been hidden from us some people are doing it for Noble reasons they're thinking oh I just don't want the world to end and other people are going well I want my country to be safe and have the the super weapons which I personally I do uh and then there's other people for me who are like I don't really care if this is the end of the world because the world

(1:05:19) deserves to know the **truth** and the world deserves to have access to this magical technology and if we manage to make it through it without destroying ourselves then we're going to be in Star Trek level and we can go to Mars like Elon Musk wants to do if you guys want to go live on Mars we have the capability to get there like we can just use a wormhole and warp ourselves right over there and be there um which I think is incredible I just think it's amazing uh wow a bunch of donations just came in okay let's let's do some of

(1:05:45) these donations uh Chaine they hint and have been at technology in the movies like all their knowledge yeah to uh the population has no clue a lot of I think I think it's ancient techs speak about this type of tech too but just in different ways rabbit Hol is deep I would love to dig into those rabbit holes in the future I just avoid going down a lot of those rabbit holes right now because if I start talking about some of that stuff they're gonna say oh Ashton's a guy that likes this and that weird esoteric Concepts and other

(1:06:12) conspiracy theories and the **truth** is I was never a conspiracy guy before this that's the **truth** I never believed in any major conspiracy before this um but now once you see something like this you really begin to wonder because once you realize the power that the United States has over the media and other countries uh it's it's to be pretty scary um so yes I do think that they they push some of this information out into media to have this like slow drip acclamation where people start to get used to the

(1:06:40) ideas so that when they do reveal it it's not going to literally break people's minds and you can see a lot of the papers like the stuff we post about teleportation quantum teleportation the patents all the stuff it's out there it's out there you know that's the crazy part it's out there um Cosmo ball and thank you very much for that donation thank you everybody for the your donations uh appreciate that Cosmo ball 2020 benevolent **Putin** character leads a league of athletes in a fight for Earth in a game of orbs

(1:07:07) teleportation deep underground prisons what are you kid is that real Chad how can that be real Cosmo ball oh my God okay we might holy [ ] we might have to watch this trailer in a minute what okay I mean if there's predictive programming that that is that is a weird one chat that's a weird one uh and then chicane again I'm 21 retired and have all the time and resources in the world dedicated to learning the science probably one of the next crypto narratives will be free energy related probably I think that the

(1:07:49) free energy narrative it's coming like we're ahead of the game uh if I'm able to make a business out of it it's going to blow up majorly like it could be something like how big Tesla got like the the car company uh if it really works um and it's not a scam then you can imagine the implications of it it's just going to be massive and there'll be a bunch of people trying to copy it right away uh people trying to imitate it there'll be scammers scamming people uh and and that's why I'm like at

(1:08:19) the Forefront of it where like people trust me they trust I'm not going to screw them over they trust that I'm telling the truth they've listened to the science explained it uh so they can understand it themselves so I think that's a good it's a good starting place because it's somebody you can trust that you're going to get something that's going to work uh also Scarlett Johansson is fine yeah yeah it's been an ongoing joke but she is like the ideal woman and if they can clone her just

(1:08:45) clone like a bunch why can't I just have a clone I said too that I would uh settle for a Tiffany Gomez clone the that that guy ain't real there and from the airplane but apparently she's a Mavericks fan so that might throw a wrench in the plan because the timber rules are playing the Mavericks right now so okay um yeah so Ross kohart and I have a rocky relationship because he thinks the videos are fake he actually thinks the videos are fake and like I exposed him early on way before like way back in

(1:09:25) like September I exposed Ross Kart and and several other people as well and this was back when I thought everybody was like a disinformation agent I really had no idea and now I just think Ross kohart like just is like too CNN brain himself uh but he wouldn't even talk to me about the MH370 piece that he did he talked to Florence to Changi but he wouldn't talk to me about it so like a lot of these guys I've burnt a couple bridges that are out there and we're like slowly rebuilding them so it might be a while but what I told Ross

(1:09:58) kohart that one of the last posts that he liked for my for me was when I told him that when teleportation gets proven to be real come back and talk to me for a lot of these guys they need to see it in mainstream academic scientific papers like when Eric Weinstein and then the Ross koharts of the world see the scientific papers that are able to literally teleport like an actual object like this that's when they're going to want to talk to me and they're going to go wait at Ashton guy was was telling the truth the whole time

(1:10:27) Brian keading actually follows me I I've direct messaged him a couple times but he's also like kind of CNN brain himself I even gave him some tips like which is it sounds pretty

arrogant to send a guy who's like a literal professor of physics tips but I'm like you know hey maybe you should check into this concept like this or check into that uh might help you out because I mean if Brian key wants to win a Nobel Prize like the truth too is the guys that win the Nobel prizes aren't generally

(1:10:55) sad to say like Roy de Herbert probably would deserve one we know that Thomas Bearden deserves a Nobel Prize uh but they're not the ones who win it it's like the science influencer people that are known Brian Keating could be that guy if Brian Keon were to realize that the ether is real and be able to figure out that we can solve dark matter and dark energy with bringing back the space-time ether then he could win a Nobel Prize and that's why I'm like dangling the line out there for some of these mainstream academics where I'm

(1:11:24) like hey man whichever the first one of you is that figures this out like there you go and they may say well how do you know Ashton how do you know you're just a normal guy yeah well because I'm the teacher looking at the answer sheet you're the student who's trying to figure it out you're trying to work forward and figure out how to explain dark matter and dark energy I'm going looking at the answer going here's dark matter and dark energy how was explained uh so I don't care about

(1:11:48) winning Nobel prizes that's not what I'm doing this for um but if they want to win them information's out there we're just going to keep dangling it out there someone's going to win it okay so I think I'm not going to be able to answer all the questions I'm going to skip ahead so if you didn't get your question answered uh please Reas it in the chat and then I'll I'll try to go to it there's no requirement to donate by the way to get a question asked actually a lot of

(1:12:14) people that donate don't even ask questions which is pretty funny uh hey Billy nice to see you bro good to see you I don't require donations to answer questions or anything in fact you guys see my posts on on Twitter and I I post all the time yeah the fact that they keep mentioning MH370 the mainstream without talking about me is really weird especially because they just Fox News just T like did a whole story about the kid who saw aliens in his backyard they did a whole story about it and they're

(1:12:45) not willing to talk to me about a guy who's like hey uh we warped an aircraft and I know what happened to the plane that nobody knows where it is 10 years later and by the way we have anti-gravitational technology we've got two military videos like hey you can find the leaker just go talk to him send your Fox News journalist after Edward C Lynn and figure out what he did like and it's kind of weird that they're like want to talk to like this family that saw eight foot tall Shadow aliens where the

(1:13:14) evidence is like just some Shadows behind a fence versus like a literal 17-page list of evidence that's all verifiable anyway what whatever whatever oh boy 20 seconds okay um and I don't know guys about like 911 stuff or Maui fire stuff I don't know I don't know about earthquake generation I don't know about weather manipulation but a lot of this stuff seems plausible I mean once you start digging into the science fiction like not even science fiction the

science aspects that seem like fiction then you really start to wonder

(1:13:52) like boy directed energy weapons are def directed energy weapons are definitely possible what they're using them for I don't know I don't know uh I'm not that worried another MH370 will happen there will be another event like that I mean in fact look at the Iranian president's helicopter that crashed like is that not weird guys the weather was normal there were two other helicopters that had no problem that were with him and they had just shot a bunch of rockets at at uh Israel like there's videos of rockets raining down

(1:14:25) Israel that shot from Iran and then like a couple weeks later the Iranian president's helicopter just mysteriously crashes suddenly and it's like completely obliterated 2 plus 2 equals four guys I'm just I'm not directly accusing anybody I'm just saying there was also like three governors on board that helicopter it's a pretty high value Target uh I would say that I'm very afraid of getting on an airplane I would say that I not going to fly private even if somebody was like hey I'll fly you

(1:14:59) out of my private jet I'll be like nah I'm going to get on a commercial jet where there's like another hundred to 200 people on board the plane because I want there to be a lot of collateral damage if they try to take me out I don't want there to be like a situation where I'm on a plane with just like two people I want to be on a plane with like a hundred people uh but there's a lot of people that would have to also like have to explain why this whole aircraft went down also just for the record it's going

(1:15:23) to sound a little bit paranoid but every time I get on aircraft uh I'm going to make a post about it just so that people know that I got on aircraft if anything weird happens to my aircraft should be considered suspicious uh okay let's see everybody asks about the aliens could aliens be responsible for teleportation uh let let I'm gonna put it like this guys I'm gonna give it to you bluntly there's no aliens regarding the teleportation m370 videos uh I can't rule it out 100% but I'd say 99.9%

(1:15:58) that's our technology that's US military technology now that's the downside the plus side is I have no idea where this technology came from that's some pretty damn exotic technology to be able to figure out uh Quantum effects on the macro scale so a lot of people are going to be wondering where did this technology come from and how long have you had it and why have we been hiding it that's where you start to bring in this idea of non-human intelligence and the more this is also the **truth** the more I look into the

(1:16:27) history of the technology and the physics and scaler physics the less sure I am of what the situation is I think it could be anything from aliens are complete scop and they're using it to cover up the fact that we figured this stuff back out like way back in the 40s or maybe even before or anything to like Cryptids and future humans and Aliens visiting us from the Andromeda galaxy like it could just be anything I just have no idea whatsoever so there you got your answer uh Bob Lazar there's no reason to

(1:17:00) consult Bob Lazar he's already had a tough enough situation uh I think he'll be partially Vindicated with some of this especially if we have like crash retrievals where that's where we figured the technology out but I don't need to talk to him about this I've already figured out the science and my sources are more connected than Bob Lazar is so I'm not too worried about that um so and then Khed says I think he was from the UAE good to see you Khed uh do you believe the Wormhole can let that

(1:17:30) let the plane disappear this could cause environmental collapse I think it's going to help the environment I mean free energy is going to be a situation where we get rid of all the fossil fuels now for people like you in the Middle East it's going to devastate the Middle Eastern economy because the Middle Eastern economy is heavily based on fossil fuels and oil this is where the Middle Eastern countries need to start figuring out what they're going to Pivot to like you want to be pivoting to like semiconductor Industries stuff like that

(1:17:56) stuff like Advanced microchips those are the industries that countries that are Forward Thinking want to start investing into because those are going to be the companies of the future when we get into Star Trek World everybody's going to want microchips and and superconductive microchips for their AI for their floaty orbs and everything else like that or you move into free energy because here's the thing you could have a free energy device and then you can just sell the energy to people so you can still have the exact same

(1:18:22) conventional economy that we have right now where we have power plants but the power plants are just producing free energy and then you distribute it and you sell it that way people don't have to pay tens of thousands of dollars for a free energy device they can just buy the energy for very very cheap because you can centrally have a power plant that makes it and sells it and then the people that want to live off the grid they can buy their own device so uh that's what people like should be thinking that's why as an American I

(1:18:49) want the I'm I'm a patriot I want America to have the corner of the market on free energy I want us to Corner the market on semiconductors I want us to Corner the market on all the advanced technology because that's how we'll make America great again and I understand how that sounds um I'm not like a giant Trump supporter but I do want to make America great again and I want to make it like the most powerful Nation on Earth and I want to make it uh considered like a Utopia for the people in this country

(1:19:18) and I think that that's what we can do that'd be great boy the chat is moving too fast man I'm trying okay let's if you have questions hang on to your questions and I'm going to do go through a couple Twitter posts and I'll answer a few more questions and then we will have another live stream tomorrow night uh but I do have to go to sleep early tonight because I've got to wake up early for an interview with the people in the UK so that's pretty damn early my time there's a big time

(1:19:48) difference oh wow Nvidia CEO just said they in an interview they plan to change all the CPUs to gpus Nvidia is worth like 2 trillion dollar right now 2 trillion dollar that's their market

capitalization something like that maybe even more at this point this goes to show you if you go look back like five years nvidia's market value is increased like 15 fold like 15 fold maybe even more it's absolutely insane how much it's gone and they're a Semiconductor Company it's uh guys the world is going

(1:20:17) to change and you can see it when you watch the stock market like you can see it happen and Nvidia is actually going to split 10 to one as well uh because their stock price got to \$1,000 so they're splitting 10 to one so if you had one share of Nvidia at \$1,000 you're going to soon have 10 shares at \$100 um so don't this none of this is investment advice invest your money where you feel comfortable but you know my opinion is that semiconductors are pretty sweet industry okay let's take a

(1:20:47) look at what we got oh another donation chane again thank you very much again sir aliens are and aren't a SC up at the same time yeah they be from a dimension stacked over s and the government access Lord I don't know about all the extradimensional stuff guys I'm not sure if you listen to my interview with Tom mon talk that's that's probably one of the best interviews I've done as well where Tom mon talk talks about this idea of like time loops and how various Loops might be connecting to one another it's

(1:21:10) a really cool idea and that's why I say like the more I dig into it the less I know what I will say I'm very confident of is there's not like a Bizarro Dimension where like the aliens are hiding in the Bizarro Dimension The Ether is not like a like a a mirror Dimension that other beings are hiding in the ether is like the fabric of our universe uh so that's the part where I don't feel that like the aliens are coming from some hidden Dimension to me you could say they're coming from like

(1:21:37) another Universe if you believe in like the Multiverse in terms of like the the universe being a Multiverse of little bubbles that are popping up here and there that's where like maybe you could argue that but again I don't know that stuff's just so far out there I'm not sure yeah the more I learn the less I no that's a very very true statement you can quote me on that anytime you want and that's probably the most the least I did not anticipate that let's just say I didn't anticipate that the more I

(1:22:05) learned the least that I would know um yeah I do love that I I can tell that the UAE in the Middle East knows that fossil fuels are limited and they've been investing in renewable projects for a long time like if I was the Middle East I would be looking into free energy I would be looking into fusion power and and the the sources of energy for the future and figuring out like what's the trajectory of my country for the next 20 years 30 years 100 years not just like the next five years because I do think this is going to wipe

(1:22:35) out uh fossil fuels one last question where do they teleport the plane to uh the best evidence we have is somewhere near the malds based on a B7 fire suppression device and some of the Islanders seeing the plane there you can make an argument that the plane got held in super position which means that like it got released like a few hours later somewhere else uh

the science of quantum mechanics gets super weird it gets very weird and we just don't have two videos on the other side now we believe that the plane went to the West in the

(1:23:08) Maldives because of the right hand rule in electrical engineering which indicates the plane is getting sucked backwards uh based on the the orientation of the orbs around the plane uh you can use the you can use your magnetic curl Vector which is these fingers this is your electric vector and this means your power Vector is going to be going that direction which is in the case of the plane backwards and the plane is going to the east in the videos so we think the plane ended up in Diego Garcia that's like the most logical

(1:23:35) place to hide the plane and we're going to look at that evidence right now actually so um let's take a look at this yeah we're going to cover the or actually we're going to go into that right now uh so so let's take a look oh one more donation okay chill the donations chat Ashton caught the Apec talks yeah saw Cosmo ball then Ukraine couldn't help but think it meant something now here we are yeah Apec is like that's where these smart Engineers are like talking to people and it's

(1:24:04) funny because nobody watches these like comparatively speaking like no one watches these ape talks some of these people who are had these ape talks are like really in the know Charles berer who came up with this em Drive where he's been making the news about this anti-gravity which is a very simplistic form of it it's like the the lowest level uh he's been doing ape talks for a while I plan to talk to Tim Ventura who's interviewed a lot of these guys um I don't know what happened to the passengers guys good question I don't

(1:24:31) know um I I hope that something good happens to them is what I'll say I we can only speculate oh the Wolves just won thank you yeah okay coming back to Minnesota um so yeah I'm not a psychic I I can only tell you what we can see in the videos and what have you I will say that it's not looking great for the passengers no matter how you look at it it's not looking great um I also do think that there are underground hangers at Diego Garcia and actually people pointed out that there is a hanger that's big enough to house a

(1:25:02) seven Boeing Triple 7 on Diego Garcia now I don't know that firsthand because I've never been in Diego Garcia but several people have told me that there are hangers big enough to manage aing trip which should not be surprising because they have giant military planes like old pictures show like 20 military planes sitting on the runways um and there was a bunch of D dredging contracts so it wouldn't surprise me at all if there are underground hangers at Diego Garcia okay let's dig into this guys sorry uh we

(1:25:30) gotta we gotta Focus we gotta Focus okay where should we start with this tonight let's go to BL blue oh yeah so here was the thing about these news articles about this stuff I am going to try to get back on with Matt Kim uh hopefully in the next couple weeks because that was one of the best interviews I did in general uh here was the link to the scientific papers right here this stealth skater you can find a lot of scientific we are going to be reviewing those in the future as well um also this elevator Charles interview

(1:26:02) should be coming out I think tomorrow so we talked about that we talked about some of the **debunk** stuff talk about a lot of stuff on there I actually kind of popped off on this a little bit and started talking some smack about some podcasters so it might get pretty good I just wanted to try make sure I didn't miss anything down here oh and then yesterday we talked about refuting the **debunkers** and how easy it was to refute them and then I showed as well last night that like **Reddit** literally the way **Reddit** brainwashes people and how social media

(1:26:33) brainwashes people to the point that people ask like how do they keep this stuff hidden well the way they keep this stuff hidden is that they control the message on social media and so **Reddit** is probably the number one most United States federal government controlled censored uh applicant program out there they ban anybody who do uh promotes anything that can is is counter to the narrative that they're trying to push out there and then they bot up vote certain comments so that because the way it works is people only read the

(1:27:01) headline and then they read the top comments to figure out how they should think and that's what this lady right here is saying she and I'm not going to play the sound but she's basically saying that what they do is they they manipulate the comments that show up because then people read it and they they absorb that and they take those opinions and they adopt them as their own that's how the brainwashing literally works on every social media site but it's very effective on **Reddit** because people just read the headline

(1:27:28) and then they read the few top comments and those top comments are all manipulated and especially on the news sub**reddit** uh that's the most propaganda location maybe on the face of the Earth uh all the headlines that even make it on there are already curated you can't say anything that's even remotely right-wing uh it's not even allowed and then like even situations like a good example would be January 6th uh anything related to J January 6th on the news sub**reddit** will get upvoted and you'll have tons of comments talking

(1:27:59) about how people deserve to be killed uh like literally deserving to be killed you have people just promoting violence on all the top comments and if you come in and say oh Ashley babit didn't deserve to be killed you will literally just get banned I actually made a comment about how disgusting it was how many people were promoting violence and the moderators immediately banned me within like 10 minutes off the news sub**reddit** so that's literally how they manipulate the conversation it's not a secret it's like just right out in the

(1:28:28) open and the **redditors** actually know this and they love it they actually love the censorship what they hate is when it gets used back on them and this is the reason why they get so upset when I block them because my Twitter profile and my replies are like my house so I have control over what people want to be there and if you don't like how I manage my house well you're free to leave and go somewhere else I'm going to manage it the way that I want to manage it and I don't have to account or you know

(1:28:57) um I don't have to uh um deal with anybody that I don't want to deal with okay uh and they hate that because they want to push propaganda in my replies to my followers and I'm

simply not going to allow that um and that doesn't mean that I'm not against criticism I will take criticism but you'll find is most of the people are sitting there making defamatory comments or they're pushing disinformation or they're trying to clout Chase or they're trying to uh engagement farm and link to like other

(1:29:27) people who are **debunkers** to try to sway people's opinions and all this other [ ] all these disinformation plan Ops that they do um and I don't have to stand for that it's my platform you want to preach to your platform where nobody listens to you go nuts say whatever you want to say on yours and we'll let the free Marketplace of ideas uh figure out who the winner is okay let's go to the next thing uh and we're gonna get to those videos in a second I didn't think I don't think

(1:29:51) beans are are hiding in The Ether either I think that they exist in a plane parallel to ours in my opinion government arew maybe man maybe if you guys look at the there's like a chart of non-human intelligence there's like 40 options on there there's more options than even I would have imagined and again the **truth** is I really don't know I would love for us to get the answers to that m370 videos and for the government to admit we have this crazy advanced technology because then I can start to

(1:30:17) ask those kind of questions we can start to dig into some of the fun stuff like well what the hell's going on where' we get this from like what we got crypto terrestrials hi in the oceans or under the Earth or something like who knows man who knows especially if you can teleport planes and warp drive as possible then you know that means that like aliens could literally be visiting us from Andromeda galaxy it becomes possible um uh yeah airliner videos actually I think it's called airliner Abduction

(1:30:46) 2014 that's the **debunker** sub**reddit** like they banned me from that sub**reddit** not only did they ban me from that sub**reddit** they banned my name they like people can't even say my name or your your comment and your post gets filtered out they banned anyone who would post any of my investigated work they ban those people they ban their content uh and so like literally this is why I call the it the **debunker** sub**reddit** because it literally is the only point of The Airliner Abduction 2014 sub**reddit** was to make the videos go away that was

(1:31:17) literally the goal of that sub**reddit** that's what the moderators made it for is to pull everybody into that sub**reddit** and then ban the discussion and it then it was successful they've done it and now people post back and they look back and they wonder why that's been happening and they and you can see right through it it's it's transparent because what happened is after they banned the discussion there all those people migrated over to X and now they're trying to ban the discussion on X but

(1:31:41) they don't have control over X the way they did there and they hate it the the **redditors** love censorship they love censorship they just love censoring other people they don't like when they are censored um and that's and that's the ultimately problem and it goes to show again just how much federal government disinformation and control there is over social media

platforms my subreddit m370x where I simply banned all the debunkers was banned in other under two weeks they never gave me a a a rational

(1:32:13) explanation you can go to the subreddit MH 370x you'll see that it's banned permanently banned they gave me no explanation and when I appealed it they denied my appeal after making me appeal twice and they didn't give me an explanation on the appeal either the reason why they banned it is because they can't allow people to see the truth and they can't allow somebody like me telling the truth to be able to speak it freely and openly because people would resonate with it it would get a lot of

(1:32:36) traction at this point we probably have a 100,000 followers on the subreddit maybe even more um and people didn't want to go to a debunker subred because they know people are just [ ] lying to them there they want to go somewhere where people aren't lying to them people gravitate towards the truth this is why there has to be so much suppression and control and and again this explains for the people who are asking how do they hide this information this is how they hide the information 100% control over

(1:33:01) social media and over the message across every media platform okay so this video right here was one I posted earlier now this was there's been a couple color a couple color changed videos now this one was and I don't remember what his Twitter handle was he sent me some of these and this was the best one there's a couple different ones now the only thing people have adjusted on these is the color the color channels nobody has like edited these videos or edited anything into them okay so before people try to claim that somebody edited

(1:33:34) the smoke into the video or whatever [ ] no the only thing that people have done change the color channels and when we change the color channels we can see details more clearly because in the original some of the colors are very similar so it's really hard to see some of the details now in this case when you see the color change you can tell that the zap here not only does it illuminate clouds accurately it illuminates the environment accurately the whole environment is being illuminated and you can tell because it's illuminating the

(1:34:03) area around where the zap is happening and you can still see the clouds over here being illuminated you can see a little bit of illumination down here in the bottom left you can see basically no illumination change in the bottom right but you can even see these areas around the clouds like the edges here even the environment is being accurately illuminated I'll make this big for you guys actually let me move this over I'll make sure this works okay yeah so again this is this probably should have had as

(1:34:30) many views as some of the other stuff does because look at the Environmental Lighting on this this is not just like compressions and artifacts this is a real event look right here look at this how get illuminated on this Cloud right here like this illumination is not a manual brushing of this this Cloud this would be very very difficult cuz these are real clouds everybody agrees what we're looking at here is real clouds the debunkers claim that we're looking at a 2d Cloud picture yeah we're not looking

(1:35:02) at a 2d [redacted] Cloud picture look at this kidding me we have two videos from multiple angles we have moving and evolving clouds and per and perfect 3D Lighting in three dimensions and we're looking at real clouds so you're lighting real clouds you think you they fake lit up real clouds no way so that's the first one to me this is huge I can't believe this only has 16,000 17,000 views cuz when I look at that I'm like holy [redacted] how is anyone denying that this is fake and this is part of the

(1:35:31) reason why um this is part of the reason why I think the whole thing is real even the zap people are like well what if the zap is fake well look at what we're looking at right here chat to me when I saw this illumination of the zap this is when I realized like the whole thing's real I was actually open to the idea of the zap being edited in by the government or something like that but once I saw this I was like no even that's real holy [redacted] like no one's faking this man no one's faking this

(1:35:57) there is no hoaxer for these videos by the way guys like there just isn't there literally is no hoaxer and if anyone wanted to prove me wrong I've given them so many ways to prove me to be a liar I've made very bold claims I've said that there's no hoaxer and there isn't one all they would have to do is produce a hoaxer and they could prove that I'm a liar but there is no hoaxer uh they could um I've also said that the FX is not in the videos as a statement of fact not an opinion as a

(1:36:27) statement of fact it's not in the videos so if they were able to prove somehow Beyond any shadow of a doubt that there is a Pyromania shock wave VFX in here without manipulating it then they would be able to prove me to be a liar but there isn't they have to manipulate they have to turn an apple into an orange and then claim that the Apple was always an orange that's not logical and many people just see right through that that deception um so once again like i' I've set the bar man I've even said what it

(1:36:53) takes to convince me that the videos are fake you have to find the hoaxer and at this point finding the plane like we know now because we've seen the acoustic detections we've seen the scientific paper we know that they're not going to be able to find a plane in the South Indian Ocean so if they all of a sudden start to find some debris at the bottom of the ocean the South Indian Ocean there's gonna be some tough questions to answer like I want to see that debris with my own eyes I want to see 10 years

(1:37:15) of growth on it uh and I want to see exactly what the the debris looks like because they're not going to find [redacted] in the South Indian Ocean okay so now here is the stabilized version okay now before people say well what could what if the stabilization impacted now in this case the stabilization you can see right away one of the the reason actually why I posted this wasn't even the color changes because when you look at the stabilization you can see that even when they move the frames around everything

(1:37:44) is in the exact right location which tells you something very important if this was a hoaxed video they didn't stitch together these perspectives this is literally a bigger field of view

this proves that what we're looking at here is a larger field of view that's cropped so the only way for this to be faked would be that somebody faked a much bigger field of view a much bigger field of view and then they literally did a cropped screen recording of a hoax video now listen to what I just said right there because I want people to

(1:38:11) really understand the significance of what I just said because the stabilization here everything is in the same place when the perspective changes and we can see that from the stabilization this means that the only way for this to be faked is that they faked a larger video and then they cropped the larger video into a smaller video that makes no sense whatsoever that's never been done for any hoax videos ever in the history of the world wild right so that's the reason why I initially wanted this is because I

(1:38:41) wanted to show people that in the stabilization as the perspectives change you can see these perspectives moving around all the objects are in the right locations there's no displacement the objects never move to a different location this is actually the counterargument for the jittery contrails so the people when they did the stabilization and they falsely claimed that the contrails jittered when it was and it's smoke by the way when they claimed that the smoke jittered they were uh claiming they didn't

(1:39:06) realize that the stabilization software caused that to happen well here's the counter when you stabilize this video there's no discrepancies anywhere which means that this is not a stitch together series of shots and the funny part is that's what the **debunkers** were claiming regarding the cloud picture they're claiming oh you stitch together all these clouds or whatever well we can prove beyond any doubt that this is not a stitch together video there's no sign of it ever being stitched this would be

(1:39:33) a v big much bigger they made in this case they made a giant hoax video and then they cropped it down that would be the only way for it to be hoaxed which again pretty much proves this video is real now and this and you can see I didn't even notice this now quantica science you can go talk to quantica science about what he did here he just made a bunch of different uh um different color channel change versions of these videos and I was digging back through today because I wanted to post uh one of the best color change versions

(1:40:04) of the satellite video I've posted a bunch of the Drone video uh color change versions in fact the blue and black of the Drone video is my favorite one um and I'll I'll just show you guys that one real quick just so I'm not going to show the whole thing I'm just going to show you persp to your so here's the blue and black drone video this was my favorite version of the Drone video and all he's done here is change the color channels that's it he didn't edit the videos or anything

(1:40:31) just change the color Channel and again because it lets certain areas stick out more some of the details get lost a little bit um like when you zoom in here you don't have as much gradients I think it's called on the plane like you can't see all the colors on the plane but you can see like the orbs pop out a little bit more and you can see the black lines in front of the orbs a

little bit better in these versions so the only thing we've done here is change the channel so if anyone wants to recreate any of the

(1:40:55) stuff that's been done all you have to do is change the color channels around and you'll be able to recreate anything that we've been able to show here so nobody is editing these and fabricating details into them after the fact that's not what any of these people are doing so Quan call also made this version that you're looking at right here of the Drone video so when I saw this video then I went oh uh he stabilized it as well I didn't even see that he did a stabilized version I and so I downloaded

(1:41:19) this version from him you can find it on his Twitter profile from a couple weeks ago and um this is where JK Philly fan had a really good eye and somewhere in the comments right here yeah's right at the top notice between 13 seconds and 16 seconds how the orbs interfere with the smoke Trail that's remarkable pretty insane and I remembered when he said that somebody else had told me something similar to this that you could see that and in the original version like it's there but it's hard to see because of

(1:41:49) the color channels or because the color of the smoke like Blends into the background too much um but in this version whoa you can see it so first thing I did is I checked for myself so I put this into my editor software I looked around the time 13 seconds in it's when all three orbs get around it and I checked it and I went wow you really can see it and in this fast version there you can see it right there it just happened so right there around 13 seconds you can see the thing go right through you can see it displ now

(1:42:21) the second and third it goes through it again and they don't displace it again and the reason is because it's it's going around in a sphere so they're not going through the trails repeatedly so it's like just that one orb that one time went through it now there might be other times that they do but it's not very visible to see it um so what I did then is I just slowmo it I probably should have zoomed in on it but I just slowed it I got excited because I saw it and I was like holy crap so when I saw

(1:42:48) that detail I was like damn that's wild because having accurate Distortion of the smoke when the the orbs go through it shows that the orb is real that the orbs a real object and it goes to show that it's it's even faking smoke dissipation like that is extremely difficult even now VFX artists struggle with that so to be able to do that accurately in 2014 when this is supposedly just some random kid on the street doing it for the lulz completely rules out there's no 0% chance that anyone would fake this video for the

(1:43:22) lulz you know I would say Beyond any shadow of a doubt the only way this video could be faked is by a absolute professional by the US government themselves and even then there's no way to like rationalize why they would have faked this video so because people ask like could the US government have made it and I say well maybe but there's no logical reason for why they would have made the video I mean this it implicates them you know like when people look at this the people that are implicated is them and yeah in four days as well so

(1:43:48) like for the **debunker** story to make any sense and watch the interview I did with elevator Charles tomorrow we talk about this the **debunkers** would have to start their story with reeside andan being the hoaxter because reeside aan says description received March 12th 2014 and the bunkers just don't ever address that they just say well he just he lied why would reidon non lie about the video unless you think he made the videos if he received these videos he has no reason to lie about it like well we don't know why he lied well then he

(1:44:19) didn't lie Pretty Simple so there's a really good chance that these videos were **leaked** uh March 12th 2014 which is four days later there's no chance you can make these videos in that period of time zero% chance they weren't even searching in the right area at that time we were searching the South **China** Sea the world thought the plane was in the South **China** Sea uh and and this plane has coordinates in the nicobar islands so these are some of the most impossible details and they the reason why they

(1:44:46) can't claim that Regis side a non was the hoaxter is because higher quality versions of specifically of this satellite video the Regis side and's version is stereoscopic side by side and there's a higher quality version that's not stereoscopic it was released by somebody else a couple months later and there's been people that have claimed that this was posted on some Forum some secret uh like UFO Forum that needed like a password to get access to and that would mean that there's a higher

(1:45:14) quality version you can't make a higher quality version of a video from a lower quality video which means that Regis sideon non is not the original source that would rule out reges side and on as being the hoaxter so this is why they they the **debunkers** get trapped and this is the simplest way to trap them you just say is reges side and on the hoer and they go no and then you say okay well then the videos are real because that means they were received March 12 2014 and they go well no regid and non lied and you go okay well who's Regis

(1:45:41) and non why they lie and the argument okay let's move on I don't want to go too much into this okay so here's the the slow-mo version that I made so what I did just to be perfect transparent I cut it down to like the two seconds where I saw the orb literally dis I saw my own eyes I saw it dissipating the the smoke Trail which is about to do right here and then I copy and pasted it and I reversed the uh the time on it I did that twice and then I took a very super slow-mo version and did the same thing so this is

(1:46:13) technically three of the same things stacked side by side forward back forward back forward back that's all I did I made no other edits to it right there you can just see it go right through the smoke I mean there's no denying it whatsoever right there boom you can see the smoke go right through it you I checked before and after there's no other smoke sitting around here or anything like this is not a compression artifact this thing is going straight through the smoke it hits the smoke you can see it clear as day you

(1:46:40) can see the smoke dissipate right here in that frame and then you can see it go back I mean look at that when you see it go forward and back it's so obvious like boom where's what

frame this Frame right here like this Frame right here where you can see the smoke especially when you watch it moving look at that look at that you can see the smoke it dissipated there's no denying it's so crazy I couldn't believe it I was like holy [ ] when I saw that look at that it's going right through

(1:47:09) the smoke literally hits the smoke and dissipates it naturally too like that's what it really should look like and someone said too that because of the gravity engine like they think it's even more accurate because it's creating space around there which is causing like this the the smoke to like maybe I guess the way to think about is like make a cone basically uh wild man so let me I'm just gon to play the whole video again so you can watch it so right there it clearly breaks through the smoke Trail reverse play through breaks

(1:47:41) the smoke Trail reverse again and then Super slow-mo frame by frame poof look at that look at that man undeniable undeniable man holy crap that is just absolutely incredible Ironclad proof really is and this is why the debunkers have nothing at there's no counter to this the only counter you can claim is that somebody edited it in there or whatever but that didn't happen that didn't happen chat there's uh all there is left is the cop and SE all there is left is the cop and SE and this also rules out uh there was

(1:48:18) some guy some loser named Joseph Lancaster who was lying about having made the videos it this one of the things and I'm on the record saying this is that if somebody had made the videos and like didn't have proof with them the proof would have been they would know small details that they had added that the that we had no idea about this would have been one of the details like if somebody had made his videos they would come out and say oh I added the orb going through the smoke Trail on frame 17 or whatever 13

(1:48:47) seconds into the video they would know that because they would have had to manually add that in there on the one orb going through the smoke Trail so Joseph Lancaster if he hadn't been a liar and Joseph Lancaster if you find this piece of [ ] on Twitter he's a 100% liar and he came out and he tried to lie about having made the videos had no evidence his whole story fell apart there's still reditor that think he's telling the truth because they're just coping or whatever he's 1,000% a liar if

(1:49:14) he had made the videos he would know he would have known about this detail and he would have brought this detail up because it would have been absolute proof that he had made the videos he would have known about a detail that nobody knew about that nobody had found so there you go chat um okay let's look at some of the other sagas God I I this video I even I love looking at this video it's w 421,000 views uh and so I made let's talk about this because every single time one of my things is going to get

(1:49:42) over a million views this one's going to get over a million it's only nine hours and it's already 400,000 or something like that I always post the evidence on there so that people so that they can't Community note me because the next thing the redditors are going to do is they're going to try to censor me they're going to try to community note it I already know

they've done it many times so if you guys see Community notes on this post downvote them report them the best thing you can do is report the fake

(1:50:06) Community notes so you can get the people who posted the community notes banned from the platform so once again report any fake Community notes no there's no YouTubers who have debunked this no Mick West has not debunk this nobody has debunked these videos these videos are real anybody who's trying to lie about them they should get reported and they should be removed from the community nodes platform and so here's that here's the claims that I've posted on here the videos are real leaked

(1:50:31) videos I've identified Lieutenant Commander Edward C Lyn as the leaker so there's no even reason to try to debunk them I've given you guys the leaker anyone who wants in the world the media anyone can go find Edward C Linn and they can just straight up ask him if you leak these videos these are real military videos of MH370 that were leaked from probably classified sources presumably maybe not don't know United States military all the way up to President Obama is implicated in The Disappearance of MH370 President Obama

(1:51:00) was visiting the Prime Minister the Prime Minister ended up uh going to prison for the biggest uh corruption scandal in history called 1mdb he stole at least \$700 million so a dude's sketchy as [ ] uh the motive is the 20 freescale semiconductor Engineers they were literally very important people for this company and a show of force for adversaries technology that's on display is gravity and SpaceTime manipulation that's what we're looking at there we've been able to show scalar physics as what

(1:51:29) causes that I know I don't have in there but I've interviewed Engineers connected to the government Salvador P Navy engineer active Navy engineer uh B um Dave Rossy DOD contractor and engineer and learned that this technology is real and it's being suppressed from the government uh salvator Pi has literally patents for this technology he has patents for the technology that we're seeing high frequency gravitational wave generator literally explains what we're seeing in these videos so we have real patents

(1:51:59) real scientists and real scientific papers um the technology is basically a super weapon uh that Beyond conf uh conventional comprehension so on this part here like this is beyond nuclear weapons this is a super weapon beyond what the public thinks is currently possible uh and I want people to realize that because I want people to understand the dangers of what we're talking about here um I have reported the videos and the leaker to the AO the all domain anomaly resolution office who's underneath the dod in Pentagon for

(1:52:34) authentication and an official statement from them they have said that they would give me an official statement they have said that they would give me a historical record memorandum of record they have said that they uh found something related to the search efference after the plane went off of radar and I've gotten nothing I've gotten and I've got nothing back they've ghosted me over a month ago and to me this implicates their guilt because if these videos were fake they should have been able to come back way long ago and

(1:53:02) they should have been able to prove that they were fake to me so they're probably going to try to Gaslight me that's that's the **truth** uh related to this I also want to point out that they said that the United States search efforts that there's something related to search efforts after the plane lost radar well we proved that there's five Radars that were within range of the plane after the official story says it lost radar contact five Radars Thailand and India were within range and Indonesia all three had Radars

(1:53:34) that would have tracked the plane we have 100% proof of that so why are people lying about not having seen the plane there's at least five different radar systems that would attract the plane after it supposedly L contact UM United States government is freaking out over the attention that these videos are getting and they're pulling out all the stops to try to put this Genie back in the bottle unfortunately this Genie is not going back in the bottle the only way to stop me from talking about these videos is to do to turn me into a martyr

(1:54:06) and if they do that then I'll probably become an urban legend and that's a sacrifice I'm willing to make YouTubers who **debunk** the videos are frauds and they lied to you so I'm State making this as a statement of factual a factual statement on the record that the YouTubers that claimed these videos were **debunked** which includes the lur Lodge **Mick** West Corridor crew these people are frauds they falsified fake comparisons and they lied to millions of people I want that to be on the record so that people know that I am directly

(1:54:40) accusing them of that and I would be able to prove it in a court of law that they falsified comparisons and lied to millions of people I I would love to go to court against any of these people and prove in the court of law that these people are frauds and Liars I would love it um all **debunk** attempts have been conclusively proven to be falsified and fraudulent and you can find a link in to the evidence in the post below so if there's any question about that you can just click this right here and there's

(1:55:07) all the links to all the major **debunks** right here that have been proven false so I've I've literally put all the evidence out there um none of this has ever been refuted in fact the one about the cloud image right here being impossible to require 3D render we have moving clouds you can literally watch the clouds evolving right here right where my mouse is you can literally just see it you can see the accurate lighting and we just showed the accurate lighting even illuminates the environment not even just the clouds you can see we have

(1:55:34) two videos that show the same cloud formations synced up right there here's the first Cloud what what is it doing there's the first Cloud right here which is presumably This Cloud right back here and then you can see the second Cloud right here which is clearly this one right here so we have two videos this requires a full 3d rendered environment this is not a situation where someone's using After Effects so I I showed this information to **mcwest** he refused to look at it this post right here which is just

(1:56:01) a reply has 35,000 views **Mick** West refused to look at this evidence he's a fraud **Mick** West is 100% a fraud and the phony uh he's been banned from Wikipedia for manipulating

Wikipedia using alt accounts nobody nothing **Mick** West says has any credibility nothing any of these **debunkers** say have any credibility I just want to make sure that I'm saying that as statements of fact that are out there um and if you want to come after me in a court of law I can not wait I have all the proof I have all the receipts I have everything ready to

(1:56:34) go um okay so speaking of that and then we'll go to the orbs part so when I asked after this video came out there I made a post on **MC West** Post because he was saying something and he's blocked me now saying something about Tim gal or whatever his name is uh rear Admiral uh in the Navy or whatever he went on Shan Ryan he was saying there's disinformation people out there and **Mick** West goes well show me the evidence and I say okay here's the evidence right here I said it's time for you to apologize and retract **Mick** West

(1:57:08) is directly responsible for all the **debunk** attempts related to MH370 every single one leads right back to him directly and we found now proof that the videos are real so he should have addressed this proof because he's literally asking for evidence and I've given him the evidence and he hid my post he hid my post even though it was directly related to what he was posting he was saying that people don't provide evidence I provided the evidence for him he also ignored the evidence of the cloud images and he keeps lying about it

(1:57:36) over and over and over and over again so I made this post then he hid this reply he de he deserve he owes the families an apology he owes me an apology and he needs to retract his fake **debunks** that he has falsified and promoted uh fraudulently to the world every single **debunk** relates back to M3 back to **mcwest** including the Philip wood picture that he **debunked** in 2014 he even **debunked** this picture and I rebunk that picture too that was even before the investigation somehow one guy one man **Mick** West is linked to every single

(1:58:12) **debunk** about MH370 not even just the videos all **debunks** out there at all that has got to be extremely suspicious that we we're looking at a real conspiracy where the United States took the plane where it completely disappeared and one man is tied to every attempt to cover it up one man tied to every single attempt so this is where I'm going to push back on them first of all **Mick** West is a ghou he is a terrible person that is has no he needs to think of the families in terms of what he's done and

(1:58:47) have some shame for what he's done it's disgusting that somebody would cover up what happened to two 239 people like he's done and lie about it to the world this is the compassion argument that the **debunkers** always try to throw at me I'm throwing it right back at them and they try to claim that I would not accept the **truth** even though I said if you find the hoaxer I will admit the videos are fake just find the hoaxer they're the ones the bunkers refuse to accept the facts and reality there's nothing they will

(1:59:15) never admit they're wrong they're never going to apologize doesn't matter how much proof we provide even when we provide a video of orb L shoot distorting the cloud distorting the smoke they still won't even admit they're wrong even when I proved his his **debunk** attempts for false he still wouldn't so they're the ones that project their insecurities they're the

ones that will never accept the **truth** no matter what doesn't matter he's also paid by skeptical Inquirer to **debunk**

(1:59:43) real videos this is a statement of fact **Mick** West is paid by skeptical inquire to **debunk** real videos he should be charged with criminal conspiracy under the Pinkerton rule which says that you can be charged even if you were not directly responsible for the conspiracy if you're part of the cover up you can also be charged with the crime that's what the Pinkerton rule is he should be charged criminally over that here's the 100% proof I have all the receipts I'm a fellow of the committee for the skeptical inquire I

(2:00:14) get paid a little to write a column for their magazine every two months here's the last one oh what is it it's the article **debunking** MH370 claiming fraudulently and falsely that the videos are fake when he knows as a statement of fact he cannot possibly know that the videos are fake from a factual perspective so what this is called is lying when you claim unknowable information when you don't have a hoaxer and you haven't proven the videos to be fake then that makes you a liar and he says if somebody else wants

(2:00:42) to pay me to be skeptical I'm all years to me that's a statement of guilt he's literally promoting that he will **debunk** stuff for money right here somebody wants pay me to be skeptical I'm all years okay so posted that about him get blocked got blocked by **Mick** West from that which I he's dodged five debates he has ignored the evidence multiple times he's ignored all reputations of the **debunk** attempts I've shown him the evidence that the VFX doesn't match we've shown him the jitu contrails was a

(2:01:19) matter of stabilization three or four different sources proved it to him independent sources not even ones that are tied to me refuse to admit the **truth** so let's just read this I guess this settles it my detractors always say that I block people instead of addressing the arguments which is false constantly people post the same arguments and I keep replying every single time it's usually the VFX Cloud stuff whatever I reply over and over and over and over again I would say 99% of the time the only reason why people get

(2:01:47) blocked is because they call me a **scam**mer they call me a fraud they call me a grifter if you say any of those things me you're going to get blocked instantaneously instantaneously I'm not going to think twice about it I have no time for negativity in my comments so that's what people get get people blocked and usually when people say I got blocked for no reason I go look at their replies and I find them literally just toxically attacking me and I just post it I've actually done that several times to people because and it just I

(2:02:11) get tired of doing it turns out there that's what their hero **Mick** West does he was proven wrong he was proven to be a liar and instead of addressing the facts he blocked me so let this post be official record that all **debunks** related to **Mick** West have no merit they all come from an objective fraud who is paid to lie about real videos which we we showed the proof right above this includes the VFX comparison that the corridor crew borrowed and the claim that was their own actually comes from **mcwest** the jittery contrails claim comes directly

(2:02:39) from [MC West](#) duplicate frames claim comes from [mcwest](#) and the Philip wood picture analysis comes from [mcwest](#) we even found out that the 2D Cloud Image [Mick](#) West personally knows the website owner and where was inexplicably and impossibly found and there can't be a 2d picture of clouds in the MH370 videos somehow every single [debunk](#) leads back to [mcwest](#) all [debunks](#) related to MH370 have been conclusively refuted let's move past the phonies and move into Star Trek without them and I think somewhere down

(2:03:13) here somebody I think it was Wall Street and we're going to go back we're going to be done with this uh but yeah I'm just laying the fire down on people guys oh here it is right here so here's the proof that knows actually this is from [Mick](#) West skeptical inquire uh the one he that I link they talk about right here this this skeptical inquire link that you guys can go find right now you can prove it for yourself skeptical inquire.

(2:03:52) com know the owner of textures. org it's actually textures.com he's [Mick](#) West is kind of an idiot and can't even spell correctly he literally knows the owner of the Obscure website where the cloud image was mysteriously found by a Six-Day old [Reddit](#) account what and he he admitted it in his own post wow chat that's pretty damning why is one guy connected to every single [debunk](#) every single [debunk](#) he even admits the Six-Day old [Reddit](#) account called d1370 DPX 3709 d d yb2 i6l is that not weird that it's a random

(2:04:36) burner email account that find inexplicably finds a picture on a obscure website and claims they found a picture of clouds in 20 minutes you have to stitch together and stretch out and reorient what this guy the Rainman he's the Rainman he had to look through 115 sets of CLS in 20 minutes and magically found the picture of clouds that can't be in the videos amazing yeah so take I so I my claim on [mcwest](#) is that he's objectively a fraud if you think he's a government agent or whatever I don't really care I don't

(2:05:08) really know whatever it is he's a piece of [\[redacted\]](#) so the only reason why I'm talking about him is because he non-stop keeps talking about me nonstop every day even today so hopefully that's the end of him so I block him back because anyone that blocks me if I find that you've blocked me the very first thing I do is I go up there and click block and then I block them right back so if you block me you're going to get blocked back I don't unblock people except for in extremely rare circumstances now people ask last thing

(2:05:38) for tonight uh and if you have any other questions uh please let me know uh somebody says I heard some of the background image disappears around the orbs that's not true no that's not true okay if you have any other questions let me know um so people ask and then put your questions in the chat right now and I'll take a look before I go to before I go to sleep which we're going to log off here in about five minutes people ask what are the orbs super conductive harmonic orbs people want to know what

(2:06:09) the orbs in the videos are they are exotic vacuum objects that exhibit magnetic monopoles basically there's an object inside of them they're producing a field of plasma around them there's no one inside these orbs there's not aliens or humans inside these orbs they're

either a targeted homing or remote controlled they're either targeted homing or remote controlled by AI Advanced Computers there's also a possibility there's some kind of beam matching them or moving them around but so that you

(2:06:38) get the idea um somebody asked how the orbs move they are bending SpaceTime around them like pulling or like being on a conveyor belt so it's not that they're moving they're moving space around them that's why they don't exhibit any G forces that's why they're ignoring gravity they're literally creating space around them and pulling themselves forward like if you are on a rug like my mouse pad right here if you're on the rug and you pull the rug that's what the orbs are doing good

(2:07:09) question the second one does not come out of the first one you can actually see the second orb come out of the water that's the only orb we have a good idea where it comes from the other two come from the side of the screens the second orb comes out of the water shoots up and then kind of connects to the plane so just a heads up on that um so hopefully those are questions oh the reason why I block him is because I don't want people to be able to quote tweet me or anything like that if they've got me blocked if

(2:07:40) they've got me blocked I don't want them to see my content so that's the reason why I block people back that's why it's my policy is if I see You' blocked me and it happens a lot especially in the UFO Community there's like hundreds of people that have me blocked for no reason I've never inter acted with no idea who are they're just triggered by my existence so whenever I see those UFO fraud people that have me blocked that I've never heard of before I just block them right

(2:08:01) back um but yeah so hopefully that explained how they move uh I don't know about Skinwalker Ranch I've literally never watched skin walker Ranch I would say Skinwalker Ranch is made for entertainment so take it with a grain of salt I don't think that there's random portals just walking around like it takes very specific energy levels and densities to achieve some of these effects now it doesn't mean that they can't happen um doesn't mean they can't happen in in in real life with the right

(2:08:28) conditions but it's going to be extremely rare it's not gonna be a situation where they're's hanging out um yeah MX Dallas yeah maybe I'll come down to Texas sometime we can have an MH 370x party I don't know much about Antarctica but you can watch my Eric Hecker uh interview if you want to know more about the Antarctica stuff I did interview him he is a whistleblower from rathon that went down to Antarctica pretty cool yes I've seen the mazzle orb I don't know much about I just know that what we're

(2:08:52) looking at here is not a metal sphere which is what blew me away is that we were looking at a plasma ball that's one of the first things you can tell looking at the the Drone video as you can tell we're looking at a ball of energy uh and so let's go back into that it you missed out I already went through just like 20 minutes ago you have to rewind if you didn't find the new detail in the evidence so when do I sleep yeah hopefully I'm going to go to sleep right after this

because I got to be up early

(2:09:19) so yeah the quote tweet me out of context and stuff like that so this is the reason why I don't I just block people back guys again I just answered all the questions how are the orbs defined gravity they're bending space time around them that's the answer to how they move that's the answer to how they define gravity you can literally see the space being created in front of them uh in the orb videos so I'll show you guys another comparison so everybody's asking how the orbs move so this is a different

(2:09:43) color channel change version I'm going to show you guys right now this color channel change version really lets you see how the orbs move so what the doing is they're bending space around them pulling themselves forward it's most likely a version of aluer Drive warp drive so this would be subluminal warp drive subluminal means it's not going faster than the speed of light but it's still bending space that's a little bit different than a wormhole which is like creating a bubble around the object

(2:10:13) creating a hole in the fabric of SpaceTime so there you go that's how they're moving and you can see it very clearly in this video those lines are in front of them and they sort of start to like dissipate behind them pretty quickly so that's where like the space is like being temporarily created and then disappearing pretty incredible technology if you ask me and nothing like that has ever existed anywhere in any video um Peace David uh thanks for being here but yeah nothing like that has ever existed in

(2:10:42) any video there's been no UFO videos that ever show anything like that which is was crazy oh Ian Carol showed a FBI file talking about Skinwalker Ranch yeah supposedly there's this whole background related to it um okay so if I missed your question I think that the orbs probably are visible I think that they probably are but I don't know for sure I think that if you're producing this much energy it's going to produce visible light uh but yeah yeah the space in front of them it's not yeah they're they're creating

(2:11:19) space in front of them guys it's like it's like opening up space in front of you um so they're creating their own geodesic for sure why aren't the orbs cloaked I don't know can't answer the question for you again I because we're seeing an infrared it's hard to know anyway let's finish this and I'll answer a couple other questions the orbs show harmonic pattern consistent with a three-phase 120 degree electrical engineering power system that doesn't seem random to me that seems

(2:11:46) very deliberate their movement forms perfect sine waves when graphed the right hand rule indicates the plane is being pulled backwards somewhere back from the the zap which is to the West I found an image that closely matches the heat signature of the orbs on the doe this is the doe Department of energy X account some weeks back so yes again the orbs are some sort of plasma ball that doesn't mean there's nothing inside there though so down here at the bottom I'm just going to go to show you that this is from the Department of

(2:12:17) Energy's website the one on the right where they're talking about plasma physics look at how similar the heat signature is to the orb it is identical to the orb identical identical Heat Signature if we zoomed in more it makes me wonder if you would be able to see even this part in the middle here like there's no way this is a coincidence it even has like you see where this heat signature right here kind of like Cuts back you can even see where that's happening in the orb video or in the in the

(2:12:46) orb to me that's wild how much that connects and then just yesterday we found this post from the unel website the unel website was this one talking about macroscopically observable superconductive States like literally Quantum effects at the macroscopic level using super conductivity and then we found these paragraphs even though monopoles have not yet been observed and that's what we're looking at magnetic monopoles that's that's this that's this right here even though monopoles have not yet

(2:13:17) been observed there have been successful applications of helically wound Optical fibers and RF wave guides producing monopo effects such as parallel transport on a m macroscopic scale well guess what free scale semiconductors was producing RF power radio frequency power for the United States government so there's another connection directly from the orbs to our to um freescale semiconductors we also we will also produce parallel transport which is a purely geometrical effect with our pulsed spiraling laser plasma

(2:13:52) seems like that could be I mean we see our orbs spinning around on their axis like this seems like it literally what they're describing centrifugal force is exerted on the projected plasma is directed towards the center of the circular motion of the spiraling plasma not away from it interesting this phenomenon is attributed to massively rotating charged naked Singularity at the end point of the projected plasma so presumably what they're saying here is this middle here there's like a beam shooting in towards this or it doesn't

(2:14:21) even have to be that far out maybe it's like right here and it's shooting in towards this and it's creating this effect that seems to be what this is explaining in in my you know Normy brain perspective this three-phased projected plasma what three-phase projected plasma like a three-phase electrical engineering system like the exact same system that I just read up here three-phase 12 point degree electrical engineering system this three-phase projected plasma confines the exonic gases and provides a

(2:14:53) path of parallel transport a finer connection that automatically aligns the Trap charged particles in One Direction like atoms in a magnet literally this they're talking about how to create a magnetic monopole using plasma right here these particles then move without resistance in a super fluidic fashion this is this is superc conductivity this is high temperature superc conductivity excitations perfectly rep replace the information particles called phonons or Cooper pairs however cyons can carry the same information in a vacuum as phonons

(2:15:23) cannot operate in a vacuum the 8 xyon mechanism in the superconductive phonon mediated electron electron interaction is replaced by excitons as in the case of phonons the

excitons can cause the electrons to attract forming bounded States known as coirs this is literally describing high temperature superc conductivity without getting it to extremely low temperatures I think it's explaining these these these orbs right here so that's what the orbs are guys hopefully that answers your questions about how

(2:15:50) they move around yeah this stuff is just guys if these videos were fake we wouldn't be finding secret science and [REDACTED] like this that perfectly explains them like in De very detailed fashion um let me see if there's anything else I think that's probably good let's see oh yeah the Hodge twins post from only two hours ago already has 160,000 views sorry I didn't say guys and I said men okay let's uh try to wrap it up any other last questions I do not think that they move like any type of metallic spheres I

(2:16:27) think that what we're looking at here is like the real deal hidden technology that we only break out when we have to I think that there could be various different forms of this like China and Russia might have their own and there might be forms of it that are literally metallic spheres I don't know but what we're looking at here is definitely plasma feel of plasma around something else which I think should be visible but it's hard to say um there the both videos are at nighttime the Drone has nighttime video

(2:16:57) capability and you can uh even infrared capability they have false color IR can make it look like daytime so a lot of people don't realize we're looking at daytime guys uh I mean we're looking at nighttime sorry we're looking at nighttime they're making it look like daytime that's what I meant to say uh so yeah there's no issue about daylight stuff or whatever A lot of people argue that but they're just speculated the orbs are not manned uh any other [Music] questions guys I don't know the stuff

(2:17:30) about the ultimate destination once again I've said everything I'm gonna say about it Diego Garcia there's no way to know any more than that we're not doing any remote viewing and psychic [REDACTED] we're not doing any of that um okay uh I'm not super interested in like the 369 stuff and in sacred geometry I'm not interested in numerology stuff and the record just for the record guys I get more direct messages than humanly possible uh so I can't even look through a fraction of them so if I ignore your

(2:18:04) stuff it's not personal you just have to realize that it's gotten to a point where it's completely impossible for me to be responding to everybody um and I'm I'm going through it piece by piece and I've got a list of about a hundred things that I'm supposed to look at so it's going to be a little while for that what I will free scale was bought by nxp so free scale is gone they got bought by nxp just for the record um yeah I'm not going to do stock picks I've given you guys the information I'm

(2:18:34) going to give you I really don't want to run a foul of the SEC those that's how they'll get me is they'll get me on some [REDACTED] Financial crime or something like that uh so for Road pirate films the retical thing was proven to be fake as well um it's actually the reticle is built into the software so the reticle we actually showed several other um I showed one picture that shows lit

a blurry retical um and several other people have stepped up and one person who actually said they had experience

(2:19:04) with it as well showed that um that that's completely normal for the reticle to sometimes be behind the object in front of the object it's not always going to be in front so um when it comes to the retical **debunk** and you can find a link to it in the post we talked about this earlier uh I have all the **debunks** uh refuted every single one including that one uh the **debunkers** literally made up a fake completely wholesale fake **debunk** uh they claimed from a position of ignorance that the reticle should be visible or something like that um and

(2:19:36) they didn't know that they just made that up so once again every single **debunk** has been 100% addressed all the **debunkers** have been proven to be Liars especially the people like Chrisley and T Powell and these people that are like spending thousands of dollars from fake **debunks** they've lied about me they've been lying about the videos they've been lying about their VFX skills lying about everything none of these people have any credibility um nothing they say should be taken at face value and I will not be

(2:20:00) addressing any future **debunks** that they come up with because they've been proven to be frauds they've been proven to be liars and they still owe me apologies related to the fake **debunks** they pushed out there they still owe an apology to the world and and they should the thing is between me is when I make a mistake or something I retract it they don't retract their falsehoods ever so if you're not willing to be intellectually honest then you don't have any credibility nothing you say has

(2:20:23) any credibility so um I don't mean to be mean it's just just the facts guys just the **truth** okay any other last questions um yeah it's it's ning Lee uh I think that you were talking about not Ming Lee but yeah I'm not going to dive any deeper into Diego Garcia it's a good question I I did enough if you want to see I did the lot of stuff early on as well okay Road pilot you just got banned you will never be unbanned either if the 3D Google environment includes a view of the sky it would make

(2:21:08) sense if some of the clouds are from a Google Earth yes because it's clear as organic clouds in both videos yeah there's Beyond any doubt the the clouds in the videos are real clouds no nobody's even **disputing** that actually um because they know that the **debunker** know that um there's making real clouds is practically impossible it's like the hardest thing to do in VFX so this is why it really goes to show how coordinated the disinformation campaigns have been about trying to **debunk** the videos is that they know what they can't

(2:21:36) admit and they're very careful about saying the stuff and not admitting to the stuff that they can't admit um like like they can't admit that it's a 3D rendered environment because that would destroy all the **debunks** as well so they're very very careful about the disinformation that they push out there versus me who I am fully honest about everything that's out there uh I've never said that I'm gonna Patten a device so don't worry about the free energy stuff guys we'll we'll talk

(2:22:01) about that later on in the future Brandon Rudder yeah we're not going to go into that I'm not I'm not going to answer like don't ask me any questions guys any uh personal questions about my family or anything like that just don't ask me those questions I'm never going to answer any of those questions um the woman that that died on thepe was Amy ESD I talk about her a lot you can watch the emerald if you Google go back through my history find the emerald interview I actually just recently spoke

(2:22:30) about her and I even explained what happened to her and everything so it just heads up on that um yeah we're not going to do any petitions the way this is going to work is we're just going to keep making this bigger and bigger until it gets so big that the government has to respond um the videos you can find all the evidence about where the videos came from from my evidence list you can find my watch my own interviews guys so a lot of the questions you guys are asking they basic questions I I would just implore you to

(2:23:01) do some of your own research you can just go through my highlights and you can find all of the information you're asking the questions on uh you can find the evidence list that I posted out there as well in fact I'll even post the evidence list right now for you guys so that no one can claim they don't have it um so here's going to be a list of the evidence link I would probably add more sources on here but everything that you find in this evidence list you can find by just Googling you can find

(2:23:26) the sources for all this stuff um so here you go there is the the Google Document list this is a shared document list you can read this you can make a copy of it for yourself or whatever else you want um and all the questions you have are probably in there as well there's no other cases that have as much evidence as MH370 has let's go ahead and watch um this this this uh trailer for this puon movie or whatever the hell this is that'll be a fun way to actually you know what I think we'll probably end

(2:23:59) on that as well uh let's let's watch this first actually we's watch this two minutes long and then I'm GNA stop after that so let's watch this the moon was hit electricity for only an hour a day barely any food and all you care about is Cosmic you can hear this right this is attention unregistered teleportation his power is unbelievable beyond anything I have seen all we have is now I like you I waited for this stepping in here makes everyone nervous Fe not the game is more dangerous than it

(2:24:49) may seem all the hardships Earth face are a result of the war with Cherno we're about to go play football with what's essentially a nuclear bomb and everyone else thinks this is just a game is that right oh I'm going to probably get copyright stried um this is already really weird it doesn't seem very good this is apparently Cosmo ball and yes it looks like there's teleportation was that Sydney Sweeney I it's easier to risk your life when you know you're supported by millions even if they don't know the

(2:25:27) **truth** Lord understand you guys think it's CGI or do you think that's real oh that guy was definitely the bad guy [Music] four young earthlings with Incredible Powers oo four

earthlings with superpow you show there is something to be inspired by here we [Music] go [Music] power okay well that was that was a thing that was a thing that happened chat um okay guys well it's been a good stream tonight thanks for watching hopefully I answered as many questions as I could you guys got the answers that you want um I've already addressed

(2:26:29) everything including the radical **debunk** like if you weren't watching like five minutes ago when I literally just went over this just rewind it guys again uh the link that I posted uh the the reply in the most recent post that's been going viral has a link to all the reputations of all the **debunks** that are out there um every single **debunk** has been addressed uh there's nothing wrong with the reticle um it's on the person who makes the claim that says the reticle looks false that they have to prove that that's how the reticle should

(2:26:56) look so just for the record guys for basic logic and reason when somebody makes an assertion which is a claim they're the ones who have to prove that that's what it should look like I don't have to address what other people claim something should look like and I don't have to but I do anyway just because I know how disinformation flows so when people say something should look like this it's on them to prove that something should look like this so just keep that in mind in the future because

(2:27:20) I don't want to have to keep addressing fake **debunks** and once again for the record I will never be addressing any **debunks** from **debunkers** that they invent from this point going forward including uh Chrisley T Powell **Mick** West any of these people none of them have any credibility anything they say has no credibility and you should not be listening to anything that they say if you do that's on you but do not expect me to uh address any of those claims I've already addressed all their **debunks** they owe me an apology the family's an

(2:27:46) apology and they should retract the false claims that they've been pushing out there uh until they've done that there will be no negotiation debating or anything with them um so just please understand that I've made this statement I don't want to have to keep making it have a great night everybody I appreciate you guys peace out everyone we'll talk later I'll see you guys [Music] tomorrow out in the fields where the skies are wide talking about a journey through the cosmic ride Einstein and

Transcript:

(01:26) [Music] out in the fields where the skies are wide talking about a journey through the cosmic ride Einstein and Thorn they set the stage for a trip through time across the Space Age wormholes connect distant points in space traversible paths to a far off place no black holes pull no crushing weight just a cosmic tunnel to a distant gate talking Wormhole Stargates negative energy travel through the cosmos it's our destiny MH370 where did it go Bona Tri 7 through a wormhole but we're talking Wormhole Stargates negative energy travel through

(02:14) the cosmos it's our destiny MH370 where did it go B Triple 7 through a wormhole FL [Music] [Applause] [Music] exotic matter negative Energy's the key to stabilize the Wormhole for you and me Quantum vacuums squeeze so tight creating conditions for this wondrous flight static fields and lasers in the lab they play generating forces in a new kind of way gravitational squeezing cast Force negative zones we need to stay the course talking worm star Gates negative energy travel through the cosmos it's our destiny it Mak 370 where did it go B

(03:12) and Triple 7 through a wormhole FL s shell formalism play so fine spherical geometry we realign energy conditions that we must defy for stable Wormhole let's give it a try [Music] on forces balancing the plates creating the throat open the gates from Earth to the stars in a single bound a shortcut through space profound engineers and dreamers hold the key to Future worlds and what we could be with science in hand we Forge ah head through the cosmic paths that we now [Music] tread we're talking wor Stargates

(04:11) negative energy travel through the cosmos it's our destiny image 370 where did it go

going trip 7 through a wormhole flow from the fields to the Stars we break the chains understanding the universe we make the gains littlea CR shines bringing TR to light through his music will'll explore the night with wormholes and Stargates our path is clear exploring the cosmos our Future's [Music] here welcome everybody to the live stream tonight good to have you guys all here let me just fix the volume on that

(04:53) my volume issues have been automatically corrected so thank you guys for being here uh I appreciate it we have a lot of people already in the chat love how active the chat streams are or chat is early on in the streams thank you guys very much I would like to say hi to all of you individually but it takes so long now because so many you guys are in here it's awesome yeah the sign is on fire unfortunately I'm probably not going to be able to get it up on the wall for like another week or so because I'm lazy and uh my dad can't

(05:22) come help me out for like another week sucks so we might be dealing with this on this table for a little bit but eventually it's going to get up here on the wall it's going to look awesome uh but it it looks amazing man so I want to go ahead and say thank you to I want to thank the sign maker so if you guys aren't familiar with the The Saga of the sign I'll just show it again that is looking nice that is looking nice chat oh that looks good uh we had designed out a sign a couple weeks ago on live

(05:54) stream and then I had somebody reach out to me and tell me that they can make signs and that they would do it for even cheaper than what we had priced out uh and it came out amazing I'm really glad like we also had a discussion in the Discord where we were talking about it that later that night about like what the best color was what if you wanted to have the board I'm really glad I went the board like the the square border on the back I really like the square border on the back it looks really really good

(06:21) uh so I want to give a shout out to the people that produced the sign for me uh yes I did pay for the sign I don't like getting things for free um they said if you could direct your followers to the following email so if you're interested in neon signs email the producers of this at skunkworks UFO gmail.com skunkworks UFO gmail.

(06:45) com I'll spell that out s n k w r KS UFO gmail.com for any inquiries into designs signs prints decals Etc they said they would appreciate it and then they said don't stop talking we'll be in touch awesome man uh love it dude absolutely love it great email as well uh so you know let's help out our other four four orbes that are out there uh if you are looking to produce any of this sign kind of stuff reach out to those guys uh they will hook it up they did it really well as well sorry I'm getting this wire set

(07:27) up what's going on here with this there we go that should help uh they did a really good job and they were really quick as well three orbs you no there's four orbs guys four orbs so somebody also asked uh what are uh what was that in the beginning that we watched so I've actually got so many songs now that I don't I have to like categorize them so I'm probably going to spend tomorrow making sure that I got all the songs and then maybe tomorrow's stream I'll

go over all the songs and if

(07:54) I missed any that people produced that are out there uh they can send them to me I did just upload four more songs to my my list here there's a lot of songs guys uh but I appreciate everybody putting the songs together there um damn dude he's wearing a wire yeah I'm wearing a wire guys Jesus's King Taylor says um okay so what are we gonna do tonight we're gonna do a chill uh science stream tonight so I'll answer questions tonight in the chat I'm going to uh pull up some science stuff we're

(08:28) going to review it together uh so that part might be a little bit boring but you can ask me questions while we go which will keep it kind of fun maybe I'll throw in some music here and there throughout the night as well we're only to go for a little bit over an hour probably so it's gonna be a little bit short tonight uh I've just had a lot of stuff going on in the background if you guys have been watching the interviews that I've been doing I've been talking a lot about free energy you can probably

(08:49) have some idea of the stuff that I'm working on behind the scenes but it's just getting busier and busier and busier guys um I do want to try to commercialize free energy so let's just I'll address that first and foremost um a lot of people have been saying hey Ashton you should I solicited ideas like how do we get free energy to the world that are out there a lot of people were like well you should put it on the blockchain you should make it available for everybody the reality is that's not

(09:15) going to be an option um the people that know how to do this stuff related to free energy aren't giving away their services for free uh but I don't think that that's okay because you know free market that's how free markets work everything costs money in this world uh but there are benefits so what are the benefits of free energy and what does free energy mean free energy means the ability to extract unlimited energy from The Ether which is this idea of a device that you can plug in or you just have to

(09:43) get it started somehow and once you get it started it out excuse me outputs more energy than what it takes to run that's over Unity that's coefficient and performance greater than one I like to call it free energy although it's a bit of misnomer and so then you can feed that energy back into the system you can unplug it and it'll just keep running producing energy now the benefits okay obviously this still cost money to produce in fact it's not going to be cheap as far as I can tell uh the

(10:12) materials and the labor is very expensive but the benefits are no dependency upon government uh run Energy Systems so almost all the Power Systems out there have ties to the local municipalities government uh so you would be able to be off the grid I mean you could literally have a house in the middle of the forest with no power lines going to you and you could run it now you'd probably have to have some kind of like satellite Wireless if you want Wi-Fi but you could still if you don't care about Wi-Fi you could

(10:42) literally just run your house in the middle of nowhere which is pretty cool uh the other benefit is no pollution the thing I love about this is that you have like the libertarian side or the right-wing side that want to you know small government they get what they want and then the people on the other side that are like the tree huggers or whatever if you're somebody who likes green energy that's another thing that this type of device would be able to provide for you and then the third side of it is that it potentially can

(11:09) actually save you money I mean over the long run so even if something costs a lot up front uh you know you could save money especially because you don't have any electric bills anymore and if you change your heating to go from like you know natural gas or some of the other heating options and you go to electric heating now you have potentially no no energy bills whatsoever some people are saying that even in the summertime their energy bills are like \$700 for air conditioning and heating per month so you just add that up like

(11:40) you're already at like I don't know uh 6,000 five or \$6,000 a year just for energy that's a lot that's a lot so you imagine that like if there's a device where it pays it off in just a couple years like that's pretty similar to the idea of moving from like a gas powered car to an electric car where you know electricity still costs money for your electric car it just costs a lot less money than a you know fossil fuel run engine a gasoline run engine um so that's how people should be

(12:12) thinking about this business concept obviously very early stages I'm just you know trying to figure out how this would work and if it even can work I do imagine that if this does work that there'll be quite a lot of people I think the demand will be pretty significant for people that want it for the reasons the reasons I just listed um and then and this is just all hypothetical right all hypothetical we're just speaking hypothetically here would be that you know if this becomes a real business then people could invest

(12:40) in the business you know people could actually put money in the business for overunity devices and then you could get a return on that investment if the stock value of the company goes up so I think I think it's something that's really exciting because no matter where you are economically in your life it could be something that you are involved in or that you are just promoting that you want because you want to change the world like I want to change the world like my main motivation is I want to change the world but the reality too is

(13:08) that I I understand business I understand economics and you know that's how a lot of this stuff works so um somebody's probably I don't know where the questions are but somebody ask like about patents and stuff like that yes most likely I don't I don't know how the patent stuff works with like free energy devices so I'm not really sure on that but it would be proprietary information so it's not going to be information where it's going to get put on the blockchain now that may disappoint

(13:35) people I've had a lot of people say the only way you can do this is putting on the blockchain and I say to those people you do it however you want to do it and I'll do it however I want to do it and I root for you just as much as I'm Roo for me you know I just I just want to get

the information out there and now however it gets out there uh my view my dream is that we create an industry and once you create an industry there's no going back anymore once the information's out there it's going to

(14:02) it's going to build up and up and up and up um so I don't know we will see um we will see where this leads you know Step One is finding a device that can be proven to work uh and then step two is building a business model around it and then step three is probably getting it out to people who want to buy at early adopters uh early adopters and influencers uh so I don't know that's just what's going around in my head all the time uh but yes it would be proprietary information that's not going

(14:36) to be out on the blockchain or whatever uh some people say well that's how you get killed I don't know man I think you get killed no matter what so we'll see I'm just hoping to live long enough chat I'm hop to live long enough man we're we're pushing the limit and yeah we are like just think of what we're doing here you're going to get **scammed** you think yeah well we'll see man place your bets if you want place your your bets uh you know if you think that's going to be the

(15:03) case then we'll see uh and if not then um I mean there's a lot to gain and and very little to lose so we'll see when I have more to say on that front I will tell you for sure um but for now I can't say much more but um I think as I said in a different one uh how am I going to build this is good how are you going to buy build an overunity device if you have you need to help to have your dad to put the side the wall great question guys great question I think you can figure that out I'm a business-minded guy um I I can't

(15:36) say more at this point uh when I do have more to discuss I will definitely bring it up you guys can tell how sensitive a lot of this stuff is and when it comes to business ventures you know um you know you have to keep it under wraps until it's really official so um not much more I can say on that front uh one other thing just hypothetically on the on the free energy front you know is that I do imagine a world where the costs come down and there are other ways too right where like if you are a business and

(16:07) you're trying to power an entire building like that can spread the cost around or if you're in like an apartment complex like your apartment complex might want to buy a device and they can power like the whole apartment complex so we should think outside the box in terms of like marketing and business aspects related to it um so see yeah I'm not doing any **scam** my crypto coins I guarantee you that nothing like that chat uh you would win an instant Nobel Prize if you could prove a free energy device uh I doubt it I doubt it Thomas Bearden

(16:42) didn't win a a Nobel Prize and he deserves it and that's what we're going to get dig into next on our science stream guys um what are your thoughts on the two individual stolen passports so this is a great question guys what are your thoughts on the two individuals with stolen passports uh there were two people that had fake passports stolen passports that had changed their appearance to look like the people on the passports on MH370 and this was if you

go back to my confessionals podcast the very first

(17:11) in-person one that I did uh I talk about that this is like one of the aspects that made me think it was Espionage because you would need operatives on board the plane you would want some people on board the plane to make sure everything goes down right and this was like the biggest factor that had me thinking this there's an espionage angle here I was thinking that it was Espionage way before like I don't even know if I had found out about the satellite pictures from China at that point uh maybe I did maybe not but

(17:39) that's why I wasn't sure early on if it was like a UFO event or an Espionage event it turns out it's a mixture of both it's potentially a mixture of both because I I didn't even realize that that could be our orbs back then um so the the thing I love about doing all these podcasts you can watch the evolution of my understanding of the science and my understanding of the case evolve over time which I think in the future it would make like a really great movie Cipher yeah people are already

(18:06) excited about this I love it uh did the tsa try to do a free energy thing I'll tell you this I'm not scamming anybody I'm not scamming anybody that's not the kind of person that I am if I am selling a overunity device then that means that I have seen it firsthand uh I am I am not falling for any scam bull [ ] around it uh and I've already explained to you what the device has to do so if I'm selling it then it's going to do that um and most likely there would have to be a lot of like basically the

(18:42) podcast I was just on that you guys can see it's going to get dropped like tomorrow I talk about this but like there would probably have to be like a mattress tag kind of situation where it's like you can't tamper with this device and if you misuse it then all liability Falls onto you because I don't want people mess with the device and then claiming it doesn't work or you know because that's what they'll do right they'll they'll Tinker with a device they'll Break It They'll claim it

(19:06) doesn't work or they'll claim it's giving them cancer or some [ ] like that um so early on most likely like all risk would fall to the person who's using it uh because that's the only way this can work as time goes on then we can work through what kind of protections people have stuff like that and I would obviously make sure that it's safe before that I'm not trying to sell anything that's going to give somebody cancer just heads up I I don't want to do that either uh so the

(19:35) only thing I would ever try to sell out there something that truly works the way I've described uh and can produce power for your whole house with just a box like a generator that doesn't run on anything no no fuel no no gas no diesel you know I think that would be pretty sweet man let me know when you sign on decide on a ticker symbol yeah we'll do guys um have I been following Terence Howard's Theory yeah everybody asked me this is like the number one question I get these days is about Terence Howard

(20:07) and I think he's a really smart guy I don't necessarily agree with him on everything I think he's similar to me where he doesn't have a background in science and he's seen stuff and he knows that our current understanding of physics is not quite correct um I absolutely agree with him when it comes to The Ether I thought it was awesome when he brought up Michaelson Morley and I'm like wait that's what I just brought up so Michaelson Morley the e is real for sure uh phase conjugation as well is

(20:33) also real he's not using it the same way I'm using it but it's the same idea phase conjugation having the the waves make love um and I don't think he dropped anything about scalar physics but maybe he did uh the stuff I don't agree with I don't agree with the numerology stuff like 1 Time 1 equals 2 I don't agree with that uh that's just because conceptually you know you can understand multiplication tables uh the sacred geometry stuff as well well as the periodic table stuff I'm not really

(21:01) sure it kind of goes over my head uh so that's my opinions on Terence Howard but I do think he's really smart for sure I also think that he opened himself up to a lot of criticism uh because because he went all in on the periodic table thing and the residences and all that stuff he opened himself up to scrutiny and you saw that was the vector of attack of everybody that said he was full of [REDACTED] they all attacked that very few of them I haven't seen anybody attack him on the idea of The Ether uh or the Michaelson moley

(21:30) thing either and we we showed the JW Sawtooth uh counterargument that shows that Michaelson Morley is not irrefutable at all uh so pretty wild man let's see okay what else we got in the question yeah the Iranians are the ones that were the ones with the fake passports um and it's super weird that those people were ignored early on on the MH370 thing like these people were just dismissed and the cover story for why they dismissed them makes no sense at all they're like oh they were just refugees trying to get to Amsterdam and

(22:14) you're like wait but they they were going to Beijing like if you're trying to flee somewhere you want the least number of hops and you certainly don't want to go through a communist country like China on a stolen passport so the whole Iranian Refugee thing made no sense what's whatever to me um so yeah I don't know when it comes to the Iranian stuff and those fake passengers there's something weird about that for sure salvator Pas already has patents with the Air Force for this technology um yeah yeah I've talked to

(22:43) him twice so if you if you don't know that I've talked to Salvatore pasz multiple times you probably should check out the hard truths podcasts on my YouTube channel immediately uh like immediately especially now that you understand the science more from what we've been disclosing so the people that are upset about my plans for overunity as well uh here is the counter I'm literally telling you how the science works I've reviewed videos that go over how overunity devices work if you are expecting someone to show you exactly

(23:15) how the iPhone works well I'm not that guy I'm not that guy I apologize for that I'm not that guy that's never gonna happen um if you want a device that runs free energy well then I'm

potentially that guy I will tell you as much about the theory as I can tell you and it's for you to take it from there if you want to be the person that shows somebody figures out how to make an over Unity device and you want to give it away for free to the World by all means go nuts I'm not going to stop you uh but

(23:45) that's not my plan because I understand how economics and business Works what else we got um yeah a lot of people didn't even know about the Iranians with fake passports maybe I'll pull those people up because there's this famous picture out there yeah here it is and uh okay let me see and then we'll get into the science guys for tonight although it's cool we're just doing a chill stream tonight so this picture right here is so people freaked out because this picture here the one on

(24:25) the left they're they photoshopped this this guy's legs on the right onto the guy's legs on the left and everybody freaked out about it but it's totally insignificant like this was the weirdest thing every back then everybody was freaking out because they're like oh they photoshopped him they photoshopped him so what it's just they moved the guy's legs on the right to the guy's legs on the left this makes no difference whatsoever no difference whatsoever and then you can see this as

(24:49) the passport or whatever this is the only image that matters right here you can tell this guy on the right looks just like the passport the stolen passport they knew each other too they were traveling together two people stolen passports traveling together um and one last statement on this so Michael and some other people are probably very skeptical they think it's a **scam** what I will tell you is that I already know beyond any reasonable doubt that it's not a **scam** okay just I want I'm GNA level with you I always

(25:18) tell you guys the **truth** I already know it's not a **scam** I'm not going to say how I know but I already know when I see it with my own eyes I will probably tell you guys that I've seen it with my own eyes okay so good news is none of you guys are have anything invested into it so if I get **scammed** it's all 100% on me uh so don't worry about that part I I don't like when people concern troll me uh so like if you have followed along when I literally did get **scammed** or with the letter to Ashton Forbes everybody

(25:46) wants to give their opinion on how it's fake or whatever I don't care about your concern trolling save it for somewhere else okay uh so yeah so this is the passport thing and then uh somebody asked about the fractal the banking thing so guys even if you have free energy keep in mind nothing's free so the devices cost a lot of money to make so you know this is where people say well how does how does gas powered cars still exist in in a world we have electric cars well because there's a cost benefit

(26:19) tradeoff now over time energy will get cheaper and cheaper and cheaper and then yes you'll have a situation where energy becomes very very cheap but that's not going to stop it that's not going to break down all the economy it will disrupt it it's not going to completely uh make it obsolete this is where a lot of people think that the whole economy is gonna fail no it's

not GNA fail no no chance of that guys they wouldn't let it fail either they would take me out way before that so uh Bernie is in the chat thank you

(26:50) Bernie crypto Alchemist says uh just did a stream covering the Walter uh Russell periodic tables yeah the that I haven't looked into that yet people linked that to me so I may take a look at that uh next few days but we're not sure oh and this is a great one too so this is one of the big pieces of misinformation that's out there about the Jacob Rothschild inheriting the patents uh this is actually not true um the people that were the patent uh signers on that patent were not even on the plane and

(27:18) that's not how patents work anyway the company would have owned the patents uh but there is I think what is it the Carlisle group actually did invest in free scale so there actually is some sketchiness and freescale the engineers on board this plan this uh fake uh conspiracy theory argued that there was four people with a patent so none of those people were really on the plane that's misinformation but there was 20 people from this company on the plane which is actually bigger even crazier 20 people from that company were on the

(27:46) plane and they were tied to like Aerospace and defense and like advanced technology and uh Advanced semiconductors and microchips so like those are definitely the motive and that's what it makes me wonder if like that didn't get pushed on the internet in as intentional disinformation to distract from the real motive which was the 20 free scale semiconductor Engineers where eight of them were literally Chinese Nationals uh that sticks out like a sore thumb on board that plane guys and they probably will end up um

(28:19) they probably will end up taxing free energy if it were to become a legitimate business model I totally see that happening uh chaotic good it says she's good uh she's a resourceful I or handy lady yep appreciate it um and this is the other thing too I want to say guys if I am able to start a real company around overunity devices I want to help give back to the community if that's allowing people to invest if that is selling devices to people if that is hiring people who have skill sets that want to be part of this um those are

(28:51) things that I absolutely want to be able to do uh no promises of course this is a all businesses are risky most businesses fail that's the **truth** that's what you learn in Business School uh but this just it feels like an opportunity right now just because we've got the following we know the devices are possible we've looked into them uh you know having connections to people that might be able to produce them everything coming together like this and this is a movement too like it feels very similar

(29:20) to when Tesla came up and everybody wanted Tesla to be a thing because they wanted electric cars to be a thing it feels a lot like that to me uh which is awesome and once again there's no **scam**ming or grifting because all the risk is on me all the risk is on me uh no one's going to get sold a device that doesn't work first step is finding a device that works what I will say is this I have had multiple people reach out that um are interested in this model and that's all I can say for right now

(29:53) uh so you know more to come if you know when I get to something where I can announce it or you know have something a little more more tangible if this technology is potentially Planet ending powerful how can it be how can it be put in public knowledge that's a great question that is a great question um there's always going to be risk associated with it in general at the end of the day it's up to us to decide what we do with this universe and what we do with this world we would have to put in safeguards uh I already have it on

(30:23) pretty good authority that the government can already detect gravitational waves so if anybody is trying to produce uh weapon of mass destruction in the United States my guess is they would get a knock on the door before they even realized it so I'm not too worried about that angle I don't think that the devices that I would be putting out there to Market would be ones where you're going to destroy the whole planet you would have to Tinker with it change it around turn it into something that it's not meant to be um

(30:47) but good question yeah uh yeah so have I heard about the NASA guy that's Charles bu so what he developed was like a form of em Drive electromagnetic Drive Electro is that what it is I think it's electromagnetic Drive uh and that's a little bit different than everything else we've been pushing but it's another concept it's like pushing off pushing off the vacuum pushing off of uh The Ether and that's another that's another valid method of propulsion but it's more like Star Trek impulse drive that's like

(31:17) the the lowest level of gravity manipulation uh the next level would be a warp drive where we're seeing like pulling space around you to pull yourself forward like we see with the orbs where they're like literally pulling themselves forward and then the next level beyond that is like macroscopic phase conjugation and wormholes which is uh the idea of literally making a wormhole between two points right like this like a wormhole puncturing through or the idea where you can like literally revert matter down to energy and then

(31:48) back to matter again feron to Bon to Fon pretty crazy I mean all of these ideas to me like mean 100% we live in a holographic Universe holographic princip Le uh you know that to me that's the only answer any of this makes any damn sense you want to call it a simulation call it a simulation but I'm going with holographic principle okay uh let's see what else we got oh also I'm in talks to potentially get on with um is it red pill I don't know I may be adding another streaming venue uh I've had some people reach out

(32:23) to me about joining different streaming services and I am looking into that in general just in case like I don't know if this whole business thing starts up then I don't know my old job's probably going to go away I really I really don't know everything's so crazy in flux right now that's why I'm so busy guys so that's why I haven't been able to keep up with DMS or Discord or a lot of stuff Ohio gaming dyed your hair tonight awesome blonde as F awesome I'm gonna guess you're a woman just because it's

(32:51) not very common for guys to Die the hair blonde but maybe maybe maybe um yeah like JK Philly says don't you think that the government want to tax you yeah it's hard to tax a free

energy device though right pretty hard pretty hard uh they might do something like property tax it's G be tough though you know oh do I think the government will use this to do a project blue beam so good news all the people that think aliens are fake um I am already 100% against the Project Blue beam [REDACTED] so uh it would not surprise me

(33:27) if their plan literally would to use this technology to try to convince the world there was an alien invasion can you imagine like a hundred of these orbs coming down from the sky people would literally think there's an alien invasion and I'm gonna be the guy going n n that's our Tech nope don't freak out that's us that's United States government Tech 100 per.

(33:43) I can actually see Project Blue beam [REDACTED] actually happening and I think we just blew up their whole plan for Project Blue beam like just the fact that I'm out here saying it's our technology like and and waking people up to this that we could have this kind of Technology uh destroys the brainwashing that they could put into place on people that might have been a real plan like that's that's wild I have not been threatened by anybody in the government just a heads up um this is interesting thought what if the Iranians hijacked the plane and

(34:17) then we Zapped it away it's not really an angle I had thought about but yeah honestly if the government's out there and they're looking for a cover story this is a good cover story right here say that the Iranians hijacked the plane and they started the fire and then we were saving the plane and maybe like I would say like honestly CIA if you're listening to CIA this is a good this is a good cover Story I mean do I think that that happened no no no no I think 100% we stole the plane but this would be a good

(34:47) cover story you say like oh no uh the the Iranian terrorists hijacked the plane and then we saved it with our orbs but something went wrong and they all you know perished or something like that like that would be that's a pretty smart narrative I hope the CIA is listening that's a smartass narrative uh I don't if this for sale is about the devices yeah uh I'm not going to dig more into the UN over uni stuff but there'll be more to come potentially more to come on that yeah the grid can't handle everyone

(35:23) going electric which is another reason why overunity devices solve all of that problem to guys I'm probably like way behind on messages here I'm going to go ahead and go down Hermes wants to be my Asian pool boy don't worry Hermes I think we got a spot for you my man you guys cracked me up hey Heather birdie nice to have you here as well uh I'm gonna go down to I'm like probably a thousand comments behind so I'm going to scroll down a little bit um what does holographic reality mean great question

(35:58) guys uh more to come on that I don't know anymore I if you can if we can take energy or if we can take matter and convert it to energy and then return it back to matter to me that means like our reality is like a computer game a computer simulation that's being played out because we're literally just like cheating like cheat codes like literal cheat codes uh but you know doesn't mean life is any different any less worth living no I think I think life is worth living no matter what life is awesome

(36:30) guys if we can make overunity devices and have Star Trek level [ ] going on life is going to be [ ] sweet it's gonna be awesome yeah whoever came out that narrative by the way you just gave the CIA like a nice out right there you really did man Obama's like oh [ ] that dude Ashton he just somebody in his in his live stream just gave us the out guys quick form the narrative tell the media this is what we're going to do the Iranians stole the plane we were saving it and we orbbed it to safety but

(36:58) something went wrong that's why we had to make this cover story like such a good ass narrative honestly really good narrative blame blame the random Iranians honestly people will believe that I might believe it honestly it's a a really good narrative uh the Philip wood texting thing I don't talk about that much because it's just it's hard to R first thing I want to say is he didn't he didn't put his phone up his ass okay he just put it in his underwear or something like this is where like the

(37:24) story gets changed around where like it can't be real cuz he couldn't have jammed his ey I phone up his ass it's like well he didn't put it up his ass he just like put in his underwear or hide it hit it in his butt cheeks or something right that it's just somewhere where they didn't find it that part I have no problem with the part I struggle with is like why didn't he call his call his girlfriend or something you know like or anything other than posting on forchan that's like the only thing I

(37:49) struggle with now I get why you wouldn't post on forchan because reddit's garbage and Twitter back then was garbage as well uh but posting on forchan just seems bizarre I would text message people that could help me now maybe he did maybe he did and that's just been suppressed I don't know um post a video showing how the orbs made a sphere around the plane maybe guys I have to organize my videos man I have uh too many I don't remember what it was called uh we're probably gonna I'll

(38:21) probably save that for next time but I do have those videos actually uh it's called like orb movement or something sorry I'm looking to see if I have it I don't see it right off my search and I have like thousands of videos now so going to probably take me a while to find this orb video thing but there are models that show the orbs movements around the plane which is it's pretty damn cool honestly I like them a lot I'm I'm looking to see if I can find them quickly yeah I can't find them sorry guys okay

(39:02) uh any other questions if I get disappeared I mean just move on with your life I guess or you want to pick up the slack where I left off everything's made publicly available and you know one of you can be the next uh me for sure if you want uh upcoming podcast Martin Gibson I he's probably upset because I like recorded it like six weeks ago and I still haven't posted it uh because I was going to make some edits to remove some of the paes so that'll be the next one after that I'm trying to talk to Tim

(39:32) Ventura Dr Brandenburg uh a few other people as well I've just been I've been wiped out guys I've just been doing too much stuff at once okay I think I answered most of the questions

there oh did Skyfire space end forget what they were talking about today hey Ace thank you very much oh let's get to these donations uh stay safe thank you appreciate it sir uh let's heat it for garlic olives garlic olives oh no no blue cheese I mean if you like gar garlic olives go nuts Deep Space 9 was a great Star Trek that was

(40:10) that was really great honestly uh Deep Space 9 was probably it's pretty close Star Trek next Generation is a little bit higher than it but uh Deep Space 9 is like way up there next to it I was a big treky when I was young I mean I I didn't go to conventions and [ ] like that but I've seen every episode of Deep Space 9 every episode of Next Generation Um I've seen every episode of Next Generation multiple times actually okay okay you guys ready for some science let's do a little bit of science

(40:43) tonight Ashton going to business with the four orbs that kidnapped the plane no I don't think so I don't think so guys I think I would be a white hat though if I if I got signed up with the government I would probably try to be a white hat do think Carl Nell is telling the truth yeah probably I think just if you don't know recently he was talking about I don't what was it aliens exist or something and all this other stuff I don't know I I think those guys are probably telling the truth as they know

(41:12) it but to me like there's so much non-human intelligence can be so many different things that I just the more I learn about this technology the less sure I am like I it could be that aliens are all just a big scop and there's nothing and it could be that there's future humans it could be that there's ultraterrestrials hiding in the oceans or under the Earth like I I really don't know man I really don't know don't you don't need to take a bullet for me but that's very nice of you to say I

(41:38) appreciate it guys um people say ashon get a gun everybody you guys cracked me up man I do appreciate it because like there's a nonzero chance that like something will happen to me but uh whatever I'm not too worried about I'm more worried about like the Psychopaths on the internet and like they're crazy crazy uh stuff that they're coming up with like just like there's like a full disinformation apparatus like trying to discredit me it's so funny to watch it go down you never think as you're a

(42:12) normal person you would never think that you have like these Psychopaths on the internet like inventing fake [ ] about you and all these fake narratives and all this stuff and I have like like maybe three or four full-time employees like fulltime just trying to edit stuff come up with fake ways to like defame me and come up with different ways to discredit me it's just like it's actually funny man I'm like what did I do to deserve all this it cracks me up man my the big the crime that I committed in these people's minds is

(42:42) like I blocked them it's like of course I blocked you you're Psychopaths you're like literal Psychopaths uh it's just too funny so for that crime of blocking people I deserve uh having everything I've ever said out of context how people trying to trifle through my entire life's uh life and figure anything they can to defame me and and try to claim that I'm a grifter or stealing

money from people it's like holy [ ] man people are insane those are the people I'm more afraid of way

(43:14) more afraid of than the government like one of those people is going to like do something because like they're just that they're that Bonkers man they're just disconnected from reality Okay so so let's look uh speaking of which let's look at a couple Twitter posts real quick and then I we've been going for already a little bit I want to make sure we get to the science can I make this smaller there we go oh that's how you can make them the message thing go away damn chat this whole time I could have just made the

(43:47) window smaller and then the whole message thing goes away I would never have revealed DMS well whoops whoopsie uh so yeah this this interview should drop tomorrow I think I don't know whenever this is going to drop elevator Charles good interview check it out if you're interested we talk about the **debunks** as well um fun Story the uh the other person I was with was it Mike Mike right God if it if it's not Mike I'm gonna feel bad I know was Mike um I had him blocked actually I don't know if

(44:21) he had like said something and got blocked but unblocked him uh CU you know yeah I mean people deserve a second chance if they were you know skeptical and and whatever figured it out uh somebody must have retweeted my thing to have 53,000 views on this weird uh okay so I'm gonna ignore some of that stuff oh okay let's let's do this real quick guys dude so this is the **debunkers** like why is **Mick** West still coming at me still coming at me this guy we've broken this guy man we broke **Mick** West dude

(45:00) Lally broke this guy man and he's retweeting T Powell this is the nut job that's like paying thousands of dollars to promote fake [ ] and then I saw this post and I was like wait this is what this guy's claims are like I've had him blocked so I haven't even been able to see the [ ] this guy spews uh but people tell me that he spews a lot of [ ] and talks about me like 247 every single day which is just cockoo you know just you know you need to stop obsessing my dude uh um and then this guy who is this

(45:29) guy so people tag me in this stuff and I see the tag and then I find stuff like this and I'm like who Simon fly this toxic individual is a self-promoting narcissist grifting delusional fantastic [ ] anyone giving him a platform to spew his unproven nonsense for clicks and Views needs to have a hard look at themselves he's a vitriolic [ ] how can you take yourself seriously dude like do you these people have no sense irony it's like they have no sense of irony at all this is like one sentence too he uses the word [ ]

(46:04) twice in the same sentence like this is just straight up like how how [ ] in the head do you have to be to make a post like this like I can't imagine getting this angry how do you get this angry at somebody that you have no connection with you have no idea who they are how do you get this angry chat I I don't get it I guess like are these people just like have nothing going on in their life lives I can't imagine ever making a post like this about somebody in my whole life I can never imagine making a post like this

(46:34) about somebody what did I do like kick your dog like this is the like I just don't get it are they so mad dude why are they so mad or this guy so this guy this is all today by the way like this is all today except for maybe T Powell's post was probably an old post this guy snuck into this other this PhD lady very nice lady researched by she had followed me I've seen some of her stuff and he's tagging me this Kenji guy this guy's off his [REDACTED] rocker this is a random post that this woman put up that has nothing

(47:13) to do with me at all and he starts he starts talking about me Ashton is transparently evil evil what what is wrong with these people I really don't understand it it is wild man some of these people and like he did like a it's it's a four-part post he made here as well and she's like can you just leave my thread like this is like when you tell the psycho person who comes into the Burger King ranting about uh you know how his neighbor like made a you know dug up his uh his lawn or something like just can

(47:49) you just go somewhere else or this is a Wendy's we don't we don't want to hear this like what the hell it does wreak of desperation right it really reeks of desperation uh like it feels like these people realize the gig is up and like this is then then they're just screwed you know and they're just melting down it's so wild so I I decided so I was I took Lulu for a walk so I'm out on a walk and don't worry we'll get to the science in just a minute I took Lulu for a walk and I'm like you know what I I

(48:18) read this post and I'm like because I had never seen this because like yeah like this guy says I've had him blocked for like six months and he's not getting unblocked not in this world not in this life um and I was like wait I can refute all these arguments like while I'm on a walk with my dog while on my phone like just on my phone I'm like I can refute all of these within like five minutes like this is like what look what his claims are uh we know the US knows what happened to the plane not in the

(48:45) slightest the videos are fake that doesn't even really address the claim but okay and then we found amountain of evidence for the fire emergency event yeah we did we have like a witness we have the batteries we have actually 19 witnesses that corroborate it uh the flight path corroborates it some circumstantial evidence but iMat data suggests the plane kept flying for a long time and debris washing off The Reunion Island suggests a plane did crash this is all false and then out the next one we prove that the science is real zero evidence

(49:15) of teleportation of even Quantum particles like does this guy not know that quantum teleportation is actually real like there's actually records for quantum teleportation so I'm reading this and I'm like is this guy just complete idiot like is this guy just complete [REDACTED] and then the last one we found leaker the leaker Edward C Linn Edward C Lin was convicted of Espionage completely unrelated to these fake videos Ashton is trying to fully exonerate the convicted spy so first of all he wasn't convicted he took a plea

(49:45) deal second of all he definitely wasn't convicted of Espionage the government had to admit that it was nothing related to it so this is how easy this is how dumb the debunkers are

like I just I'm honestly embarrassed for the **debunkers** because they're not sending their best right if this is the best that they've got this guy's a complete [ ] like I'm I would be surprised if this guy passed High School let alone even went to college uh because like his arguments are terrible so first of all

(50:17) the videos are real there's no hoaxer no one came forward for \$150,000 the list of requirements rules out anybody except for the government themselves and the Perfection and complexities of vide are completely impractical given the short time frame which they appeared which includes requiring a 3D rendered environment right that's the Baseline if the **debunkers** can't even admit it requires a 3D rendered environment then we're just not even dealing in facts right we got two videos from different angles we got

(50:43) 3D lighting we got clouds matching up we have literally real clouds in both videos they're volumetric with 3D Dynamic Parallax you know it's it's wild so second one was uh the imrat pings that literally proved earlier today I showed a scientific paper from nature that proves Beyond any doubt that there's no acoustic detections anywhere near the seventh Arc which proves conclusively that the iMat pings are wrong there's no other interpretation the iMat pings are wrong which shouldn't surprise anybody we found literally

(51:15) nothing the longest most expensive search in history searched all up and down the seventh Arc and they found nothing like just basic Common Sense this is what blows me away is like most people it seems like a lot of people like 50% of people out there like especially all the **debunkers** they have no common sense whatsoever no just basic critical thinking no acoustic detections for a 777 and before anyone asks the scientific paper literally does the math to find out the exact energy that would have been uh released from the plane

(51:45) crashing into the ocean and confirm Beyond any doubt that the acoustic detectors would have heard it so we know the plane didn't crash in the seventh Arc uh also the debris as well the debris that they mentioned contradicts the location the debris should have drifted in wash the shore in Africa or in uh Australia not in Africa you can just go look at the like if you if this guy had just done like Google ocean currents he would have just seen that the ocean currents flow to the east like I have it linked down here at the bottom

(52:14) I think right I no it's somewhere else I have it linked but the ocean currents flow to the east so the debris actually rules out the seventh Arc the fact that we found no debris rules out the seventh Arc and the imers or the um acoustic protections rule it out so we know that the iMat pings are false there's no arguing against it we know they're false um so if if the **debunkers** want to counter that I'd love to hear a counterargument and then teleportation there's records for teleportation energy

(52:41) and information have been teleported uh recently on May 2nd there was an article you guys can Google it yourself near perfect quantum teleportation where they were actually even able to teleport stuff in the presence of noise so normally with entanglement it has to be like no one can even look at it even looking at it can break down the entanglement but now they're

actually like looking at teleportation with noise going on in the background so pretty wild um and then the last one Edward C Lyn was not convicted of Espionage he

(53:11) pled guilty to mishandling classified information and disclosing secret information to a colleague or to a friend the government literally had to admit that there was no evidence that he was a spy that he exchanged any information with anyone from China so every single thing this guy said was false every single thing and also Edward C Lyn got a 9-year sentence extremely disproportionate the military had to testify that what he leaked was so dangerous because the public available information for what he leaked was like

(53:41) completely mundane so they had to have people testify and then the lawyer argued it's available on the internet so this is why it's just kind of a waste for me to like even debate against debunkers they're total morons and nothing they say is factual everything that they say is just opinions they don't even list any facts ever and when they do list facts they're always wrong they're always just wrong uh there just you know that's what when you say when you say something's a fact

(54:09) and it's not that's called a lie that's what that's what lying is so technically by the technical definition the debunkers are liars uh so I don't know I don't know why it's like a whole thing anyway I really do hope Mick West admits he's wrong and apologizes because he's pushing misinformation here I I it took me five minutes to refute this while I was taking my dog for a walk that's how that's how pathetic these people are and of course Mick West is pushing disinformation and misinformation

(54:35) because that's really what he is Mick West is just a literal disinformation artist and a complete [ ] idiot like I literally do not think that Mick West would actually be able to pass a high school physics test like I I literally don't think he could and he definitely can't even pass a spelling test dude can't even spell my name right it's only got six letters he can't even spell my name right dude is a complete [ ] oh here's the here's the map guys so here's the map I mean just look at the

(55:00) ocean currents they flow East man they flow East they don't flow West here they float East the debris should have washed up in Western Australia this isn't rocket science the amrat pings stop at the exact same moment where the plane goes into the South Indian Ocean like up here where my mouse is this is where the ersat pings completely change right here we're supposed to believe that this 10 rows of data right here is like completely what nothing you know we can fake Perfect videos but we can't fake 10

(55:30) rows on an XL Spreadsheet come on guys and then the idea that the the debris doesn't even prove uh yeah you just got banned uh the debris doesn't even prove that the plane crashed the debris doesn't even prove that the plane crashed this tiny little pieces of debris prove that there's a plane crash this is not even 1% of the plane this is nothing so I don't know why people think that three pieces of of tiny pieces of debris qualify as proving that a plane crashed that's pretty wild to me guys people just need to look at

(56:10) this is this is CNN this is CNN for the CNN brains and if you think these yellow pieces are part of the plane well then you got to explain how an engine cowling an engine cowling like the the edge of the engine washes up 3,000 miles away in South Africa you got to explain that one and then here's the scientific paper you can see right top nature.

(56:30) com have you guys heard of that one nature.com therefore it is highly unlikely for MH370 to have crashed near the seventh Arc without leaving a discernible acoustic signature I highlighted it for them this is a scientific paper there's the math here this also goes through all the math about the uh the jewels of energy that would have been uh created the resulting energy release would be 89 Mill equivalent of 21 kg of TNT or an earthquake of magnitude 2.

(57:04) 1 guys we just don't think that this the Sosa system heard an earthquake of 2.1 so anyway proved it okay guys yeah education system has failed a lot of people you guys ready for some science yeah the Barnacles also so first of all the Barnacles were on the area so they did this test and they have this fla Ron sticking out of the water like this and they go okay this proves this proves that the wind would have blown it to The Reunion Island well problem is there's Barnacles all up the part that's out of the water so that's impossible

(57:35) that means the thing had to be submerged if it was submerged it couldn't have drifted and then they measured the Barnacle growth on it the Barnacles on it and it's only got four months of Barnacle growth which isn't enough for it to have drifted there so literally like these are all facts by the way like I don't know factually the plane didn't crash in the South Indian Ocean okay science time [Music] okay we're going to do a couple science I can't find my quantum counterfactual teleportation where is

(58:07) it I bet it has some weird name and that's the reason why I can't find it oh is this it right here no [REDACTED] is this it no sorry I'm looking for counterfactual teleportation we might go back to that one oh is this it yes chat I've been looking for this counterfactual teleportation uh link you guys have no idea how many hyperlinks I have up I have like hundred websites up in the background Ashen Forbes do you have do you discuss the UN uninterruptible remote control I did read all of uh Captain Dan hanley's

(58:55) report on the uninterrupted Boeing autopilot it does seem like there could be that could be a factor at play uh there's no way to prove it I have no idea how to prove it but if we can teleport an airplane we can certainly remote control an airplane there's no doubt whatsoever how did it get teleported well the orbs are doing the teleporting I I think that what we see in the video is a wormhole so while I get this up in the background I will play the videos for you guys I'll play the Drone video so you

(59:26) guys can watch for yourself while I'm getting this up what you're going to see here seems to be the uh the first ever publicly available Wormhole oh this is a good quote ugly American 09 I can prove Chrisley's retical hoax argument Wrong by the way I studied geospace intelligence satellite imagery and remote sensing light Arts an artifact in the sensor of the camera can show you many drone gun camera examples where the reticle appears behind the

object yeah we've already kind of figured that out um the **debunkers** hav an

(1:00:04) admitted they were wrong yet about that uh but you're like the fifth person to corroborate that information and we of course that was the reason anyway because the videos are real so um I do hope that Chrisley issues a retraction on that because she got caught in a lie um and she should have been more careful before they pushed it but it goes to show like they're not they don't about lying like Chris doesn't care about lying T Powell these guys don't care about lying they are pushing disinformation they are trying to uh

(1:00:35) confuse people and try to convince as many people as they can that the videos are fake uh but ugly American 09 if you want to uh ping me or whatever I don't know how to figure out what your chat thing is you can send me the information on on X you can DM it to me if you want later uh if I'm not following you then you just have to send me you have to tell me who you are so I can find out who you are and I can follow you back um appreciate it though what's my opinion on the Philadelphia Experiment I wouldn't be

(1:01:05) surprised if this technology we're looking at right here goes back to the Philadelphia Experiment this what we're looking at here is not the first version of this no way no way they've been advancing that what you just saw right there that's not the first version you you don't start out with the floaty orbs that are teleporting airplanes um so I think that most likely this goes back many decades like this that's the scary part about this science maybe we could recruit Bill Nye the Science Guy to do kids messaging on

(1:01:32) m370x he's actually a **debunker** Bill Nye is actually on the the fellow board with uh **Mick** West uh so I don't think he's gonna help us out okay guys I'm gonna have to switch over to science here oh he's oh oh awesome ugly American's going to do a video that's even better man you do a video that shows the retical **debunk** is fake and I will retweet the hell out of that make sure you at me but if you if you do it in the middle of the night I'm not going to see it you need to do it during the day or something or you need

(1:02:02) to get into our Discord and then you can post in the Discord so I can see it uh but yeah if you do anybody who does de uh **debunks** of the **debunks** that's almost a guaranteed uh retweet and for the record I do not do uh don't ask me to retweet your content I I don't do that kind of stuff uh just to be fair to people I don't do it um and also to keep the Integrity of the investigation I don't do it uh but if you are making stuff to the case like **debunk** stuff whatever then you can show it to me and

(1:02:30) if I like it I'll retweet it uh I did just post a link to the Discord in the chat so if you want to join the Discord there's 25 invites right there if anyone's interested okay uh I'm not going to answer any more questions on MH370 for now we will uh we're going to dig into some science and then we'll I'll answer more questions at the end so if you have a question that I didn't answer um wait wait till after the science is over and I'll answer a few more otherwise you can ask me tomorrow a lot of the stuff you

(1:03:00) guys have asked has already been you can look through my highlights and you can already find all the answers your questions as well so if I didn't answer your question I guarantee you every question that's out there has already been answered and asked so you can go to my highlights my Twitter profile just start scrolling through my highlights all the highlights my highlights are only MH370 stuff uh I don't put any else in the highlights so you don't have to dig through everything yeah no Martini tonight guys

(1:03:25) I had chicken before the stream okay let's take a look at this counterfactual quantum teleportation so there's a few key points in [Music] here thank you digital K guys I don't think what kind of chicken I had is super important um so counterfactual quantum teleportation so this is important because like I said the noise is a problem uh quantum teleportation has to do with entanglement and entanglement is uh similar to double slit experiment in double slit experiment When You observe the measurement the wave function breaks

(1:04:17) down so what we need is we need the wave function not to break down so what this experiment talks about is this idea that you can transmit information to allow the quantum teleportation to occur without disrupting the entanglement that's what this this experiment is basically talking about um this means that while quantum teleportation is a clever method to leverage the kind of strong spatial correlation that can only that only occurs in Quantum systems to transfer an informational state or energy from one

(1:04:48) system to another with 100% Fidelity it is not the kind of teleportation we generally think of when something is instantaneously transferred from one location or Recon SED from one location to the other so quantum teleportation right now only has to do with like energy and information it doesn't yet have to do with moving a whole person and that's why the MH370 videos are so big because it completely changes the Paradigm now it does say here though as well that uh there are mechanisms such as traversible wormholes a Rosen

(1:05:20) Einstein Rosen Bridge uh and that's where it starts talking about this idea of E equals epr so if you're not familiar with ER that's Einstein Rosen that's Wormhole and er equals epr is the idea that quantum entanglement quantum teleportation could be equivalent to a wormhole a real Wormhole and that's what's going to end up being proven in the future uh because we are already seeing it in two military videos is we can just tell that the government is decades ahead of the public in this

(1:05:49) perspective okay um sorry I didn't take a good enough notes here so I'm just skimming it real quick okay so the counter uh counter portation or counterfactual teleportation experiment basically what they're going to do here is they're going to exchange the cubits of information without ever measuring the state okay so they're not going to look at it it's like not looking at it they're going to be able to figure out how to measure it without looking at it so how do you do that how do you measure

(1:06:25) it without looking how do you do the double slit experiment without actually measuring it how do you figure out which slit the photon goes through without measure in it it's

that it's that kind of idea so they developed this protocol and this protocol that they developed here uh then allows the information to be transferred which is like normally you're talking about Alice and Bob A and B on two sides of the Wormhole and you're passing information Through the Wormhole or the quantum entanglement to the other side but you

(1:06:55) need to do that in a way where you don't have to measure it because if you measure it it's going to all collapse so this right here is how they do it with the experiment which is pretty interesting they're using uh mirrors here to split the beams and so the idea I think is that you're going to measure it somewhere over here so you're going to send that information over and you're going to have it keep splitting and then you're going to get to a situation where you have your detector way down here and

(1:07:21) that that detector will tell you information about the process process without breaking down the transfer of the information so this is kind of similar to if you guys were with us uh the yeah someone said look into the future yeah it's very similar to the delayed Choice Quantum eraser experiment uh it's very similar process I think in terms of how they have this set up now why is this important it's probably bigger than even understanding it because this really opens the door now to like what a requirement would be

(1:07:53) to create a real Wormhole that's going to be stable that's not going to fall apart because otherwise what I was thinking with respect to that m370 videos is like you have to do a measurement and doing the measurement would allow the plane to like appear over here so you would say like you're going to stretch the rubber band and then like you would do a measurement and when you do the measurement then poof the plane disappears from over here and reappears over here this opens the door where we don't even need that

(1:08:17) measurement anymore where you can like flip a switch and once you flip the switch you're going to get your rubber band to flick so to me this is why I found this paper really interesting I'm going to put this in the chat for you guys hey Pete nice to see you man welcome from Spain I love that there's people all over the world who are watching by the way and not just in America oh Charles donated I don't know what our dollars are but thank you very much I appreciate it do you think there's any possibility of inventing

(1:08:45) teleportation without quantum physics considering is essential to understand and manipulate the fundamental properties of matter and energy no I think quantum physics is absolutely required and I think it is uh um irrefutably linked together with the teleportation we're seeing in fact the macroscopic phase conjugation uh variant of it I think is literally turning Mass into energy and energy back into Mass again which is like literally rebuilding the wave function in the double slit experiment and that is straight up quantum physics

(1:09:17) I think all of this quantum physics is the basis for everything related to the to the videos uh because it goes to show what the real underline frame work of our reality is and that's what leads the idea of the holographic principle is that and unification theor is we don't understand why Quantum things seem to work differently than very large things that we see like

this bottle why is why is this bottle if I drop it going to break into a million pieces but if it's a Quantum bottle it's just going to go

(1:09:41) right through the floor you know that kind of stuff stuff that's basically just magic pretty wild yeah people have talked about the Crov mirrors as well which is like seen into the future I think that this opens the door to that kind of stuff as well because the delayed Choice Quantum eraser experiment if you look at the model of how it looks it looks pretty similar to this in fact what you'll notice is there's a lot of interferometry interferometry is like having the beams uh connect and what have you split and connect you're going

(1:10:11) to notice there's a lot of that in these experiments that's something they all share double slit experiment the delay Choice Quantum eraser uh the uh michelon Michaelson Morley experiment they all use interferometry they're all very similar to this and this is also very similar to holography when it comes to Optical phase conjugation and macroscopic phase conjugation they all have very similar configurations which makes you wonder is there a connection between gravity and light because this is all using lasers and stuff like that

(1:10:46) so what is the connection there there's obviously some kind of connection here which I think is really interesting that's why in the future one of the additional papers that I want to go through is if we can use light like laser beams to manipulate gravity which I already think we can like high powered pulsed lasers uh pulse lasers potentially like uh Salvador Pas is mentioning uh high frequency gravitational wave generators I think that lasers are the key to a lot of this stuff uh but I think it can also be done with like

(1:11:13) sound waves as well uh I think there's several different ways to pull out yeah people say that delay choice Quantum eraser is **debunked** I I don't think that they can they really understand delay Choice Quantum eraser uh people **debunk** a lot of stuff especially YouTubers that **debunk** stuff usually they're wrong um I looked at it myself and it seemed very plausible that you can glean information from the future to the past which is essentially a form of time travel um and I think that what people are going to realize in the future is

(1:11:45) that time is not linear and once you realize that time is not linear you realize you can cheat and look forward a little bit or look in the past a little bit and once you open the door to that then the time aspect of this stuff is going to get wild chat real wild um now let me see what else we got here uh there's a part here where it talks about maybe I'll just read some of the rest of this oh there still okay there's not too much we're just going to read some of this chat okay similar to the Quantum energy teleportation protocol

(1:12:27) the counterfactual quantum wormhole teleportation protocol leverages the fact that entirely separate Quantum systems can be correlated without ever having interacted via the intrinsic strong spatial correlation of the vacuum entanglement this correlation at a distance can then be used to transport Quantum information qubits from one location to the other without a particle having to physically Traverse the intervening space revealing the integral multiply connected SpaceTime geometry of the micro wormhole Network that connects

(1:12:56) everything okay chat this is huge this basically says that everything is secretly connected in the background and this is how we can literally teleport information as as actually possible this also opens up the idea of The Ether why is The Ether important because once you break through the ether you break through the medium uh then you have a situation where light can travel infinitely fast hypothetically if light can travel infinitely fast that means that all two points in space and time are connected in a in a way that we

(1:13:25) don't perceive this is another reason why the ether is so important I actually forgot about this but this is why the ether is so important is that it represents the idea that light can go faster than what we imagine is the speed limit of light and that begins to really question special relativity uh otherwise special relativity would say you can't do any of this stuff and this is why people struggle a lot of Einstein stuff is going to get Einstein did a lot of amazing stuff but we are going to have to improve on

(1:13:55) some of his uh his scientific beliefs spooky action at a distance uh kind of ask some pretty tough questions for Einstein uh this is just a paper you can see right here at the top I post it in the chat already I'll post it one more time if you guys want to watch for yourself the experiment to test counterfactual quantum wormhole teleportation protocol will utilize cavity Quantum electrodynamics in an optical setup where it can be demonstrated that communication has been achieved without detectable photons

(1:14:24) traversing the channel between between the two communicating parties often referred to as Alice and Bob no measurements are carried out between an initial Quantum State and the final Quantum State and hence an underlying physical state a traversible wormhole is what has carried the quantum information across space such exchange of such exchange free communication is only explainable via Malina susin  $E$  equals  $e$  holographic correspondence in which Quant States like entanglement of cubits are equivalent to or a manifestation of a

(1:15:01) quantum wormhole connection through space between two systems yatsi godamn do I love being right or do I love being right guys this right here this paragraph that we're reading basically begins to open the door up for a real Wormhole a real traversible Wormhole to be possible um this is why I wanted to review this this was the paragraph that I remember reading uh because like you just read it right there guys if we can transfer information across SpaceTime with no measurement whatsoever like it's it's

(1:15:34) Star Trek time man it's Star Trek time once you open the door up to faster than light communication and you're actually transferring information if you can actually transfer information now you've already proven that all the stuff that we think is impossible is possible and then it's just a matter of scaling it up to do it to somebody's all the information that you see about who I am in the location that I am in SpaceTime so this is what's wild about it and then I think it's going to be

(1:16:02) easier because we don't have to a lot of people say well it's impossible because like this bottle you have to map every atom in this bottle to teleport it no just surrounded in a

bubble just surrounded in a bubble we don't have to map every atom just surround the size in a bubble like the orbs are doing around the plane and just teleport everything around the bubble right instead of trying to figure out all the atoms just make a bubble and teleport the whole bubble poof there you go problem solved

(1:16:29) that way we don't have to worry about mapping every single atom the experiment proposed by Hayden will implement the construction of a universal exchange free 2 Cubit computational circuit or grade to counterfactually teleport an unknown Quantum state from one or more senders to one or more receivers across space via local Wormhole an experiment that if successful will be a demonstration of Ham's counter pration uh counter portation protocol and the primary holographic correspondence conjectures of quantum gravity oo

(1:17:02) chat oh this gets me hot chat when I read about teleportation and wormholes it Heats Me Up chat it gets me spicy I love it absolutely love it I just love that wormholes are a real thing I had never thought like when this investigation started I didn't think wormholes were a possible thing like I didn't even realize how much science there was around them and then I started reading Juan mic's uh traversible wormholes and I find out about ER equals epr and I'm like holy [REDACTED] this is actually real and

(1:17:35) then I'm like wait okay so can we actually do this oh yeah yeah the government's figured it out like decades ago oh okay cool cool cool it's like man people think the government's like I used to think what people were joking when they were like oh the government's 30 years more ahead than the public now I'm like nah it's more like a hundred years more ahead like they they're like in the break way civilization category at this point it's wild uh let's read this last couple par

(1:18:02) oh four paragraphs okay we'll just read it real quick the concept of exchange-free quantum comp computation communication has significant implications for the unified physics model expounded on by herine and brown which describes an entropic Force en engendered from the temporal entanglement and information exchange across the multiply connected geometric networks of SpaceTime uh more termed the unified space space memory Network our work explains the ordering mechanism underlying dynamical processes such as

(1:18:32) the evolution and development of General physical systems in the universe toward ever increasing levels of order and organizational synergetics leading to the emergence of living forms of matter I.E the living system why is this part important here because the ether is essentially negative entropy so think of the ether as nothing and then imagine a line just getting bigger and bigger that's complexity increasing so what happens when we break through to The Ether it corrects itself right away closes up right away to me that's what

(1:19:05) this is explaining this idea that complexity everything we see the mass and matter is what's laying on top of the ether and it's spreading out like the paint all over the ether yeah space memory is this idea that like okay and this is explains to me like when you see the zap happen why does it just close up right away why is there not some some type of explosive event

there because it's like a phase transition between The Ether and our SpaceTime it's immediately autocorrecting itself through some type

(1:19:35) of like memory mechanism or something I don't know the same info entropic Dynamic underline generalized evolution of organized matter in living systems is Unified with the propensity of some forms of organized matter in the universe to exhibit intelligence often and arguably arising from or correlated with the attribute called consciousness the Dynamics which we further explain are linked via trans temporal information exchange generated morphic resonance via intrinsic Wormhole connectivity circuits of the vacuum

(1:20:04) Quantum vacuum which are integral to intelligent systems via the space space memory Network basically this is saying that our bodies are receiver and that our souls and Consciousness come from The Ether I think that's a cool idea um okay actually I'm going to probably skip the rest of this oh let's do the last paragraph cu the Consciousness stuff is great but I don't I don't want to dig too much in the Consciousness stuff I think it's it's really cool uh but it's not the most important thing

(1:20:33) for me personally uh after we fck out MH370 I'm gonna dig into all the crazy [REDACTED] though chat I'm gonna dig into all the crazy [REDACTED] oh boy oh boy if we get we get a solution MH370 oh [REDACTED] I am I am popping off I'm gonna dig into all the craziest esoteric Concepts conspiracy stuff out out there I don't give a [REDACTED] we're going to dig into all of it but for now no we're going to keep it straight keep it on the up and up okay another Salient uh Salient implication is the necessity of developing a

(1:21:09) communication technology that is not limited by the speed of light in order for human civilization to survive far into the future it must Master Interstellar travel at Interstellar distances communicating via light signals like radio transmission is not Fe feasible even or without even regarding the power requirements of sending a strong enough signal over light years of distance it is completely impractical to have a multi-year transmission time over eight years just a send receive between us and Alpha sario which is the closest star system

(1:21:42) this is why SEI has not detected any radio Transmissions technologically advanced civilizations are not communicating via electromagnetic signals instead leveraging the int intrinsic spatial entanglement of the quantum vacuum and the multiply connected Wormhole network of SpaceTime it is more likely that advanced civilizations are utilized in a form of exchange free Quantum communication and this may be our best bet for Interstellar Parx spanning communication technology so the Practical and experimental proposal by hatim Sali

(1:22:14) could not be more important and perhaps it will lead to a path of research that one day realizes quasi instantaneous communication and computational Technology G guys to me that is wild chat um because I I believe that if we can teleport a plane we've already figured out faster than light communication faster than light communication is like before we get to any of this stuff so uh you know just listening to that doesn't that make so much sense I'm GNA go ahead and save this in here I'm G to close this

(1:22:51) out oh we're going to do Lauren Transformations a little bit later okay so the quantum teleportation stuff is amazing and the faster light communication basically they're saying like the reason why we haven't detected any signals from other species is because no one's using electromagnetic signals it takes way too much energy and it takes way too long to get anywhere we're going to use something like Gunter nimitz's faster than light communication protocol or something like quantum teleportation if all two points in

(1:23:18) space and time are connected then we just abuse that and we just use quantum teleportation to literally create faster than light communication the government's already figured it out like 100% sure MH370 videos are real it means we've already figured out Quantum uh faster light communication Quantum communication and this is where why Professor Simon Powell wanted to talk to me wait is it Powell or Howell Simon Howell right oh Holland sorry yeah I don't know why uh so the reason why Professor Simon Holland which shout

(1:24:01) out to him because I saw his video on faster light communication and I was like that's real I know that's real and he's like yeah I have a source and his he wouldn't say who his Source was and his Source said that seti has already received faster than light Communications and that they're using it and I was like yep that that that jives that jives with what I'm saying so this is the reason why he wanted to talked to me super cool guy uh fun to talk to he just did an interview with Jack sarfati

(1:24:28) if you guys want to check that out as well uh shout out to uh Professor Simon Holland okay next thing what's next on the list chat so we finally it took like a week guys but we finally got through the counterfactual quantum teleportation protocol finally um okay unitel where's my unel [Music] stuff okay if you guys were not with us in the early days you probably never saw the unitel stuff I think this is it right here yeah okay here we go ch- ching ch- ching ch- ching sorry I have like a hundred uh Pages open in the background so people

(1:25:30) are GNA be like what is unitel so unitel was this website that we found which I don't even know how to describe it uh but it's just like an archive of like a bunch of super smart people in scientific papers and they were talking about teleportation and gravity waves and all kinds of crazy [REDACTED] this was even before I knew who Thomas beard in was and where is it let's look at so there's this website I'll pull it up here for you guys so this website huh I don't know why the is the website

(1:26:27) yeah so I started looking up like teleportation and stuff like this somehow we found this website unitel first practical Interstellar transportation system this unitel type 6 Moss vehicle requires a three-part laser lens and charged hole to produce specific Quantum effects in order to be used for propulsion the Moss The macroscopically observed able superconductive State what when I read this the first time and I was sitting there talking about super conductivity and teleportation I was like how does this exist pertains to A system that is

(1:27:07) observable on a larger scale yet bound to the same laws Quantum laws as subatomic particles the fact that atoms or particles can exist on a macroscopic scale was recently proven

with the creation of Bose Einstein condensate a proven Moss system huh so macroscopically observable superconductive state is Bose Einstein condensate so there is a connection this is the connection people ask what is the connection between superconductivity and the answer is superconductivity is what leads to these macroscopically observable super or uh

(1:27:42) Quantum states which you know we want to go from quantum teleportation to macroscopic teleportation then we need to take that Quantum State we need to scale it up we need to make it macro scopically observable how do we achieve that we achieve that through super conductivity uh I'll try to find a better link oh is this it right here no see the old website's gone I don't remember I have it somewhere Guys these were just like old web pages that I had open on the background for like months and months and months and months and months

(1:28:16) so I don't know that I have the link to it I'll give you guys this link here uh I mean look at these applications I'll give you this link here if you guys can find the other link I good luck and then here's the science link to this so maybe it's on this this link right here I don't know I I just put them in the chat for you guys so if you're in if you're in uh X right now then you should be able to see this so uh you probably don't need the baker thing in there to for make that

(1:28:45) work by the way uh macroscopic Quantum tunneling okay and then let's see what else we can say for traveling huge distances such from Earth to a NE solar system our ship will tunnel tunneling is a commonplace phenomenon at subnuclear levels and occurs in semiconductors nuclear fion and the tunneling electron microscope unitel will use the lens to generate electromagnetic buckling waves denoting a direct interaction with the Zero Point Energy the zp is found in the vacuum of space they're talking about The Ether by

(1:29:21) the way chat it is referred to a zero point because the energ is not thermal in nature the Zero Point Energy consists of quantum random Quantum fluctuations AKA The Ether acting as a single giant electron oh oh acting as a single giant electron the unital spaceship will tunnel through the fabric of SpaceTime to arrive at the calculated destination the same distance could take eons to travel by conventional means in this manner our vehicle will demonstrate super luminal or faster than light cap capabilities scalar

(1:29:57) Fields fill the universe and mark their presence by affecting the properties of Elementary particles scalar fields in nature can generate mass by the expansion of the wavelength of quantum fluctuations large fluctuations such as those produced by a propulsion system May alter The observed properties of physics the unal vehicle with its charged hole surface and projected laser plasma will polarize the scalar field underlying the elementary particle in our universe and organize the quantum fluctuations coherently to make them

(1:30:29) large enough to alter the physic locally in order to provide instantaneous Transmission in SpaceTime coordinate to any other that sounds a lot like teleportation chat sounds like teleportation with extra steps chat yeah we might have to post this chat holy smokes uh we're gonna goe and save this someone needs to find this website this website doesn't exist anymore I don't know if it got taken down oh it's too large come on man well that's interesting holy [REDACTED]

chat you guys just realized they're talking about exactly

(1:31:09) what we see in the videos right uh the part about turning into a giant electron that's super conductivity so imagine if you create a a super conductive uh electron wave now you're electrons are acting like one electron that's super conductivity now I'm I'm understanding better and better why superconductivity is so important this we're literally cheating the system this is actually very similar yeah this is literal mindblowers every day man every day we're just Banger after Banger in the streams man this is

(1:31:43) like what uh Roy D Herbert was talking about the electron extended electrons around the plane you create an electron wave around them or your field if you want to imagine with the orbs actually probably like this cuz they're vertically around the plane and then that's causing the entire area with inside the plane the Wormhole to act like one giant electron and once it's acting like one giant electron now you've achieved your Quantum state so now I'm even more confused as to whether or not it's really a wormhole or if it's

(1:32:12) really just macroscopic phase conjugation I really don't know yeah this is blowing my mind chat I mean what the hell this wasn't even what I wanted to look at today I only came back to this because you guys asked me about finding the The Source let's look through this but I did want to show you this unitel stuff because like there's this there's something here man there this like whoever made this I don't know who made this unitel where this comes from oh oh yeah there's even more I

(1:32:43) remember this as well I think this is the website this one laser propulsion so this is like em drive or something I I remember there was something here let me do a quick search on my Twitter to see if I've posted about this oh yeah here we go February 14th 2024 so this was four months ago four and a half months ago we found this macroscopically observable superconductive State oh that it was already what I just read actually yeah it was what I just read but it added a note in order in other words one is faking out Mother

(1:33:36) Nature by creating a unique device which will circumvent the macroscopic laws of general relativity and use the magic of quantum mechanics which only applies to Quantum sized particles that's actually somewhere in here oh here it is it's right here it's lit right here this is this is what I was just reading right here chat yeah this is wild this is wild this is real oh monopoles even though monopoles have not yet been observed okay we we hit the to we hit the mother load chat we hit the mother load I'm only doing an hour tonight chat

(1:34:14) hour and a half in uh I mean this is this is getting spicy chat this is really making me wonder okay even though monopole have not so here's the thing too chat even four months ago when I saw this like I still didn't conceptually understand it well enough now that we've had a much better understanding of scalar physics and we've seen all of Thomas Bearden stuff all this is starting to make more and more and more sense I'll post this link in the chat here as well please look through this guys if you are in the

(1:34:44) Discord uh and you want to look through this and you find any good quotes from it put it in our uh I'm going to make a new science channel for people for now just put it in the general Channel um if you find anything good so there's a the link to it there for the people in X you can copy and paste or something people who are in uh YouTube you can you can click on it directly from my my link okay so monopoles oh and RF wave guides oh boy this is spicy because now if you guys have been following on long enough you're starting

(1:35:15) to see patterns in the scientific Concepts we see Thomas Bearden talk about this stuff we see this stuff with freescale semiconductors we are seeing it in stuff like these papers there're these common themes to the same scientists in history the same scientific Concepts over and over and over and over again so even if you don't understand all the science you start to see the same stuff over and over again and this is how you build your knowledge up this is why I say that anybody can understand this stuff it doesn't you

(1:35:44) don't have to be special or anything like that okay we will be able to produce okay so let's see even though monopole has not been observed there have been successful applications of helically wound Optical fibers and RF wave guides producing monopole effects such as parallel transport on a macroscopic scale we will also produce parallel transport I haven't heard this term which is purely a geometrical effect with our pulsed spiraling laser plaque PL centrifugal force is exerted on the projected plasma is directed towards the center of

(1:36:36) the circular motion of the spiraling plasma not away from it this phenomenon is attributed to the massively rotating charged negative naked Singularity at the end point of the projected plasma chat I'm going to get [REDACTED] killed we are over the mark chat we are over the target chat oh boy chat uh yeah we are over the target this is what we're seeing in the mh37 zero videos holy [REDACTED] who wrote this who wrote this chat yeah they're talking about the Taurus this is I'm that when I read something that's like so over the mark

(1:37:25) it scares me so what are we looking at right here guys we're looking at what they just described here with these orbs that's what they're describing it's a plasma that's shooting some kind of laser to create a magnetic monopole oh boy oh boy the Heat Signature right there you can see the Heat Signature rotating on the axis just like that that thing just explained look at that heat signature right there oh boy boy we got to read that yeah what year was this chat what year did this get 2001 is that it anytime I read

(1:38:00) something and I'm like oh well that's what I'm looking at the ma370 videos that's what freaks me out the most because the key here the thing that gets people shut up is when they piece the stuff together and we've been piecing the stuff together on live streams every night look at those look at the orb movements there look at that oh my god um okay let's read that again um we will also produce parallel transport with our pulsed spiraling laser plasma man no wonder salvator pz was like you figured it out like I was

(1:38:39) selling the can we do something with like a laser like this he he was probably just sitting there like afraid to say anything because he's like yeah you've pretty much nailed it he

doesn't he wants to be like yes yes you've nailed it no wonder Salvador pz is like sitting there telling me like you're going to be a great man one day well cuz I'm [REDACTED] just literally intuitively figuring out exactly what's going on in those videos Man literally look what's going on on these videos spiraling laser plasma

(1:39:07) centrifugal forces is exerted on the projectile plasma is directed towards the center of the circular motion of the spiraling plasma that's going to probably I bet you anything that forms our testle symbol that we see this phenomenon has attributed to a massively rotating charge negative naked Singularity at the end point of the projected plasma massively rotating charged naked Singularity I this I think he's just this part this sentence right here I think is literally describing the Tesla symbol in the

(1:39:41) orb I think this is literally describing the Tesla symbol in the orb right here that's what I think this is describing right here like what Bob Greener was talking about where's the dam do I have the damn image Lulu Lulu come on she's trying to get in my room I can hear her scratching come on girl oh yeah here I have it I have it chat we have it oh we have it I saved it recently guys this is what the [REDACTED] doe was talking about this is what the doe thing was talking about chat shat look at this look at

(1:40:18) this chat I think this is what they're talking about right here with this orb this phenomenon is attributed to the massively rotating charge naked Singularity at the end point of the projected plasma so it's either they're talking about right here shooting out but it's shooting Inward and it's creating this field around it right here and look at the doe this one on the right is from the Doe's Twitter from like a couple months ago look at the one on the right it looks it's it's identical the heat signature

(1:40:50) on the Doe's orb is ENT identical to our orb identical even you notice how it like cuts off right here as well this orb does right here as well the Heat Signature Cuts off towards it it like Cuts back towards the middle right here it's exactly the same this is not a coincidence this was something on like their plasma physics they posted something about plasma physics on the doe and I saw this picture and I'm like what the F this is exact same thing we're looking at it I think this paper is explaining

(1:41:28) it how how can people think this is fake man there's no video in the history of the world where you can go to this level of corroboration we're pulling pictures up from the doe Department of Energy's Twitter profile and they have heat signatures that match our orbs this was posted on D's website a few weeks ago these videos are from 2014 10 years ago this is going to be better than any movie ever any movie ever guys who should play me in the in the in the movie about MH370 hopefully I live long enough to to

(1:42:04) watch my the movie written played about me Jim Parsons uh it's gonna be either Jim Parsons or uh Jesse Eisenberg or Michael Sarah one of those three guys that was wild okay is there any more is there more chat oh is there more this three-phase projected plasma confines the exonic gases and provides a path of parallel transport a fine connection that automatically

aligns the trapped charged particles in One Direction like the atoms in a magnet these particles then move without resistance in a super fluidic fashion

(1:42:47) excitations perfectly replicate the information particles called phonons Cooper pairs oh he talking about super conductivity superconductive harmonic orbs chat however exons can carry the same information in the vacuum as phonons cannot operate in a vacuum the excitation mechanism in a superconductor phonon mediated electron electron interaction is replaced by excitons as the cases phonons the exons exons cause the electrons to attract forming bounded pairs S as C it's literally explained high temperature super conductivity this is actually

(1:43:26) explaining salvator P's high temperature super conductivity this literally just says plasmas can create like basically super fluids where Cooper pairs begin to form to produce superc conductivity without low temperatures that's what this is explaining right here those orbs are super conductive harmonic orbs like I literally nailed it before I even understood this super conductive harmonic orbs scalar Fields F I mean we got to post this tomorrow guys this is [REDACTED] wild this is just this is blowing my

(1:44:12) mind man this is just literally blowing my mind oh come on paste comment text a [REDACTED] this is wild okay scalar Fields like what can is there going to be more like this is I've already got more than I was even expecting tonight and we didn't even get to the papers scalar Fields fill the universe and matter and mark their presence by affecting the properties of Elementary particles scalar fields in nature can generate mass by the expansion of the wavelength of quantum fluctuations huh large fluctuations such as those

(1:44:49) produced by our propulsion system May alter The observed properties of physics the unitel vehicle with it charged Hall surface and projected laser plasma will polarize the scalar field underlying the elementary particles in our universe and organize the quantum fluctuations coherently to make them large enough to alter physics locally in order to provide instantaneous translocation from one SpaceTime coordinate to any other wow they're talking about creating wormholes polarizing SpaceTime one way or the other how many times did Dave

(1:45:23) Rossy mentioned this on our interviews I think he's mentioned this multiple times about polarizing it this is what they're talking about they're talking about creating coherence qu coherent Quantum fluctuations a CO what's a coherent Quantum fluctuation a wormhole you're creating coherence so you're basically manipulating the fabric of The Ether and our reality damn this is wild chat wow uh okay okay we might have to come back to this tomorrow um and look at look at this paper so I went through so this link right here on

(1:46:11) the science this is just like all scientific papers like somebody like put together all the best scientific papers ever written and put them together and I was like started looking through it and I'm like wait warp drive the science of warp drive look at all these papers about warp drive and then there's something about black triangles here yeah like this is like just the motherload this is like when you're playing a video game and you get to the chest and it's like a golden chest

and it's got like a million coins in it and

(1:46:57) you're like whoa [ ] or you get like the super weapon out of it you're like okay that was a we hit the jackpot on that one like that's what this is like holy [ ] what is this postquantum physics there's Jack saati what jackar f is listed here harnessing gravitational waves harnessing gravitational waves yeah look at the loot chat look at this loot man we had it this is like we got the we paid for the loot box and we hit the s+ diamond tier loot Dr Robert Baker Bob Baker this is Bob Baker chat you guys don't even know

(1:47:35) Bob Baker yet Bob Baker is probably gonna be up there with like thas Bearden the story of high frequency gravitational waves what the story of high frequency gravitational waves this is like broaching on Salvador piass's stuff now high frequency gravitational wave generator application of high frequency gravitational waves to Imaging I mean we got a lot of stuff to go through miter corporations criticism of high frequency gravitational waves and then it goes back to warp drive like it connects back to the warp

(1:48:12) drive over here it's like why are you connecting back to the warp drive with high frequency gravitational wave oh oh that's why oh this is literally the MH370 videos are real and we've got now the motherload of scientific papers to prove it absolute motherload I mean there's got to be at least I don't know 500 scientific papers in here even if only like 20% of them are legit dark matter or dark energy look at this one look who's up next chat Colonel direct Dr Tom Bearden hello Tom Bearden so we got Bob Baker Jack sarfati

(1:48:52) Thomas beard in and some of these other guys are probably Legends Hal P off right here I didn't even notice this can the vacuum space Zero Point Energy be engineered for space flight applications well that's a winner wow so we got like all the Legends are in here chat like all the Legends Quantum vacuum fluctuations a new Rosetta Stone for physics okay yeah this is this is a YSI chat this is a YSI this is like this is like when you're playing the game and you hit the loot box and then you're looking around to make sure no one's

(1:49:38) going to snipe you while you're like going through the loot and you're trying to like change out all your gear to put all the new loot on you're like [ ] I I don't want anyone to snipe me this like because you just hit the motherload you just get paranoid as [ ] you're like oh [ ] where they coming for me now like this is buzzing Bazinga lucid dreaming I I don't even want to read this part because it's just going to scare me the lucid dreaming part is just going to scare the [ ] out

(1:50:04) of me at this point because I already know the rest of this stuff is legit I don't even want to know if the lucid dreaming stuff is legit it's just let's just I'm gonna leave the aob body experiences and lucid dreaming stuff put that up to the side we're going to be like that's where you pick up the curse tool and you're like nah I don't even want to equip this we got enough good [ ] we don't we don't need that right now I don't want to I don't want to get

(1:50:26) a curse that I don't need uh we're just going to ignore that part this definitely makes

you wonder whether or not like there's a connection between uh some of this technology and like Consciousness though like some of the stuff like the Consciousness and then down here what do we Tesla's free energy transmitters and earthquake generator okay well I have to check that one oh well here's the whole thing about Tesla great great we're going to just start generating earthquakes great great well wonderful

(1:51:03) chat um impulse gravity generator based on yb2 c22 cu3 and oxygen oh I think this might be a high temperature superconductor I'm pretty sure this it is it is super it is guys I am starting to scare myself chat oh we have to check out modin as well we have to check out modin Giovanni modin uh this is po Koff dude this is po Koff this is the guy that was researching uh gravity manipulation with superconductors like it's to the point guys where I'm seeing the Matrix chat I'm [REDACTED] seeing the Matrix now like I see these yba

(1:51:46) 2c3 O's or whatever and I'm like oh that's the the uh the ceramic superconductor that PO used and then I read down here oh yep superc onductor from poov and I'm like oh [REDACTED] we're seeing the Matrix chat I'm in the flow I'm in the zone chat we got poov we got ning Lee I got ning Lee on my right over here and we got Amy esgd over here the spirits of them are with us right now and they're just like yep here you go it's yatsi time an excellent historical and current overview of the Casmir

(1:52:17) Force I mean this is just every effing paper that you need all together wa is this is this paper by both of them yep poov and mod mod modin is that how you say his name moden modin probably oh boy we are definitely going to be reading this oh this one's the easy one huh oh boy chat we're going to be doing some leveling up chat yeah is this real life right now how is this real life are we uh yeah we're going to be doing some major leveling up with these scientific papers in the next few weeks the best part is like we had to

(1:53:04) understand the basics before we got to this part to even understand what we were looking at to know how important this is like with the Casmir Force I was arguing with another physicist about the Casmir Force like Casmir force is just the vend vender walls uh fluctuations which are two completely different things the Vander walls like two atoms why two atoms would like stick together well Casmir force is when two plates at a macroscopic level have an attraction that's not the same thing I'm sure there's a I'm sure they're somewhat

(1:53:33) similar but they're definitely not the same and he says me a paper like oh the Casmir effect is perfectly explained by the vender walls and I'm like no it's not and I'm like why don't you try to explain it oh silence guys even some of these like mainstream physicists they're just they're uh I'm goofy I'm physics works yeah okay so top 10 conspiracy theories guys we have a lot of content here this is enough content to keep us interested for weeks uh what are the top 10 conspiracy

(1:54:10) theories I'm even afraid to click psychic destroys family oh [REDACTED] chat big Pharma satanic Cults oh for my conspiracy followers you guys are about to my conspiracy followers we had the motherload for you Protocols of Elders of Zion does that have to do with zionists guys I

don't even know what Zionist means the Roswell cover up JFK assassination okay yeah this is a spicy one there's a there's a Paul McCartney's death conspiracy would they like put a lookalike in place interesting oh moon landing

(1:54:57) hoax oh we got some subliminal advertisement oh yeah Princess Diana's murder oh and then of course 911 conspiracies oh boy got a little a little something for everybody in this here tonight chat little something for everybody yeah don't don't tell me turn around uh Kat good you're G to freak me out you realize I can see through the camera right so I I can see behind me uh yeah don't get me started on the Zionist I guys I'm I'm the fullon uh Chris Pratt like I I don't know what Zionist means and I'm too afraid to ask

(1:55:37) at this point so I don't even want to dig into it don't even try to tell me I don't want to know I don't care I prefer to be silent oh PBS Nova SpaceTime o damn this is great fractal geometry fractal geometry for my fractal uh sacred geometry friends yo this website has everything everything wow Hutchinson Effect notes on the Hutchinson Effect and Casmir Force gravity inertial dampening circuits and Associated patents free energy cold fusion and Magneto hydrodynamic generation well that's nice is this a link what does this go to

(1:56:39) uh 404 not found chat 404 oh and okay so this is just the same deal okay I see H and then Nicola Tesla wow scaler longitudinal waves what might they be holy [REDACTED] chat yes oh yes oh I haven't been this excited in so long oh yes yes yes yes oh boy look at this reading Thomas Bearden there's Thomas Bearden wow we have so much content now oh my God this is going to keep us going for a while this is just okay wow well I want the last thing I want to go through for tonight is this

(1:57:46) this this there's this is one of the Thomas beard in papers here this is the one dark matter Dark Energy Thomas beard just basically blows dark matter and dark energy out of the water here says that the ether can explain it all um I think I did I hold on I'm just going to read the post that I made so this is the post I sent to that that physicist because that physicist was like trying to argue with me and I'm like look man I'm not trying to be rude but like I literally have seen the answers so I'm like he's like I'm a

(1:58:20) particle physicist who has been researching dark matter and nobody knows what it dark energy is and blah blah blah and I'm like well I can explain it I'm like I've seen the answers I've seen the 2 plus two equals four so here's your answer and he's like well no it can't be like that I'm like well look man I'm not trying to argue about it but you're trying to tell me 2 plus 2 equals 5 and I just have already seen the answer says 2 plus two equals four so you know if you want to argue whatever

(1:58:45) but I'm just telling you I've seen the answers it's like so Thomas bearden's thing about the SpaceTime ether says however what particle physicists do not uh oh wait I can I link this somewhere else for you guys let's see if I can link this so you guys can read it uh [REDACTED] oh here it is so this is the the poor guy Daniel whiteson here don't harass this guy Chad I'm not trying to harass people whatever uh so yes we don't know what dark matter is but we know it's not more

mass for

(1:59:21) stars and gas it's Etc yeah that's not even what I'm arguing like at all that's not what the ether is uh what particle physicist did not do is apply Whitaker condition to the potential existing between the separated charges of the dipole uh consequently they entirely miss the neg entropic reordering of the vacuum energy that ensues so when you talking about negative entry it's like uh it's like I think you imagine like the reordering that occurs regarding if you were to make a rip Into The Ether if

(1:59:51) you were to rip through through the painting to get to the fabric Whitaker shows us that expanding reorganization of the vacuum moving all in all directions from the dipole at light speed identically as harmonic set of bidirectional electromagnetic longitudinal wave pairs organized in the virtual particle Flux Of The Vacuum each four wave pair consists of three outgoing spatial longitudinal waves and is incoming phase conjugate replica fa wave in a complex plane so when you talking about four wave pairs you talking about the electric field and the

(2:00:23) magnetic field and then having them expand out in both directions and then they're bouncing back as well I think that's what he's explaining here that's how you get to four um since time is modeled in the complex plane in minkowski SpaceTime a neg entropic reorganization of the space entire SpaceTime Continuum is underway merely from the formation of a small dipole the reorganization is not just thre spatial but also temporal because the appearance of the phase conjugate replica wave in every Whitaker wave

(2:00:55) pair in short that is the source of not only the pointing energy flow component intercepted by the physical power system and we just learned that power is flowing through the field power field is not flowing through the wires that's and it's based on the pointing Vector the pointing Vector determines the energy flow but also of all that non-intercepted and ignored heavy side dark energy flow component that Loren erroneously discarded so essentially what he's saying here is that the energy that is uh coming from The Ether is what

(2:01:31) can account for dark energy that's what dark energy is the underlying uh Quantum fluctuations of the vacuum over the huge size of the universe the the canvas essentially and then he talks about Dark Matter dark energy is a candidate source for the missing gravity in space occupied by mass this is what he's talking about the missing gravity is literally Dark Matter that's what we call dark matter is the missing gravity that we're missing in intense ongoing electromagnetic interaction activity there's far more em energy present at

(2:02:08) the interactions and in the vicinity than physics and electrodynamics accounts for because of the arbitrary and erroneous discard by Loren and is modern followers of the vast heavys side Dark Energy component of every em interaction this of course has immediate gravity implications what he's saying here is that in my mind when they simplified the equations uh not only did they throw out that scaler potential but that reduced all the total the total energy that they thought was out there got lowered when you lower the total amount of energy

(2:02:40) then you've lost all the additional mass mass equals energy  $E$  equals  $mc^2$  and so this is the idea that the mass can also be explained by the missing ether as well and that we did the calculations incorrectly the math was the math equations were simplified incorrectly and that will also bring back the extra gravity that we need it's like what the f we can explain dark matter and dark energy with The Ether now easily like how is this not why is everybody not just on this like obviously this is the answer people

(2:03:13) like no we just can't know we can't possibly know it follows that energy calculated by the astrophysicist as being available in their interactions of light and mass and distant astronomical entity entities is grossly understated due to the Lorent arbitrary emission of the most of the actual em energy flow present so they emitted a huge amount of the actual energy uh because we thought that space was empty but it's not the total space-time curvature induced by the dark energy and the in the presence

(2:03:47) of those interactions is much greater than the astrophysicists calculate and account in turn it follows that the gravity calculated by the astrophysicist for those energetic distant astronomical entities is significantly understated we just did the calculations wrong that's it guys we just did the calculations wrong so that was from the paper that Thomas Bearden won from that same website the unel website uh so holy crap guys I do wonder about black holes now actually the black holes might have a different explanation than what we think

(2:04:24) or it's just maybe we have to understand a little bit differently yeah dark matter is a silly notion anyway I never liked the idea of dark matter just I don't like that there's we there's something going on there we can't explain it so we're just going to make up something for it that that goes to show me that we've missed something fundamental regarding physics and that's the answer we did miss something fundamental we missed the ether um let's see okay any last questions before we shut

(2:04:55) down guys we've already been going two hours so I went only an hour longer than I thought I was going to go tonight I Al also guys you know what I'm gonna throw it out there I also kind of think the Big Bang is [REDACTED] too I'm gonna have to agree with Juliano here um I I think the James web Space Telescope already destroyed the age of the universe they found Galaxy when they look through James web they were far too advanced for how far away they are and that destroys the age of the universe so the question there is and the only

(2:05:31) reason why we think the universe is expanding is because when we look up at the sky everywhere we see red shift Doppler effect red shift so if we see stuff red shifting we assume it's moving away from us accelerating away from us that's why we assume that there must be a big bang but if it's just light getting tired in the medium losing energy in the medium The Ether if light just loses energy everywhere it goes that's just a simpler explanation in which case then the age of the universe completely thrown up in

(2:06:01) the air who knows maybe the universe has been around forever maybe the universe has been around for a trillion years uh and I think that's what's going to end up happening is

that we're going to find out that the universe is basically infinite in size and that we've completely misunderstood the idea that doesn't mean that there can't be a big bang I think you can still create a big bang because we can basically create energy so yeah once you scale it up you can create a big bang uh but I think

(2:06:26) that the overall size of the universe in general is going to end up being much bigger than we think and that uh it'll have been around for much longer than we think as well that's my opinion I'm throwing it out there Christopher Nolan would like to know your location yeah we got to make a new Interstellar Christopher Nolan if you're out there bro got to make new Interstellar uh also we're going with this spelling of ether guys uh AE t h e r we're we're the ones who get to make it up so we're going

(2:07:01) with a e t h e r also if you want I will allow the weird AE symbol where like the E is like in the a will also allow that to fly as well uh those will both be allow those will both be uh socially acceptable uh with respect to which ethers we use here yeah energy doesn't have to be created or destroyed it can just be borrowed so for the classical physicists who don't really seem to understand what we're talking about here yeah well The Ether is unlimited energy where do you guys think everything we see around us

(2:07:33) comes from does it just come from nowhere no it just comes from The Ether and The Ether has unlimited energy so this is where we don't need to create or destroy it it's just it's like where does rain come from right where does rain come from does it come from nowhere no it comes from the the water system same thing with energy the Energy System the source of it the origins of the energy system are The Ether so just so that makes sense for people advice for self-education outside of University now that's a great point I

(2:08:05) think that you can easily teach yourself this uh and you start the basics start watching YouTube tutorials from starting with electrical engineering and work your way up and if you don't understand it watch it again and don't worry about trying to understand all the concepts right away just try to understand like you know watch maybe like 10 and then go back if you need to until you get a good you need a good Baseline for electrical engineering and then start watching some of the stuff like the verium videos

(2:08:34) about how power really works and then start watching some of the Thomas beard and stuff and if you do it that way like I probably read like two to three scientific papers a day now uh and then once you start getting up to that part and it's it's really about which ones you read like if you're reading this unitel stuff you're going to be reading the good stuff if you're you know reading garbage that's like this has been debunked like anything that says debunked throw it throw it in the trash

(2:09:01) just throw it right in the trash uh generally real scientists don't try to debunk stuff they just try to understand um so that's where I would say start uh you can look through my old live streams as well on YouTube if you want to like follow along go back to like November when I started doing science streams and you can kind of see how I did it uh CU I knew almost nothing

about electrical engineering uh back in November and after Salvador Pas I was like I'm going to learn this and that's what we've been

(2:09:30) doing for the last six months I'd say in six months I've gained the equivalent of probably at least two years worth of University education in just six months of doing this at night for a couple hours every night uh so it's pretty wild like anybody can pull it off anybody can do it anybody can understand it yeah there's your ether symbol right there for you guys right there that one because a lot of people ask me that and that's the thing I want to do is inspire people is I want to teach people the

(2:10:00) concepts so that they can so we can finally teach people how physics and electrical engineering really works because that's how we're going to get to Star Trek we need also I'm a patriotic guy Americans need to start learning how science really works because otherwise **China** and **Russia** are going to pass us up they're going to pass us up a lot of these Engineers are old man they're like in their 80s we need young Engineers who understand this stuff so that United States can be awesome again like all of

(2:10:26) our engineers and [ ] are from India and **China** like we need like American Engineers who understand electrical engineering who understand scalar physics who can produce overunity devices so that American can finally stop sucking again and we can actually be good at some [ ] like there's no reason we can't be good at semiconductors and all this stuff that we're looking at like we should Corner the market in gravity manipulation any other last questions **debunked** there you go there's Emily has

(2:11:07) got the the correct AE there appreciate it also I haven't seen uh Ellie in the chat in a long time so I hope she's out there I hope she's okay uh she would she used to watch us a lot so Ellie if you're out there I hope you're doing well if anyone knows her by the way and can reach out to her you know see how she's doing I do recognize when people haven't been in the chat for a long time they've been following us for a long time uh okay any other things yeah by the way **Russia** knows way

(2:11:45) more cuz yeah they they look at the they don't teach their people the same way we do like we teach our people wrong in America and this is why we have so many idiots when it comes to like I mean you guys know when I posted the thing about power they were a ton of electricians and electrical engineers that didn't even know that power doesn't flow through wires like all they have to do is watch one verium video and they will actually understand how power really works like we we just literally not teaching people

(2:12:12) correctly like it's scary I was just laughing at all the people are like no it definitely flows through wires and I'm like no man you were just taught wrong like holy [ ] we don't even know about how power Works how power flows and I get why it's confusing because if you use the right hand rule if you have an extremely long wire and your connection points are like just over here and over here you know it's going to look like the power is flowing through the wire but once you change your circuit around and you make it like

(2:12:41) a long uh hot dog and you put your your power your light bulb here and your battery here then you start to realize that the power is not flowing through the wire uh so that's you know it takes a bit for people to wrap their R around it godd damn man we gotta catch up to **Russia** man [ ] **Russia** man okay guys I think that's going to be it I'm gonna take off thank you guys tonight thanks m370x we'll try to do another live stream tomorrow hopefully I won't be exhausted uh what are we going to listen to

(2:13:12) tonight we're gonna try one of these random ones that I have never listened to so if this song is bad don't blame me uh you know but people have put out some really awesome stuff so let's you know appreciate it anyway uh thanks m370x uh talk to you guys tomorrow everybody peace have a good one [Music] the [Music] is

(2:14:54) it's m m m m m H3 until you do some research don't talk to me I'm going to find the **truth** while I sit this Mar your opinion it means to me it's m m m m m h37 not all heroes wear capes I wear glasses to see I'm going to find the **truth** while I sit this Mar the trolls hate seeing me [Music] succeed but guess what m m h37 [Music]

(2:16:01) s y mm M37 not all heroes glasses to see I'm going to find the **truth** this your opinion it needs to me your opinion M h37 Heroes Keep glasses to see I'm going to find the **truth** why part TR see SE guess what

Zero Point Energy & Counterfactual Teleportation Protocol - YouTube

Transcript:

(01:25) out the C at the lot 12 SWAT buting all the bells out the box just hit a lck with the Box had to put the steak in the Box P up the whole damn SE I'mma get lazy I got the Mojo deal we Beena [Applause] [Music] like out in the fields where the skies are wide talking about a journey through the cosmic ride Einstein and Thorn they set the stage for trip through time across the Space Age worm holes connect distant points in space traversible paths you are far off place no black holes pull no crushing weight just a

(02:12) cosmic tunnel to a distant gate talking Wormhole Stargates negative energy travel through the cosmos it's our destiny MH370 where did it go Bing triple sing through a wormhole from we're talking Wormhole Stargates negative energy travel through the cosmos it's our destiny MH370 where did it go B Tri 7 through [Music] [Applause] [Music] worm exotic matter negative energy the key to stabilize the Wormhole for you and me Quantum vacuums squeeze so tight creating conditions for this wondrous flight static fields and lasers in the

(03:09) lab they play generating forces in a new kind of way gravitational squeezing C Force negative zones we need to stay the course talking worm star Gates negative energy travel through the cosmos it's our destiny it 370 where did it go B and triple could do a wormhole Flo s shell formalism play so fine spherical geometry we realign energy conditions that we must defy for a stable Wormhole let's give it a [Music] try on forces balancing the plates cre in the throat open the gates from Earth to the stars in a single bound a

(04:06) shortcut through space proile engineers and dreamers hold the key to Future worlds and what we could be with science in hand we Forge ahead through the cosmic paths that we now [Music] tread we're talking wormo Stargates negative in travel through the cosmos this St Destiny it makes 370 where did it go going trip 7 through a wormhole flow from the fields to the Stars we break the chains understanding the universe we make the gains L crunk shines bringing **truth** to light through his music will'll explore the night with

(04:52) wormholes and Stargates our path is clear exploring the cosmos our futures here yo yo yo welcome uh to the stream everybody good to see you guys glad everyone's here hanging out with us tonight we are on Saturday night or Sunday morning if you are somewhere on the other side of the world uh thank you guys for hanging out with us tonight tonight is going to be a science live stream uh hope you guys like my shirt hopefully it does some optical illusion stuff like my last stripe shirt did uh Hey Diego hey crypto Alchemist good to

(05:28) see you hey Dave nice to see you cutney I saw you jump on early PJ Mike nice to see you Diego says free energy yes free energy indeed everybody we're going to be talking about free energy tonight we are going to be talking about um uh we're going to go through a video that uh was sent to me earlier today that I watched that blew me away kind of up there with the Thomas beard and stuff as well and then we are going to look at the Wormhole or sorry the um counterfactual quantum teleportation protocol uh science paper as well a

(06:01) short review of it so uh right off the bat uh let's take a look at a couple of the posts that I've made we'll watch a Quick Clip about Thomas Bearden it's a few minutes long and we'll talk a little bit about free energy um because I think people have questions on it so if you have questions on free energy or any of that stuff uh you know bring those questions here right now this is the moment um and then I will try to answer them while we watch this this clip and then we'll get into some of the fun

(06:29) stuff as well it's going to be awesome uh also this is probably going to be the last stream while I have this background up I almost planned on Flipping it all around here right before this but I just ran out of time um I do have the four orbs sign over here it's not on the wall yet but it is looking fire so if you are in the Discord and you've probably seen the the picture I posted in the Discord of the four orbs sign it looks really really good like it's G to be awesome I'm super excited for it my only concern is it

(06:59) might be like too bright uh we'll see how it all plays out I may have to adjust the lighting if necessary um I'm not going to go somebody asked Can you highlight and reiterate the

circumstances uh of the arrest in the leaker in the satellite um I'm not going to go over that tonight if you want to know more about Edward C Lyn uh you can search through my Twitter profile for Edward C Lyn and you will find I did like four or five posts about him in the past I don't plan on doing another one real quick um but shouldn't be hard hard

(07:30) for you to find those out there um so go ahead and search that on mobile it's a lot easier to do a search than it is for um uh the if you're on PC but if you're mobile it's really really easy so just search there and find that you can repost it or whatever tonight we're we're mostly going to be just talking about free energy not going to be an MH370 investigative night tonight um uh crypto says what's the highest over Unity product available open source blueprint yeah so we're going to talk a

(08:05) little bit about that in a minute as well yeah I'm real casual tonight actually my hair is looking good tonight chat it's looking real good tonight I'm not really a person who cares about what their hair looks like but damn I don't know got that Windswept hair look you know I guess it because I was out all day today I did post a cool picture of Lulu today uh we went out for a hike and she she was loving it it's always super cute when Lulu she goes and rolls in the grass every single time I can't stop her

(08:33) so I just I've stopped trying and then she just gets super dirty and then I've got a you got to bring a towel with because if you got a husky uh they just they're wild and she just loves to get super dirty like the more the more white she is the more dirty she wants to be okay does can you guys see this let's take a look here okay yeah this looks really good well that's not what I'm trying to show you guys but okay let's see what we got here um okay we're going to get into this guy

(09:02) here a little bit later but I want to yeah Lulu's wiped out she was actually outside a second ago and she wanted to come right back in because she's so tired now uh she was running around the water she she can't swim either so it's really it's really cute when she uh she goes in the water she only puts her feet in because she can't swim so or she probably could if she tried but yeah um yeah the good news is Lulu does not roll in the dead animals um she finds weird smells though like weird fish smells and stuff and rolls in

(09:37) those oh and here's a link to Edward C Linn there's literally like five posts about Edward C Linn I found so much stuff about Edward C Lin the leaker that I kept having to make more and more and more posts like if you guys search through all the news articles from like 2014 to 2016 about Edward cinn it's crazy how much stuff and each news article has like a different piece in there about this guy which is why it was so incredible that's why when I say this on the podcast like it's piecing

(10:02) together like a dozen different news reports some of them have different quotes Etc and then we found the appeals related to Edward sein as well and there's more evidence in there like Edward sein is the guy man he's the guy for sure um okay okay yeah we'll talk more about the let's watch this video first uh just this is we're gonna watch the clip here first and then I'll

talk about what what I can tell about my plans and what I'm trying to do to prove free Energies real I'll answer questions for you guys as

(10:32) well so that I'm as open and honest as I can be about it uh pretty wild uh here's an interesting question how would you picture the future of Transportation means in Monday and daily life more generally I don't know what that means exactly I don't know if you mean like in the future or what okay here we go so this here is a video that I have had up on my Twitter thing or like on my in one of my uh background Pages for like three or four weeks and I found it after the Y Files free energy episode

(11:08) because I he in the wifi episode he goes here's a real free energy generator and I heard Thomas Bearden narrated and I went so I went and found it Floyd sweet and I found the full video and I only like clipped the first like 10 minutes or so and I I clipped it down to about four minutes which is how long this video is and it goes over all the key points right here as well so this is a real free energy device I looked through there was no **debunks** out there at all in fact one of the only things I found was

(11:41) a **Reddit** post from like a year ago and people were still commenting on it a few like weeks ago and days ago and the top post says that just like this this has to be fake because the second law of Thermodynamics that's that's the **debunk** and the funny part about that is we're literally going to rewrite the second law thermodynamics because the second law thermodynamics is wrong it's not really so much wrong is that once you incorporate The Ether and you open up your system then the second law thermodynamics changes and has to be

(12:10) reinterpreted so this is again where and I'm going to be coming off harsh uh when it comes to mainstream academics the reality is mainstream Academia is wrong and the textbooks of the United States are wrong that's just the true reality of the situation um I I feel confident I'm saying that just just as bluntly as I'm saying it it's 100% clear that we do not understand everything about physics today and the people that think we do are just straight up idiots that's just the true reality of it they're just

(12:39) idiots uh there are big gaps in our understanding of physics and we have had very little progression over the last 253 years and that should alarm people because in the early 1900s we were making huge Leaps and Bounds and now all of a sudden everyone's just totally content with not understanding what dark energy and dark matter uh and what Quantum uh fluctuations in the vacuum are and virtual particles and all this stuff everyone's just totally content with having like no understanding of what this stuff means and and the answer

(13:12) is very very simple the higs field is The Ether there's an ether there's unlimited negative energy in The Ether this will solve all not all but most of the problems we have right now with physics that we don't understand so that's it guys I mean just throwing it right at you you so here we go let's go ahead and watch this so this is a device that's not been **debunked** um and most of the criticisms either come down to the fact that it was never mass-produced or that like some guy looked into it and wasn't too

(13:45) comfortable with it like that's it that's all that's the **debunks** so when we're talking about free energy stuff like if you were paying attention to the video we did last week where Thomas Bearden talks about the Meg he explained why it's never been popularized like these people get suppressed uh or they have people come in and they buy up the the rights to it and then they just shove it uh people literally get disappeared uh a lot of different reasons why it's never been you know commercialized plus it's

(14:18) expensive there's only a small number of people that know how to tune the devices to a degree where you can make it actually work it's not as simple as just putting some magnets together and then just there's then it works like there's specific configurations and resonance that you need to achieve in order to produce to get it to work correctly and even Thomas beard talks about this and the better it's set up the more efficient it's going to be and you need it to be efficient enough where it's

(14:43) actually you know producing more energy and it's coming in and it's getting that extra energy from The Ether and it's feeding that energy back into a system where it becomes self-sufficient so that requires a high degree of specialization and specialized skill sets now the beauty of this is that we are in 2024 now and we're getting the part where we have ai and we have um potentially Advanced tools that we can use that might be able to make this something where it goes from a high skill set requirement to a lower skill

(15:16) set requirement and that's how I Envision I'm a business major I've Loved economics I'm a marketing finance and international business major triple business or triple Major and when I look at this kind of stuff I go huh I think I can figure out a way to Market this I think we depending on what the cost point is like this could actually be a product that you know we can sell to people that people can that can get get into the ground floor and that's how I've been approaching this so we're

(15:40) going to take a look at that okay here's the question how would you picture the future of Transportation means a mundane daily life if we had free energy I don't think things are going to change as much as you guys imagine a lot of people think oh well this will change everything but there's costs associated with building these devices as well what I think would change is that Transportation would stop using there's going to be more electric power right and um because really even free energy

(16:03) is being converted to electricity uh and then you know I think that we would just get rid of pollution you know for the most part but we're going to change it from a different kind of pollution now our pollution will be like we have anti-gravity devices that are powering everybody's houses and we just have to be careful like they're not we want to make sure there's no negative side effects to having these things running you know maybe it has to be like in a basement buried underneath the ground

(16:24) where it's not near you or something like that I I don't know yet um so I don't think that there will be major changes from that perspective but I do think that it will end our Reliance on

fossil fuels it will allow us to be completely independent of the government when it comes to power which is why I think that's just incredible and then the last thing I'll say before we dig into this and we'll answer some more questions after this short video is that this has really been an investigation that I never would have

(16:52) thought even free energy is possible without looking at it in the MH370 videos and a lot of people say like how do you how does this lead to free energy when you look at that and you know I thought about it a lot and it's like well you need the ether to explain how a wormhole can be real because we need negative energy and we see negative energy we're looking at an endothermic event in the MH370 videos and because we're looking at that endothermic event and I'll just play this clip real quick

(17:22) this clip I'm going to show you is probably the most important clip in the history of the world right here uh and I and I don't say that lightly because what we're looking at here is the first ever publicly available recorded wormhole in highdef thermal video that right there that is the most important clip that says this is the most important scientific clip in the history of the world right here because it proves that the ether is real that there's an extra Dimension it proves that we can create a wormhole and

(17:51) it proves that we can produce negative energy an absorption of energy uh is what we're seeing from these videos as well as the what the the line in front of the orbs as well so once you begin to understand what this really means from a scientific perspective this is what leads to free energy and it took me months to even come to that conclusion but once I realized that this was all about free energy everything made sense this is why they're hiding it it's not even just the anti-gravity technology or

(18:18) like the history of where that we got this technology which by the way the more and more I look at this video the less the less I think that it's aliens the more I think that we have had this technology and we've been using aliens as a cover up for us having this technology which if you had asked me a year ago I would have said the exact opposite and this makes sense now why can even congressmen and stuff like that and people that witness these orbs and stuff in the sky they all think it's aliens because this technology seems so

(18:46) Advanced and that's exactly what the government wants the government wants it to for it to seem like it's totally impossible that we could have developed this technology because that's how they keep it hidden it's messed up man okay let's get to the video how do we know that the MH370 videos were um recorded in 2014 first of all I saw one of the videos in 2014 uh as well as thousands of other people and then we have them on the way back machine as well so if you go to my evidence list you can see the way back

(19:23) machine in fact the original uploader you can only find it on the Wayback machine from 2014 so uh and it's not just a matter of because like people could argue well they can manipulate the way back machine which we don't really have any proof of that at the moment although seems like it could be possible but I literally saw the videos in summer of 2014 I saw

the thermal the Drone video and many people saw both the videos in 2014 they were uploaded by several different accounts so there's no question whatsoever the videos are from

(19:46) 2014 just just as a heads up but good question on that okay let's let's watch this little tour for a demonstration on just how uh straightforward and just how nicely the vacuum triode is working so we have 120 volt fan as you can see it's turning at good power it is providing quite a breeze and it's real usable power now we'll turn around and here as just coming into view you you see five 100 watt lamps ordinary Garden variety household lamps you guys can hear this right so there's 500 watts of very real

(20:41) power here okay so this guy so Tom Bearden and this is uh Floyd site you guys can hear this right please confirm um they're running a fan and five 100 watt bulbs there uh so it's over 500 watts of output and what we're going to find out here in a minute is there's only uh like a million amp or a third of a milliamp coming input so basically almost nothing going into this system and 500 watts coming out of this system here again coming right out of the vacuum and you see the Assembly of very large meters and show you the kind of

(21:18) power amplification that is being achieved by the vacuum Tri and we want to go up and show you some instrumental measurements so this could this thing called uh what is this damn thing called the vacuum uh I have it written down here somewhere vacuum triode amplifi is what they decided to call this thing um it loses weight in proportion to the amount of negative energy generated people also ask what negative energy is negative energy is still Just Energy but think of it as like energy that's Trapped In The

(21:51) Ether that's potentially producing like uh an the opposite kind of forces that we experience in our daily life but you can extract that energy from The Ether and just becomes the same as any usable energy that we would have anywhere else so negative energy is a little bit of a misnomer because I think people think it's like the opposite of normal energy some kind of weird exotic substance but really it's simpler than that and I think that's a really important thing to understand is this idea that it's there's this sea of

(22:20) energy that's out there that we don't see that's hidden from us that's the negative energy want to show you how much we're actually putting in to the G signal of the trial first okay and this is something I want to highlight here as well real quick and this goes back to one of the questions right people say why don't you open source it um also I think people will say I want to see it everybody wants to see it for themselves this is a video right here that we're watching right now where

(22:48) they're showing all the instrumentation all the measurements and people still don't believe it's real so there's no level of standard like what people need to realize out there is that there's nothing that you can do and show people that will convince them that this is real just like with the MH370 videos we have more than enough evidence to absolutely prove Beyond a doubt that those videos are real but even with that there are many people out there all the **debunkers** out there are still just lying

(23:17) insisting that it's fake that's the exact same thing that will happen with respect to any free energy device you put the schematics out there people will come out and say that it's fake uh you'll have people making YouTube videos is claiming it's not possible uh this is just the reality of it guys I'm just giving you the hard **truth** here you show them the literal measurements and the devices and they'll say that you're cheating they're going to say that you put a battery somewhere or whatever

(23:42) right literally no matter what you do there's no way to open source this information that's why when people say you need to open source it like like Z jalapeno says you are looking at it this is why guys I but here's another one that you're just looking at like I want to show you something else like this is the this is how crazy the world is this video right here that we're looking at in a second I don't know why it's not coming up there it is you're looking at lk99 you're looking at room

(24:10) temperature super conductivity you're just staring right at it you're staring at the mezer effect and flux pinning the magnets on the side here this is just absolute proof and yet it doesn't matter like there's no wires connected to this or anything this is just absolute proof you're seeing it with your eyes and yet despite the fact that people are seeing it with their eyes they don't believe it's real I show science influencers this on Twitter people that are like supposed experts that everybody goes to

(24:42) about super conductivity and stuff they have no answer like you show people this and their minds just shut down because for a lot of people it doesn't matter what they see or what's true it's a matter of who told them and how much Authority they have over them that's the stupid ass world that we live in today right so once again what people see when you're staring right at it that's not even good enough in this video we're staring right at the meters that prove that what he's saying here is true

(25:10) literally doesn't matter this video's been out there for uh this is 1987 this is 1987 guys what's that 30 something years ago 37 years ago something like that this is from 1987 and still nobody thinks it's real even though we have a literal video where you can just straight up St stare at it so open sourcing it is not the answer I wish that it was I really wish that it was um and that's the reason why I I'm not going to try to open source it also because I think I would probably get disappeared again that's just the

(25:43) **truth** um so yeah what was that floaty object that floaty object was lk99 or some variant of lk99 that is a room temperature superconductive Rock that's floating freely in the sky also my shirt is looking money right now look at this okay Lulu it's okay um okay so let's keep going where's the play button we're going to come right in on this meter here and try to give you a close shot of the actual reading of this meter okay reading the meter it shows you that we're putting in right at 10

(26:30) volts it's oscillating between n and a half and 10 volts that one is really a 10 it's on the that's a 10 volt okay we're going over now and show you the amperage that we're putting in and

hold your hats that 31.2 is actually 31.2 microamps that is a voltmeter and it shows that we're putting out about 112 A5 volts coming out okay 112 volts are coming out I think he said a third of a mil milliamp or third of a mwatt of power input and 112 volts are coming out 500 watts are coming out of the vacuum trial

(27:20) that's the plate voltage so to speak that's output by the device coming over to the next meter uh this is a watt meter and you divide it by half and you see it's reading 1 kilowatt and so this one here we get on the right meter it's reading one full kilowatt so divide that by two and so you see that we're putting out 500 watts of actual measured power the entire output is being taken from the energy of the vacuum output by the device and grit signal to do that is less than 1/3 of a mwatt this is real usable power it's

(28:11) stable it is not transient it is not noise and it is not any other kind of spurious effect this is a real effect it's all coming from that little tiny box sitting behind behind the 500 wats of power behind the lamps that little box is putting out all so that box you see right here in the background is the generator this is what's causing it so there's some kind of magnet resonance system in here that's causing all this to happen so in order to think that this is fake you have to imagine that there's

(28:53) some kind of battery system in here that's running 500 watts that we don't see and that this is all all fake but this is Thomas Bearden who is narrating this who we find to be highly credible he's definitely not some kind of **scam** artist or anything like that all of that power well over 500 watts and yet it is receiving less than onethird of a millatt of input power this is April pretty good to me 30th 1987 at about 10:30 p.m.

(29:28) in the home of Mr V of the very first vacuum trout this is a most historical occasion guys I freaking love Thomas Bearden what a th what a g this guy is man absolutely love this guy I think he was the real deal okay so some questions in the chat uh can you do simple videos to start off with people with no background in electronics explain each individual component not really you guys can check that's stuff out on other I'm not an electrical engineer you can check out other electrical engineering videos if you want to know that here's what

(30:04) this comes down to guys at the end of the day nobody really cares how it works as long as it works right the number of people that care how it works is almost infinites the people that care how it works are the ones who want to **debunk** it right that those are the only people that care how it works if I give you a free power generator if I give you an iPhone you know this iPhone works of course not of course you don't know how this phone works but you still use it every day do you even know how the computer works do you know your camera

(30:28) works you the internet works very few people understand how any of this stuff works that's not what matters right so this is what I want to get through to everybody so that everyone can get on the same page with me and like Charles says open source what it's already out there by concept economies of scale require larger investment that's what needs to be open sourced exactly exactly that everything has already been out there these are videos from 30 some years

ago nobody's out here producing

(30:53) them right they you're seeing how it works it's not really that complicated I don't think there are diagrams out there as well that people have shared that I haven't posted but there's diagrams as well so it's not an issue of open sourcing information I've been open sourcing the MH370 investigation where's that led us we've had no response from the government we have **debunkers** uh paying hundreds and thousands of dollars to try to convince people that the videos aren't real even though I've open

(31:21) sourced everything and proven Beyond any doubt that the plane didn't crash in the South Indian Ocean and that those videos are authentic so once again open source it is not the answer I don't think people realize that like when you say open source it I don't think you understand the the framework of what we're dealing with here this stuff is not the reason it's suppressed is because open sourcing it doesn't work that's the whole point the only thing that we need to do is build it and make

(31:46) it available and have people buy it and use it and then what will happen is people will realize that it's real and the free market will take over people that want free energy devices will buy free energy devices they don't care how it works as long as it works and eventually it'll just become a thing so that's the plan that's the full plan guys you've heard it right there um somebody asked how did I come across the MH370 videos uh those videos had reemerged on on **Reddit** and I remember

(32:13) seeing one uh this was back in August August 7th 2023 and they got suppressed and the conversation banned fake **debunks** came out and this is how the the government literally controls **Reddit** and I'm not I don't mean that in like some kind of weird like deep State controll no they literally control **Reddit** they literally delete people that post sensitive information about the government in real time it's happened like two or three times now it happened like last week with the Whistleblower post that I made

(32:41) May 13th a guy posted exactly about how the private contractor system works and his post was deleted in under a week uh the government literally deletes you the ebo scientist post that guy got deleted in real time while he was answering questions in the comments guys like just use your head the government is literally deleting people off of **Reddit** they control 100% control the flow of information on **Reddit** um so anyway that's where the videos reemerge they all all the information is out there again check out

(33:13) here I'll give you guys the the list of my evidence so anyone who has question about MH370 for tonight just go to the link of the evidence my all evidence list here that I'm posting in the chat right now has everything that you need all questions are answered um including the links to the old sources as well um yeah exactly even if it's open source the academic people the people who don't the people who you would think understand it but don't well they just all say it doesn't work right

(33:39) so that's not even the thing either like what dumb academics think that don't understand science and don't understand physics like doesn't matter to us like the **truth** is if you've been watching this investigation you know more than most academics and PhD physicists know out there that's not ego that's just the **truth** because most people were taught in correctly and a lot of people are book smart and they're not like street smart right and when I mean that I mean that they just regurgitate information they

(34:07) absorb and they don't have the ability to think for themselves people have the ability to think for themselves know that well we don't know how to explain dark energy and dark matter it must be something missing so and again how can you be sure it really works great question exactly the thing right so here's how it's going to play out I'm going to see it for myself in my own eyes once I see it for myself in my own eyes then I'm going to figure out a system to Market it to other people and you know probably try to

(34:36) build a company around it and potentially solicit investors but it'll probably won't be open- Source investment it'll probably be Angel Investors because the idea here as well is that you can't relinquish control over it because then somebody will get bought out they will uh make it proprietary and then they will like take money from the government to make sure it never goes a market so there you go that's the answer to that good news is I'm a business major so I have some concept of how this stuff works and I I

(35:04) took several entrepreneurship classes as well um and I've been in business for 20 years okay let's see um what other questions do we have yeah exactly ignore Academia follow the engineers that's the way for sure and then you have to be very careful because you need to make sure that you've been blessed by all the intelligence communities or what have you because if you haven't been blessed then they'll just disappear you frankly and that's why you have to be careful about how you

(35:29) push the information out there I'm not joking when I'm saying that I'm pushing the limit here like literally pushing the limit the moment you start to probably explain exactly how it works and like the person who saying go through every component that's when your your channel is going to get shut down your YouTube channel is going to get shut down maybe even my Twitter account you know like Elon Musk is keeping us afloat if I was if I was pushing this information on **Reddit** like this already would have been banned in fact my

(35:54) sub**reddit** got banned within two weeks so there's no question whatsoever you guys have to realize the United States government controls all social media except for Twitter and this is the literal reason why they ban Tik Tok or **China** from owning Tik Tok because they I want to be the ones that control the flow of information this is just straight up Common Sense on how it works guys whether or not you believe it or not I don't don't really care um let's see be is such a hero I agree how far did Bearden get in commercialized in

(36:25) this uh he got pretty far but something happened and I don't know the full story of what happened but uh something happened that prevented it from happening um I don't know if like

he got threatened or what um khed ask from UAE hey from UAE from Dubai um what allows it to happen is the idea that you can extract the energy from the ethers from with the probably I know magnets are involved because we watched Thomas Bearden and the Meg but the idea that you can like trap the magnetic fields within like a toroid or

(37:04) some kind of shape something like that and then you're getting excess energy that's spilling out and then how do you trap that energy so that you can extract it um that's the high level understanding of it now you can watch my other previous videos if you want to know more about that okay let's see what else we got yeah and part of it so here here's the other thing too as well guys so why are people not producing it um one thing that I want people to realize as well around this is that you could also ask

(37:36) why weren't people producing electric cars 20 years ago it's not like the technology didn't exist why were people not why were we not driving electric cars out here why was it the Tesla that Elon Musk came out with Tesla everybody was short selling Tesla everybody thought that Tesla was going to fail that it couldn't make money now look at Tesla it's worth I don't even know I'd have to look up the value maybe hundreds of billions of dollars if I had to guess so you have to realize

(38:01) that just inventing something is not enough and this is one of the things you learn in business is that it's not who came up with the idea it's who found a way to Market it people thought that the segue I don't know if you guys remember the segue I think it was uh something Dean came up with the segue which was this scooter you drove on but it was \$55,000 nobody was paying \$5,000 for a scooter it was cool technology it was revolutionary and now it's instead what do you have I look around outside and

(38:29) I've got scooters all over the place everywhere downtown scooters in every major city you rent them you ride them around it's not some Segway just a regular electric scooter right so it's again it's the business model that makes it happen not the idea very important um yep yatsi okay we're going to get to the next video here in a second I just want to see if there's anything else yeah the moment the moment it gets proven this is funny because this is how will work now this is like me looking

(38:59) into the future the moment that the business starts to work and people start to buy them everybody will just flip this is the same thing that happened with the war in Iraq for some of you who are not that old uh George Bush the war in Iraq they just completely lied about the pretenses for why we had to go fight Saddam Hussein said that he was making weapons of mass destruction there was no evidence whatsoever of it and at the time like everyone was in support all the Republicans were in support we have to go fight and we have to go fight we

(39:25) have to protect the country blah blah blah a after turned out that was all [REDACTED] you couldn't find anybody that was that ever supported the war anymore everybody like yeah we knew it was Bull full of crap the whole time it's she like that's how that's how it works and that's how you know that's how you can tell when there's disinformation where there's this like they

try to make it look like there's this popular support for things you'll see it in a lot of stuff once you start to notice it you'll

(39:48) see it everywhere as well um yeah that box was that box was basically producing free energy that was producing all the energy you see there um and you I mean that's five 100 watt bulbs and uh a fan that was running as well I mean how much stuff do you really have running in your house all the time right not that much I've got two lights running and my computer and my modem that's like the only thing I have running in my house right now that device could TR right now even just run everything I've got going on the only

(40:19) thing where you start to get in trouble is maybe with like a refrigerator or an air conditioner those things use significantly more energy than other stuff so here this link is probably not going to be able to be copied very easily this link right here is a link to all evidence if you want to know about that um okay let's see what else you guys got oh Felipe thank you very much for the donation sell it won't it put it you in danger it could yes it very could uh and I don't know if we'd even be able to

(40:49) get it to Market honestly um I think the way to play it out would be to try to uh uh get like certain influencers on board with it right and this is where I can use my new found influencer capabilities and you know go to other influencers and be like hey I've got a free energy device if I get you one or if you buy one you know you can talk about it on your stream you can't talk about how it works but you can talk about it how much you love it stuff like that then next thing you know everybody's wanting one

(41:23) right and then that at that point that's how you open source it that's real open sourcing it because once again it doesn't matter how it works no one cares as long as it works right let's say Andrew Tate just followed me right let's say Andrew Tate gets one of these or I give him one of these or something right and so first of all I have to be able to make it and then I can give it to Andrew Tate and then Andrew Tate's going on his live streams to his eight million followers and going yeah I'm running

(41:47) everything right now off this device that's the size of a laptop or however big that box was that you just saw right there next thing you know everybody in the world wants one at that point there's no hiding in anymore that's open sourcing it that's what open sourcing is in 2024 so that's my plan guys and I've now just giving you the plan so hopefully we can we can make this work and I don't get disappeared with it but now here's the thing now you guys know what the plan is so if I were to disappear now

(42:16) all you have to do is find somebody who can make one and follow the model that I'm giving you right okay just looking to see if there's any other questions here yeah Amy's dream needs to be realized uh Amy and Thomas Bearden man Thomas Bearden wanted this out as well yeah I think that I don't know if there the mainstream Academia is being controlled but it's um they're they're definitely being misled a little bit for sure yeah and some of them will have been created and confiscated absolutely

(42:52) maybe today maybe 2024 is the time where it's coming out I'm not going to talk about sources and methods because again I don't want to get myself or anybody else disappeared but when I do have more information where I have something that I can show or talk about absolutely will do that the moment I can do that I'll I'll be blasing to you guys what I can say is that no that's really all I'm going to say about it for now guess yeah I'm not suicidal I'm not unhappy or anything like that you guys saw me

(43:21) posting pictures of my dog today having a great time outside so yep um okay me see anything else and yes I I have it on good authority that there's not just one way to do this so like there's the Meg we had the other one I have a list of like 10 different free energy devices here as well so there's probably more than one way once you figure out that there's an ether like it's just a matter of figuring out how you extract the energy from it Bernie Bernie says 60% of Tik Tok content is Flat Earth yeah why is Flat

(43:56) Earth like so huge now honestly the way the Flat Earth stuff has been getting pushed on me makes me feel like it's being intentionally pushed on me to try to discredit me like that's really what it feels like C's like you got to believe in Flat Earth now what you guys gotta realize the Earth is not flat and like we literally need curvature for any of this stuff to make sense and just a rag on Flat Earth for a second I'm hoping the Flat Earth people come back to me and they're like Oh no you're just misconceptualized it it's

(44:24) like this is the lens to my camera this is this circle here is two dimensional but obviously there's three dimensions to it that's why I have two eyes if stuff was flat I wouldn't need two eyes if if you think the world is not round why is an orange round I mean it just doesn't make any sense to me like an orange is round but the Earth is a circle or sphere but the Earth isn't I don't get it I dug around the Floyd sweet stuff and I couldn't find much more but I'm sure there's a whole backstory related to it

(45:07) so if you guys find more backstory let me know here's the biggest problem it's potentially expensive so making this stuff is not like it's not like \$20 going down to the hardware store right this stuff's going to cost thousands and thousands of dollars generally with any product that somebody produces the overhead is usually 100% so imagine that whatever it costs you to actually like make generally you're going to sell it for twice as much because you've got all this overhead that you need you know H

(45:39) you need to have security you need to have Finance people you need to have all this stuff right so generally the overhead is usually in business like 100% so there's very big margins on a lot of this so the big tough part is getting it to a point where it's cheap enough where you can be produced cheap enough and w L enough that it can get to the masses but even if you start off where like it's it's expensive like imagine it costs I'm just going to throw a number out there \$50,000 so now this is like an expensive

(46:10) car that's going to rule out a lot of people but there's still quite a lot of people that would buy it at that rate you know uh and then the idea is that you get it cheaper and cheaper

and this kind of happened with Tesla as well right Teslas were very expensive and they they came out with cheaper and cheaper ones and then it's like a little more and more affordable I I could imagine using a similar bus model as that okay so are we ready to go to our next video here hey Amanda nice to see you Amanda's

(46:39) been my favorite follower for a very long time thank you Billy Johnson appreciate you yeah feel free to make sure you guys like the stream as well appreciate you if you're on if you're on YouTube make sure you like the stream let's get more people onto this more eyeballs the safer this is and what have you that device was the triode vacuum amplifier was what that was called Bernie uh I'll put a link in the chat for you guys to where you can find all the free energy devices free I know for a fact free energy is real uh the only

(47:11) question is like which of these devices work the best because again it's not even a matter of the free energy being real it's like which one is the cheapest or like the one that's most economically practical to to produce you can make something that's super complicated but it's going to be very expensive right and this is why I think that like the one that I want is the one that can be produced very cheaply I want something very simple just simple right as simple as possible but can run everything in

(47:39) your house to me as a business person that's the one I don't want something with a lot of moving Parts either because the more moving Parts the more maintenances there's going to be so minimum moving Parts I've saw like the surl generators it's got these magnets flipping around at like 160 like uh rotations per minute I think is going to break man 100% right so uh yeah that's the tricky part yeah I mean I was just I was just giving I was just saying Andrew Tate because he just followed me the other

(48:08) day I was just making something up guys I don't know if you guys didn't watch the stream the other night Andrew Tate is following me now I guess so are a lot of people guys also you guys gotta realize I got some crazy huge accounts following me man I've got a general following me General Flynn I've got Elon or not Elon Musk but uh Joe Rogan Andrew Tate these people have over five million followers like it's pretty wild um okay sorry guys I'm I'm way behind on the questions here I'm going to scroll

(48:42) down a little bit I'm on I'm still on the part where people are talking about Flat Earth okay let me scroll down to some of the more recent questions okay if you guys have questions and I missed it just repost it and I'll try to get to it um I did send Joe a followup uh I got I found somebody's email but Joe Rogan's going to probably have to come to terms with this on his own uh you know eventually he'll eventually he'll uh get on board especially now that I'm talking about the free energy stuff he may

(49:12) there's two schools of thought right the people that are trying to push disinformation will say like oh Ashton's moving on to some other fake thing right free energy but the people that have been following this investigation will realize that Ashton's right about everything Ashton's right about MH370 he's right about wormholes he's right about The Ether and he's

right about free energy there's a logical link between all of those things uh from a scientific perspective and I'm true

(49:38) about I'm right about how the science works so whether or not people believe that I really don't give a crap because the reality is it's going to be proven true in the future 100% it's going to be proven true so the best part is the people like you guys who are following along now who are following this early on in the future you will be able to come out and say was following that guy who was pushing the information right at the beginning turns out he was right I knew he was right all along you guys

(50:03) will be able to tell people that other people are GNA go how did you know you were following that guy in the beginning blah blah blah like I don't know maybe it'll take 10 years 20 years 100 years I don't know but it'll happen eventually okay so let's jump to the next video uh so we're going to do the quantum teleportation protocol last so first thing I want to do is I found this video um I think did I not post the link to the video I'll post another link so first I'm gonna do another link to the

(50:31) Discord so if you guys want the Discord here yeah that's true like so pointer Buck like it is arrogant yeah absolutely it's arrogant but that's like that's like saying somebody that's looking at the answers to the test is arrogant of course they're arrogant they know the answers to the test it's like you come at me you try to tell me two plus two is five and I'm staring at the answer says 2 plus 2 is four of course I'm going to sound arrogant to somebody who's saying

(50:56) 2 plus 2 equals five yeah I'm arrogant because I know I'm right I'm literally staring at the answers it's not it's not like I had to like use my superpowers and figure out how the world Works no I just literally was staring at the answers and was like okay well how does this work oh here's all the answers right here it's all just sitting right there great that's that's what I think is so funny about this investigation it's just like you know what do you want man of course it sounds arrogant if you have no

(51:24) idea what you're talking about how about science works and I'm just staring at the answers right you can keep trying to tell me 2 plus 2 equals 5 but I'm just going to laugh at you and go well you'll find out in the future turns out it's four it's wild man I just love it that's what I and I guys I've said this consistently about the videos sorry while I'm pulling the links up is that uh uh we since we know the videos are real all we have to do is just wait and see like who wants to lie about them and

(51:52) what [ ] they try to spread about it because we know the videos are real so if somebody just tries to lie we can like deduce what their motivations are right away like all the debunkers we can deduce that their motivations are like either they're having like mental breakdowns and they can't believe that they've been lied to their whole lives or some of them are probably disinformation I'm not going to name names but you guys know who I'm talking about uh and so it's like yeah I mean go

(52:13) nuts try to convince as many people as you guys want uh you know we we know the **truth** okay so here's the video that we're gonna be looking at here in a second again this is going to be this is one of uh Dr Steven Greer's videos so guys even if you think that Dr Greer is whatever whatever you think about him there's a lot of stuff about there people that they you know discredit him for the way he makes money or sends people on C5 or all that stuff this dude is 100% on it when it comes to whistleblowers Dr Steven Greer has

(52:47) interviewed more people that know about this stuff that are real whistleblowers than anybody more than the government more than Arrow uh I respect like Ryan Gray and uh David Grush and Commander Fraver Commander Fraver is to me the most authentic of all the UFO whistleblower people the whistleblowers that we are interviewing are on another level completely another level David Rush he knows about programs he can't say anything uh Lou Alzando same thing Commander Fraver saw one of these objects firsthand with his own eyes

(53:23) right that's awesome the people that we talk about Thomas Bearden uh Paul uh SZ Sizzix I don't know how you say his last name guys he's got a weird spelling these guys are literal Engineers they're not just people that saw it they're people that engineered it that built it and this is the difference this is why the UFO Community is so stupid is that all they care about is what people saw and their experiences for some reason all these UFO all all these UFO Community idiots are all just about like

(53:53) what was your experience like did you talk to you telepathically what did you see how you know that must have come from the Andromeda galaxy and all this [ ] the engineers that we're talking to are like no this is exactly how you build it this is exactly how it works and like we've had this technology figured out for like 30 years right what we're going to hear today from this guy he's going to tell you that we had Mach 12 Mach 12 like 20,000 miles an hour Mach 12 or 12,000 miles hour or something like that in the

(54:28) 60s in the 60s it's 2024 guys 60 years ago we had Mach 12 even in the videos the orbs are only going Mach two two or Mach Three right and this is the thing like the UFO Community is so lost man like it's all it should all be about the science and explaining the science and talking to the engineers this is why people like Tim Ventura and alien scientist are the people you guys should be following because they literally interview the engineers that know about this stuff that they probably have ndas as well but

(55:04) they like are just explaining how it works and the physicists instead everybody just wants to know like oh you're you're a guy that telepathically communicate with a blue alien tell us about your experience was it **sexy** I was listening to Danny Shean space yesterday and he goes on about getting raped by aliens for like 10 minutes straight I'm like what the [ ] are you talking about dude what the like actually what the [ ] is everything about being raped by aliens with these people like I literally just I just

(55:35) sitting there listening to it going are you kidding me like absolutely are you kidding me anyway here we go yeah alien scientist you guys can find Jeremy Reese um yeah that's what I'm

sitting the whole time I'm going that's so hot right now like just like and he just kept us talking about it over and over and over again I'm like dude what the I just had to drop out I just couldn't do it guys uh Jeremy reads Tim Ventura as well you guys you can find both of them on X you can find them on YouTube as

(56:08) well the crazy part is their interviews and stuff have like no viewers like nobody like compared to what they should be when they're literally interviewing Engineers there was one time I'll tell you guys a quick story before we get into this where I was watching this big panel where like Mark soal who who started up Falcon labs he's like showing around the engineering lab with um Jeremiah which is another like engineer these guys are really smart dudes and there's like a whole panel of Engineers

(56:37) the engineers I even recognize some of the names on there of some of these engineers and I'm like whoa these are like important Engineers that like actually work in in third party labs and it's like like there's like I don't know a thousand views on this video like how are people not watching this is like that video is probably like a hundred times more important than like any of these UFO whistleblower videos or any of this stuff like I I just I don't know guys it's wild man it's

(57:07) wild yeah it's all about clapping alien cheeks dude this is why my big joke is like with the the Danny Jones stuff is like these these some of these podcasters that had me on that literally just are spreading literal disinformation like I actually feel like Danny Jones was pressured by somebody to to like make a fake name and try to like have these Corridor creep people come on like the goal was clearly to try to discredit me that was like 100% the goal and it makes no sense because then he the next week

(57:40) or a couple weeks later he's interviewing a guy that says he got raped by an alien and lost his vCard to an alien I'm like Wait So you you're trying to discredit me when I have like actual hard evidence and facts and can literally go through the whole story and timeline what happened to this plane and prove the conspiracy and you're you're you're being incredulous to me but when some guy comes and says that some blue alien took his VC card from him and had an alien baby you don't even begin to

(58:09) question any of what he's saying like obviously he is set up and it doesn't surprise me because these the the podcasters that did this literally interview CIA agents like every other week every other week like Danny Jones interviewed Ron pandaly who's like the number one piece of [REDACTED] CIA agent on the whole planet he's got a picture of like Tak like hugging him and [REDACTED] I'm like okay obviously this guy's a plant like obviously Danny Jones is a plant Julian Dory is a plant these guys are big

(58:42) frauds like if you guys follow them you might enjoy their content they are 100 1,000% government controlled 1,000% no doubt whatsoever uh just complete clowns guys so uh that's just that's just the **truth** guys I always tell you the **truth** that's just the way it is man I call it like I see it uh yeah and FBI buddies as well guys like I'll never get over how when I'm talking to Julian Dory and I'm like being the nicest guy in the world and he's got Jim diorio legendary FBI spook

on the

(59:19) speaker phone he's gleefully showing me his name on there and I write it down because I'm like okay this is going to be important to later on literally write it down Jim dioro Google him right there while he's on the speaker phone and I'm like okay why the [REDACTED] are you talking to a legendary FBI agent right now and then you're GNA go and just have a completely hostile interview with me and like try to cherry-pick meaningless [REDACTED] like really really obvious really obvious okay let's watch the video guys

(59:52) you ready once again these are the people that you want to be watching these are the videos like with these whistleblowers and stuff that we've got here um because these are the guys that literally know how it works man yeah alchem scientist science is a good one as well so a lot of people have been linking me his videos he actually gets pretty decent views I would say because he has less followers than I do but he gets like 10 15 th000 views on his on his videos the only problem I have with his content is he needs to

(1:00:31) increase the production quality a little bit just standing there and going off like you know you can take that two-hour video and slim it down to 30 minutes but uh he's and that's Jordan I'm gonna meet him as well I'm gonna probably try to help him out with some of his marketing uh when I meet him next month okay so this year I don't know graduate of parks College um I don't know how to say his last name if you guys can figure it out I mean CZ y SZ that's a that's a pretty tough one to

(1:01:04) that's a tough one to figure out chat um he spent 30 years at McDonald Douglas eight years in the Air Force at Wright Patterson Air Force Base and he died in 2013 sis oh his last Paul CIS is that how you say his name thank you very much appreciate it okay here we go size CIS well maybe size maybe CIS anyway whatever the important thing is that he's a literal aerospace engineer and he what you're going to hear from him is going to blow your mind let's watch started in the air force can I Patterson and um was in the Air Force

(1:01:44) for two years and stayed an additional six years working in research oh that's how you I returned to McDonald Douglas and stayed there for 30 years and finally ended up at Parks College again as a endowed chair and McDonald Douglas What were what was your work there oh it involved uh a lot of highspeed work hypersonics um we worked on hypersonics like first of all once I heard that we're not even a minute into this thing and he's already talking about hypersonics realize that this guy this is from before

(1:02:22) 2013 so and he had worked there for 30 years so this is probably like from the 70s to the early 2000s and we were already working on hypersonics his eyes are so big Emily why are you being weird his eyes aren't that big are they chat cracked me up okay here we go uh but hypersonics like wow things that flew from Mach 4 to Mach 12 right off the bat we're not even 2 minutes in Mach 4 to Mach 12 12 what like okay the moment you got an aerospace engineer who was working on stuff from the 70s to 2000s and he's

(1:03:05) talking about Mach 12 Mach 12 20,000 miles an hour I'm sorry what however fast that is like okay now you've got my attention already we're only a minute in he had some airplanes that flew Mach 12 all the way around the world airplanes have flew Mach 12 all the way around the world and just for the benefit of people can you just explain what wait wait I got to do my thing hold on Mach 12 airplanes that flew Mach 12 all the way around the world what the mock ref mock mock numbers how many faster than the speed

(1:03:43) of sound you are so literally a Mach 12 airplane flies about 12,000 ft per second or about um uh 12,000 ft per second 14,000 miles an hour 14,000 miles an hour just going around the whole world in an hour 14,000 M hour and it could it could fly all way around the world almost built it well okay you've already convinced me just from hearing that alone I only need to hear one minute and I already know now that most of the stuff that we're seeing as UFOs is just black budget programs the stuff that Pilots are seeing are clearly black

(1:04:26) budget program they like no nothing can fly that fast this dude's talking about stuff flying 12,000 14,000 miles an hour in like the 60s and 70s one of the more interesting nights I had was one of the things I did of course when you're lieutenant in the Air Force is you get these wonderful assignments like your office the assistant assistant officer of the day one night I was the assistant to the head officer the day over at Patterson field and we had 151 phone calls come in of objects flying down interstate well

(1:05:06) that time us 40 then turning at Columbus and going up to um Detroit um and these were state policemen some doctors that were up late at night all kinds of people that reported seeing us we had radar tracks on them had airliners call in that they had seen them uh very very interesting and each one that called in I had to run over to FTD and take the thing over and if I didn't get back in time and the poor Colonel got awoken by the next call I got bowled out so he's already talking about like basically people were seeing the stuff

(1:05:48) they were testing and they were thinking it was like UFOs and crazy [REDACTED] like that he's like n we're just testing our Mach 12 supersonic uh airplanes and stuff like that I mean this blew me away and like uh ryer says like now Mach 12 is you know 12,000 miles hour is probably conventional now I mean we've got literal teleportation technology now we've got Wormhole technology so we've literally just broken through the you know Quantum barrier so to speak but that was a very interesting night and

(1:06:15) these guys they were not you know people who weren't used to seeing evident sites and things like that I mean they were very clear descriptors of what they saw probably more than half of my career that was in projects over classified or compartmentalized can you describe how that process were how much of his career he just said like a major part of his career he was in compartmentalized so like special Access program so like this dude was in the no and people ask me why don't people come out dude they did come

(1:06:45) out man you're listening to the guy this guy from 2013 this is before 2013 this interview he died in 2013 like this stuff is out there people just talk about it freely this is why

when you're talking to salvator pz and even people like Dave Rossy like Dave rossy's just starting his career like Salvador pz has been in his career these people talk openly about this stuff people just don't listen well generally um you you have to depending on the level of the compartmentalization and and the secrecy

(1:07:15) level you have to go through a fairly significant background check it takes between 6 months to a year to get the background checks okay so right there I already know he's 100% legitimate because I have a security clearance and that's exactly what they told me is that it can take six months to a year to get your security clearance and I know because I went through the whole process I know exactly what the process is that's why my whole background check has been my whole background has been vetted

(1:07:45) by the United States government that's why I chose to come out and do this because I was like I've got a security clearance my job has nothing to do with this so it makes me a perfect candidate to talk about this because I don't have any so I found some crazy [REDACTED] on the internet all publicly available no inside information and I can just speak freely about it and free energy whatever I can just figure that out and I can speak freely about that too until somebody makes me sign an NDA this guy had NDA so he can talk specifically

(1:08:12) about the programs he can just say what he knows and then when you do that then you generally if you're in a very tight compartment then you have to sign a statement that you will not divulge the existence of the project or even answered a question that could divulge the existence of the project so there you go guys did you want to know why David grush and Lou alzando can't say anything you just heard it right there if you have an NDA you can't even answer a question that would divulge the existence of the project you hear that

(1:08:47) if you have an NDA you can't even answer a question that would divulge this existence of the project that's why when Lando is doing these interviews and people ask him various questions he can't even say anything about it a lot of the questions he can't answer at all that's why for someone like me I just I can deduce it and figure it out and I can just openly freely talk about it this is probably what got Salvador p in trouble because he had to be very careful about the questions that he

(1:09:15) answered and because he had to be very careful about how he answered them they probably were like you were giving away too much because he gave away he told us he basically told us how Maxwell's equations were incor incorrectly reduced like he explained how super conductivity could be a key right and uh it's on a it's not even on a need to know basis it's on a basis of people being identified specifically to know what you're working on and directly associated with the project oh so it's

(1:09:44) not even just the information but like they don't want you to become a target for spies right because uh foreign adversaries might Target you if they know you're on a special project as well so it's very closely contained material if you have a covert project the funding would come through a number of government sources none of which would be identified to the workers uh

whatever higher level you know people were involved in it even they might know might not know where the funding came it's just that

(1:10:16) you sign a contract with the US government and the funding would show up at the right place at the right time if there were and so yes he was talking about the funding there's actually a Twitter post that talks about how the funding works as well I'm going to expose that too uh actually that reminds me and make a note of that uh there's a Twitter post that it literally explains how they hide the funding um I'm not I was surprised it was on the internet I almost forgot about that I'm glad this guy just reminded me right

(1:10:45) now thank you very much Paul appreciate you explaining to me Paul size or whatever your name is uh like they basically use the like shell companies and this is how they move them up funny around so there's no paper trail to get back to how the money works and yes this is why Elon is using copy and paste answers 100% 100% because you can't even answer questions that could reveal the information this is literally why Elon can't talk about MH370 you think that elon's not chomping at the bit to talk about the MH370 stuff

(1:11:17) do you think he really doesn't know about me I've got 137,000 [REDACTED] followers in less than a year and I'm talking about the craziest [REDACTED] ever that would completely change Tesla completely change SpaceX and I'm talking about our spy satellite surveillance system that Elon Musk is literally shooting starlink satellites in the air and secret secret satellites on his SpaceX rockets in the air of course he can't talk about it he can't talk about anything that would reveal anything this actually basically proves

(1:11:49) the videos are real because if the videos were fake he'd be able to talk about the videos the fact that they're real means he can't even talk about anything related to them can't even bring it up can't even answer questions about it this is why there might be this is why we have to be very careful about the people who are being very quiet about the videos because it means that they might have ndas that is like literally preventing them from talking about them that's why this is like that's why I started getting spooked

(1:12:11) right away when people wouldn't even talk about the vide that makes just zero videos uh is AI is alien scientists really rage quitting YouTube I doubt it anyway let's keep going if there was a non non Earth bound sources of the information you would at least that the people that were doing the design work or doing the analysis work would never had any idea of where it came from um all you would have to do is visit **Russia** to see how they did it um they would compartmentalize every project into what I used to call silos

(1:12:47) and they would have a colonel or a colonel General sitting on top of that and literally they could not talk to anyone outside of that silo if someone else needed help one person would be sent over to another place sit down at a desk look at a piece of paper say yes I know what that problem is here's the answer to it and walk away he would not even know what it was that he was working on there's giant triangles that appear over Palmdale that move very slow so they may be different triangles from so they have this the ones that I've

(1:13:23) heard about have this glow around them and uh they they're they're very large and very slow moving so that's different I think than the ones that appear over Belgium and that that are very fast moving the ones that appeared over Belgium that moved very quickly in a few seconds no you can't explain that unconventional physics just like if you use con by conventional physics I mean engines and jet engines and Rocket motors and propulsion systems as as we know them today okay so he's talking

(1:13:57) about rocket propulsion and stuff that we know today this is a very dated video this dates it right 2024 we're way past the idea of like Electro gravitics like that's a very common place but this was probably filmed in like the 2000s and back then nobody really understood this idea of non-rocket based propulsion you know now we have Charles berer who's like I'm making an em drive and it can do anti-gravity so it's much more commonplace so right there it kind of dates this video a little bit uh he

(1:14:27) died in 2013 for William Bill who answered asked a question a second ago uh Consciousness I'm not sure about the whole Consciousness controlling the craft stuff I need I would need to see that to believe it I that's that's the kind of thing where it's like it's a little too out there but it's getting more and more mainstream this idea of Consciousness controlling the crafts I'm just giving you guys my opinion on that uh the Joseph P Ferrell thing uh we found that somebody found that back in March

(1:14:54) but that's from from 10 years ago as well so that Joseph P frell clip where he's literally talking about exactly what happened to the plane which is just nuts uh yeah that that we found that like two months ago somebody found that two months ago you put fuel in you burn something and it produces thrust and it accelerates an object um in in that context no and in the con that kind of physics you cannot explain any hardly any human beings living long enough to go much much Beyond uh the the edge of our of our little solar system

(1:15:33) because it it takes almost 13 years to get to the outer edge where the caner belt is and some of the uh Outer Outer things that are that are going around with uh with Pluto and cheron and those things so that's 26 years round trip so you're not even out to the edge of the heliosphere where the edge of the Sun 's uh interaction is with the with free space that's three light years away and that would take 100 150 years so in in the conventional terms no you can't explain it it has to be if the physics

(1:16:13) that have to explain that are quantum physics in which things can appear to be almost two places at the same time and appear and reappear just like uh positron and electrons do in in some of the um high energy particle colliders it's probably not anything pushing it through the air it's it's a it's a coupling of of of the device with the energy that's permeate Spas yeah so right there I CLI that part as part of the free energy thing but this is where you start to realize that there is a connection right is that the

(1:16:52) ether is the connection between all of this that's how you get the free energy and that's where the propulsion mechanisms come from em Drive you're coupling with the vacuum

permutivity of free space or you are able to create space around you as well um and you can tell just the look in this guy's eyes right now is he's giving the information out that he can say without getting killed that that's what he's doing right here he knows more than what he's saying I can tell right away uh if you guys

(1:17:20) have not been following me you know I have really good intuition and I can tell when people are lying right away he is not revealing everything he knows right now he's he's got like a script in his head for what he can say about the technology and what he can't say um couple other questions as well uh the Mike Harris thing we found the Mike Harris thing back in November of last year and somebody's setting up an interview where I'm potentially gonna talk to Mike Harris so we're gonna find

(1:17:47) out what Mike Harris knows about this plane uh potentially even next week uh and we'll see I mean I'll be able to tell if he's line for sure uh what are your thoughts on the concept of gravity manipulation similar to the Jump program in The Matrix uh yeah I mean we can manipulate gravity and we can manipulate SpaceTime which are two very similar Concepts uh it's like uh the the fabric like bending the fabric of like my clothes right when you when I bend it like this I was actually just watching was it uh Ken

(1:18:18) wheeler talk about this it's like bending SpaceTime is much like bending the fabric of your clothes uh and you imagine that bend it so much you're going to make it rip you know same idea um and so bending a little bit will create gravity manipulation bending it so much that it rips will create a wormhole pretty cool right wait there's a post an hour ago saying Jeremy recently is permanently quitting his quitting YouTube oh wow hey alien girl um somebody said why do we not use this technology more often well because this is a trump

(1:18:52) card this is a super weapon this is like saying why do we not use n more often you don't use nukes more often because we don't want to destroy the planet you also don't use your super weapon because you don't want to you don't want the enemy to know how it works this is why the MH370 videos are the most important leaks in the history of the world because the US government never wanted those videos to come out not just because they want to hide it from the public but because they don't want **China**

(1:19:16) and **Russia** to figure out how to reverse engineer it and because we were able to figure out how to reverse engineer it just from watching those videos and figure out that there's an ether and figure out that free Energies possible not only does this open the door for **China** and **Russia** to figure it out but now everybody can figure it out North Korea Iran the Isis terrorists on the street can figure this out as well that's why those videos they're desperately trying to hide the MH370 videos that's why they

(1:19:42) have every single disinformation operative every single YouTube channel that the government controls is trying to **debunk** those videos because they are trying to hide them from the rest of the world right that's the **truth** that's just the **truth** of why so you don't you don't use this Weaponry you you keep this Weaponry in the back shelf uh a quick anecdote on that front

as well is that somebody there was an anecdote there was somebody was saying like they were working on like Advanced Aerospace stuff

(1:20:10) and somebody tells them like hey all this stuff is obsolete that we're working on and that if any real war were to break out they would just break out the stuff that is like the super weapons like they wouldn't be using f-35s you know f-35s are the public facing technology that we show people the stuff that we've got in deep projects where we break those out if it were to get sketchy that stuff completely obsoletes everything that we have from the public realm so that's the answer about it guys probably Tesla was as close to it

(1:20:41) when he said that it's given the right uh Energy System the right the right electromagnetic spectrum I can power a a a human base on Mars from Earth without any loss of energy and and in in quantum physics and Zero Point Energy that's a possibility but literally um sacharov and the number of people that were working on it I think are very very convincing arguments that the fabric of space is like an ocean a energy ocean in which solid energy is floating on it and solid energy is the mass and if that's true then gravity

(1:21:23) ways exist and in fact everything goes back to heavy sides equations and it's waves not particles holy crap chat did you just listen to what he just said right there so somebody just asked at the same time what fills the void when the rip occurs you will you're you're looking like imagine the painting and you rip the paint away you're looking at the canvas you're looking at The Ether you're looking at the negative energy you're looking at the ocean of unlimited energy that he just described and then

(1:21:53) what happens it closes up right away that's why we don't ever see it because you have to try to keep it open otherwise there's an automatic correction mechanism that closes it up immediately what is just saying there is if this is real then gravity waves are real well gravity waves are real we've detected them with ligo we know they are so now we're work backwards If gravity waves are real then this is real wow I G play that back one more time and the number of people that were working on it I think are very very

(1:22:23) convincing arguments that the fabric of space is like an ocean a energy ocean in which solid energy is floating on it and solid energy is the mass so right there this is why we're calling SpaceTime the SpaceTime ether because space is not empty they want us to think that space is empty but it's not that's why there's an ether The Ether is the underlying framework mass is sitting on top of the ether Mass on top of the ether is what's causing causing gravity it's a repulsive effect or I guess not necessarily

(1:22:58) repulsive but counter repulsive effect an attraction and if that's true then gravity waves exist and in fact everything goes back to heavy sides equations and it's way and right here here's the only mistake he made he says heavy sides equations but it doesn't go back to heavy sides equations it goes back to Maxwell's equations and I think he just slipped up right there I think he meant Maxwell's equations but he me like heavy sides equations in the respective of like we wrote them we reduced them incorrectly waves not

(1:23:32) particles and the quantum is now not mass but time and if that's true then there's a whole different royy Herbert where's royy Herbert everybody he says it's not mass it's time and why is this important because time dilation is real Interstellar space time is one in the same if you can bend space you can bend time and this I can't believe he said this before 2013 I didn't even know time dilation was real till I saw the movie Interstellar that was like 2019 2020 maybe even later so this is wild people

(1:24:10) probably this probably went over everybody's head when he said this back then when he said this during this interview probably nobody understood what he was talking about you look at the whole universe in a different light and then a lot of things become possible that we think impossible within our current understanding of what time and space and thrust and force and all that is if they come from the other part of the universe if there are craft that travel galaxies on the average are 10 million light years away and even our

(1:24:43) our galaxy is about 100,000 light years across all of the conventional thrust and force mechanisms that we conceive of just won't work work in terms of human time frames that's the only explanation I can get is that that if they if people are here from another civilization then theyve they've understood the the higher the higher the finer points of Quant quantum physics and how to couple that from particles into beings that can do what Quantum what what particles can do now yeah so a couple questions great questions in the

(1:25:21) chat mass is the paint on the canvas exactly mass is the pain on the canvas and there's Ma and mass equals energy and we have mass everywhere even when we take a area what we think is empty space is not empty at all so mass is what we have on there and yes the other person don't you need a rip on the other side we answer that too that's where the fourth orb hypothesis comes into play where does the plane go when it when we open up a rip right here with our three orbs it's got to show up over here so we

(1:25:50) need something else over here that's the fourth orb hypothesis so it's it's it's disappearing from one point in time the energy is being sucked out from here and you're going to hear something else is going to come this video is nuts this is one of the craziest videos I've watched and we've seen some crazy [REDACTED] chat so get ready for it we're going to hear it in a little bit but the idea we're absorbing the energy from this point and the energy is going to reappear over here

(1:26:14) okay remember that endothermic event an absorption of energy that's what we're seeing you could argue that an endothermic event is consistent with negative energy as well uh and then we're going to see this plane slingshot away let's watch let's keep going when I was at rght Patterson we had the flying saucers that went up I think they covered the distance from Columbus to Detroit in something like uh equivalent of about 20,000 miles an hour and I don't think anyone in the con in the

(1:26:45) ordinary Aerospace business would have had any knowledge of what they were even talking about if you mention quantum physics are or wormholes are the type of things we know

now because if you went to sorry what did he just say did he just say wormholes right there chat he just said wormholes literally just dropped wormholes on us why is he saying wormholes right there what the hell he just said wormholes a guy that worked in Black budget programs literally says that most aerospace engineers wouldn't understand

(1:27:29) this technology don't understand wormholes I do not think that's a good question I'll William I'm gonna take notes of some of these questions we'll get back to them in a second but I want to keep going on the thing here um yeah and this is part of the reason why the clip art people and people think we're looking at VFX like anyone who thinks we're looking at VFX and that 370 videos is an idiot like you just have to understand how much science you would have to understand this guy's

(1:28:00) telling people right here in this interview that it's only a few years before the videos happened that most PhD aerospace engineers don't even understand the idea of a wormhole okay and yet we're literally seeing it in two videos who the hell it wasn't some lazy kid that made the videos these people are [REDACTED] morons anyone think these videos M70 videos are fake at this point like just do some real science right and then you'll realize those videos are real uh wow and talk to the I'm back

(1:28:31) miles hour and I don't think anyone in the con in the ordinary Aerospace business nobody in the ordinary Aerospace business that was the prerequisite there would have had any knowledge of what they were even talking about if you mentioned quantum physics or or wormholes chat what bro [Applause] bro this guy is in the no man I I couldn't believe this I wouldn't have believed this a year ago now that I'm looking at in two military videos I'm going holy [REDACTED] Paul SI here you are wow my man are

(1:29:20) the type of things we know now because if you went to CERN and talk to the particle physicists they would tell you certainly some of this was possible because they see it all the time where they think they see Mass they really see uh they really see energy Frozen in a in a in a Time Quantum and what they're seeing is not is is just is is really a frozen bundle of energy and it moves back and forth almost without any restriction I thought there were enough credible St okay so I am going to answer the question about super position because

(1:30:00) whoever said time dilation is not real get caught up with physics my man time dilation has already been proven for like 40 50 years time dilation is 100% real space time is a fluid symmetry if you can bend space you are bending time that's how wormal is even possible probably certainly how some of this manipulation of gravity is possible so could you have the plane gets stuck in super position technically yes technically yes there's a real possibility where the plane could go into a wormhole and then come out at a

(1:30:33) completely different time now and then you could release it at a different time as well now it's hard to conceptualize that because we don't have two videos on the other side but if you showed me two videos of MH370 coming out like four hours later I would say we [REDACTED] held that thing in super position somehow right and it wouldn't surprise me if that ends up being true

but I just don't have enough evidence to run with it at the moment stories that I may not be able to explain them but they

(1:31:02) weren't phenomenon that were people's imagination whatever they saw was real but I couldn't explain how it how it was real what made it real but I think what they I think they saw what they saw near St Lis there was a fairly large triangular object scene and it covered the distance down to South St Lois in some in some of its sightings it was moving relatively benignly but then it it literally jumped about 20 miles in a sec couple of seconds and uh I've received a lot of phone calls from the

(1:31:39) local newspapers and TV stations is how can that be and I said I don't know how it can be except if you explain it through something like a quantum physics explanation of of time and space dude the way he's talking about this where he smiles a little bit this guy knows man he knows he's like I I don't know how to explain it uh you'd have to look at uh quantum physics and uh quantum mechanics and maybe some wormholes and that would explain it uh relationships that gave you time and space travel but other than that I

(1:32:15) don't there's no way I know that I can put a the biggest rocket engine I could think of on it it still couldn't get there at that speed and the noise and the sound you would make doing something like that would wake everybody up for 10 miles and it made no sound at all it see it starts out at hover and it literally almost disappears and Pops over here so it's not like it's not like a cartoon where it goes whoos it's almost like it disappears and comes up over here uh guys is he just explaining teleportation

(1:32:53) right now like like three different times already we're only 10 minutes in 12 minutes in this video he's explained wormholes in teleportation three different times and it's I feel like the interviewer is just it's like going right over the interviewer's head at least the the descriptions that some of the police officers gave to it a lot of combat Pilots routinely go up to seven and 8 GS but that's a very specific Direction that's from your head downward along the axis of your spine

(1:33:25) if you were to take that what's called eyeballs in which is when you accelerate the forces this way um you literally uh would have your eyeballs compressed out of their sockets and You' have brain damage so the the G's to do that might be in the level order of a th000 G's so no that's not physically possible for any even even insects to take that level of acceleration even over a short period of time uh you might get in an automobile accident you might get 100 to 150 G's and that's when the car is completely

(1:34:00) crushed so that's what happened would happen to a human being if that were a conventional Force accelerator so it's not a conventional Force accelerator because if there's people in them human beings in them or some a being in them that isn't crushed then it has to be a different way of doing it the hard part is okay he just explained inertial Mass reduction for everybody who wasn't paying attention there there there has to be another way to pull it off this is how you have to have a situation where

(1:34:27) you're not going to get crushed by the g-forces this means you need inertia reduction so how do you pull that off well you bend SpaceTime around you right warp drive and or a wormhole will both accomplish this warp drive lets you pull space around you right like on a conveyor belt if you're on a conveyor belt you're not moving conveyor belt's moving if you make a bubble around your object if you go through a wormhole it's the space the medium is moving you're not moving moving this means there's

(1:34:55) zero inertia that's how you can achieve these relativistic speeds of that are extremely high yes to find a way to physically do that you know there are people who have been experimenting with Z point energy or try to tap Z Point Energy for years every once in a while someone will do it accidentally they'll call it cold fusion but I don't think it's cold fusion I just think it's a Zero Point Energy T okay when you heard when I read when I heard that part what he just said right there he said that people have accidentally

(1:35:27) figured out uh free energy and Zero Point Energy Zero Point Energy is the same as free energy guys they're synonymous uh he says some people think they're finding cold fusion but in the end they're finding free energy I've I thought he was talking to me when he said that this whole time I've thought there has to be a relationship between sucking energy out of The Ether and cold fusion this is probably how we're able to achieve over Unity through Fusion fion the way that it's possible is that

(1:35:56) it's extracting energy from The Ether maybe that's how our sun works right like this is what I think there's a missing link that we don't quite understand how can the sun be up there for billions of years producing basically a limited amounts of energy for us right it's there's a connection between cold fusion and The Ether for sure and this goes the idea the thunderstorm generator Malcolm Bendle stuff as well plasmoids like it's all starting to come together chat like this is in pseudo science we're like actually

(1:36:26) figuring out if you're listening to this right now you are on The Cutting Edge of literally experimental physics that's been out there not even just yeah experimental proven physics been out there forever suppressed from us uh Mike diets thank you very much for the donation says Ashton thanks for bringing light to the subject you really open my eyes and mind keep doing what you're doing dude yeah what I'm trying to do is I'm trying to bring the information down to the common person like myself like

(1:36:51) everybody else that's out there I've loved physics and science for my whole life uh and I you know I've absorbed as much as I could and I knew there was something missing here too many questions too many gaps and after I saw the videos and it just all started to come together like this is why the MH370 videos are the biggest leaks in the history of the world is because once you see those videos if you know enough about science like a lot of this goes back to the double slit experiment especially when he's talking about like

(1:37:17) superp position and uh you know time being stuck this is the issue with the double slit experiment the only way the double slit experiment makes any sense is if time is not linear just

let me to repeat that again the only reason the only way that the double slit experiment makes any sense the answer is that time is not linear which means that the Double SL experiment is able to react based on us observing it because it's able to break locality break the speed of light it's able to break time as we know it the

(1:37:46) universe is defined the laws of physics as we understand it that's what's happening in the double slit experiment except for three people that I know uh no one has been able to control it when it happens it happens for a short period of time and it's almost always destructive it's like drilling a hole in the base of grand [REDACTED] Dam and all of a sudden this jet of water comes out that literally has enough pressure to cut you in half um without a valve on it you can't shut it off uh so that's really interesting too

(1:38:21) because I've always wondered okay well like you get your generator running how do you stop it the moment you have your generator because you know Thomas Bearden explained it right okay you've got over you have excess energy coming out more than it's coming in and you send it back into the system but now your generator is just going to run forever and it's going to continually produce excess over Unity like how do you stop it how do you make sure that it doesn't send so much energy out that it

(1:38:44) just blows up or something right that's the real problem like you're have this destructive event that's where you need your engineers to be very smart so I don't know what the answer that is at all just being honest with you I have no idea the first time I heard it was this and I went oh wait yeah that is doesn't that seem like kind of a problem um there's one guy that that that a friend of mine actually visited in an Arbor Michigan that was I consider a mathematical genius that actually

(1:39:10) figured out a way to control it he was so paranoid he divorced his wife left his wife and children and went in hiding this story is nuts because he was terrified that someone would kill him for the knowledge that he had of the ability to tap this whenever he chose to and control it we don't know where we haven't seen him in 5 years I don't know where he is so some guy figures out how to control it and he just freaks out divorces his wife and goes and runs away because he's so scared I can relate to

(1:39:41) that because when I first saw the videos and realized they were real I was like holy [REDACTED] I'm GNA be killed I was like I'm gonna be killed I figured this out government's going to come silence me and I was like I got to I got to talk about it otherwise like what else where my options like I either go into hiding or and wait for them to come for me or I just be as loud as I can be that's literally what my thought process was so Brandon brings up a great question right when you start to think about this and

(1:40:03) absorb this you go wait what does this mean for the universe If energy is infinite like is the universe actually GNA die from you know going cold I would say this questions whether or not a big bang even happened maybe our universe is actually infinite I've always thought that makes more sense that our universe is is infinite size basically and that it's been around

hundreds of billions of years if not infinitely long um and to me that makes more sense in my personal opinion uh so I would even question if

(1:40:36) the Big Bang even really happened or if it did happen if it didn't happen way longer ago than we're thinking and James Webb Space Telescope already destroyed the idea of the universe being 13.8 billion years old they they already found galaxies that were already way too advanced that were super super far away uh so the idea of the universe being 14 billion years old like everything we've been taught growing up is all wrong we already know that we're already pushing it back now they're saying it's like 26

(1:40:59) billion years old we're like literally doubling the age just because of one telescope Improvement you know right now today you've got an energy problem with the price of oil what do you think would happen if you introduced an ability to t zero point energy represents about 40 to 50 megawatt of power per cubic inch of space um that's a lot of power that's uh 4,600 million watts of power and if you could tap it at will then no one would have to sell gasoline or oil anymore you would just tap into it it it would be it would

(1:41:47) be like taking and going out to the great lakes and taking out one drop and using it if would you'd hardly miss it and so that was huge too honestly this is this is the craziest interview other than Thomas beard and stuff this guy is a he's on the Mount Rushmore of crazy videos that we've watched in this investigation because he just explained it it's like taking out one drop of water out of the Great Lakes just basically infinite energy this is where it's like technically we're borrowing

(1:42:16) the energy but it's like borrowing one drop of water from the lake it's nothing and it presents so much energy just a single drop this why it's literally just unlimited free energy like this has been suppressed from us we shouldn't be driving around a [REDACTED] cars or any of the coal power power plants all this crap that we have literally could all be just gotten away with overnight and since it permeates the whole universe and it it continually fluctuates as it as as that as the the matter and antimatter interact

(1:42:53) it's not like it's a steady Lake it's a it's a it's a pool the size of the universe so you'd never for what we've used before you never even miss it yeah it's just it's just unlimited like the amount from just like a drop is enough to run the entire country right that that's how crazy the amount of energy is you want to move up from the cardiv scale from like zero to one like the moment we tap into free energy in The Ether we move up to a type one civilization overnight overnight with

(1:43:24) this amount of energy we can start to do crazy stuff like we can destroy our own Planet but then imagine using it for something productive like we are going to be able to start doing crazy stuff like CERN the whole CERN thing is is just [REDACTED] guys CERN is a [REDACTED] scop uh they're doing nothing there that's relevant everything that CERN is trying to accomplish has already been discovered decades ago we don't need some giant particle collider that's like 20 miles wide or whatever this thing is

(1:43:52) we don't need this [ ] uh what we need is free energy and have one drop of it then we can basically just start to do magical stuff the only thing this one guy claimed that happened is if you bottle it and move it to another location and release it he sounded exactly like Mr Spock he said you create a tear in the in the time time domain of the of of local space and bottle it and create a tear a Time tear in local space What chat what he just explained the MH370 video you bottle it up and you create a tear in local

(1:44:50) space uh excuse me sorry sir I'm going to need you to to repeat that yeah that that's a boom that's gonna be that's gonna be a yatsi for me chat that's GNA be a yatsi for me so you mean like that video right there sir is that what you mean sir cause a problem which he claims he did like it's a steady it's a it's a it's a pool the size of the universe so you'd never for what we've used before you'd never even miss it the only thing this one guy claimed that happened is if you

(1:45:36) bottle it and move it to another location and release it he sounded exactly like Mr Spock he said you create a tear in the in the time time domain of the of of local space and guys I will bet you any amount of money in the world that he's talking about Thomas Bearden right there I will bet you anything he's talking about Thomas Bearden right there like that he's got to be talking about Thomas Bearden actually cause a problem which he claims he did and he will never do it again which is bottle and move it the other

(1:46:13) part is that you're not it doesn't work on conventional jet engines one has to create an actual Zero Point Energy engine to do that this one one guy in an arbor M Michigan had one running in his basement not connected to any power source whatsoever sitting in the middle of a table and it had been running for a year yeah of the ones I've seen not there there there's they might be able to make a an engine that would drive an automobile or they might make a a a motor that would drive a pump for a well

(1:46:47) in Africa somewhere or a generator to power The Village but none of them would have the have even this the inkling of how you would build a 300 a ship the size of a football field and make it move at that apparently it moved sh and speeds actually the wrong word what what appeared to be changing in location in very rapid times because conventionally we think of this as speeding through space but one if it really acts like a like some of the high energy particles at CERN they really transfer into energy and reappear

(1:47:26) over here and there was no mass that went anywhere because all mass is is solid energy and if you find a way to move back and forth with that the conventional wisdom is that a complex organic structure like us cannot transfer back and forth from energy to solid but that's because we've we've never seen it done what holy [ ] he just explained macroscopic phase conjugation chat he just explain macroscopic phase conjugation going from Mass to energy and back to mass again that's exactly macroscopic phase conjugation he just

(1:48:11) explained it he just explained inertial Mass reduction what he just explained is inertial mass reduction going from a massive object to a wave function energy and then going back to a

deterministic point again Mass again this is the craziest video I've ever [REDACTED] watched we only know this is real because of our investigation into this science if you if I had even watched this six months ago I wouldn't have known what he was talking about I only understand it because we've been talking about this I want to play that again

(1:48:47) guys holy crap yeah Beam Me Up This is literally teleportation we're not you're not dematerializing the object you're reducing it to a wave function where now it's just pure energy and you're transmitting it somewhere else and then you're turning it back to mass again from a firon to a bon and back to firon again because all mass is is solid energy and if you find a way to move back and forth with that the conventional wisdom is that a complex organic structure like us cannot transfer back and forth from energy to

(1:49:27) solid but that's because we've we've never seen it done what you represent is uh solid energy now what you you see you think you're solid right in fact the distance between the atoms in your body are almost exactly relatively proportional the same distance as the planets around the Sun so in fact if you were to take if you could if you could look at your individual atoms you would be 98% space so he just explained it right there and so I'll I'll put this guy's name in the chat for a third time guys

(1:50:08) please if you if you are walked in late then you're gonna have to catch up I'm sorry uh I'm not going on to repeat it again for a fifth time this will be the time but he it's worth saying his name one more time this is his name he's an aerospace engineer for 30 years he worked at right Patterson Air Force Base in the Air Force for years um this part right here what he's explaining that we are we're 90% empty space so what we don't realize we look like we're these massive objects but if you were to

(1:50:33) Crunch us down all the mass in our whole bodies would fit on the head of a pin so then now you can begin to understand how easy it would be to revert us to a wave function like we really are just waves this is this is Tesla you know frequency waves and vibrations energy frequency and vibration right yeah the if if we if you if we if you were the equivalent of a neutron star which is only only the the the nucleus and the electrons compressed you you would fit on the point of a pin so when you really get down to what

(1:51:10) you're made out of um it the total electronic the total state of view is on the point of a pen James S McDonald actually had an Institute to study paranormal psychology he's that's why his airplanes were named Banshee and Phantom uh he was uh he was an Irishman who was very inter Scotsman very much interested in in the in the in the spiritual world in the par in the Paranormal and he had uh part of his research Department working with a foundation he had to study the par paranormal and the great Randy the

(1:51:51) magician infiltrated his organization and actually for about a six months did slight ofand experiments to get him tied to this that there was something really there and then he discredited him the head of the research Department um would not even talk about anything related to this in fact the guy in an arbor that had the Zero Point Energy machine actually came

to McDonald Douglas he and a couple of his Partners came in they were going to talk talk about this funny hydrogen motor that they had and I got invited to the

(1:52:28) meeting and about halfway through it I just said guys you've got a Zero Point Energy machine why don't you admit it and the head of the research Department who was who he thinks quote was discredited with put off when they he just Nam dropped how put off right there he just name dropped how put off randomly in this as well how put off nose guys I'm 100% sure how put off nose and it goes to show how they just get discredited right and what he's going to explain here too is like literally the plot of Fallout the show that just came

(1:53:01) out they've got a free energy device and they just shell it because D can't make any money off of it because they're making too much money off of the the the uh competitors to free energy like what the why is our world so messed up man did uh Randy did this had the guards come in and escort them off the planet off the plant because he was just so terrified of this uh he thought it was pseudo science and I said it's not pseudo science it's just beyond what we know right now yeah and this is the thing guys so like um

(1:53:34) Terence Howard has been getting attacked and discredit discredited and this is why you have to be very careful about what you say like if you if what you say is not locked down by science then you're going to get attacked the reason why there hasn't been like 50 videos from scientists attacking me and trying to discredit me is cu I'm right and in fact they will probably start trying to do it but I've been very careful about what I say and this is why I go to the the physicist and the engineers and Roy

(1:54:03) D Herbert tells me repeatedly like make sure that you what you say from the science is like 100% nailed down because when people start to try to discredit you you're gonna just clap back at them right this is why people can't say like oh Ashton's crazy about The Ether because I'm like literally explaining dark energy and dark matter and if they come back at me I say okay why does work and then they're going to look stupid right and it's different because when you're a **debunker** you can just make

(1:54:28) fake arguments but when you're a real PhD and you are a scientist with multiple scientific papers uh terrible logical arguments are going to get you completely discredited and blackballed in the academic Community because people in the academic Community can see through terrible illogical arguments if you're just some shittier **debunker** **redditor** or whatever you can make up fake crap all day right this is why they don't tie their real names is why a lot of them just remain anonymous right because they don't want to get their

(1:54:56) real names tied to it but real scientists this is why they don't come after me because at the end of the day they're question in the back of their mind this guy might be right um but anyway Randy would always say I can't measure it and what I would say is I'm going to give him a ruler and I'm going to say now **I want you** to measure the diameter of an atom or **I want you** to measure uh um **I want you** to measure how how what's the distance between quarks and the answer is well that device can't isn't useful for doing

(1:55:30) that so when he talks about radio instruments and electrodes and probes and says well I can't measure any anything parch parapsychological he may not know what is parapsychology how do you measure it yeah so right away here you can already say like oh I can't measure a scalar beam or a scalar wave right well yeah because you don't have the right tool to measure it with you know you don't have a you're not measuring gravity so of course you're going to measure zero EMF same idea is I go ahead and measure an

(1:56:04) atom here take this ruler and measure an atom you're gonna go well I can't exactly because you're not using the right measurement apparatus this why when they start to come at me when the scientists come at me and start saying well the ether is not real then I say well what the [ ] is a virtual particle where does that come from what is dark energy go ahead and measure some dark energy for me go measure some uh some dark matter for me right and this shuts them down immediately this is why Sabine Hossenfelder when she tried to

(1:56:31) clap at me and go oh you can't just add an extra Dimension well I just go well Kusa Klein literally added a dimension extra Dimension Tesla Einstein all Maxwell all these people initially believed in an ether it's not some crazy concept it's like literally all the pioneers of modern physics as we know it and electrical engineering all believed in The Ether until general relativity came around and then we just moved away from it the only people that I know that have come close are the Russians in

(1:57:02) their parapsychology institutes most of which are all now defunct but they had some very interesting twins that they were doing experiments with that they could find ways they were they were measuring something was occurring between the two of two of them in their brain so they could actually know what the other one was thinking and it's utterly amazing as to the the spectrum of electromagnetics that are going on inside the brain um the Russians have done a lot with what's called scalar waves and different Spectrum electromagnetics

(1:57:44) with the within the brain and they're convinced that you could explain Paras pchology if you could ever find out what it is is that you have to measure to prove that it's occurring you just Dro scalar waves right there randomly okay a lot of people argue your hemispheres scalar interferometry that's why you have two hemispheres of your brain they creating scalar waves scalar interferometry potentially as well so this actually allows us to unify gravity and electromagnetics as well as Consciousness pretty

(1:58:16) cool but they are only they just got to the edge of perhaps measuring something but they really quite weren't sure what to do or how to do it it's all based on physics but maybe you haven't got maybe it is scaler waves if it's scaler waves then you're in a whole another Avenue of physics which are very controversial um and this is the thing too scal waves are highly controversial guys and this is where um unfortunately for everybody else that's out there I don't give a crap how controversial it

(1:58:50) is I'm uh I'm bringing back I'm bringing The Ether back even though it's super controversial I'm bringing back scaler physics because honestly just saying scaler physics is so

fun I love saying scaler physics scaler physics scaler weapons sounds [redacted] awesome so we're bringing it back H scaler physics is coming back uh I don't care if it's been discredited or whatever then we're just going to recredit it we're going to bring it back into the mainstream we will slap down every single physicist

(1:59:18) that we need to because once again I'm looking at the answers I'm looking at 2 plus 2al 4 so they want to come back to me and say 2 plus 2 equals 5 I'm just going to say prove it I know I know it doesn't because I'm staring at it right here it says right here in the paper 2 plus two equals 2 plus two here equals uh four we can see it right here look here's the answer want to look at it there it is right here and I can even show them here you go 2 plus 2 equals 4 here it is chat right there you're

(1:59:45) seeing it if you can explain this with with standard Einstein physics and tell me how 2 plus 2 equals 5 I I'm willing to listen there it is I was very very much into those the difficulty with Tesla is that when he passed away Jay Edgar Hoover came in and confiscated almost everything when his maid dis when his maid discovered him him dead she didn't discover him dead she discovered five FBI agents in his room pilfering everything and he was laying on the bad dead um his nephew sued the US government and won

(2:00:27) back theoretically all of his equipment experiments and Records there were theoretically 50 boxes he got 45 of those in Belgrade the other five are missing and a whole bunch of stuff is missing one of the guys did an experiment that he did in New Jersey which was build a half grounded antenna of very unusual different configuration everyone said it wouldn't work but in 1934 he met one of Tesla's assistants who you worked with him in New Jersey and he says oh well you're hooking up wrong here you hook it up like this so

(2:01:05) in a rainstorm in Massachusetts they hooked a little 10 watt receiver transmitter up and the other guy went 50 mil away on the other side of a mountain and in a rainstorm they held a conversation over that antenna system without any noise static or anything else on it we also found a record of a submarine that was in the Mediterranean in 1917 1918 an um and Tesla in New Jersey put one of these antennas in the ocean right off the coast and on the shore and and he's holding a conversation with the captain of the

(2:01:50) submarine and uh one of the guys is actually dug out of the Navy records the log of the submarine and it essentially says some idiot who's claiming his a New Jersey talking to me must be absolutely crazy because I know I'm 100 feet underwater and no one can be talking to me from New Jersey and he had the matching language in his records in his log book Tesla's logbook so what was that yeah so basically Tesla was right guys I mean now this doesn't mean that Tesla was right about everything right

(2:02:25) uh cuz a lot of the people in The Flat Earth mov want to say well Tesla said that Einstein was an idiot right and this is where people get too tribal about it like science is rarely a situation where people are all right or all wrong Einstein was still a genius man like Einstein was still a genius but Tesla was definitely right about The Ether and he was definitely right about

scaler waves you know people say oh it it was an accident it was a coincidence it was an inversion of the white layer over here you know um there are a lot of

(2:02:54) things we can't explain that are going that people have actually done this also reminds me of The Ether experiment that I posted uh last night or earlier today or whatever it was where I found the somebody recreate the experiment and then they use an completely illogical argument to claim that oh it was because of the temperature it's like dude uh correlation does not equal causation you can't just be like oh I I just decided that it was because the temperature and got it to know line up or whatever like

(2:03:26) that's exactly what this reminded me of right here where like somebody shows them something they can't explain and then they just use some reductive reasoning to like figure out to come up with some other explanation that like makes them feel good like that's the exact same thing as the guy uh who tried to recreate um the Sawtooth experiment did exact same thing he just didn't like the answer he was proven wrong he knew he think didn't think the experiment was going to work it ended up working and so

(2:03:54) then he goes **debunk** around and just goes oh goes the temperature like complete utter nonsense yeah literal literal logical fallacies like and it was kind of embarrassing when I read it and I'm like he comes to the conclusion he didn't want and so then he just tries to come up with an explanation that doesn't prove it because correlation does not equal causation and then he just writes it off as that which is just super lazy not science back when I was a young young engineer at McDonald in the 60s

(2:04:22) uh we routinely designed for the Air Force and the Navy airplanes that Fu at Mach 4 and A2 and six uh the the Vietnam War interfered with most of that but we had running engines that would fly Mach 6 easily running engines that would fly Mach 6 in the 60s so what is that chat uh like 8,000 6,000 mph uh we actually had tested engines that would fly the mo 12 airplanes in Mach 12 in 1960s in fact in 1966 a fellow by the name of Bill eer he's still alive working for sic and saic in Huntsville so saic is one I've got to

(2:05:09) look into chat saic uh I'm also staring at an image here um where is that image where did I put it I've got too many too many things now oh right here um saic guys you guys want to see something fun so he just said saic right was working on some Hypersonic uh Mack um Mach 12 who who who are my ufology followers you guys are going to love this you're going to uh wait why can't I see it oh why is this like so zoomed in what does this say on the right over here holographic recording and micro Nan Nano fabrication via Ultra fast

(2:06:03) holographic two proton induced photopolymerization I don't know exactly what that means but this says saic right over here and this says Shan M kpatrick well that's interesting Shan katrick is in like the former head of the AO who tried to convince the world that they're the government's not hiding aliens and not hiding reverse engineer technology 2000 he has a patent from saic that's got some pretty weird name on it that looks like if I had to guess this this this image right here looks

(2:06:40) like the Casimir effect or some kind of capacitor and he's looking at a bunch of wave functions and these other images here that I'm looking at right here look like uh these look like some kind like a lot of these are the same kind of what do they call them um goddamn it some interferometer experiments everything's always the in aerometer experiments whenever I see holography Holograms holographic stuff this leads me to think about teleportation was this guy like was Sean Patrick literally linked to some of this

(2:07:15) technology look at this guys Sean Patrick said 2000 pretty weird chat had on a test stand an engine that I might send this to the AO guys should I troll the AO and send them this that that image that screenshot from Sean Patrick guys we just like every time the Government as the government's like not responding to us we just keep finding more damning information was now we can't fly at Mach 8 and a wind tunnel but we can duplicate the pressure and temperature that the engine would see if it were attached to an inlet which is

(2:07:53) what he did and he actually ran an engine that got within 5% of predicted performance of a airstream that duplicated Mach 8 conditions at about 120,000 ft and it ran for about 20 minutes that was all the Air Supply I had 1966 and we were convinced we could build them then what's fascinating is I got to see the X-33 a couple weeks ago and they had this new breakthrough of this new shingle technology that allowed the the inside of the airplane to be room temperature or cold with the shingles that reflect the

(2:08:32) heat they look exactly they're now they're a little bit thinner because they have a little bit better materials but we built exactly the same structure in '65 and tested it to Mach 12 conditions um almost the same standoffs a little bit more elegant than what we had cuz they have a little more elegant materials these days but we were convinced we could do it then people laugh at you and say well no you couldn't or no it's impossible we're not going to do that cuz it's risky but no

(2:09:05) it wasn't risky and yes it could be done all it takes is a dreamer so can you imagine the right brother all it takes is a dreamer and yes I probably will send that to the AO also I did send it to Skyfire news uh so whoever sent that to me thank you very much appreciate it pretty pretty crazy if they one was a lawyer and one was an accountant why are you going to build a stupid airplane for it only carries one person who's going to buy it what kind of profit margin we going to get God we got 40% on bicycles why are we doing

(2:09:37) this for think of the liability everybody can sue us it's a bad idea yeah let's not do it he just explained why nobody's created free energy it's not that simple like just showing people how to do it not enough you got to commercialize it you got to make money off of it people say why would it make an airplane if it can only hold one person well because you're going to make an airplane that can hold more than one person you've got to have a marketing strategy you've got to have a way to sell it you've got to

(2:10:04) have a price point like business is not as simple as just inventing something as long as we have that opinion we're stuck what you have to say is by gosh it's something that no one's

ever done before let's try it if I were to look at I literally feel like this guy was just [REDACTED] talking to me today when he said that it's like we've just got to try it we've got to we got to try to make it work like other people have failed now it's our time to try like I feel like this is my purpose in life since my

(2:10:31) first introduction to UFOs as a young Lieutenant um to today I would say you have to look at first of all I believe there's a large number of covert projects that go on the United States that none of us are ever aware of and if you see some of those things they probably bend your mind and they don't fit your conception of what what an airplane or whatever it is and so it seems to you to be a UFO so I think maybe a large fraction of those are covert projects that we're doing or someone's doing that are Earthbound and human

(2:11:16) beings and and and if you really knew the the what was behind them you would say yes I I can see how that works but then I think it's like PL Project Blue Book there's this hardcore 10 15% or 20% that don't fit any explanation other than the fact that the the the individuals the beings that are in them and came here came here by way of a process that we're not familiar with yeah so I love what he's saying here because he's like look there's all these projects out there there's probably like most of the stuff

(2:11:57) we're seeing out there is us but there's some percentage that we can't explain that's even more complicated than apparently Mack 12 speeds and literal teleportation like he just described wormholes that is time space travel and I I firmly believe that some of those are like that the history of the world has been that the wrong individual getting that information can use it uh for a lot of destructive things so he just also said that he believes that there's some non-human intelligence Visions he didn't explain what it was

(2:12:30) from or where it was from or what the nature of it is but what he just right said right there the wrong individual getting this information can do very destructive things guys what have I been saying for seven months eight months however long this technology is dangerous it's a weapon this is is a this is a situation where Whoever has this technology can destroy the whole planet wow thank you very divos appreciate you very much man Big Ups huge donation thank you very much sir you've been following along forever we

(2:13:06) are no doubt in my mind right over the target like we are on the target we've been playing darts and we've just been nailing Bullseye after Bullseye after Bullseye after Bullseye like literally that's what's been happening in this investigation to the point where like the government is like so far behind like the the agents that have been following us trying to like get ahead of us they must just be [REDACTED] exhausted they must just be absolutely exhausted because we have just been relentlessly pushing the investigation

(2:13:39) forward relentlessly pushing it forward and we just keep finding more and more and more and more proof more corroborating evidence uh for everything that we've been pushing the science um the coverups uh the stuff about the plane you know the conspiracy all of it is being exposed we're just putting it all out there thank you very much deos not everyone would

use it for the betterment almost anything you can think of can be turned around to be used as a weapon and when you get into these kind of energy energy

(2:14:18) time transitions what whatever I then that I can't I can't think of the best word um it's it's it's what Tom Bearden says that they could be used to just wipe out whole segments of the population and in the earth as well use to wipe out whole segments of the population and wipe out whole segments of the earth that's pretty scary man like this might be able to you be used on a situation where like you could potentially spread a virus around or you could just literally cause instant death in people like Tesla's

(2:14:56) death ray um pretty scary stuff man they could be made to to liberate us from all dependence on fossil fuels yeah the the letter to Ashton is really starting to get a lot more credibility right like that letter to Ashton Forbes like the more we find out the scarier that letter Dash and Forbes is and it starts to make sense because I haven't been silenced yet and I've just been exposed the government's biggest darkest secrets for nine months straight and I still haven't been silenced or got a phone call yet

(2:15:27) I've got the a afraid to talk to me the AO is afraid to talk to Ashton Forbes honestly it's just the funniest [REDACTED] ever like I have to laugh I've got the government afraid well first of all the the anti the ballistic missile defense system is probably um a pipe dream in the sense that um if what it's designed for is that you know where it's coming from and when we had **Russia** there was a 5050 chance that you you knew about where it would be coming from uh with the Rogue Nations we have today it's absolutely

(2:16:10) ludicrous um it's the guy who walks in with the briefcase with remember that okay so somebody says this I was going to no different than nuclear power mutually this is way different than nuclear power I let me be 100% clear this is a no way comparable to nuclear weapons what we are talking about here is instant death and destruction on a scale that is a million times more powerful than a nuclear weapon a million times more powerful nuclear weapons are literally obsolete in the face of this technology we're talking about directed

(2:16:48) energy weapons that could destroy and blow up a nuke within one second of it lifting off the sky we're talking about weapons that can be Amplified to such a degree that they can destroy the whole planet with the push of a button now **I want you** to listen to what he's about to say right here because we're not afraid of a nation state what this is afraid is that somebody can take a suitcase suicidal bomber can take a suitcase and blow up a whole country a whole country and I mean like blow it up like a crater or maybe even create a

(2:17:22) black hole that just destroys the whole planet with just a suitcase that's what we're afraid of in the 50s they built a nuclear warhead that fit inside a sparrow A7 Sparrow which has an 8 in diameter body that was a quarter Kil a ton weapon that'll fit inside any briefcase you can think of now the guy may die carrying it but he's going to die anyway so what difference does it make see so what he says like the guy may die carrying it he just said that we could fit a nuke into a suitcase and this was like what in the 60s or 70s

(2:17:54) that was 50 60 years ago if you could yeah this weapon can zap a nuke out of the sky imagine that you can have a briefcase weapon that's a scalar bomb that wipes out the whole Western Seaboard one person with a suicidal one person this is why they're covering up guys like the people that think that nuclear weapons are a threat you need to completely re-evaluate what you think a threat is this is the biggest thing I see so many people talking about nuclear weapons nuclear weapons are [redacted] obsolete obsolete completely irrelevant not

(2:18:32) relevant at all to geopolitics if you think nuclear weapons are a threat you are living in a completely different time nuclear weapons were dropped 80 years ago most people aren't even alive when we dropped nuclear weapons and figured nuclear weapons out this is like saying that somebody on a horse is a big threat to us you would laugh somebody on a horse came up to you you run them over in your car like nobody's afraid of somebody on a horse nobody should be afraid of a nuclear weapon on this planet nuclear weapons are not a

(2:19:01) threat in any way shape or form to any uh Advanced China Russia United States none of us are afraid of nuclear weapons the weapons that we have are magnitudes more powerful uh I'm far more feared of that then and when I say destroy the whole planet no I'm not talking about the surface of the planet I'm talking about destroying the whole planet like Kaboom the whole planet's gone or like the whole planet's gone into a black hole like I'm talking about the entire destruction of the whole planet so I

(2:19:38) just want to be 100% clear about that that's how powerful these weapons are like I'm talking about destroying the sun I'm talking about creating a big bang or creating a black hole remember when people were freaking out about CERN creating black holes I'm talking about creating a weapon that creates a black hole that destroys the entire planet that's why they don't want to tell anybody about this technology a it's too destructive B people are going to freak the [redacted] out people are freaking out

(2:20:05) about nuclear weapons and they're obsolete imagine if you start telling people that we can create a weapon that's that goes into a suitcase that will destroy the whole planet anytime we want people are going to lose their minds if if people can if beings can travel in time space then anything we would put in orbit as a weapon would be like like going against Jenghiz Khan with a firecracker you know it it doesn't make sense you know when we talk about zero energy what it's like going at Jenghiz Khan with a firecracker did you

(2:20:42) just hear what he said it's like going at Gus con with a firecracker Perfect Analogy right that's what a nuclear weapon is you're taking your little firecracker you're going at Jenghiz Khan he just runs you down right that's how like people this is the thing that I keep trying to impress on people is how advanced this technology is just completely blows Conventional Weapons completely blows nuclear weapons completely out of the water completely obsolete so that's what I if you don't take anything else away from this I want

(2:21:09) you to take that away from this discussion is that the weapons in 2024 that we are talking about obsolete nuclear weapons that means is that when everything comes down down

to rest there's still energy left it's like sea level in in in the ocean and there is a constant flow of energy between matter and antimatter as it annihilates itself and recreates itself it occurs in stars all of these big star factories you see now with Hubble is a continual exchange of energy and although the average is zero

(2:21:51) that zero may be a pretty high level above nothing at all and what sakarov and some of the physicists said is that it's this level that creates the background for the universe to exist there's a group of **Russians** that you that was great and I if you watch my clip I moved some of the stuff around so it made more logical sense but like he just explained how the ether is the fabric of our universe and that the underlying negative energy that we see out there is what allows everything to exist that's why we have

(2:22:25) virtual particles bubbling into existence it's coming from The Ether it's seeping through pop po pop pop seeping through the ether use that tube to repeat an experiment that Tesla ran in Colorado Springs when he ran it he actually created he tapped so much energy that the electric energy flowed back through the wire and actually destroyed the power the power station in Colorado Spring RS and when the **Russians** repeated it at Moscow Aviation Institute they blew up the one megawatt power station at Mai this was

(2:23:00) 1980 when I got involved in space again with Sandy McDonald and we started the what eventually became National Aerospace plane uh I met a group of **Russians** over in England had a conference and one of them had been involved in transmitting energy from a and 10 on the ground to a satellite in orbit back down to Moscow with only about 10 10 15% losses and he said the reason we can do this is this is a scaler wave projector and here's what it uses and he opens up his loose leaf binder and says now you can't take any

(2:23:38) pictures of this or make any sketches just look at it in lo and behold there's the tube by saw in sman Yugoslavia so basically he's talking about being a beam energy and beam it back and this is exactly what Lieutenant General Quast was saying in that one I post this presentation from Len Lieutenant General Steve Quast and he talks about being able to beam energy into space he's talking about this he was talking about teleportation as well and he just like had to backtrack as well because he gave

(2:24:10) too much information away this is what they're talking about we can beam energy at a distance the only way that's possible is who scaler technology and to the person who earlier who said that nukes are not just obsolete but a liability nukes are a liability you shoot your nuke up and somebody shoots it with a directed energy weapon and it blows up on you like I don't want us to have any nukes not because I think we need to get rid of nukes but because the nukes are gonna blow us up **China's** gonna

(2:24:36) hit us with a space laser it's G to blow the nuke up on us we should definitely be getting rid of all of our nukes they're Obsolete and this was the antenna that what Casper Weinberger was saying was the anti-ballistic missile thing and he told me even then he said you know if you ever go in the building all you're going to see is an empty concrete building with a

couple of cables because it's not he just explained directed energy weapons the anti-ballistic missile thing is literally a directed

(2:25:02) energy weapon system that's what he just described using scalar technology I mean he just described it this this was over 10 years ago like probably 20 years ago this interview not an anti-ballistic missile radar it's a scalar wave transmitter and finally when the dod got in there they found an empty concrete building with a couple of water wires in it and he said ah they pulled everything out and Victor says it never was in there so they actually he claims he transmitted up to 10 megawatt of power from

(2:25:35) this station to satellite to Moscow and got about 8 and 1 half to 9 megawatt of power back received in Moscow uh what do you need he's just literally describing scalar weaponry right there guys literally describing scalar weapons 20 years ago so they were on the verge of understanding how you do some of these um unconventional things um but I all of that is now gone I don't know where he is he lost his job his Institute disappeared um so a lot of that work just collapsed in the Soviet Union that's the same tube the Tesla says he

(2:26:29) could transmit energy to Mars the surface of Mars in support a human Colony or to the surface of the Moon so once you make a once you break that break through that and you actually do that then just think of the whole that then fuel doesn't become a problem anymore in orbit you just use one of these tubes to generate the power directly to the right antenna and you you can you can fly to the moon you can fly in orbits you can do anything you want I mean guys he just talking about transmitting power to a distance we've definitely got ability to

(2:27:02) transmit power around no question um and then great question here Honestly by Patrick are you concerned about scaring people well I mean it's a scary world we live in I'm just concerned about telling people the **truth** so I want people to know what the threat are and not live in this false sense of security that we have right people are afraid of nuclear weapons thinking that that's somehow scary know the stuff we've got is way scarier in fact I'll go so far as to say that I think that the logical conclusion

(2:27:36) of this is that we are going to destroy ourselves we are going to destroy our whole civilization with this technology I'm almost certain of it uh so I know that doesn't make people feel good but it's important that we have this conversation so that people realize what's at stake here like this UFO technology exotic technology we've got out there has the capability to destroy our entire civilization and people should know that they deserve to know that and if we know that maybe we can prevent it from happening and at the

(2:28:07) end of the day even if we do then at least it's up to us the choice is up to us we determine our own fate not some **[redacted]** people in suits in the military that Dole out the technology to us as they think that we are ready for it as Jake Chanley would say the worst people in the world already have this technology we trust them not to wipe us out I trust us more than other people so at the end of the day we didn't destroy ourselves with nukes so you know we deserve this technology as well in my opinion but that's a great question

(2:28:38) thank you for asking that Patrick I think it's like a lot of things the people that if there are a group of people in the world that that have access to it I don't think they know how to let go of it because they're afraid who's going to get their hands on it right there he just said it right this is what I've been saying for months guys the people that have access to this technology they don't know how to let go of it they don't know how to let the world have it because they're afraid that Isis

(2:29:14) terrorists are going to get it the Kim jong-un's gonna get it or whatever Kim Jong ill I don't even remember which one we're at they're afraid that Iran's going to get it right they're afraid that the bad guys are going to get this technology well you know what I just took that choice away because I just told the whole world and I've been telling the whole world for the last nine months so now [REDACTED] them right we're just telling the whole world that's just how it's going to play out because the

(2:29:39) reality is they got themselves stuck into this Web of Lies and they screwed up when they filmed MH370 videos because then I saw them and I said you know what this is not getting putting back in the box so that's where we're at right now right you know they were looking for a way to get it out there and some of them probably do want it out there and this why they're you know letting me do this even though there'd be tremendous benefit to Mankind and and and getting us energy sources that we wouldn't um

(2:30:14) have the problems we have with today they're also worried about that somebody could take that same energy source and do the equivalent of what they did with the coal of instead of blowing a hole inside just obliterating the whole ship it's like trying to describe uh Casper the goat the Friendly Ghost it's so like he just said there you know they're afraid it's going to destroy the whole planet absolutely that's what they're afraid of and I would disagree I think that this technology has been

(2:30:43) around long enough that it could destroy the whole planet uh that's one parts of this investigation too is that those mh27 videos were 10 years ago so not only do I think it's Advanced the part where it can destroy the whole planet I think that multiple countries have it now **Russia China** the United States and we are probably in like a Mexican standoff at this point right nobody wants to use it because everybody can just blow up the world anytime they want uh you might see a cartoon of him but you don't know how big he is you

(2:31:11) don't know where his funding comes from you don't know how many there are because of the compartmentalization and the oath that people have to take um I mean I know people today that worked on one of the things that I worked on that if you asked them did do you recognize this name they would even if I can show it to you on the internet there's some things that have come up recently on the internet where some of the stuff that I was associated with their names are now on the internet they would say no that's I have no idea what

(2:31:43) you're talking about yeah so he just said like they will lie to you they will Gaslight you they will do anything they can if it gets on to the internet they are going to use all the

disinformation they can they're going to lie about it whatever this is why we got them over the barrel with the MH370 videos the videos got into the internet they lied about it they uh planted fake VFX comparisons they planted a fake Cloud picture that they produced onto the internet they did literally anything they could to hide those videos and they

(2:32:12) failed and we pulled more information that was than we could ever have pulled and found and I developed a huge following 370x all of you guys and now we've just got them over a barrel and they don't even know what to do anymore they can't even they can't even come up with any more fake **debunks** because at this point it would be so suspicious to even come up with any more fake **debunks** well that's what he just said there he said that they literally had buddies of his who are caught out on the internet

(2:32:38) and they just lie about it in their in their 70s now but they still absolutely would never admit that they even know what you're talking about so you don't know you have no idea but it's probably it's probably larger than you think yeah and I mean he basically just saying that you know the a this is why the AO is ghosting us right the AO got the call said stop talking to this guy I mean we we caught him we caught him Aro is dead in the water right we caught them they have to they've they **[REDACTED]** up

(2:33:14) because they also responded saying they saw something and they wanted to know more about the videos and now they have to say something right and if they' lie to me I'm going to expose the **[REDACTED]** out of the AO if the AO lies to me I'm going to go to war against the AO and I will expose them I have Shan kpatrick you just saw the clip the the thing I posted we will dig up everything about Shan kpatrick we will dig up everything about his LLC I will expose every **[REDACTED]** aspect of every one of these AO

(2:33:39) **[REDACTED]** if they try to lie to me that's a promise so if I know you Spooks are watching you just heard what I said don't lie to me don't you dare try to Gaslight me about the mh3 70 videos we know they're real so you better come back and you better not try to lie to me about this **[REDACTED]** and again that there's a reason for it and that is you don't want people who would be hostile to you to know what it is you could do to them if they really caused a major catastrophe uh because if they knew that

(2:34:15) you wouldn't prevent them from doing it they would just do it another way they and that's that's the hard thing to do this today I mean who would ever think in Japan that a group of Japanese citizens who are normally the most controlled individuals you've ever seen would release sarin gas in their in their underground uh Metropolitan train system yeah so he just did a really good analogy right there at the end right and this is the end of it think I it just blew my mind that they would they they

(2:34:48) did that so right at the end he's like look even good people even like Japanese people who are like the most laid-back people ever are they'll still commit atrocities with the right technology and right power because absolute power corrupts absolutely and so at the end of the day they're afraid of this technology getting out there uh and that's why they're going to do

anything they can to prevent that from happening this is why we've been kept in the dark for decades this technology is not like

(2:35:16) just figured out in 2014 this technology has been out there for decades and they've been advancing it in secret and they've been hiding it to use it as a weapon because they think that only the United States military should have it and this also explains why they did what they did to MH370 they were sending a message to our adversary saying this is what we have we figured out teleportation technology like it imagine if you are Vladimir **Putin** and you see MH370 Get Zapped out of the sky by some [ ]

(2:35:47) orbs like you every time you get on the plane it's going to be it could potentially be your last if you've pissed off the United States government and they want to make you disappear they're going to disappear your plane you're never going to be seen again and all the world's media is going to go out there and say ah yeah the plane crashed that pilot was an idiot uh Vladimir **Putin**'s pilot was a [ ] he crashed a plane and all the Western media is GNA go yep yep it was his Pilot was such

(2:36:13) an idiot couldn't believe he crashed look at the Iranian president Iranian president gets shot down by a directed energy weapon with four Governor's on board and they're just like he the weather was bad you go check there's no weather this is like the whole world's like oh it was cloudy or something are you [ ] kidding me of course they [ ] Zapped him out of the sky man he just shot a bunch of missiles at Israel and then he gets shot down like a couple weeks later let's just say it how

(2:36:41) it is we Zapped the [ ] Iranian president's helicopter out of the sky that's what happened guys I'm just laying it out there uh so yeah like that's why we did what we did to MH370 because we're not going to let **Russia** and **China** have this technology and B we want to show them that they [ ] around with us it's game over instantly it doesn't matter it's not about scaring **Russia** it's about scaring Vladimir **Putin** so that Vladimir **Putin**'s like no we are like he realized that he's our [ ]

(2:37:13) like we're just dog walking Vladimir **Putin** around because we [ ] got some weapons will zap his plane out of the sky any any time we want any day we want right that's or you know **China** whatever Z whatever his name is Right same diff this is why like is it Z what what is **China**'s prime minister or uh president what do they have God I feel like an idiot oh yeah no z um this is why he's hugging Vladimir **Putin** because they're like [ ] dude next time I get on an airplane the United States might just zap me away

(2:37:48) right like that would be it That's all folks like there would be no you would never be able to convince the world that the United States did it either like we would just send all our media to lie about it too so I mean that's just the **truth** man why do I think **Putin** doesn't have this I think that he might have it but our technology is Way Beyond them when the Soviet Union fell apart then United States Leap Frog the [ ] out of **Russia** like we Leap Frog way past them and **China** is catching up why why do you guys

(2:38:16) think that **China** is spending all this money in in semiconductors **China**'s investing like \$160 billion dollar in semiconductor industry because they know that semiconductors are what allows this magical technology to happen they know it like they 100% figured it out um and I probably shouldn't be pissing off **Russia** because he might hit my plane with a directed energy weapon so I should probably not be pissing those guys off for the record **Russia** and **China** if you guys are watching like I don't want to be at war with **Russia** and

(2:38:45) **China** I think it's stupid I think that with this kind of Technology we have to find a way to get world pce because otherwise we're literally going to destroy our whole planet so please don't destroy my plane uh I I want to live for a while longer also hey man I'm like exposing my own government so you know do me a solid and don't zap me out of the sky I'd appreciate that anyway guys I was going to go over the teleportation protocol but I'm wiped out we went for way longer than I thought we were going

(2:39:10) to go tonight the plan was only to stream for an hour tonight and somehow we're pushing almost three hours so yeah like why do you guys think that **China** wants Taiwan guys it's a small island why do they care about Taiwan because Taiwan makes all the damn super conductor or semiconductors superconductors whatever they're making all the most advanced microchips that's why **China** wants Taiwan that's probably why they hit them with a [ ] earthquake weapon or whatever the [ ] went on a 7.4 earthquake hits Taiwan

(2:39:36) buildings are falling down I mean I'm not saying that it was necessarily an earthquake weapon I'm just saying like what would it look like how would it look different if it wasn't if it was an earthquake weapon you know that's all I'm saying okay guys this was a good live stream uh you know share the stream get the word out to people because again I want people to know about the dangers of this kind of technology and let's do another stream tomorrow night if I'm not too exhausted and let's get into some of the

(2:40:02) scientific papers and do some more stuff but this this was an awesome one hope you got appreciated it and uh yeah have a great night uh check out crypto Alchemist Bernie that you see right here as well he and uh Jer Jeremy ree have been digging into a lot of this stuff for a long time and I just kind of came along and propelled it to the next level so appreciate everybody who's come before and thank you for everybody who is following tonight thank you m370x if anything were to happen to me I would want you guys to take the reigns with

(2:40:31) this you know and and take the information and push it Forward right like we've got it all out there so do what you guys need to do have a great night everybody love you peace everyone it's m m m h until you do some research don't talk to me I'm going to find the **truth** while I sit this Mar your opinion it means to me it's m m m mm h37 not all heroes make capes I wear glasses to see I'm going to find the **truth** while I sit this Mar the trolls hate seeing me [Music] succeed but guess what m m h37

(2:41:34) [Music] s what M M37 not all heroes I wear glasses to see I'm going to find the **truth** this your opinions to me your opin m m h37 Heroes our glasses to see I'm going to find the **truth**

while I this party hat guess what

(01:28) n [Music] we meant to fly PRS ain't supposed to fall from the sky but if they do they'll leave behind more than aace are to ples just be flying I know you think I'm lying the USA Baby hid **truth** night play they meant to fly PR PL supposed to fall from the sky but if they do they'll leave behind more than are to they'll leave behind more than who you think I'm ly the USA Baby hi the **truth** and I ain't fine planes they're meant to fly planes they

(02:42) ain't supposed to fall from the sky but if they do they'll leave behind more than P are to I a just be flying I know you think I'm lying the USA they be **truth** and i a't f [Music] they'll leave behind more than a piece of two they'll need to hide More Than A P or [Music] two what up everybody Welcome to the stream tonight I'm your host Ashton Forbes tonight we're going to be talking about science I'm excited to get into it everybody so let's see who do we got here today uh we

(03:38) got a bunch of people on here today guys thank you for being here early uh probably more that I can shout out I'll just shout out a few people uh pepper Zen appreciate you man nice hey what's up natti I haven't seen you around nice to see you Cole hello His Highness Alex I think I saw Heather in the chat as well Heather birdie good to see you my moderators uh hey there Kathy D nice to see you uh yeah that's a good Jam appreciate it man that's that's a fun one hey Carter good to see you as well uh let's get right

(04:09) into it guys um I got some basketball to watch later tonight so I want to get into it and do a little bit of science heyy Juan what's Up Everybody appreciate you uh shout out to **Mick** East and loser Jeff okay I'll do a quick recap on the stuff that's happening today um so first of all I'm getting so so much stuff that I I can no longer respond to DMS so if you send DMS to me do not expect a response uh the only DMs I probably will reply to if it's something highly relevant or like podcast requests like

(04:42) that in general uh please do not be offended if I do not send you a response I get uh inexorable amount of uh messages and emails and I simply can no longer keep up I guess that's just what happens when you get I don't know a ridiculous amount of followers that are out there so please do not take it personally if I don't respond to you uh it's very unlikely that I will respond to you if you DM me so no problem t- wolves baby what up yeah I mean if you know I'm a Vikings fan so you should

(05:10) know I'm probably a t- wolves fan as well let's take a quick look at some of the comings and goings on Twitter and then we're going to get right into the science today we're not going to waste any time so if people are watching this on the recording uh hopefully you won't have to wait too long to check stuff out uh so what happened today I'm going to start for reverse order here as well uh one of the big things right away was this claim that came up that I started getting spammed with about something's

(05:37) wrong with the reticle or whatever that the reticle doesn't look right or something on the Drone that the the reticle should be um the reticle should overlay over the top of the Drone uh so I looked into it looked at some people's replies that were out there confirmed conclusively that no it's not true the reticle does not appear over the should not necessarily appear over the plane uh somebody else provided another example I put in the reply by uh gluten sloth right here conclusively shows you can

(06:07) see the reticle literally disappear right here says right here as well it's only if the overlay presents a transparent color that these combined radar and underlay show through so once again yet another **debunk** has been proven 100% conclusively false um and it shouldn't be a surprise that a bunkers are commonly will lie uh related to stuff like this uh they did the same thing when they tried to argue months ago that the drones don't come in this they don't have thermal uh color a rainbow palette like this and I have

(06:37) like at least six videos that show that IR does come in blue thermal just like this uh with uh the rainbow pallets as well and we saw that um so I mean I I will just to be 100% clear you guys can clip this if you want or whatever I will no longer be addressing claims made by **debunkers** that don't come with proof now they keep saying that they have proof but having someone say this is what something should look like is not proof that's just what we call a bare assertion so in logic and reason when you make a bare assertion the onus is on

(07:11) you to prove it to be true so in order to prove this to be true they would have had to talk to Flier experts that use these systems and have those people on the record with their real name saying yes I've used these systems this is this should not look this way this is why it's wrong just saying hey I don't like I don't think this looks right and then demanding that I give a respon response the only reason why I did it this time is that I want to end that permanently at this time like we've shown now that

(07:36) they are 100% liars uh this has been conclusively **debunked** as well so you know they're acting in bad faith from this point going forward you should have known that already anyway once again they're paying literally they admitted to paying hundreds of dollars to promote fake **debunks** like this at this point they're probably been paying thousands of dollars uh it's really mentally unwell Behavior they I mean they really do need serious help I hope they honestly get it but just to be 100% clear I will not be addressing any more

(08:05) **debunk**s by the people that have been lying about the videos that have been making fake **debunk**s that have been lying about me they're caught on record doing all three of these

things conclusively so please do not expect that from me anymore if they try to post any more de simply just link back to this one now so I'm going to save this link to this right here right now uh in my Discord uh as I have a list of quick links so uh I'm going to save this in my quick links **debunkers** fake uh reticle that way anytime anyone ask me

(08:38) in the future to address some fake claims or whatever like I'm just going to link this one showing that they've been lying about the videos super annoying uh I wish they would stop but it's up to them you know and a lot of them too at this point are just like envious or clout chasing right they're trying to get their own little followers so don't follow these people that are lying about the videos whatever don't give them the attention that they want that's out there it's all a matter of

(09:01) just simply trying to uh you know it's they're trying to yeah they're trying to distract right yeah they're trying to distract everybody from the science so this is why I want to show we'll start with this and then we're going to dig into the science right after this um and yeah you know the funniest part is they don't address any of the claims that we make like you saw I posted to **MC West** like and and that's actually one of the things so also two podcasts Dro today I wish didn't everybody didn't drop their

(09:32) podcast at the exact same time but man in America drops tonight at n at 10 o'clock Eastern time which is in a couple hours I'm going to try to end right before that so you guys can go watch it good interview with man in America I've I've gone on with him twice uh this post just here like this is literally the **debunkers** that are posted that fake **debunk** and the ones that uh are paying the money so this T tjp of Texas is the guy that's literally paying th hundreds and thousands of dollars to

(09:58) promote uh Christian **debunks** and Chrisley is the one that fabricated that fake **debunk** about the reticles so these people are literally spending full-time jobs they're spending full-time jobs trying to **debunk** me this is not this is pathological Behavior this is like you need to like actually go talk to a psychiatrist and like go like when people say go touch grass like this is the very definition right here this is the very definition of like you need to go outside you need to go touch grass you to find something else to do

(10:30) with your life that's productive um very just and the the worst part is that these people aren't trying to solve the case imagine if they put this energy into trying to solve the case we could probably get answers from the US government but they're not nobody's putting their energy into solving the case they are trying to make the videos go away they're trying to make the case go away uh the videos are 100% real I know that the videos are real uh so when people do this it comes off very dishonest and it comes off very

(10:57) suspicious as well um now I'm not going to harp on that too much the blurry creatures podcast was awesome as well um the only thing that I want I'm not going to necessarily retract it but I talked about um that in this video I talked about the VFX going back to January of uh 2023 and I had partially retracted that saying that there we couldn't prove that it was on the

little collage because you can apparently keep editing and overlaying it uh and somebody provided evidence not proof but evidence that had

(11:32) been updated in December but it actually doesn't matter because no matter how you look at it and I'll can I pull it up real quick I'll pull it up real quick so you guys can see I want you guys to have the context of what I'm talking about here oh crap okay um I just I just switch share my screen hold on okay so this was the thing that we found right and you look down here and you can see the actual comparison that was all they added it in here so the fact that somebody went out of their way to add this in here the uploader did

(12:10) shows bad faith intent right away so this actually even though we can't prove this was here in January of 20223 it still proves that whoever uploaded this did so with dishonest intent because the only person that would add this in here to troll would be one of the people trying to debunk the videos so that's why I didn't ask uh Luke and Nate to remove it from the blurry creatures podcast so when you listen to the blurry creatures podcast and I talk about that we had proof that they planted this uh it still does look

(12:39) very like almost 100% proof still even after that that this was planted on the internet this comparison because here's the comparison that was been falsely used to debunk the videos right there um and then once we caught them we they they pulled it out so this is no longer there if you go back to this uh where this is from the source they removed this after we called them out on it so again it shows dishonest intent um so I just want to make that correction otherwise the blurry creatures podcast was great you guys 100% need to check it

(13:10) out it was awesome okay so let's go back let's get through some of the other stuff real quick um here it is CL this oh somebody just donated wow thank you very much uh brain scratch I've been watching your videos for like a month now all of your three-hour videos I watch I listen thoroughly during the day I've always missed the chance for the disc link please drop it oh yeah 100% man 100% you don't need to um you don't need to pay me for that I had somebody today quick story guys while I'm pulling up um making a new

(13:40) Discord link here as well um somebody today said that they they wanted some questions for their dad I responded I still try to respond as much as I can to people uh I gave them the questions and the answers that they wanted and um and then they said hey how can I donate to I have I don't have a job and I I'm broke but I want to donate like at least a dollar to you and I told them I appreciate your your thought your uh thoughtfulness but I don't want to take any money from anybody that needs their money anybody that's broke anybody

(14:13) that needs their money needs a job whatever please don't send me money I do not want to be taking money from people that need it for themselves um at all I've never asked anybody for money so uh you know again I love the sentiment I love that people are like so willing to do that because they support the case so much uh but I I don't want people's money like that uh and you don't need to send me money to get a question asked either thank you so there you go there's the Discord invite from my man or woman

(14:40) brain scratch appreciate you yeah hey hey Gerald how's it going man good to see you there as well and hey ski Moss yeah the interview with uh uh with the lady from Frank TV uh was also really good yeah I'm um some people have actually reached out to me at this point to uh join their streaming platform forms uh and I potentially will be considering that but I'm at a very weird spot right now where like I'm trying to hang on to my job and focus on that but I'm obviously have a ton of stuff to do

(15:12) related to this and it's just getting bigger and bigger and bigger and bigger so it's getting very difficult if there does come a time where I switch over full-time to doing this um where I can actually support myself on this right now I cannot uh not making nearly as much nearly enough money to be able to support myself on this but if there is then will potentially consider some of that and I may consider it if you know it's it's a good offer we'll see um it's just it's hard guys but thank you very

(15:36) much for your support I've been putting a lot of stuff on this um a lot of work into this in my free time uh and thank you crypto nice to see you thank you Rex for the the nice words appreciate it man have you seen the Carl Nell interview so real quick I've heard the Carl Nell interview basically he says that there is he's sure there's aliens you's sure that there's craft and stuff whatever I believe him I believe him man uh and these guys and the funny part is like we've scooped all these people like

(16:04) these people are trying to catch up to us now like we are shown that we have literal warp drive technology and Wormhole technology and we have floaty superc conductive harmonic orbs that's actually what they are I realized they literally are super conductive harmonic orbs that's that's what they literally are um and this this is bigger disclosure than anybody else everybody else is just trying to catch up to us at this point that's the true reality of it so I support Carl Nell I support all the

(16:31) people who are in disclosure trying to get the **truth** I always have uh but we've scooped them simple as that we beat them to the punch uh there's gonna be no denying that all the evidence is out there on my Twitter profile and on my on my live streams for the last nine months uh so when the stuff gets proven true those people don't deserve the credit that's just the **truth** of it so um yeah uh one other thing I will say I'm going to keep this very vague but I have spoken to some relatively uh powerful prominent people uh about

(17:02) the case in general and um they they are taking it seriously so you know um I hope the Aro comes back and admits what we did to this plane and admits the videos are real and then we can move on because the true thing I'll say guys is that I don't want to do this for the rest of my life I want to focus on other stuff I want to focus on the science I want to make terrible takes about uh about uh political social issues and stuff like that you know it's a lot less uh stressful than doing all this so I do

(17:35) hope that we can get the **truth** from the government and get to uh a closure on this and then we can start moving on how we get the science out there to the world hey Chad and Sherry

I did see as well the clips uh from Ian Carol with Chad and Sherry investigate Earth if you guys haven't checked out that interview was really good uh I just finished downloading it right before this Stream So after this stream I'm G to clip together the parts where they talked about me because anytime anybody likes it talks about me talks about the case

(18:02) talks about MH370 videos I usually try to retweet them uh because I want to get more people out there doing it a lot of people said like if you disappear the whole case is going to go away and I'm like um it probably won't but like I I do want this to be like a communal effort I don't want this to be all about me like I've tied my reputation to the videos and what have you but I'm trying to make this more mainstream so that it's like other people are looking into it investigating it trying to figure out

(18:28) what happened even open to other theories I mean even Ken's theory of like maybe the portal is fake and everything else isn't sure I got nothing against that man the only problem I have is when they try to falsely discredit the witnesses like it's super scumbag to try to say like somebody's witness sighting where they clearly saw the plane they were in the right location and then try to claim they couldn't have seen the plane it's [REDACTED] nuts stop trying to discredit real people that

(18:55) really saw the plane they put everything on their lives one guy lost his job for seeing the plane like stop trying to discredit these people stop saying they couldn't have seen stuff like that's extremely messed up Behavior especially for people that are like believe in 10 rows on an Excel spreadsheet Witnesses are more credible than an Excel spreadsheet it's not even close an Excel spreadsheet can be manipulated within like that it's easy to fake I could fake the Excel spreadsheet imrat data in less than a

(19:26) day it's it's just silly yeah nobody saw the plane um imagine Ashton solves MH370 moves on to Epstein so true thing is if I were able to solve the case the next thing I would do is I would start interviewing other people like flat earthers like 911 uh conspiracy theorists because I want to be open-minded I don't believe in those things but I am willing to have a discussion with those people about it right and I want to hear their side of it because I want people to do the same thing with me when I'm presenting

(20:00) something that seems incredible that's out there um and then yes I want to help out people like Ian Carol like I would love to help out Ian Carol and be on his team and help do research for him and get content out there for him I think we can make an incredibly powerful media journalist organization that does real investigative journalism I want to do stuff like that but the reality is like right now I've got to focus on MH370 stuff because there's just so much going on man so much going on I I wish it

(20:31) wasn't the case but like things are getting bigger and bigger and bigger and I I just we got to roll with it right now we got to roll with it okay um and yeah the the **truth** is the Flat Earth guys seem like cool guys man especially like death and uh those other dudes that like interviewed me as well like they're cool guys they're funny as hell like I don't that's should

believe with all them but that's fine we don't have to agree with everything to get along you know uh and they seem fun but

(20:57) the reality with that and like what I told them cuz because they're like hey I want to do a debate with you the problem is like you guys see what the **debunk**ers are doing they are taking every single thing I say out of context everything if I go do even a debate with those people they're gonna say ations of flat earther or whatever right they already are saying that even though I'm literally not uh so at the moment I just can't do it but in the near future I hope to and you know whatever if things die down a

(21:21) little bit then then maybe I'll do it there too okay sorry let's keep uh focused on the task at hand here so then the other two things real quick were two two people already uh refused to debate with me one of them was Nick West I call call him Nick West because he he literally can't even spell my name right Aston like dude can't even spell my name right so **Mick** West once again was asked for a fifth time fifth time five times by five different people have tried to set up a debate this time pat

(21:51) vetted very good offer you know he wants to set it up he refuses to do it because he keeps lying and saying that the videos are proven fake the only way to prove the video is fake is to produce the hoaxer that's it again I've said this from the beginning it's I've not changed my tune find the hoaxer or find the plane at this point finding the plane isn't even enough you need to like actually find the plane fully intact with bodies inside of it in a black box because that's the only way you couldn't

(22:14) have a debris field so good luck with that or again find the hoaxer like the the bunkers claim they found all the assets okay find the hoaxer like less than five people could have downloaded the cloud picture by the way the cloud picture got conclusive abely refuted somebody did technical analysis on that prove that there's no evidence whatsoever the cloud image predates the videos there's manual updates on the cloud images that shouldn't exist the website literally says that they did a script but there's manual updates for

(22:46) some reason it's very suspicious so just saying the cloud thing has been complet completely blown out of the water and it wasn't even by me it was by somebody else who was completely independent it's hilarious uh so West once again dodged again and here's the questions he again has refused so I've addressed every question I've addressed every single **debunk** I've even address the **debunk** that just came out yesterday within 24 hours and **Mick** West will not even tell us how you can get a 2d Cloud picture into a 3D

(23:15) rendered environment it's a very simple question very simple question you're claiming there's a 2d Cloud picture in our videos that have two different perspectives that have 3D lighting that have evolving clouds and the clouds m match up perfectly in two videos that are perfectly in sync and from the Drone video we can see there's 3D Dynamic Parallax when this when the Drone Zooms in so where where is the counterargument why won't the **debunk**ers address the evidence again why are the **debunk**ers refusing to address the

(23:47) evidence the **debunkers** need to come out and admit that there's no 2D Cloud picture in here and that the videos require a full 3d rendered environment when the vid when the **debunkers** address the fact that there requires a full 3d rendered environment to make these videos then I will begin to address any more future **debunks** but without that I'm not going to address any more **debunks** from this point going forward no new **debunks** will be addressed until the **debunkers** admit it requires a 3D rendered environment you can clip it you

(24:15) heard it here first guys hey Glutton the sloth Glutton the sloth was the one that found the evidence thank you for being here today appreciate you did I see uh alien girl hey alien girl good to see you as well guys support alien girl as well uh and her and her YouTube channel uh she does content uh about the UFO Community I don't really like the UFO Community but I like alien girl um okay so then the next one was he wasn't even the only one so then we went to **Mick** West or to uh Jeff wise Jeff wise is one

(24:43) of these people that's been uh grifting MH370 he was in the Netflix documentary I know for a fact that Jeff wise was begging The Blaze to have him on um and that's when I went on with Glenn Beck so Jeff wise was uh begging them to have him on I don't think they did because the Dude is full of [REDACTED] and obviously a CNN brain someone else pointed out that he's retweeting Joy Reed this guy's retweeting MSNBC garbage so uh Jeff wise dodged it as well I actually couldn't link to Jeff wise

(25:14) because he's got me blocked so instead I went ahead and screenshotted it and it's weird because he got a DM by vett then he claims he didn't get the DM Jeff wise like nobody follows Jeff wise nobody like m messages Jeff wise so for him to claim he didn't get a direct message is pretty damn weird and then he says he's not trying to debate somebody who is a flat out fraud like Jeff wise is a literal grifter trying to sell books trying to sell content related to MH370 he's the literal thing that **debunkers**

(25:45) claim I am and he's 100% a fraud I have proof I showed screenshots of me trying to get him to look at the evidence Mike MC saw the lithium ion battery fire I'm trying to solve the case by explaining to the public what the evidence is and it means yeah well you're ignoring all the witnesses dude I listened to his show and gave him feedback I literally listen to his show it was terrible his podcast was unlistenable it's just so boring and just ignores everything that's important as for KT I didn't really have any

(26:17) dealings with her because I didn't find her story to be credible this is a woman who is in the agreed upon spot of MH370 she objectively saw the plane he doesn't want anything to do with her he doesn't want even look into the evidence of it Jeff wise is a guy that showed up on the Netflix documentary if you watch the Netflix documentary and he starts trying to present this weird Narrative of Blaine Gibson being a **Russia**n spy because Blain Gibson found debris from MH370 in Africa and the reason why Jeff

(26:46) wise did this is because Jeff wise thought the plane went to to **Russia** and if there's debris that washes up in Africa there's no chance it could have gone to **Russia** so Jeff wise's brain

of course goes well bla Gibson this old man on a beach old old expatriate which means an American living abroad on a beach tries to say that he's a Russian spy that planted the debris like this just the dude's crazy he got ridiculed heavily and it was deserved the fact you're were trying to like vilify some old innocent man was

(27:19) just like the craziest [ ] ever I remember watching it even before I looked at this case I watched that part and that's when I turned it off because I knew Jeff wise even before I even looked into this case I knew Jeff wise was % full of [ ] and despite that I still gave him a chance I tried to reach out to him I tried to show him that repeatedly look at this post guys I'm being critical your biggest mistake was trusting the Ping data and assuming it couldn't be falsified if you take more stock in the actual human

(27:45) Witnesses you'd see their data tells a much different story and almost all of their sightings line up I'm going to vindicate just about all of them this plane didn't fly for 6 hours the plane is on fire isn't lasting 6 hours if the data was legit they would have released it right away they falsified it to fool people like you and the independent group the obvious thing is that it was a fire Mike McKay saw it from an oil rig no he didn't see it crash like he saw the fire initiate Witnesses on the coast

(28:12) heard the loud noises consistent with the battery Witnesses saw the plane flying low because the plane may have been depressurized the from the fire the pilots are trying to keep them alive pilot goes to panang because like the wired article said simplest Solutions are the best KT see the plane sees the plane later with no navigation light power was out glowing do the fire suppression devices have been deployed fire brakes containment gas seeps through the plane hon causes at the glow orange in the pitch black as for the 825

(28:40) 1825 reboot is probably falsified actually um it was Dan Hanley that argued that the the reboot attempt could have actually been uh them taking over the plane by manual control or by remote control interesting thought uh the first reports are that the plane lost contact at 1840 that's the time of our videos it was likely tracked the whole way they made a fake story changed the time to 1822 as the last radar contact remember they didn't release the radar data right away they had to come up with a cover

(29:08) Story I mean what what more does Jeff wise want man so anyway he dodged it uh he dodged a debate I I posted also my witness from K Katherine T Katherine T literally told me that she felt pressured into changing the time of her sighting she said she was pressured to change the time of her citing by the experts because it disproved the experts wrong I don't know what more you guys want okay okay enough of that wild huh how hard would it be to send fakes uh pings to iMat not really sure but the US government can teleport a plane

(29:45) sending some fake pings is [ ] easy I think the simpler way is that they manipulated the data and hacked it afterwards I mean the only reason why you don't release the iMat pings the next day is because you need to falsify them so uh I I don't think that they spoofed I don't they didn't have another 777 or anything spoofing a track there's just no need for that hacking

data is simple so they just simply CH change the data and that's the reason why when you look at the data it just it changes like

(30:13) the the the data itself is uh irrefutable when you just go look at the actual data I'm G just show everybody right now how ridiculous it is there are dozens of pages of data and then you get down here to 1840 and after 1840 it's just like on the hour every hour on the 41 minute there's one ping that's it what what and there's like this clear pattern the channel here changes as well from what it was all the time before this like guys they just inserted 10 rows of Excel data that's it that's five

(30:51) hours of the plane fly 10 rows of data and they didn't even map the 2313 uh ping here they didn't even map it on the arcs because it didn't fit with their data like they nobody can look at this and not think that there's something suspicious going on here this is why all the independent group people are frauds uh like I would go to court and prove that they're frauds because like that's how much evidence I have a jury is going to look at this and they're going to know right away those people are full of

(31:18) [REDACTED] 100 per. nobody's looking at that and going oh yeah that's totally normal that all the data changes at 1840 the same time that the subang air traffic control said the plane lost contact right wild huh yeah so what happened that made 370 videos happen man that's that's the reason for the cover up that's the reason uh I guess I want to get into the other stuff here but I will show the videos very very briefly they're only one minute long each so this is what really happened you know

(31:46) don't ask me why the drone's following I all this is in my tweets so again if you want to be educated on it go through my highlights the reason why I've made my highlights of all the MH370 stuff is you can just scroll through my highlights go to my profile go to the highlights scroll through the highlights you will get every single answer that you are thinking of every single question you could have asked has already been addressed every single one there's no unique questions out there that people

(32:09) haven't as asked me the most common ones I get are what happened to the plane where did the plane go what happened to the passengers all it's been questions have been addressed again please just go do your own work please go check it out I can't address everybody's questions also why is the Drone there why did they do this all these questions have been addressed every single one every single one there are highlight videos as well uh I have flight path explainer videos I have uh there's a news explainer video

(32:42) there's a satellite video uh explainer video they're all on my YouTube channel you the one YouTube channel you guys are on right now you can literally find explainer videos just go to my video section you can find them um so all of those are there as well so that is the this is the Drone video I'll go to the part with the SLO zap this is what we're looking at here this is literally a wormhole that we're seeing we're seeing these orbs they have some kind of gravity manipulations consistent with a warp drive uh and then

(33:11) they're inducing a wormhole on the airplane I wish I had a I honestly do guys wish I had a more palatable answer a lot of people don't want to believe that they would if I were to say this was cloaking or something more people would believe it but that's not the **truth** the **truth** is what we're looking at here is a is a wormhole that's that's the **truth** whether or not that's the that's the hardest thing to believe you know the the simpler things to believe would be that we annihilated the plane or that we

(33:35) cloaked the plane in fact the freescale semiconductors is is linked to Advanced cloaking technology uh but that's not what we're looking at here there's like only a less than 1% chance that this is a cloaking or Annihilation event it's like a 99% chance that's a wormhole so uh now this is a good question what are the repercussions for the United States if this is finally accepted to be real the answer is none there will be no repercussions for the United States there will be no repercussions for the

(34:03) people who are responsible for this that's probably not the answer people want to hear but that's that's how our world Works in fact I would argue that the majority of Americans 60% or more would uh completely forgive the people that did this and and even say this potentially Justified if it was preventing **China** from getting this technology a lot of Americans would say if we have this kind of super weapon technology then you know take abducting the airplane like this assuming we didn't kill them all now if we killed

(34:36) all these people like that is that's unforgivable unforgivable no way about it like that is that's horrific uh so I'm hoping that somehow these people lived or it was an accident where we messed up on the operation we didn't mean to like have them all die from the fire or whatever uh but there will be no consequences so I I hope people AR aren't out there thinking there's going to be consequences the best case scenario scario would be that the families are allowed to sue the United States government and like Boeing for

(35:05) civil civil things that would be like the only thing because I'm sure there's some statute that protects the United States government and says that like they're not legally responsible because this was some type of uh Espionage operation or something like that which sucks but end of the day I just want to get the **truth** you know and let I'll let the other people worry about that stuff I will help the families Sue the people that have been lying about these videos though I have all the evidence I'll

(35:31) provide them all the evidence I will even help them with their Court arguments against the people we'll use the Sandy Hook president so Sandy Hook if you guys aren't familiar was when uh Alex Jones got fined one or he got 1 billion dollar judgment against him for lying on TV to uh about the uh it was like 19 children that were gunned down he said it didn't happen so I'm going to use that same precedent help the families of the lawyers sue people like Corridor crew we we'll take all the money the corridor crew has we'll take

(36:01) their YouTube channel we'll do the same to the lore Lodge uh we'll do the same to **Mick** West we'll make sure that there's no **mick** wests ever exist again uh you know that nobody

wants to be **Mick** West um and I think that would be the best thing we can do in terms of helping Humanity you know proceed forward okay we're g to get started here with the video was sponsored by c um hold on there's one oh got we got our man here um oh oh I missed another one BC thank you very much for this donation

(36:36) seriously it's not almost time to you move to this fulltime zel is no fees for you or us it's more efficient way I know you hate the idea of accepting funds yeah uh honestly what I'm really waiting for guys is uh for Twitter streaming to go live if Twitter streaming goes live and allows people like tipping in or whatever on their posts and stuff like that um then I probably could afford to do this fulltime I'm not going to make as much money as I do now but I could potentially like I don't mind like

(37:00) taking a big pay cut uh in order to like you know follow your dreams and my dream is to disclose advanced technology to the world um but we'll see also I may set up memberships and then people can do be a member if you want for like I don't know what it is \$5 a month or something like that uh but yeah I appreciate it BC I know a lot of people want to donate even though I tell people not to so I will try to find ways to make that as efficient as possible for the people that want to uh maybe I'll do

(37:28) a cash app thing or something like that I don't know I gotta talk to some people about it but it's not really my major priority but thank you very much for the people who are donating that's very very generous of you and nice of you and William Bill uh William Bill's awesome guy uh he's been following for a long time he just wants to get the **truth** before with the time he has left on this Earth and I think about William Bill a lot as well as other people and the **truth** is I hope we can get it uh but you

(37:53) know this is not going to be a race this is going to be a marathon so he says I believe they're on the verge of saying it's real to help dissolve it dissolve away you are right they're too big for repercussions yeah yeah that's that's the **truth** guys and and the **truth** too real quick guys is that if they were to reach out to me and tell me hey please stop talking about this we have a plan to disclose it or whatever I might consider it I might consider it just because like it's this is so messed up

(38:20) man this is so messed up I'd want some contingencies or some you know something in in response like there needs to be a compromise but uh you know that I just see the way this stuff breaks people's brains like there's a lot of people out there that just get their brains just completely melted by this so uh I don't know it's a tough situation okay guys so what we're gonna be talking about here is how does power work okay how does power actually work how does power flow um and and you're going to be

(38:50) surprised by this so I'm going to show there's two videos we're going to go over here uh and then after that we're going to take a look at counterfactual Wormhole teleportation protocols um so let's play along let's see what we've got here I'm going to make some pauses in between this uh partially so I don't get copyright strided here we go SATA by Lutron imagine you

have a giant circuit consisting of a battery a switch a light bulb and two wires which are each 300,000 km long that is the distance

(39:19) light travels in 1 second so they would reach out halfway to the moon and then come back to be connected to the light bulb which is 1 meter away now the question is after I close this switch how long would it take for the bulb to light up is it half a second 1 second 2 seconds  $\frac{1}{c}$  seconds or none of the above okay guys put your questions put your answers in the chat right now so we make a super long circuit that goes like all the way around the world or whatever right but we've got our battery right

(39:51) next to our light bulb but the circuit extends off to the side super far uh kind of like this rubber band if I were to stretch it out out but you've got your battery over here and you got your light bulb over here which which answer you think it's going to be half a second 1 second two seconds one over the speed of light seconds or and where one is the distance between the two or none of the above what do you guys think my man be right back oh no this is a Mexican Coke by the way this is this is I don't drink

(40:16) the American Coke I only drink the Mexican one okay okay what do we think what do we think guys none of the above lots of none of the above is in the chat skinny Bob says none of the above ug says one over c what see uh lot Juan says c yeah I I funny part so I'll tell you guys I thought the answer was C as well originally that it would take the speed of light traveling around the wires and that that the energy would flow around the wires that's what I thought so hold on to your answers and let's listen and

(40:57) watch let's see if we can learn let's see if we can learn a little bit about science now you have to make some simplifying assumptions about this circuit like the wires have to have no resistance otherwise we're through unlike a battery the electricity in the grid comes in the form of alternating current or AC which means electrons in the power lines are just wiggling back and forth they never actually go anywhere so if the okay so that's already really big so when you look at alternating current it means that it's

(41:25) flowing if it's going like this back and forth it's constantly flipping back and forth now what that means is that the electrons aren't actually going the way you would think that're they're not moving they're technically they're moving but there more like wiggling it's not like they're moving over long distances because the alternating current keeps rotating back and forth so it's going to be going like this so right away we got to answer our question like wait so how is the power actually

(41:48) getting there if the electrons aren't actually this electron here is never actually getting all the way back over here it's just wiggling like this charges don't don't come from the power plant to your home how does the electrical energy actually reach you honestly guys this video is mindbending and here's the thing guys this video is going to help explain the ether there's not I I showing this video for a reason when I used to teach this subject I would say that power lines are like this flexible plastic tubing and

(42:21) the electrons inside are like this chain so what a power station does is it pushes and pulls the electrons back and forth 60 times a second now at your house you can plug in a device like a toaster which essentially means allowing the electrons to run through it so when the power station pushes and pulls the electrons well they encounter resistance in the toaster element and they dissipate their energy as heat and so you can toast your bread now this is a great story I think it's easy to visualize and I think my students

(42:56) understood it the only problem is it's wrong for one yeah so you know the visualization right there is like oh this makes sense you're just the power is wiggling between the alternating current as it goes back and forth and then anything that's along that current is just getting the energy now Gerald says hey ashon there's a way of pulling power from copper cable 16 feet in the air between two posts the cable is isolated from the post and you take separate copper cable and ground through yeah and you're gonna part of that's

(43:23) going to be explained here as well it's pretty wild guys the reason why you they don't put these cables in the ground is because the ground acts as a capacitor and messes it all up yeah actually is what said a capacitor to ground you get power for free so pretty interesting guys this is going to be pretty cool thing there is no continuous conducting wire that runs all the way from a power station to your house no there are physical gaps there are breaks in the line like in Transformers where one coil

(43:50) of wire is wrapped on one side a different coil of wire is wrapped on the other side so electrons cannot possibly flow from one to the other so right away he completely dispels the myth because there's no continuous wire they have two coils next to each other so the power is jumping between one coil and the other plus I mean if it's the electrons that are carrying the energy from the Power Station to your device then when those same electrons flow back to the power station why are they not also carrying energy back from your house to

(44:24) the power station I mean if the flow of current is two ways then why does energy only flow in One Direction that's another great point right is if the AC currents going back and forth like this shouldn't the energy go that way and then come back the other way it doesn't right it only goes in One Direction so how is this really working so right away we're starting to blow our own minds about how we think electricity works and hopefully this will help under for all my followers to understand out

(44:55) there how we really don't understand that much about electricity these are the lies you were taught about electricity that electrons themselves have potential energy that they are pushed or pulled through a continuous conducting Loop and that they dissipate their energy in the device my claim in this video is that all of that is false so how does it actually work by the way guys spoiler alert this video triggered the hell out of the CNN brain people we're going to get to that video after this but like this video made like

(45:34) a million debunkers heads explode because they had been taught wrong their whole lives and this goes back to a post that I made about The Ether related to what Matt R said um

about the Terrence Howard appearance is that scientists and academics hate being told that they've been wrong and they were taught incorrectly in the 1860s and 70s this there was a huge breakthrough in our understanding of the universe when Scottish physicist James Clerk Maxwell realized that light is made up of oscillating this dude's a [REDACTED] G dude

(46:09) we need to somebody uh please is pepper zolin out there you know get the glasses put the get the sunglasses in the joint uh for James Kirk Maxwell James Kirk Maxwell's a g and they just butchered his work electric and magnetic fields so if you guys are anybody's out there new to this and you're not familiar with James clerk Maxwell's name get that thing permanently memorized in your head James Clerk Maxwell I mention him all the time he's the father of electrical engineering the fields are oscillating

(46:39) perpendicular to each other and they are in Phase meaning when one is at its maximum so is the other okay so when they're in Phase that's why when we look at these here we see that they both are the same exact size one's the magnetic phase and one is the or the one's the magnetic field and one's the electric in terms of the wave okay so when they're in Phase it means they're perfectly the same size okay so in Phase wave now he works out the equations that govern the behavior of electric and magnetic fields

(47:10) and hence these waves those are now called Maxwell's equations but in 1883 one of Maxwell's former students John Henry pointing is thinking about conservation of energy now if energy is conserved locally in every tiny bit of space well then you should be able to trace the path that energy flows from one place to another so think about the energy that comes to us from the Sun I mean during those 8 minutes when the light is traveling the energy is stored and being transmitted in the electric and magnetic fields of the light now

(47:47) pointing works out an equation to describe energy flux that is how much electromagnetic energy is passing through an area per second yeah did I miss the the the equations back then I think I missed the equations um so verium the name you see in the bottom left right now that's the YouTuber that does this he's got million I don't think he need doesn't need our support he's got millions of followers and millions of views on every single post so dudes rolling in it uh one sec I'm gonna come

(48:16) right back to this did I miss the equations yeah okay these are the so he lied right here so verium we are **debunking** verium guys these are the reduced equations these are not Maxwell's equations he falsely stated these were Maxwells equations these are heavy sides equations do you know how I know these are heavy size equations because he's got the Dell crossb operator equal to zero that's incorrect it's actually equal to a this is what Hal hudoff Tom Bearden everybody else this is what we've been

(48:48) talking about the second equation you see on your screen here the Delta time b equals 0 is wrong this is where they messed up this is where the reduction in heavy sides in Max's equations was incorrect it's actually equal to a and once you set it equal to a it's gravity manipulation time that's how simple all of this has been suppressed from us that's how simple it

is just like that crazy right I couldn't believe when we dug into this that it's that simple we don't need to develop new complex equations in order

(49:22) to understand gravity manipulation it's been out there the whole [ ] time so the only thing we're **debunking** to veritasium there on right now is the fact that he's got he claims these are Maxwell's equations these are heavy sides equations that we see over here these are the ones that were wrongly reduced this is why we messed up James Clerk Maxwell is a G Oliver heavyside [ ] us he [ ] this over guys okay let's go back it's the pointing vector and it's given the symbol  $\mathbf{S}$  and the formula is

(49:52) really pretty simple it's just a constant  $1/\mu_0$  which is the permeability of free space time  $\mathbf{E} \times \mathbf{B}$  now  $\mathbf{E} \times \mathbf{B}$  is the cross product of the electric and magnetic fields okay pointing Vector is pretty simple there right so permittivity of free space how much resistance there is for the electromagnetic field to go through free space and then  $\mathbf{E}$  is the electric field and  $\mathbf{B}$  is the the magnetic field seems pretty straight is just a particular way of multiplying two vectors together where you multiply their perpendicular

(50:23) magnitudes and to find the direction you put your fingers in the direction of the first Vector which in this case is the electric field and curl them in the direction of the second Vector the magnetic field then your thumb points in the direction of the resulting Vector the energy flux so what this shows okay so you guys just learned pointing Vector so nobody should nobody should forget how the pointing Vector stuff works you take your hand okay this is the electric field flowing with your fingers you curl your three fingers electric Field's

(50:53) going this way magnetic Field's going this way uh and then your point pointing Vector is going to be your thumb that's the the vector of travel same way you see on your screen right here about light is that the energy is Flowing perpendicular to both the electric and the magnetic fields and it's in the same direction as the light is traveling so this makes a lot of sense light carries energy from its source out to its destination but the kicker is this pointings equation doesn't just work for

(51:27) light it works anytime there are electric and magnetic fields coinciding anytime you have electric and magnetic fields together there is a flow of energy and you can calculate it using pointing Vector okay so why is this important we're talking about the flow of energy we're talking about the flow of power in the past we've been talking about free energy systems what the Thomas beard didn't say about his free energy system you trap the magnetic field inside the material and then now you have energy radiating

(52:00) outward so this is very important because we need to understand how the flow of energy works especially related to magnetic fields and electric fields and I'm sorry my shirt is crazy it looks so weird in the Stream I'm probably not going to wear this on stream again looks like I'm at a disco what is this to illustrate this let's consider a simple circuit with a battery and a light bulb the battery by itself has an electric field field but since no charges are moving there is no magnetic field so the battery doesn't lose energy

(52:34) when the battery is connected into the circuit its electric field extends through the circuit at the speed of light this electric field pushes electrons around so they accumulate on some of the surfaces of the conductors making them negatively charged and are depleted elsewhere leaving their surfaces positively charged these surface charges create a small electric field inside the wires causing electrons to drift preferentially in One Direction note that this drift velocity is extremely slow around a tenth of a millimeter per

(53:09) second but this is current well conventional current is defined to flow opposite the motion of so this part's the thing I hate about electrical engineering is that the current flows opposite of the motion of the electrons because why they just arbitrarily decided that but uh whatever is still fine um and they technically move they just move very slowly so there's no way that they are transmitting the power they're just like the vector for the the direction of travel of the power but this is what's making it

(53:43) happen the charge on the surfaces of the conductors also creates an electric field outside the wires and the current inside the wires creates a magnetic field outside the wires so now there is a combination of electric and magnetic fields in the space around this circuit so according to pointings Theory energy should be flowing and we can work out the direction of this energy flow using the right hand rule around the battery for example the electric field is down and the magnetic field is into the screen so you find the energy flux

(54:19) is to the right okay so I'm going to spoil it for you guys so basically the wire is creating a magnetic field around it so everywhere use the right hand rule anywhere along the wire or on the battery the the direction of vector of the power flow is towards the the light towards the bulb no matter what every single area so what it's going to create is it's going to create just like with the Earth for example it's going to create these field lines going from let's say the South Pole the battery to

(54:49) the North Pole the bulb all the way around but they're not going through the wires they're going directly from the battery towards the bulb get ready for it away from the battery in fact all around the battery you'll find the energy is radially outwards energy is going out through the sides of the battery into the fields along the wires again you can use the right hand rule to find the energy is Flowing to the right this is true for the fields along the top wire and the bottom wire but at the filament the

(55:24) pointing Vector is directed in toward the light light bulb so the light bulb is getting energy from the field if you do the cross product you find the energy is coming in from all around the bulb so look at this is the just money shot here right and I don't even know what I just said at blacked out guys I think that the science is downloaded into my brain at this point but no what we look at here is the energy is Flowing directly from the battery to the bulb so now we can start to answer the question that we

(55:54) had at the beginning right is that the energy is not flowing through the wires at all the wires are creating electric and magnetic fields and the battery is Flowing ba or that energy is

Flowing based on those fields so now we can understand that the battery the energy is Flowing directly from the battery to the bulb through free space how can it flow directly through free space unless free space itself is a medium it takes many paths from the battery to the bulb but in all cases the energy is transmitted by the electric

(56:27) and magnetic fields people seem to think that you're pumping electrons and that you're like buying electrons or something which is just so wrong for most people and I think to this day it's quite counterintuitive to think that the energy is flowing through the the space around the conductor but the the energy is which is traveling through the field yeah is going uh quite fast boom yes exactly boom this is this is in fact mindblowing I remember I watched this like couple months ago and I was like telling my parents I was like guys

(57:00) energy doesn't  flow through wires what are we what have we been getting taught for a whole lives it's all wrong so there are a few things to notice here even though the electrons go two ways away from the battery and towards it by using the pointing Vector you find that the energy flux only goes one way from the battery to the bulb this also shows it's the fields and not the electrons that carry the energy I mean so right there oh crap that was the best screenshot where did it go right there this one right here so notice as

(57:33) well the the power is only flowing One Direction the power is not flowing two directions the power is Flowing from The Source towards the light bulb so now remember our alternating current example going back and forth it doesn't matter it's the power is not going back towards the power plant the power is going from the power plant to our lights to our apply and it's not going back the other way this proves it right here so we're sending unidirectional power even with alternating current even though it

(58:04) switches because when we switch the current all the fields change as well the fields go in reverse so all the magnetic fields flip so if you change the current the magnetic fields flip so no matter which way the alternating current's going the power is still going from the battery let me get my thing is it where's my other rubber B oh there it was no matter what the power is going from the battery to the apply iance to the light bulb no matter what even if you rotate it flip it the other way it changes all of the rotations of

(58:32) the uh flows of the magnetic fields and therefore the pointing Vector changes anyway and not the electrons that carry the energy I mean how far do the sorry technically the pointing Vector still going the right same way but it it like flips the electrons go uh in this little thing you're talking about they barely move they probably don't move at all now what happens if in place of a battery we use an alternating current Source well then the direct of current reverses every half cycle but this means that

(59:00) both the electric and magnetic fields flip at the same time so at any instant the pointing Vector still points in the same direction from the source to the bulb so the exact same analysis we used for DC still works for AC so for Abner you got a little bit out of the game yes for a battery it's DC but even with AC it still works the exact same way either way because when you

flip the you flip like if you flip the battery upside down then all of your stuff's going to flip around so either way all the fields flip so the pointing

(59:34) Vector is still going towards the power source in either either scenario this is why AC power works so this again like somebody just said there is no empty space there's no such thing as empty we have to have a medium for this to be flowing through in my mind this proves that we need an ether this is the reason why people are struggling so for the people that are lost just look at the yellow lines on your screen right now the yellow lines are where the power is Flowing you can see the circuit the metal circuit in the background the

(1:00:01) power is not flowing through the circuit not and imagine you elongate this now so you take we have let's say uh like so I'll I'll use this letter here as an example so we have our circuit here right there right so you have your battery over here you've got your light bulb over here now imagine you flip it so it's like this so now you have your battery over here and you have your light bulb over here the power is going to flow this way between right between these so this current this this outline doesn't even

(1:00:32) matter because the power is going directly from the battery or from the alternating current directly to the light bulb in any scenario and this explains how energy is able to flow from power plants to homes in power lines inside the wires electrons just oscillate back and forth their motion is greatly exaggerated here but they do not carry the energy out inside the wires oscillating electric and magnetic fields travel from the Power Station to your home you can use the pointing Vector to check that the energy flux is going in One

(1:01:08) Direction you might think this is just an academic discussion that you could see the energy as transmitted either by fields or by the current in the wire but that is not the case and people learned this the hard way when they started laying undersea telegraph cables so somebody asked too do we even need wires why do we even need wires all we need is electron flow we just need a circuit right so as long as we can get the electron flow then we don't even need wires anymore does that remind you guys of anything maybe any

(1:01:43) videos where there's three orbs circling around a plane what if they're creating a circuit between them where's the power going to go if those are the the power the batteries where's the light bulb between a z point system right in the middle at least that's how I imagine it I could be wrong but that's what I'm thinking the first Transatlantic cable was laid in 1858 it only worked for about a month it never worked properly there are all kinds of distortions when they tried to send enormous amounts of distortion I me

(1:02:14) they could work it at a few words per minute what they found was sending signals over such a long distance Under the Sea The pulses became distorted and lengthened it was hard to differentiate dots from dashes to account for the failure there was a debate among scientists William Thompson the future Lord Kelvin thought electrical signals moved through submarine cables like water flowing through a rubber tube but others like Heide and Fitzgerald argued it was the fields around the wires that carried the energy and

(1:02:47) information none of them were right it's not the fields it's the fields uh the create the fields are creating the flow of power they're creating a separate field field for the energy so that's what's going on it's not that the the magnetic fields aren't carrying the power although I guess in a sense you could argue that they are because that's how it's going from one place to the other but the power is creating a new Vector consistent with the pointing Vector in terms of where the power is

(1:03:13) flowing and it doesn't give a crap about what your circuit looks like I mean it may give a crap about the the shape of the circuit but it's uh it doesn't flow through the wires and ultimately this view proved correct to insulate and protect the submarine cable the central copper conductor had been coated in an insulator and then encased in an iron sheath the iron was only meant to strengthen the cable but as a good conductor it interfered with the propagation of electromagnetic fields because it increased the capacitance of

(1:03:45) the Line This Is Why today most power lines are suspended high up even The Damp Earth acts as a conductor so you want a large insulating gap of air to separate the wires from the ground yeah so the problem is if you put the wires in the ground then the power is going to flow through the ground because it's a conductor so you need an insulator so you can keep the energy within your wires so you still get a shocked because the energy in the wires is flowing through the wires because of how the wires are configured it's not a closed

(1:04:17) circuit so the in this situation the energy is flowing through the wires here I mean not technically the actual wires itself but because of the fields of the wires themselves and the pointing Vector that's where they're flowing but if you were to put this underground where there's conductors everywhere now the energy is going to start flowing all over the place yes it's the flow of energy that creates the fields exactly the flow of energy itself not the flow not the fields of the the magnetic fields

(1:04:45) although those Define what the fields of the energy are going to be so what is the answer to our giant circuit light bulb question well after I close the switch the light bulb will turn on almost instantaneously in  $1/C$  seconds so the correct instant almost instantaneously turns on so even if you have your wires extend out for 300,000 kilometers so just imagine that guys your wires extend out for 300,000 kilometers so I stretch this so much it it goes off the screen and you flip it on light bulb turns on immediately how

(1:05:25) is that possible answer is the power is not flowing through the wires the power is flowing through the space between the location of the battery and the the light bulb crazy answer is D I think a lot of people imagine that the electric field needs to travel from the battery all the way down the wire which is a lightsec long so it should take a second for the bulb to light up but what we've learned in this video is it's not really what's happening in the wires that matters it's what happens around the wires and the

(1:06:01) electric and magnetic fields can propagate out through space to this light bulb which is only one meter away in a few Nan seconds yep and yeah so I could be wrong with the closed

circuit stuff whatever you can correct me on that feel free to I'm not opposed to being proven wrong I am just trying to understand it myself and I am a newbie when it comes to this stuff even now uh somebody else also asked blah blah blah so do we need wires at all I think the answer is I don't know I don't think so no under the right conditions we don't

(1:06:32) and this is where Tesla had electricity jumping from one location to the other under the right circumstances you can potentially Force the electricity to jump the same way where in the beginning of this he said the wires are not continuous there's gaps in the wires and so they put two circuits next to each other and the energy jumps between one to the other so technically wires are just to help in facilitate the process in theory you don't need wires at all and so that is the limiting factor for the light bulb turning on now the

(1:07:03) bulb won't yes and so another good question if the battery was far away it wouldn't be instant correct correct the further your battery is away from your light bulb the slower it's going to be but it's still one over C so it's if if you go like it so assume one is one meter so now if you make it two meters it's going to take twice as long but it's still relatively instantaneous because C the speed of light is a gigantic number so relatively speaking it's almost instantaneous yes receive the entire

(1:07:31) voltage of the battery immediately it'll be some fraction which depends on the impedance of these lines and the impedance of the bulb and then then the impedance so I think when you're talking about the impedance is whether or not what the conductivity is in the wires themselves if you have a super conductive wire then it's going to be instantaneous like then the equations are perfect but if your wire has more impedance in it then supposedly it's going to take a little bit longer but I think we test that out later on I want

(1:07:58) to show one more time just so you guys can see so you can visualize it so there's your second for the bulb to light up but what we've learned oh wait okay where's the where's him turning the switch so just pay attention when he turns the switch right here so what is the answer to our giant circuit light bulb question imagine we have this giant circuit after I close the switch the light bulb will turn on instantly so what did we learn we learned the power is Flowing from the battery Direct to

(1:08:26) the light bulb doesn't matter how long these wires are it's flowing directly to the light bulb that's your answer guys how can it even be doing that how can the power be flowing directly to the light bulb through the vacuum of SpaceTime and we don't even see it that's what people need to wrap their brains around to me that's we need a medium there's got to be a medium okay so that this is one of those things that we use every day that almost nobody thinks about or knows the right answer

(1:08:57) to uh Mac boost uh okay what you say there's a current flowing in The Wire close to the battery that set ups a magnetic field yep the corresponding wire coming back one meter away received that magic field yeah we're going to go to the next one guys you'll see the next video is going to explain it even more guys get ready okay so here we go that's the first video

we're going to do one more video tonight this one's a little bit longer we might not have time to get to the other stuff just based on how

(1:09:20) I've been going slow today okay so remove this so he did a follow-up video oh God where is it uh how electricity flows oh I have too many windows open oh my god oh here it is here it is what's going on here I have no idea I have too many windows open oh God what I don't know if I'm able to find it oh boy I can't I can't tell where it's playing guys one sec chat this is awkward here it is

(1:10:29) no sorry guys I have it it's you guys can't hear it it's playing in my head my headset I don't know which where it is just started playing how time work oh there it is I found it okay I closed it oh my God stop playing I don't know why they keep aut playing okay here we go guys sorry about that where is it man Jesus there it is finally okay here we go sorry about the delay guys we're we're good battery and switch and I asked you after I Clos the switch how long will it take for us to get light from that light

(1:11:18) bulb and my answer was 1 over c seconds and his answer is wrong we would be able to communicate faster than the speed of light causality and Common Sense this is actually a bit misleading misleading misleading in a way extremely unconvinced naughty Mr verium has start of a right hornets nest clearly I did not do a good job of you see how triggered all the **debunkers** are guys look at how triggered all the **debunkers** got right there like immediately you got all these people claiming that what he said was wrong it's **debunked** blah blah

(1:11:50) blah this just goes to show like how stupid academics are that are out there right like they can't even like so if you guys feel like you're lost here know that you understand this better already than most a lot of people who are like phds and academics and YouTubers like you already understand it better than most of them just from watching that one video This is how little people actually really understand how power works and how electricity works also this should be another situation too where you start

(1:12:22) to realize that like **debunkers** in general have no credibility at all just in general they have no credibility everybody in the world yes exactly there's a missing pixel it's been **debunked** like everybody wants to be able to poop on something right they don't ever want to think about it logically right and uh I don't we're not getting into Flat Earth stuff and stationary Earth stuff right now but they do get upset explaining what was really going on in the last video so I want to clear up any confusion that I created so

(1:12:54) behind me okay so I'm I'm going to probably try to skip ahead through some of this so what he does here is he creates a small scale down version of it he creates a small scale down version of it here and they have a way where they can they can calculate exactly how fast it's going through there to make sure it's accurate okay he pulls in a guy from uh ligo ligo the the detector that detects gravitational waves he has one of those guys come in so this is where they set up a little uh I don't know what you call it they

(1:13:24) their detector to make sure to figure out how fast the the energy is Flowing um so here we go and then here's the **debunkers** again right the amount of power you're getting to the lamp over here people thought it would be negligible the amount of energy supplied by this is so minuscule okay so then they also argued guys they doubled down so the **debunkers** doubled down on this and they went no there's no way what he can said be true because even if the power is Flowing directly from the battery so if we take our situation here

(1:13:56) with our our our um so this is our circuit you can have it either way so imagine here I wonder if I have a pen I don't have a pen okay so imagine the battery is down here at the bottom okay and then the the bulb is at the top they were saying that the power flow from the battery to the bulb would be so small that it wouldn't be able to make the bulb turn on so they were like even if he's right there's no way that the P there would be enough power to turn the bulb on they double down on it you guess

(1:14:24) you guys can guess this is going here you go I love listening that all these like YouTubers just completely bury themselves because we've been watching with mh37 zero videos where they just keep doubling down they keep claiming they know how it works when they're wrong it's just we just talked about it in the beginning of the stream right they their favorite thing for people on YouTube and whatever you do is to claim they know exactly how it works and be 100% wrong uh it's it's crazy a tiny

(1:14:51) tiny effect right the amount of power you're getting to the lamp over here it's n he meant the light turns on at any current level immediately that is not what I meant well actually with that assumption Derek's answer is wrong the light never turns off no matter the state of the switch some electrons will jump the Gap and result in an extremely small continuous leakage current let me be clear about what I am claiming okay it is my claim that we will see voltage and current through the load that is

(1:15:17) many orders of magnitude greater than leakage current an amount of power that would actually produce visible light if you put it through an appropriate device and we will see that power there in roughly the time it takes light to cross the one meter Gap so he's like okay I got to clarify because all these **debunkers** are coming at me and they're misrepresenting my arguments they're making up fake stuff and this how does this not sound familiar guys this is like exactly what we've been dealing with these are the same kind of **Reddit**

(1:15:43) brain CNN brain people that like they're just so sure they're correct and they've got to misrepresent all the arguments it's wild but to understand why this happens we first have to clear up some Mis conceptions that I saw in responses misconception number one is thinking that electrons carry the energy from the battery to the bulb let's say we have a simple circuit with a battery and a bulb operating at steady state if you zoom in on the light bulb filament you'd see a lattice of positively charged cores okay so I'm

(1:16:11) going to probably skip through some of this but so again what's going to be happening here is that it's not that the electrons are are carrying the energy with them right the the

electrons are moving way too slowly for that so he corrects that uh slows down and the metals yeah and so when you and here's the thing too when you watch the electrons and they're bumping in here this is the situation where you have you don't have perfect conductivity so what happens when the electrons bump into things they produce

(1:16:38) heat so they produce heat now in super conductivity they're flowing freely the in the superconductivity the electrons are flowing freely and they're not running into anything that's the beauty of superconductivity that's why it's this Quantum effect where they're just not hitting anything anymore they're just flowing completely perfectly starts wiggling more it heats up and and like he just said right there so we actually just had a little lesson they heat up when that happens and when we have super

(1:17:05) conduct happening which is only at very low temperatures as we think although we believe that there they can happen at high temperatures uh that's when the electrons flow freely so that's when you have zero resistance so when we talk about zero resistance we're talking about the electrons are not hitting anything anymore ultimately this is what causes the filament to glow and emit light so a lot of people will look at this and conclude the EM carried the energy from the battery to the bulb where and so the

(1:17:28) reason why that people think that the electron must be causing is because when the electrons are bumping into stuff the filament over here that's how the light is produced that's how the light actually turns on the electrons are supposedly bumping into the filament up there but even that I we are now being called into question it dissipated its kinetic energy as heat but consider where did the electron get its kinetic energy from before the Collision it didn't carry that energy from the battery in fact if the circuit has only

(1:17:55) been on for a short time that electron hasn't been anywhere near the battery so how was it accelerated before the Collision the answer is it was accelerated by an electric field in The Wire the electron repeatedly collides with the lattice and loses energy and after each Collision it is again accelerated by the electric field so although it is the electron that transfers energy to the lattice the energy came from the electric field so where does that electric field come from well a lot of animations make it look

(1:18:20) like the electrons push each other through the circuit by their Mutual repulsion so you might think the electric field comes from the electron behind it there is the analogy of water flowing through a hose or marbles in a tube this is misconception too thinking that mobile electrons push each other through the circuit yeah so this is the big thing too is it's not a situation where the the electrons are flowing through because again with alternating current it's just going back and forth so really the way I would

(1:18:45) conceptualize it is the electrons near the filament are just constantly bombarding it that is not how electrons flow in circuits the **truth** is if you average over a few atoms you find the charge density everywhere inside a conductor is zero the negative charge of electrons and the positive cores of atoms perfectly cancel out so for each repulsive force between electrons

there is an equal and opposite force from the positive ion next to it these forces cancel out so mobile electrons cannot push each other through the wire so

(1:19:19) where does the electric field come from misconception number three is that it comes entirely from the battery this makes intuitive sense since the battery is the active element in the circuit it has a positive side and a negative side so it has an electric field but this is not the electric field that all the electrons within the wire experience consider that the electric field of the battery is much larger close to the battery so if its field were really what's pushing the electrons around then if you brought the light bulb close to

(1:19:43) the battery then the bulb would glow much brighter and it doesn't the **truth** is that the electric field in the wire comes both from the battery and from charges on the surface of the wire of the circuit as you so this is kind of wild here where he says so that he said something really important there is that even if you pull the the uh bulb close to the battery if it was just coming from the fields of the battery then you would expect it to get brighter and brighter as you pull it towards the battery but that's not the case so that

(1:20:12) means there's got to be something else going on here some combination go along the wire from the negative end of the battery to the positive end there is a gradient of charge built up on its surface starting with an excess of electrons through to roughly no charge in the middle as we'll see the steepest charge gradient is actually across the load to a deficiency of electrons the exposed positive cores of atoms on the surface of the positive end of the wire all these charges and the charges on the battery create the

(1:20:38) electric field everywhere inside the wires they also create an electric field in the space around the wires these surface charges were set up almost instantaneously when the battery was inserted into the circuit you might think you'd have to move electrons a significant distance to create this charge distribution but that is not the case even a slight expansion or contraction of the electron C with electrons moving on average the radius of a proton can establish the surface charges you see so the time for the

(1:21:05) charges to move is completely negligible and the speed of the setup process is limited only by the speed of light yeah so right there he's saying that the moment you add the battery the moment you add the current uh to the on the left over here wait can you see that I don't think you guys can see my mouse never mind but the moment you add that it instantly is perpetuating at the speed of light throughout the entire circuit and so really you could think of it more like I honestly think the chain kind of makes sense because it's not

(1:21:38) that the chain they're they're moving like that but it starts to flow it starts the the process instantly uh at the speed of light and so the crazy part is again that means if you have a really long stretch if you stretch out your circuit even though you stretch it out you're going to have the the Char the power go from the battery all the way up to the light bulb and it's going to make the area around the light bulb the the positive negative charges start vibrating the moment it can get there one one divided by C and

(1:22:09) he's going to show a visual example if you if you can't follow that which is going to blow your mind so get ready once that surface charge distribution has been established the battery does continuous work to maintain it by moving electrons through the battery against the kolm force in the load the electric field created by all the surface charges accelerates electrons which dissipate their energy in collisions with the lattice so the battery is putting energy into the field which electrons take out

(1:22:33) and transfer to the load an electrical engineer who made a response video Ben Watson came up with a good analogy the this guy that guy looks like he's like 10 years old but he does a really good analogy here battery is Like a Shepherd the surface charges are the sheep dogs responding to his orders and the mobile electrons are the Sheep Guided by those barking dogs yeah so that's a good analogy I guess so you know the shepherd has the Sheep dogs the sheep dogs are corralling the sheep and the Sheep are

(1:23:00) you know the electrons that are that are moving around so is moving them around the Sheep are out there you have your send your sheep dogs out have them move around get that bulb on for me the Surface charge description of electric circuits is omitted from most textbooks but there is a great treatment of it in matter and interactions by shabai and Sherwood they also have a vpython simulation where you can see the positive surface charge in red and negative surface charge in blue you can see how this entire charge distribution

(1:23:26) creates a net electric field shown by the orange arrow everywhere in and around the circuit everywhere inside the wire the electric field has the same magnitude and its direction is along the wire the energy from Battery to bulb nor do they push each other through the wire they are pushed Along by an electric field which is created by charges on the battery and charges on the surface of the wires with this view of circuits things that might have previously seemed mysterious make a lot more sense like if electrons leave a battery at the same

(1:23:53) rate and with the same drift velocity as they return how do they carry energy from the battery the answer is they don't they are accelerated by the electric field before each collision with the lattice at a junction how do the correct number of electrons go down each path well they are Guided by the electric field which extends everywhere throughout the circuit the fields are the main actors extending everywhere throughout the circuit and the electrons are just their pawns so how does this apply to the big circuit so the field is what sends

(1:24:22) everything around is what pushes stuff around the fields are what's moving the power it's not necessarily the electrons moving the power I that's the big takeaway from the conceptual perspective um when the battery is connected into the circuit even with the switch open charges rearrange themselves on the negative side of the battery there is an electrons on the surface of the wires and the switch on the positive side there is a deficiency of electrons so positive charge is built up on the surface of the wires the charges

(1:24:51) rearrange themselves until the electric field is zero everywhere inside the conductor this electric field is due to all the surface charges and the charges on the battery there is an

electric field outside the wires due to these charges but it's zero inside the wires we now have the full potential difference of the battery across the switch and no current is flowing except for leakage current which I'll assume is negligible when we close the switch the surface charges on both sides of the switch neutralize each other on contact

(1:25:17) and at that instant the electric field inside the conductor is no longer zero and current starts flowing through the switch simultaneously the new electric field from the modified surface charges radiates outwards at essentially the speed of light and when it reaches the B so right there this is the best example so it's radiating outwards this is the visual representation of how the power is able to get to the light bulb right away so you see it radiate hours and now right away you're already starting to

(1:25:43) see the shepherd and the sheep dogs are moving the sheep that are already next to the bulb this is happening at the speed of light this is why you can see even over here on the right the wires here have not even reacted yet that's why you can have the wires extending as far as you want and it doesn't matter the power is moving directly from the battery straight up here to the light bulb at the speed of light and this is it's happening from here because this is where the circuit is where you're

(1:26:08) flipping the switch hold the electric field inside it is no longer zero so even right here we can see the power is already flowing we can see the electrons are already stimulated here they're already making the light bulb turn on and yet we have no movement whatsoever here yet this is the answer Kaboom right this is the best visual representation right here that will teach you why the power moves directly from the battery or from the switch to the light bulb ah somebody was already on it so the orbs are somehow its own battery

(1:26:41) that is continuously sending out and taking in energy from The Ether and therefore always 100% charged and they don't need to land to recharge they're pulling energy from The Ether the orb is the battery actually I would say the light bulb in the case of the plane is the plane the plane is the light bulb they're creating a they're creating a circuit around themselves a Tor minus one an asmith and then they're producing an energy field that's so powerful that it's actually ripping through the

(1:27:08) SpaceTime itself and that's what's getting the negative energy that we potentially need at least that's how I've currently interpreted it but yes to your point yes they're literally extracting energy from The Ether from the environment so to speak and the orbs are the batteries they're the they're the charge so whoever that was Savage one you're Savage one I liked you savage one great comment on that I was going to bring that up Savage is spitting facts out here so current starts to flow here too

(1:27:34) this is why I said the bulb lights up in  $\frac{1}{c}$  seconds because the bulb was one meter from the switch and the change in the electric field travels out at the speed of light as some of you pointed out the answer should have been 1 meter divided  $c$  and I apologize for the Casual use of units if you were to move the switch then the bulb would take a different amount

of time to emit light which just depends on the distance between the wire and the bulb in response to my original video Ben Watson simulated a model of the circuit using

(1:28:00) software from Ansys called hfss it provides a complete solution to Maxwell's equations in three dimensions now I have worked with Ben and Ansys to make these simulations okay so now we're going to watch a couple simulations from Ben and then I'm going to skip to the end after that because I think we've gotten through the main points here when the switch is closed you can see the electric field radiate out yeah look at that as it hits the far wire so you can see the electric field radiating out

(1:28:24) once it hits this far wire it generates current the electric field is to the right so the electrons flow to the left this simulation shows the magnitude of the magnetic field which falls off pretty rapidly as it crosses the Gap but then a magnetic boom look at that once it hits here so this is the one I like the best because you can watch it hit this the top wire you can still see it's still moving perpetuating left and right but it's already hit the wire on the other side imagine your light bulbs up here

(1:28:49) somewhere field appears around the far wire look at that so this is the visual representation that you guys should understand figure out how the power actually yeah the simulation makes it all make sense which is why I wanted to show you guys this one afterwards as opposed to just trying to explain it the simulation really helps to wrap your brain around it this magnetic field is created so yeah imagine the glowing here is now already the fields and the electrons already already starting to move by the current in that wire to me

(1:29:14) this suggests that it really is the electric field and not the changing magnetic field that creates the current through the load some commenters on the original video claimed my answer of three or four nanoseconds VI Ates causality I guess they were thinking that the bulb would only go on if the circuit were complete and it wouldn't if the circuit were broken somewhere which could be up to half a light second away so it seemed like I was saying we could get information about the status of the whole circuit even half a light second

(1:29:37) away in just nanoseconds yeah I don't even understand the causality argument guys like if people were struggling struggling with causality on this they're gonna really be struggling with causality on a wormhole so uh I don't I don't know where the causality argument was here but whatever but that is not what I was saying what I should have stated explicitly is that the bulb goes on regardless of whether the circuit is complete or not the current flows through the load due to the electric field it experiences to illustrate this

(1:30:05) Ben added a wire below the circuit that is completely disconnected from it and what you can see is that its response to the changing electric field is virtually identical to that of the top wire at least up until the signal reaches the far end and reflects back this is why my answer doesn't break causality at least initially connected and disconnected wires behave exactly the same whoa so even when the wire is not connected this honestly brings up the question of Tesla now right like this is Wireless transfer power right here and this makes

(1:30:32) sense because if you have two circuits next to each other they don't have to be touching for that to transmit power across them using the software you can also simulate the pointing Vector that is the cross product of electric and magnetic fields in the last video I showed how the pointing Vector indicates the direction of energy flow and after the switch is closed the pointing Vector points out of the battery across the Gap to the other wire whether connected or not because energy is carried by fields

(1:30:56) and not electrons it can go straight across the Gap so you might ask why do we need wires at all well we don't I mean phones and tooth there you go we don't guys why do we need wires at all there's your answer we don't need wires brushes charge without wires connecting them to a stream of electrons and researchers have demonstrated remote charging using the energy from Wi-Fi signals wires are more efficient because they channel the fields and hence the energy from source to load uh so the wires are just more efficient because

(1:31:23) they Channel the energy specifically through an exact Direction wow so we don't even need wires guys so yeah this this really yeah we got to look at that M70 videos again after this here's another angle on the pointing vector and you can see once there is current in the top wire the fields around it carry energy in both directions we don't also points parallel to the first wire carrying the energy around the circuit as most people would expect but again note how the energy is carried outside the wires not in the wires now

(1:31:53) admittedly thinking about circuits this way is complicated and since nobody wants to solve Maxwell's equations in three dimensions just to analyze a basic circuit scientists and Engineers have worked out shortcuts for example Ohm's law voltage equals current times resistance is just the macroscopic result of all current and voltage this is called the lumped element model lump all the so our original diagram of the big circuit is flawed because Fields between the wires are important to the problem but there are no circuit

(1:32:18) elements to indicate these interactions to fix it we need to add capacitors all down the wires these capture the effect charges on one wire have on the other if there are negative charges on the surface of the bottom wire for example they'll induce positive charges on the surface of the top wire also since these wires are long they're going to create significant magnetic fields around them which resist changes in current and the Earth is itself a capacitor so interesting so we model this with inductors all the way down the wires we

(1:32:45) could also add resistors making what electrical engineers would recognize as the distributed element model for a transmission line but we're assuming that these wires are superconducting so this is how we could yeah so he just said superc conducting there in order to simplify they they assume no electrical resistance as well um okay I'm going to switch ahead to the example and sending a signal down the wires the characteristic impedance is equal to the square root of inductance divided by capacitance and for our

(1:33:15) circuit I measured the capacitance and the inductance of the lines 11.85 call it micro Henry's so we got a characteristic impedance of about 50 ohms to maximize the power

delivered to our load we want its resistance to equal the sum of the other impedances in the circuit so that's why we picked a 1.

(1:33:32) 1 kilohm resistor now I hope you're convinced that current will flow as soon as the electric field reaches the far wire the question is how much are we going to see an appreciable voltage even with these lines a meter apart that's what it seemed like a lot of people were doubting in the last video so that's really what we want to so what do you guys think guys what do you think chat you think the battery you think the light bulb is going to turn on or do you think the light bulb is uh not necessarily going to turn on uh you

(1:33:59) still think it's going to work this way let's find out find out here okay so now we're putting a pulse in there yep lucky looky Derek so what do we got that yellow one is our got a fraction of the applied voltage overshoot and then so it looks to me like the initial voltage that we're getting is about five volts per division so it looks like about five volts roughly four or five volts the green curve rising up to around 18 volts is the source voltage and the yellow line is the voltage across the resistor so

(1:34:29) after just a few nanc this voltage Rises to around four volts since the resistor was a kilohm that means four milliamps of current are flowing in the resistor before the signal goes all the way around the circuit so we were transferring about 14 mows of power this is what 14 Mills of light actually looks like boom so there we go so we measured it and we can see that even though it's a small amount of power that's still enough to turn on a light bu so what they measured there was they measured how fast and how much one the

(1:35:00) energy went from one location to the side to the other side uh and they were able to they basically scaled it down from the large version to see how much and the answer is yes some enough to turn the light bulb on came across if you are still confused then you'll have to watch the video again for yourself or you can rewatch The Stream I've thoroughly explained the phenomenon uh it's it's definitely out there if you're still struggling just re-watch it until it until connects so yeah it's not a

(1:35:25) fully on bulb but it is visible light and way more than you would get from just leakage current now some of you may argue it's unfair to use a little LED when I showed a bulb and car battery in the original video but those items were for illustrative purposes only the clue that this is actually a thought experiment is the two light seconds of superconducting wire that stretch out into space this is not an engineering question about how best to wire up a light bulb in your bedroom the question was intentionally vague and if you want

(1:35:51) to choose circuit components such that the bulb never goes on you are welcome to do that and I support your conclusion just to me the most interesting way to approach this problem is to ask how could you make the light go on fastest I was worried that those long wires would pick up all the radio waves passing through and we wouldn't even be able to see the signal for that noise but you can see clearly on the graph that the signal is way above the noise level Alpha Phoenix set up a kilometer of wire and got a very similar result so the

(1:36:18) light bulb turns on a little bit and then after one light speed delay the light bulb turns on the rest of the way YouTube yep so multiple people have recreated it and they've shown that 100% the light the power is transferring from the battery from the source to the bulb um and there may be a small amount but it's enough to be measurable and visible so we can tell that the model that they promoted there is accurate 100% so there we go let's see if zy simulated the transmission line circuit and found that even with realistic

(1:36:48) assumptions he transferred 12 Mills to the load straight away Derrik is actually more correct than we give him credit for so I believe that correct on all counts and the question is neither deceptive or requires like technicalities so everyone agrees that a steady small but way bigger than leakage current signal flows through the load in the first second after the switch is closed is it enough to emit light yes if you use an LED but the point of the thought experiment was to reveal something that's normally hidden by the

(1:37:12) way that we think about and teach electric circuits yep so that's uh I mean I think I've already kind of weighed out I'm not going to continue to risk myself getting copyright tried um but yes so as we just saw from from that I 100% no doubt the power flows directly from the battery to the light bulb if you're still confused that's the answer the battery flows power flows from the source uh to the bulb through free space does not flow through the wires that's all you really need to me remember now

(1:37:41) let's rewatch what did comper say UAP is real yeah okay so let's go ahead and watch the Drone video again actually I'm going to pull it up over here so once again that's veritasium all credit to him for his video um veritasium if you guys want to rewatch them just go to his YouTube channel you should be able to find them pretty quickly um where is it here it is okay so the question here I suppose is is the orbs are essentially a battery right a very highly charged high amount of voltage battery like a massive

(1:38:34) one and they're creating a field between them this maybe why they're actually able to stick in this uh 120 degree orientation that we see here and when they are Contracting on one another again consistent with kum's law we're seeing this exponential increase in force so strong that it's allowing it to rip through the fabric of SpaceTime right here which seems incredible but um is also seems to be true I will add the links in the YouTube description after this for you guys so you guys can check it out we're

(1:39:10) going to be going offline here in a few minutes anyway um so I will go ahead and this I think as well as Bob Greener said we're looking at a topological monopole with respect to the orbs I'm now even wondering like why don't we see the Heat Signature right there is it changing somehow like you'll see here in a second now the Heat Signature changes right there now we only see the heat signature on one side of it huh they zoomed in on this for a very specific reason guys when we see that zoom in happen there that seems very

(1:39:52) intentional um pretty bizarre okay here we go I'm going to do I'm going to add another invite right here for you guys another Discord invite if you want and then right here right now

right there you see where these blur like this this is they're they're reorienting so now I'm wondering yeah maybe they're changing their polarity or something like that someone said oscillation of polarity maybe there's something like that going on here like this is definitely a device in here these things

(1:40:26) have some kind of device in here and they're being remote controlled and you can see them this is where they recharge their orientation the same time in the satellite video in the satellite video they slow down and then they converge and they zap and again this convergence that we see here consistent with kum's law that electric force is skyrocketing yeah they could be tuning let me play it again it's hard to see the exact heat signatures moving right here the top one they don't really like look like they're rotating towards the

(1:41:11) center of the plane it looks like they've gotten into the right orientation and then they're just moving toward the the the orb itself is moving towards the plane I'm going to play it in slowmo I wish we could see a little bit further to the left right here and it's hard because they flatten so we can't really see what's going on right there yeah that that's a real Wormhole guys real Wormhole unbelievable guys I I mean I can't believe that I'm alive when this is happening and we're watching

(1:41:53) this the reverse orientation I don't know that reverse is all relative right so I don't know what reverse orientation means it's not that they're reversing orientation it's like they're getting into an orientation where they're preparing for the zap right here so right here they're getting into orientation you see them blur like this they're reorienting and then they come out of it right here in this Frame when they come out of it they're ready to go even here you can see this one like

(1:42:23) the Heat signature here on the bottom is angled to the top left and it and it keeps being angled it does kind of change there now it's angle to the top right and that's it so it does kind of change this one up here on the top though is angle to the top left and it keeps angle to the top left and then it blurs the one on the left we can't really tell because it's cropped out yeah I think from what we learned there I would imagine the light bulb is the plane or the area around the plane so the azmyth is going to be imagine a

(1:43:00) circle connecting these three that's what the that's our asmith you know the sphere yeah I can't get enough of this video either it's amazing like we're looking at something that's truly magical truly magical if if this video were to be confirmed like veritasium and every YouTuber relates electrical engineering would be doing videos on this getting like hundreds of millions of views they would be the most popular videos in all of YouTube and they would be analyzing it they would be doing exactly what we're doing uh and

(1:43:34) we're just we're way ahead of them so if you're one of the people who's watching this right now you are way ahead of the game in terms of you know what the Public's understanding is uh have you seen the stereoscopic video with a 3D headset viewer you mean the the military one the plural view 3D yeah I've seen that so one of the things that early on we don't know like

the debunkers were able to cast enough doubt on this which makes me wonder if some of these debunkers aren't literally fed

(1:44:02) shills um and they claim that this video I'm about to show right here that uh like YouTube made it into 3D but we we really don't know we can't say there's no proof one way or another because the later versions were not 3D but this one's 3D and it would make sense for the video to be originally 3D because the military would want to track the object in three dimensions and if it is they the military has these like glasses they can put on where they like are actually watching the video the videos they watch

(1:44:33) in three dimensions for tracking purposes which would be consistent with what we're seeing in this video and it's also consistent with the satellite the satellite there's actually two satellites right next to each other yeah it's pretty amazing what we're able to do with reverse engineering I didn't think we would be able to figure this much out just like normal people like us I'm going to just show this here poof there it goes crazy man I I never thought in a million years we would be able to figure this much out

(1:45:07) related to the videos um you know I thought oh we could reverse engineer this when I thought we could reverse engineer this I just meant like figure out the concepts but we have figured it out to a degree where I never thought was possible six months ago you had asked me I thought it's going to take me years and it's only been six months and we're already at the point where I'm like wow we've like China and Russia have definitely figured this out if you give us more phds and stuff like that

(1:45:33) that know more about electrical engineering they're going to figure this out much quicker than I figured it out and then they're going to be able to actually recreate this like you know you give them unlimited materials processing on how to make stuff then they're going to be able to make those orbs uh okay somebody else KH uh the energy source inside the plane was burn I mean the lithium ion battery is burned the orbs could have capacitors that release energy in the form of charging direction of each

(1:46:06) electrons zapping yeah it's it's hard to tell whether or not the batteries in the plane are a catalyst or not I lean towards no but it's not a definitive thing I think these these orbs can do it without it but that' be pretty wild if it was like the fire was accidental but they were planning on orbiting the plane anyway like what if they were planning on orbiting the plane and they need the batteries but the batteries accidentally started on fire how crazy would that be but these are the details that we just

(1:46:36) there's no way for us to know that there's just no way it's it's too far in the realm of speculation to know whether or not but it's fun to think about it's fun to think about China does have this technology I there's almost no doubt that they do if you guys look up semiconductors now we've learned what we what did we just learn today guys we went through uh electrical engineering and we learned that conductors semiconductors are everything related to this like it's all about electrical

(1:47:01) engineering it's all about semiconductors it's all about microchips that are semi that are semiconductors and if you go look at even recently Biden just put new tariffs on semiconductors there's a literal trade war going on over semiconductors most of the world has no idea no idea how important these things are and that's how they want it they don't want the world to know now you guys know semiconductors are extremely important to this technology and this is why the freescale semiconductor people are 100%

(1:47:30) involved in the motive now exactly how they're involved in the motive we can't say I lean towards Espionage or counter Espionage um especially because we read that that whistleblower thing the other night which implicates that there's definitely like these Espionage events going on uh but I'm not sure yeah tip of the spear this this community is definitely the tip of the spear right now uh what propulsion do you think the orbs used to to get into orbit uh I think that they're using alabar warp

(1:47:57) drive but not like super speed they're just bending SpaceTime around themselves and they're using something some kind of harmonic resonance or something to like stick to the plane and uh it's hard to really understand it but the way we know that is because the second orb immediately gets into triangle formation without the third orb being there yet which tells me that they don't need all three orbs it's not like the orbs are all pulling and pushing on one another because if that was the case the second orb wouldn't

(1:48:24) would get into a line formation it wouldn't be getting into two sides of the triangle um so I think it's somehow sticking to like the center of mass of the plane somehow they could also be using like a radar to like direct them there's a lot of options the problem is a lot of this stuff we we can't know for sure can't know for sure uh what do you mean why the mouse cursor on both sides I think I mean there's 3D stereoscopic so you know it's it's two camera angles from the both from the both perspectives although I

(1:48:57) guess that's a good question too but um yeah I don't know the answer to that that's a good question to think about why maybe the mouse cursor on being both sides could indicate towards it not being an original stereoscopic or it being I don't know you guys will have to tell me what your thoughts on that in the Discord not sure um but I would say that the answer is because what they did was they if it was originally stereoscopic they downloaded in a format that wasn't 3D they downloaded in the original like

(1:49:28) side by-side raw format um and that maybe when they were recording it they were recording it in literal 3D that would be my guess like when they're doing the screen recording the person's looking at in 3D they've got the mouse on it and then they you know exported it in non-3d format just guessing I don't know um either way whether or not it's 3D or not is not like vitally important to the case which is why I've kind of backed away from that from the early on um because yeah I mean we're just open to

(1:49:59) New Evidence you know sorry I'm looking any other questions yeah I've confirmed the amount of lithium ion batteries the amount of lithon batteries is 487 pounds 221 kgrs uh

Mentor pilot was wrong mentour Pilot's video is objectively wrong there was not 5,000 pounds of lithium ion batteries there was 487 the rest of it is accessories I I looked into it I looked at the way bills I confirmed it um so yeah Mentor Pilots video is wrong I mean no surprise he didn't do a very good job if I'm being honest um and he

(1:50:33) missed most of the evidence I'd say Mentor pilot addressed about 10 to 20% of the evidence uh and missed about 70 to 80% or 80 to 90% of the evidence and most of the evidence that he posted he also got wrong um which is just kind of sad because he got like four million views and he grifted like several tens of thousands of dollars off that video uh and he didn't solve anything um in fact he did more disservice to the case because he started this psychoanalysis of completely normal uh Communications which goes to show that he came into it

(1:51:05) thinking that he was going to pry try to prove his Pilot suicide which is very dishonest Mentor pilot like shame on you you are a shitty human being uh and I hope somebody send this to Mentor pilot Mentor pilot you are a shitty human being you got the facts of the case wrong uh there's literally no evidence that it was pilot suicide and the fact that you tried to blame it on pilot suicide and promote the fraudulent whisper report cast out on your credibility in general and I'm going to make sure in the future that you get the

(1:51:33) criticism that you deserve for your garbage video that you made um I I'm just so sick and tired of these like [REDACTED] grifters and [REDACTED] they're putting their advertisements in the middle of their videos and their Ed Code Pilot for 60% off [REDACTED] and they don't do any real work and then they claim oh I was just reading the atsb report and they get all of that wrong and then they goes completely off script and start doing psycho analysis and [REDACTED] like that like they weren't just reading the atsb report they ignored like

(1:51:59) everything um so sorry I have to go there but like it's true and and Mentor pilot should do the right thing and issue a correction on his garbage video all he had to do is reach out to me and I will correct him and I will help him out but instead these people double down and they claim well I got sign off from the families which family members which family members specifically signed off on your shitty video I'm just tired of it man uh there's no way we're going to get our hands on the orbs that's just never

(1:52:30) going to happen I'll be honest with you as on that yeah um I don't know about guys I don't know about the battery thing man again I just don't know man maybe yeah I personally think that they did start the fire I think the fire is related but again we can't know we can't know for sure so a lot of it like the US government just has to tell us what they what they did what the reason was what their motivation was uh if the fire was involved or accidental we just we can't Divine that you know and and again I

(1:53:03) don't want anybody like remote viewing the answers we're not doing any psychic [REDACTED] we're not no one's doing any psychic stuff here there's GNA be no psychic stuff linked to this case Okay so we're not going to like try to Divine the answers or look into a crystal ball and

figure out what the answer is we're just going to get the government to give us an answer they know what happened to this plane this investigation has Prov Beyond any shadow of a doubt Beyond any shadow of a doubt even if those videos

(1:53:27) were fake we know 100% not 99% 100% the government knows US government knows what happened to this plane 100% so because we know that everybody no matter what side you're on should be wanting the government to tell us the **truth** therefore if anyone out there is not trying to get the government to tell us the **truth** they are being dishonest we've also **debunked** all this [ ] about reticules or reticules and the uh the re reticle on the uh drone video we' **debunked** all the VFX [ ] we deunk this fake 2D Cloud picture [ ]

(1:54:01) everything's been **debunked** these videos are real anybody not trying to get the government to get an answer about the videos and about what they know about MH370 is being dishonest so please please once again stop trying to make people ignore these videos please stop lying about the videos and let's get to the **truth** and I think that's where I'm going to close it out tonight guys so thank you very much I appreciate I answer as many questions I could get to tonight um and I will I will try to stream again

(1:54:29) tomorrow I apologize we did not get to all of the uh science papers I want to so tomorrow we're going to definitely do counterfactual teleportation I read through it it's pretty sweet and we're going to look through those how put off papers and I'll try to add some more stuff in there as well and then we'll answer more questions about the videos and what have you so I appreciate that everybody wants to know more questions about the videos I will you know bring all your questions next time as well

(1:54:53) actually I'm wrong so tomorrow uh I've got the space uh let me promote that and so tomorrow the space is with uh Dustin and Ma that's G to be at nine o'clock so I may try to log on early so we can go over the scientific papers and then we'll roll into the xace after that that's probably going to be the plan so maybe I'll spend like the third first 30 minutes going over the scientific papers doing some highlights and then we'll do the xace with Ma and Dustin that's going to be a Q&A about

(1:55:25) MH370 so bring your questions to this xace tomorrow I'll remote that tomorrow morning and yeah that should be good so thanks everybody have a good one uh I'll play us off here with some of uh I don't have these other songs downloaded so I'm just going to play the ones I've got here guys peace everybody peace m37x have a great night go wolves let's do this one rck with FS like these who needs your buckers we be be through space while they CL that CL a b I'm a fall B this investigation is legit we the buckers

(1:56:04) get S off with the bu spit oh got the main name B what doesn't no best than the corridor crew while the theories are a mess who knows where this all goes bless the sky and those below but liars and deniers can suck my black hole y y come at me bro be a 4B I'm a 4B this investigation is legit be a fact Ste buckers can step off with the bull [Music] spit Ste your mind monkey Scrolls like while ucation real fact with macroscopic conation episcopic conation

(05:23) that we must defy for a stable Wormhole let's give it a try [Music] balancing the plat

creating the throat open oh there we go oh uh I think there's a longer version of that song Somewhere I gotta find it guys uh thank you guys very much for being here tonight appreciate you glad to have everybody in the chat you guys are aw awesome uh thanks for jumping on early as well for all my people who are on early uh there's too many of you guys to shout out individually but thank you guys very much I see you station Jason

(06:11) flimsy uh everybody else is here we got a lot of new faces in the chat as well guys which is awesome uh so what are we gonna talk about today uh we are first of all I want to say that I had another follow-up piece with Emerald uh today and and so you'll probably see me wearing this shirt again when that pops and she talked about the Amy esgd letter to uh to Trump and Pence from 2019 and so I mentioned that I brought up information about that how I you know I'd seen the post from Sam Neil that that letter was real uh so I don't know

(06:52) when that's going to drop that might have dropped earlier today if it did I did not see it so uh they usually will send it to me and I'll probably post it on Twitter as well so you guys can check that out uh so what are we going to address today guys so uh if you just saw my most recent Twitter post then you saw that I had a uh kind of a thing pop up today that I did not expect would happen um let me pull it up here this [Reddit](#) post from I had reported a week ago on this [Reddit](#) post because when I read this [Reddit](#) post

(07:32) called uh I worked on a team that dealt with non-human intelligence technology and left in 2018 uh I read through this like briefly and there was a couple pieces on here that I thought was pretty interesting but uh I get a little bit sketched out when I hear about people talking about biologics and aliens and stuff like that and then today uh I was in touch with a source or I got in touch with a source uh that pretty much corroborated that the person that wrote this is legit it's not somebody laring on the internet

(08:11) uh that doesn't necessarily mean that every aspect of this is true um but it does mean this isn't some kid who made up a story it's not some AI story or whatever like that um so no I won't go into what my sources are or my methods or how I got that uh obviously you can tell from the situation here that this is a serious situation this this post was deleted off of [Reddit](#) uh what I can say is I was told that this was deleted because it's accurate uh because it's accurate that's the reason why it was

(08:41) deleted and uh you know for at least from uh you know the way the programs work situation that's why the government doesn't want it on there and the reason why I thought that was interesting is because there are other [Reddit](#) posts like this that we've investigated in the past that had similar things happen to them including the ebo scientist post that if you haven't been hanging around this whole time I think that was maybe January we talked about that this one's a little bit shorter but it's going to

(09:05) take like 20 minutes to get through it's like five pages long um the eblo scientist post one was so long that it took like 45 minutes to an hour to to get through and I lost my voice um but it does beg the question about this one and it begs the question too about The forchan

Whistleblower so if you are familiar with those then you're going to see a lot of crossover here if you're not familiar with those then you should probably check those out later uh I think those to me are the three most credible leaks whistleblower

(09:37) leaks that I've heard on **Reddit** or you know social media in general um so we'll see let's see we got what we got **reddit**ors here uh Chrisley just posted a video showing the plane going over the reticle layer at least 10 times in the videos I it's done I'm sorry Ashton um I I think the **reddit**ors are having like a mentally ill breakdown at the moment because if I go back real quick we completely I didn't actually do anything is the best part uh if you guys are not familiar uh Bobby O had reached

(10:14) out to me several I don't know weeks ago I want to say and said that he was curious uh about uh investigating the case he thought that the **debunk**ers logic was very flawed and that he wanted to look into this from a objective perspective and I said go nuts and I said that I don't want to uh be I don't want to be you know like directly involved because I want him to come to his own logical conclusions uh and that if he had questions I'd be happy to answer and he told me he was going to talk to all the

(10:46) **debunk**ers uh he came back to me and told me that he talked to them for several hours about their arguments and he just posted today this um post right here and this post here he goes through uh a detailed analysis of the cloud picture so if you're not familiar with the cloud picture and then we'll get back to the other stuff this Cloud picture Saga was the kim.

(11:13) com Saga that happened in early December it seems very likely that kim.com was a government plant who was sent to try to uh build the case up and then to shoot it down uh nothing about kim.com is credible I have no connection to kim.com I've separated ways with kim.com uh right after this happened and as far as I'm concerned he has absolutely nothing to say about the videos nothing he says has any credibility he is literally a career criminal he's been convicted of fraud he is facing extradition in the United States uh for

(11:45) uh I think it's extortion don't quote me on that I think he's uh but he's he's facing some very serious charges uh if he ever to come to the United States he's probably going to spend a decade or more in prison uh so if the **debunk**ers want to uh align with him go nuts they want to align with a fraud who has a criminal who has no credibility whatsoever who's defamed me on stream uh go crazy man go crazy um but this this **debunk** I read through it and for the record I had no connection to Bobby I

(12:13) didn't I wasn't involved in making this whatsoever I wasn't involved in any process related to this I didn't ask him or make him show me this ahead of time I had no idea what was going to be in it and uh ultimately today this completely destroyed the cloud **debunk** picture permanently uh there's no more it cility I mean the cloud picture didn't have any credibility to begin with because it's literally impossible for to be a picture of the clouds in the Drone in the videos because we have two videos and it

(12:36) requires a 3D rendered environment uh but he did very thorough analysis talked to the textures website and concluded that there was really no credibility to this whatsoever there's no evidence at all that this picture existed before the the videos did um and that's the biggest thing there's literally let me repeat that there's no evidence whatsoever this picture existed before the videos end of debate um and so you can see here he's listing all the locations that they search SE quite an extensive search um

(13:02) there's really nothing there and then the real killer was this here where and this was just completely the end of the **debunk** like permanently dead no more no more discussion about cloud pictures right here um two pictures from completely different angles taking two seconds apart two seconds apart completely different angles when you look at the rest of the the pictures because they've got the metadata on when the pictures were taken and you see them lined up uh in fact I'll just go back to mine here to see it it's easier uh you

(13:31) can see that he you can see there's pretty much like a minute or less slightly less than a minute between every picture except for when you get to this set all of a sudden he's taking like five pictures in under a minute and some of them are completely different angles within just a second or two apart which is completely impossible so that completely rules out uh the possibility this picture could be real um so yeah so if you want to check out this video I I recommend you go go through it he goes through details there's other sketchy

(14:00) stuff as well for example these manual updates so it's been confirmed I think the textures.com people confirmed as well that they did Manual updates to these pictures back in in J in um April and Fe and and March or may which makes no sense at all I do I run databases that's like my actual job is so when you do database updates a you don't manually update pictures that are 12 years old that never happens um but also when you run a script and theyve said that they ran a script so they they gave this in

(14:29) story uh when you run a script it like updates all the rows at the exact same time because the script like is instantaneous you don't have these huge gaps between when you do it like this so I guess the argument is they went in and they manually touched these pictures and like rearrange the order of the pictures and stuff like that which is uh extremely sketchy so um so for whoever that serpo project person is uh sorry to burst your bubble but um the videos are real and if you want to waste your time trying to **debunk**

(15:02) them no one's going to stop you uh you can't **debunk** real videos so I do wish you the best of luck but um it's over for the most part the **debunks** are all dead permanently uh you guys tried I mean you tried really hard uh you know you're going to have a hard time rationalizing to yourself the reality of the science and the videos that we've been talking about I understand how hard some of this is for the **debunkers** to accept because their whole lives have been a lie and they're the kind of people that like

(15:28) Trust already blindly and they think that they can never be lied to uh but I got bad news for you you've been lied to your whole life your whole lives are a lie uh I hope you get used to it

I hope you start to cope with it and however you need to cope with it uh truly doesn't matter to me how you deal with it how you rationalize it um I just hope that you please don't hurt yourself that's the only thing that I ask is just don't hurt yourself it's going to be okay um you know you'll get you'll get

(15:51) through it okay so let's get back to the uh task at hand as well here and for the record like I'm not blocking people that disagree with me but if you go into my replies and you start like trying to call me a grifter or whatever like that which is the number one thing that I get uh you are going to get blocked right away and you're never going to be unblocked ever so um you know that that's all so Sero I won't block you right now but um that's that's what the rules are guys so um just you know don't be a [ ] if you

(16:28) can't help being the [ ] then don't be surprised if you get blocked okay that's all okay uh let's go through now so we dealt with that let's okay so now I think what I don't want to be up all night tonight guys and I we might end up pushing the science again till tomorrow we'll see how much we get through here it depends on how fast I can get through this **Reddit** post and for the record yes I still think **Reddit** is the worst but uh people do post on there and apparently people post on there that are whistleblowers

(16:58) that want to get the information out there I'd post on Twitter but whatever they can post wherever the heck they want man okay here we go uh and okay last comment I'm gonna make on this Chrisley has no credibility whatsoever she obviously has major issues and I wish her the best honestly as well um but you know she's lied multiple times she lied and uh defamed me out of context on a Twitter space and that's when uh I cut all ties with uh those people um so you know if you're not willing to tell the

(17:31) **truth** then you whatever I wish you're the best in her grift and her clout chasing or whatever as well as the other **debunkers** who are like literally paying hundreds of dollars these guys are out there literally paying hundreds of dollars to promote fake **debunks** like I wish you the best good luck with your good luck with your grift maybe somebody will talk to you sometime when you're brave enough to put your face on the camera um okay so let's go ahead and get started I'm so here's the thing too the

(17:56) post on **Reddit** that we're going to go through here is deleted like I went back to it it's gone I went back and looked through the uh way back machine even on the way back machine there's nothing left anymore and I'll show you I'll prove that to you right now um so I was told directly that this was deleted because of its accuracy and authenticity but you can see here this isn't this is only like two paragraphs there's way way way more in this so this is the person that posted hoers fan

(18:26) 1968 uh I don't mind showing that because they posted their own **Reddit** account I don't know if they've deleted or anything like that yeah if a **redditor** post does anyone care yeah and poor uh Shane if you guys are not familiar with the drama UFO Shane uh he blocked me after I told him that I thought that what he did with the **debunkers** was extremely disrespectful and

that I didn't want anything to do with them after that and so anyone that blocks me I usually just block them right back um so we won't

(18:58) ever be dealing with you o Shane again so if you miss his rants well whatever if you're not familiar with him then congratulations you missed out on nothing okay so this is gone obviously here there's there's nothing left of this and this is the way back machine so let me close that out close that out and we're also going to talk about The Ether and Terrence Howard but I want to go through the **Reddit** post first to get that out of the way so what I'm going to do is I'm going to pull up I put it into a text pad so

(19:32) people may ask well how did you get it well the answer is that a bunch of people in my Discord saved it so we have the whole thing to read through God this is long chat I'm gonna read through this and I'm also going to give my opinions on it while I read through it and you guys can ask questions or give your opinions in the chat as well um oh let me have another Siff of Martini by by the way guys cheers yeah I couldn't deal with the UFO Shane guy anymore like he just would repeat himself over and over and over

(20:11) and over again it's like at some point he just gota like you know let other people talk yeah I'm not going to promote any more **debunkers** either guys cuz uh the whole thing is like you shouldn't give uh people like that any uh you shouldn't even notice people like that you definitely don't want to give them any any promotion uh but I do like to make people aware of the situation so there most likely will be a new rule from this point going forward that we will simply not address to bunkers anymore the only

(20:44) one that I potentially will address is **Mick** West if you didn't check today I destroyed **Mick** West like completely uh he didn't answer any questions he couldn't even answer how a 2d Cloud picture could be involved I showed them all the evidence um so if you can find the replies in there um but this is this is the situation with the **debunkers** right the **debunkers** never answer any questions that they don't have an answer to every single time I've answered every single question anyone's ever really

(21:08) asked me and if you think that I haven't it's probably just because I've answered it so many times but I've answered even all the questions related to every **debunk** everything that's out there I've answered every question uh **Mick** West couldn't answer any questions whatsoever in fact he tried to say something about kim.

(21:25) com and then when I addressed uh I addressed him with the fake debonds that he presented he wouldn't address it I showed him the uh uh the the recreation attempt didn't address that showed him the evidence around the cloud picture didn't address that as well uh deflected ignored Etc so like all the Hallmarks of literal disinformation um and this is why these people have no credibility that are out there okay anyway here we go guys so let's get through this yeah they can't answer even one question of mine you know and that's the

(21:57) reason why we're going to stop entertaining them uh so we're just we're not going to

entertain them anymore even if Mick West if Mick West like the only thing I'm going to do with mck West is I'm just going to take what I've already asked him and I'm just going to repost it every time he comes and he tries to come at us every time he tries to address the case I'm just going to take the link that we already had there and I'm just going to send it back to him and ask him to address the questions he

(22:18) still never addressed where he gets the sources of income from he never addressed if he was told about the VFX debunk ahead of time he just doesn't answer any relevant questions he cherry-picks every single thing that he tries to address which shows how incredibly dishonest Mick West is just to for my last statement on Mick West I think he's the one of the I think I no I think he's the worst person on the planet I think Mick West is the worst person on the planet he's 100% dishonest he is a he's an enemy of humanity and

(22:47) he's been holding Humanity back with his ignorance uh and that's just sad honestly I I hope he gets well and I hope he gets the help that he needs okay can we read the text over here I don't think we really can that's fine so you're going to probably be hard for you guys to read the text let me Zoom this in and see okay yeah you can kind of read it should I go okay it's probably fine I'm just going to read it out loud to you guys here one more Sip and then we'll get going oh hi gaming thank you very much

(23:19) man appreciate it appreciate it Ohio Gaming's been in the chat recently been uh been cooking love it okay now Mick West reminds me of those uh those psychics that take advantage of people um that would like ask you about your dead relatives I forget what the guy's name is South Park made fun of him you know like the biggest douche in the universe or whatever guy that like just pretends like he's talking to their dead relatives that's like what mcwest is he's like a pseudo intellectual that is

(23:57) actually just a complete idiot that has just because of his ignorance has just been holding back Humanity the worst people are the ones who think that they know everything and they think they're smarter than everybody else and they like debunk everybody else's stuff uh th those are the worst ones like Reddit moderators exactly like a Reddit moderator precisely Reddit moderator is a redditor with extra words my channel and we said we were going to be nicer to the to the redditors guys let's be nicer okay let's let's get through a

(24:26) few paragraphs here and see how we do um hi I'm writing this because I never got any sort of debrief or moment to decompress from a job I quit in February of 2018 I worked for an agency that dealt with issues related to non-human intelligence sometimes these were referred to as ebees or a friendly Lo a friend lovingly called them a a is that how you say that wait did somebody else just donate William Bill thank you very much man had a great doctor's appointment celebrating with you kicking ass awesome

(25:01) William Bill I'm glad you're doing well William Bill really am man really well really glad you are okay uh I can't divulge what I did specifically most of the information I'm going to discuss is anecdotal information I found out from colleagues this is because it would be easy to

identify me from what my role was as the information I can say about what I did specifically would be personally identifying feel free to dismiss my post as a hoax entirely I know I know the right people will believe me I'm posting this for myself

(25:35) to make peace with the gravity no pun intended of the situation I tried VA and independent therapy uh but divulging this sort of information to a hipster trained and active listening probably wouldn't go well posting here is a last resort but I hope I'm welcome to discuss what I can so right there a paragraph like that is very credible right off the bat when somebody makes a post like that saying this is the last resort that obviously is true because reddit's the worst place in the world so if you're

(26:06) posting on Reddit it's obviously a pretty Last Resort uh also the fact that they say like hey just dismiss me if you don't care usually when people say like hey dismiss this if you don't care then it goes to show they're not trying to convince you of something they're just saying here's the information take it or leave it they even say a lot of this is going to be secondhand so this is why in my follow-up post I mentioned that you know you should take this with a grain of salt what this is

(26:31) is this is a person's personal experience from the people that they've talked to Etc so you know the their position and what they had what they said and and what they think is real is true from their perspective but this is why you shouldn't just assume everything in here is accurate to the letter of the word and that's what my disclaimer afterwards was all about uh so hopefully people understand that doesn't mean that I believe this is all 100% true okay um I'll first talk about my career

(27:03) history what working for the agency is like how it functions and then my general thoughts if my post makes it past moderation I'll answer as many questions as I can I'm unwilling to post an ID privately to moderators or otherwise people who did that faced consequences I don't think those people were Reddit leakers specifically but any act to talk uh about the information in any meaningful way outside the chain of command ends badly I'd rather be accused of making things up than risk that because I simply don't care what people

(27:35) think of me hopefully my post will clear up why again that's also a very credible statement to make there like I'm not risking it we know the redditors and Reddit mods H have like agents within them like government people are controlling Reddit there's no question whatsoever I would never come out and show a Reddit moderator my personal identification and prove who I am because again if you are tell the truth you don't care what people think people want to think it's fake or whatever go nuts um also the gravity pun that he

(28:06) made earlier is very interesting because it it kind of ties to gravity manipulation and then the other thing I want to say at this point this is my opinion I haven't been told this but uh I believe that Salvador pz has been gagged um that's just my opinion based on what I know and uh I also I am personally convinced that salvator pz has seen technology that would bend people's mind similar to what we see in the MH370 videos I don't know that salvator Pas has

seen the exact orbs we see in the MH370 videos but that also would not

(28:45) surprise me I'm at this point based on what I've learned from the science very convinced that Salvador Pas reached out because we were showing basically his work in the in the MH370 videos okay um Brother P is yeah I'm going to talk about the Jo ran thing after this guys so I'm gonna talk about Terence Howard my opinions on it if you missed the stream yesterday or you can go to the stream yesterday okay um sorry I'm where was I here yeah I'm currently a university P Professor not at the University my username would lead

(29:25) you to believe which is the hooers I was inspired to write this post when one of my students referred to me as verbatim a dude who has to know about aliens interesting if only he knew that wasn't even the start of it I graduated from college in the early 90s with a degree in something I'm passionate about but never used I started my career as an assistant for a mechanical engineer and at an aerospace contractor I got after working some connections I had entry-level contractor jobs are easier to get than you may think well maybe not

(29:59) if you've posted here I eventually was a project manager overseeing a small team working on experimental aircraft over the course of my career in aviation I worked on three different contractors I was on some of the teams working in autonomous flight in Nevada among other places okay now it's already getting spicy chat this is getting really spicy now this is exactly how it works is you get in to the Aerospace contractors you talking about defense contractors so this person's talking about locked Martin Bigalow

(30:31) Aerospace north of Grumman I wouldn't be surprised if at least one of those was one of the three that he's talking about right here Boeing Phantom Works Etc and once you get in then you you know then you're in and so I'm guessing this is going to play out where and I don't remember reading all this I skipped over some of this where he ends up moving up he or she this could be a female I don't know I'll share two major things I noticed that looking back could be related to non-human intelligence research yeah

(31:05) also the Nevada thing is interesting too right Nevada that's a that's a Area 51 it was a short uh it was a sort of Open Secret I was let in on that some point in the late 90s that if large scale Invasion or threat to the mainland United States were materialize the US had an ultimate trump card of sorts they would render everything we were working on completely obsolete jokes like well work smarter not harder on X because if it were come down to it we wouldn't use that technology anyway we're un weren't

(31:40) uncommon I assume this was referring to nukes holy [ ] chat okay I'm already convinced now this this paragraph is the money paragraph how did I miss this before I'm going to read this again it was sort of an Open Secret I was L it on at some point in the late 90s that if a large scale Invasion or threat to the mainland were to materialize they're talking about **Russia** or **China** or somebody invading US the US had an ultimate trump card that would render everything we were working on completely obsolete jokes like well work smarter

(32:18) not harder on X because if it were come down to it we wouldn't use that technology anyway he thought they were referring to nukes they weren't referring to nukes they were referring to orbs they were referring to the orbs that can just teleport away a nuke onto somebody else complete and total trump card there it is right there yeah okay I believe this 100% now wow it's funny that they've had us believing that nukes were the Ultimate Weapon for decades and he's this person's saying that since the 90s

(32:51) we've had technology that would render nukes obsolete right and even our even the planes and stuff that we're flying is all obsolete this is absolutely a um it's a it's a a situation National Defense guys I can't like honestly I'm starting like to second guess stuff now this is this what he just said in that paragraph right there is what makes me second guess what I'm doing I know the MH370 videos are real but I really really really don't want to be disclosing this technology to our enemies this is what

(33:28) salvator P said is a disclaimer in both of our interviews um it makes me question if it's the right thing to do to even disclose it honestly but this point I kind of have to just out of my own sense of safety because if I were to stop disclosing this then I think the chances that I would get um you know Iran helicoptered or whatever you want to call it is is pretty high pretty high sadly let's have another drink we need another drink after all that oh boy okay guys we're only like four paragraphs in later I spent time doing

(34:06) inspections at various secret facilities due to my standing in particular agencies if I'm identified I will definitely lose that standing so there's that this was not as exciting as it sounds it was very technical and boring I was mostly just a glorified HVAC inspector I visited a handful of facilities but two of them in particular stood out as there were areas within them I wasn't allowed to access at the first facility the scope of my job was to inspect the entire location one area had its own security who after a long discussion

(34:42) basically told me to kick rocks my boss wasn't authorized to let me through either I wrote a scathing report about this incident in My overall assessment of the facility my boss erased it from the document entirely who the situation at the second facility was similar I'll admit I was I was what I guessed that this the my students call a Karen about it I knew that whoever was operating those areas was working completely outside of congressional regulation which while it does happen in certain sectors is really not a good look once I

(35:21) got the job I'm talking about I was able to confirm the second facility was related to non-human intelligence research I was never able to confirm the first was this is wild chat yeah so these contractors have um their own private security and I'm led to believe that that's who will off somebody is that they have their own private uh security contractors they're former military just like you see in the movies and if they need to like make somebody disappear then those are the people they go to so

(35:54) if that happens to me now you guys know who did it um after a teaching stint I was offered an interview for a position in my project management routs again near where I was

living at the time I wasn't told what I would be working on which was wasn't uncommon isn't uncommon I was excited to go back to work because I had uh been working on goal oriented drone swarms in my free time and assume that's what the interview would be for goal oriented drone swarms those crazy configurations they make with the

(36:25) drones pretty interesting um the interview took place in a skiff in someone's house looking back this was most likely a house that wasn't lived in but just used for the purpose of interviewing potential hires without giving away the location well okay that's already sus as hell imagine going into someone's house and there's just a skiff there there's just like a metal box and you like go in the box and like you're in a faraday cage it's like soundproof or something like that I honestly don't know what

(36:59) these Skiffs look like but that's what I imagine they look like um it's also likely this was the location because the agency doesn't exist in any official capacity yes it has a name it gets sort of kind of funding saying the name would get me killed okay I wish I were exaggerating I was told the name at the start of the interview and I had never even heard of it before I've never even said the name out loud WOW paradoxically even though the agency doesn't exist if someone knew the name it's likely a paper trail exists through

(37:41) publicly available documents huh interesting okay guys you guys getting you guys get the feeling what I'm getting here it's likely a paper trail exists through publicly available documents guys how how much do I want to get myself killed chat how much do I want to get myself killed guys I kind of want to find this agency name what do you guys want to do we'll do that maybe we'll do that later how would we find it we'll think about that later a lot of the information isn't classified because the agency is so

(38:20) secretive going through the process to clarify to classify in the first place would reveal it to reveal it to too many people holy [REDACTED] do you guys know what I'm talking about do you guys know why this is so important what we just read right here holy [REDACTED] chat you I don't think you guys understand yet hold on I'm going to pull something up okay this is relevant I'm going to reread this again for a second guys a lot of the information isn't classified because the agency is so secretive going

(39:05) through the process to classify it in the first place would reveal it to too many people what does this mean this means that whatever they're working on is not actually classified it's not classified because it just to classify it it would get revealed to too many people so imagine they figured out let's say a weapon so they are developing a weapon using anti-gravitational technology it's not even classified because if they even just trying to classify it it's going to get revealed to too many people but because

(39:40) it's not part of the government it's part of a contractor it's protected from foas anyway so you don't even need to go through the process of classifying it now let's go take a look at the post I made earlier today about the Strange Case of Lieutenant Commander Edward cin there was something I haven't been able to piece together that I think we just piece together right

now chat oops how do I remember this chat Lynn had a security clearance higher than top secret access to the Navy's most sensitive

(40:24) Secrets where is it where's the post is it down this one I think it's down this here it is Lyn's defense attorney argued if if not all of the information that prompted the espatch charge was available publicly government lawyers argue that just because classified information is available publicly it doesn't mean that it's unclassified now I'm wondering based on this if the information the the weapons that he was talking about weren't technically classified because they were so secret

(41:09) that even classifying them would reveal it to too many people and then they classified it after the fact and so what they did I think afterwards like imagine the orbs we see in the MH 370 videos imagine those orbs are not even classified because they're part of a defense contractor project and then Lynn knew about it and so Lynn talked about it so Lynn talks about it and says it's not classified and the government comes back and says just because it's not technically wasn't classified or was available publicly

(41:41) that it doesn't mean that you can talk about it and then they retroactively classify it because they had to classify it in order for it to like go to the court and what have you that that could explain because this back and forth is so weird why would Lynn be getting 9 years in prison after a plea deal and his lawyer is like oh it's all available publicly maybe because the information is available publicly it's not just the videos but the technology is what he was talking about the weapons H now it's just it's speculative

(42:15) I'm I'm speculating there but kind of makes sense in light of what we're just seeing right here and what this person's talking about and this is this is why they they they made this person delete this or if they they could have just deleted did this person in general I I don't know um it wouldn't surprise me if the government has access to **Reddit** and they can just straight up delete post and people in fact I'm pretty sure they can because that's what they did to ebo scientist um and I hope ebo scientists

(42:42) as well cheers guys pretty wild somebody in the chat Randolph rush says Boeing and the others do not classify the or patent because it would expose the research yeah wow is that that how they're able to hide it they just don't even classify it or patent it this is why the **debunkers** were coming and saying oh it would be classified top secret it might not be classified at all and then they just throw a classification on it when they need to charge somebody with it wow wow guys I'm actually starting to get a

(43:24) little bit scared like I know I said I don't give any **[REDACTED]** but like we're not just right over the Target right now we are like bombing the Target and they are shooting back desperately like this is wild guys you think you want to know why they planted a cloud picture on the internet this is why this is why they planted a cloud picture on the internet cuz we are exposing the most top secret stuff anyway we're going to keep going uh um let's see which one are we looking at okay in past interviews particularly

(44:05) for the inspection job I could refer to specific colleagues facilities I worked at or contractors I was in good standing with to play the unusual interview game in this interview I was treated like a brand new hire while I already offered or while I already offended about how I was uh while I was already offended about how I was being treated the interview started grilling me about my love for Star Trek and said that theatrics wouldn't fly in the position I was being interviewed for looking back I should have never accepted the job but

(44:37) the Allure of working on swarms was too great so you imagine you go to an interview and like you have all this experience and then they just start being super hostile to you yeah look at the big picture this is one one portion of a program they sent trillions into yeah the Star Trek reference is interesting very interesting reference to Star Trek chat the first office I worked at was an office building that didn't stand out in any way at all so okay this part two I wanted to mention the first office I worked at was

(45:14) an office building it didn't stand out any way at all when we interviewed Eric Hecker Eric Hecker mentioned that the building they take you into just looks like a normal office building like you might just like you know go get your go get your teeth cleaned at the dentist you know um I believe our neighbors in the office Park were a fashion studio and a dentist there you go there you go literally literally dentist right there I didn't even I didn't even read all of this Chad like this is like me reading

(45:46) it for the first time I believe our neighbors in the office Park were a fashion studio and a dentist among others the difference was our building had 247 armed security the first few days were heavy paperwork and onboarding one of my old bosses called me uh on an office phone to talk to me before I was officially onboarded as a management nerd the biggest challenge of working for this agency is that it was a paperless office paperless office it has own highly sophisticated internet with hundreds of archival documents

(46:22) wow yeah okay I I see why I was told this is real this is is definitely real yeah we'll look at the videos right after this guys this this is this is sketchy guys because this is how I've always imagined it plays out right they have their own intrnet that's not even connected to to the outside internet and they've got their own documents this is where the papers like the Ning Le stuff is is probably being stored so all the papers no don't hack into this guys I'm serious I'm not even joking do not hack into

(46:55) this that is how you'll go to prison at best at best you go to prison um this is where they they store all these scientific papers that like the public just doesn't get to see so if you want to find the neral mass reduction papers and stuff like that that's where they're hidden because then these people read that and they could talk about it but they'll go to jail or something people don't know what internet is guys Internet is just a internal Network it's an internal Network so when you go into

(47:24) the building you're on that network but that Network can't leave the area this is also probably why Lieutenant Commander Edward C Lyn filmed did a screen recording you can't get

this stuff out so the screen recording and it's really even a question of how he got the Drone video out because the Drone video doesn't look like a screen recording but they took a screen recording because you you don't have like he's logged in where only a very small number of people have access to these

(47:52) networks pretty wild yeah some of y'all are asking for some stuff man and people ask me why don't I go try to find Edward C Linn because I don't want to get [REDACTED] killed guys can I put it as bluntly as possible Ashton why don't you go try to find Edward C Lyn a I don't want to get killed B I don't want him to get killed um okay where is it the implication was that unless it absolutely had to be saved to never ever write anything down I remember an early colleague telling me a Gant chart is a great way to get

(48:35) fired this uh was a challenge at first remembering all the information with no documentation is something I'm not particularly built for especially when the information is about non-human intelligence yeah chat is not suicidal but like you guys got to realize like you guys are not protected I'm protected because I have 130,000 followers and it's going to be sus if I disappear but they could make me disappear like if you guys don't believe they could they absolutely could make me disappear and

(49:04) they would convince all you guys that it was natural or something like that that's the reason why I say I would never harm myself like once a week like I'm not messing around I'm not joking around with people I'm not laring I'm literally need to say it like once a week so that there's no doubt uh I haven't had anything overtly weird happened to me yet but let's just keep it that way as long as possible so part of the reason too why they can't come after me over overtly is the same

(49:28) reason why they don't classify the weapons the more people you get involved in this the more the information spills out this is why AO is ghosting me because they just have to probably tell the AO people like don't talk to that guy anymore because the more people that look into the evidence that I'm showing the more people that are going to get woken up the more people they have to try to keep quiet that's the beauty of talking about it because the more you talk about it so compartmentalized that

(49:52) even if they were to try to silence people then the more they silence people the more the information gets out the more people they have to include in the cover up the more it gets out right pretty wild man this is this might be one of the most important whistleblower leaks I've ever read this is bigger than the ebo scientist one already already um it because it tells us how everything operates right this is why they banned it this is why they made this person deleted or they deleted this person inadvertently um later I worked at a

(50:25) facility within a facility just like the one I had tried to inspect it stored a craft being near the craft for extended periods of time is extremely dangerous how did I not read all this chat especially if it is being experimented on with power huh I didn't observe any injuries to anyone while I was there but all sorts of long-term n injuries were relayed to me through rumors and

warnings the craft was shaped like a drill with without a handle what the hell is a dedr chat is this even a real word chat these are madeup

(51:03) words oh oh ad dedal like the okay yeah okay um that is like the Hebrew thing where you spin it a a drel dral that's what it is it's Dr drel drel drel drel I shall play okay yeah guys I went to Jewish priest school so I know like a little bit of Hebrew weirdly um so uh yeah so it's shaped like a drle so it's kind of like a a square with a little rounded bottom on it Dr Dr Dr Dr drel I should play okay so it's like a drle without the handle well that's a weird shape so the craft was like a box with like a

(51:42) rounded bottom and here's another interesting thing here is that this checks out right here being near the craft for extends a period of time is extremely dangerous because it's anti-gravitational technology gravity technology is bending SpaceTime so this is the same problem you're have where you experience Havana syndrome so this is explaining Havana syndrome right here I'm actually getting scared talking about this like I'm scared for this person actually so and I will say this for people who are listening so this is what

(52:15) I'll say to this is the only thing I'm going to say to corroborate anything that I've said about this uh document uh I did ask if this person is okay and uh I was told told this person is is not un alived so hopefully they're okay hopefully I'm not putting them at risk by talking about this okay um where's the dro part there was a large exterior piece that went missing when it was recovered the theory is it acted as a stabilizer although some argue it was a crude weapon it sat in custom hydraulic rig

(52:58) that could be used to rotate it into all sorts of different positions kind of like those aot trim Astronaut training balls where they spin you around oh okay so that's like the aot trim thing he's talking about or she's talking about I don't know so imagine this uh Martini stick thing here I have right and you've got balls on either end and it spins around like this or here I'll do it like this where you can see like this they spin you around like that that's what that's what the person's

(53:28) explaining and if I say he it doesn't I literally don't I don't know if it's a man or a woman I just know that supposedly this is true um the rig was so large and extensive that I spent a few weeks thinking it was part of the craft before someone told me otherwise or I wasn't on the team that got to use the rotation rig typically the craft would would held on its side in the rig for easier storage its weight just naturally sat in that way although it was intended to be flown vertically what I'm not really sure I'm

(54:07) like visualizing what they're talking about here but sounds like UFO to me right UFO um the shape was directed directly informed by its purpose every shape is custom molded in a metallic material that would revolutionize the way we travel if we had it guys okay if you guys have been following along this right here is 4chan leaker so 4chan leaker mentioned the idea that there's these underwater bases that are producing UFOs to spec the shape was directly informed by its purpose every shape is custom molded

(54:44) in a metallic material they would revolutionize the way we traveled if we had it oh now I'm starting to get creeped out guys yeah yeah let's just say yeah I want to say this is for entertainment purposes only we're we're just laring right now like actually now I'm kind of scared I I kind of want to just like pretend like this is a lar right now uh like if my exp poost gets deleted guys like I'm I might just go off the internet for a little while just just to let the heat tie down I don't think

(55:20) elon's going to let them delete my X poost though in following the topic has as much as I can man the following in following the topic as much as I can manage to I've seen some other people mention the material there was some material scientists that had been working there for decades I never got to go inside the craft it was guarded 247 boy did I want to go look I'm with you yeah we're just we're reading fanfiction here guys this is uh Star Trek fanfiction yeah that's it that's the that's the

(55:51) thing it just happens to 100% coincide with everything we've been researching all the science we've been researching and everything that we've been exposing yep that's just I love fanfiction guys me too I love it um the agency goes out of its way to hire individuals who have little interest in working in this space at all they recruit particularly out of BYU although you have to have a contractor or government career for around a decade to be considered for an interview published papers don't hurt when I

(56:22) worked at the second facility the sorts of people that were there were frustrating to interact with because my initial reaction to working in that facility was extreme excitement and it wasn't shared I believe this is particularly responsible for the stagnation High turnover rates and compartmentalization I quickly learned who to trust and gained some enorm and gain some enormous that help my work I don't know what that means part of why I'm being secretive about my ID is because that the turnover rate results

(56:52) in a sort of summer camp work environment it's easy to point to classes of people in various non-leadership positions that were all hired fired or quit at similar times if I said when I started ended and where I worked I'd easily be identified because there are so few people that match my description leadership has been there forever no not literally so there is making a joke about uh potentially like being able to stop the aging process which is a little bit scary like why are they making a joke about people being

(57:23) like literally living forever make you wonder right the part about how like PE the people that work there is just like a boring mundane job for them that scares me that actually freaks me out because this is how it's been compartmentalized and kept secret is that like the amount of people like this person who wants it to come out is very small the amount of people willing to take this risk is very small most of the people are just like Immortal lizard people yeah just people that like are you know automatons robots they're just

(57:55) coming in and out it's like yeah whatever I'm working on anti-gravity research today all good no big deal and why this shouldn't surprise anyone just look at **redd**itors in general people

love being brainwashed yeah this is a wild wild thing huh okay guys it's going to get creepier I think man I didn't know we were going to have like a um like a horror story tonight this is scary the agency is divided up into several Wings not unlike the executive legislative and judicial branches I'm not insinuating they a shadow government

(58:45) but the wings check and the balance and balance each other in a way that the Govern in a way that in a way a government is at least designed to These Wings into including mechanical engineering biological research weapons research computer science tracking and what I'll call anthropology what I'll call crash recovery because that's what colleagues who are planning on to come forward will call it and security I'll list some information about each there are definitely more wings that I don't know about so

(59:17) remember the uh 4chan leaker said that they were in Crash recovery the forchan leaker corroborates everything we're reading here as well the forchan leaker said this is exactly how it's set up just like this and if you're in the crash recovery program like Michael Herrera might have been in like a crash recovery program if you guys believe his story uh which I'm not sure I do but that probably would corroborate this um the king of fiction remember we gotta cover Amy and all the other stuff yeah I

(59:48) talked about Amy stuff a little bit today but um I I'll I'll put it on here as well okay how did Ashton get this letter so this letter was posted on [Reddit](#) it was deleted and I talked to a source uh that corroborated that this letter is legit this was not somebody laring uh but you know you should still take it with some grain of salt doesn't mean that every detail is real it just means that this is the person is who they say they are it's not somebody making this up I mean by and large and the more I read it now the

(1:00:27) more I'm convinced I initially was skeptical to even look at this and and give it a lot of credit but now the thing that intrigues me is the um the the pro how the program works because that's this is how it works that that part I'm sure they're not making up yeah my sources are legit my sources are legit I'm not I'm not going on to post something like this and say what I said unless I was very certain that's what I'm not willing to talk about my sources or my methods but what I'll say is we

(1:00:59) just scooped the entire UFO community on this report we scooped Ross kohart Jeremy Corbell all these other douchebags out there all the UFO Community douchebags they got scooped my sources are better than probably all of theirs um okay here we go what's unique is the subgroups exist all as a part of different uh parent or government organizations and are headquartered where their parent agencies are for example the tracking Wing is sort of kind of embedded as R&D in NORAD ah that makes sense so tracking like that's

(1:01:39) going to be where you're going to have your satellite stuff your radar stuff guys there's no chance they didn't track MH370 0% chance we 100% know exactly where MH370 went there's just no [\[redacted\]](#) chance this is a simplification of the actual paperwork involved it's honestly compli at and I don't know much about how it works I do know that this is how they maintain

funding even when the parent agency goes completely dark for stretches of time it's worth mentioning that these departments employ at most 50

(1:02:07) people each it's typically much lower than that this is why we're all pushing for whistleblower protection it's not hard to identify us because there are so few of us in the first place wow so it really is just dozens of people I wonder if Edward C Lynn was one of these guys holy [REDACTED] what if Edward C Lyn was one of these guys chat he was on one of the most secretive spy plane programs ever what if Edward cin was connected to one of these programs what if he was one of these programs guys yeah vetta did probably cover this

(1:02:56) but vetted probably didn't know that it was legit man yeah this is starting to get pretty scary guys I can't believe I didn't look at this harder before yeah all the rest of the UFO commit is just fighting with each other about [REDACTED] that doesn't matter and we're just like out here like with doing real disclosure I love it the fact I will say that I do I do think it's just [REDACTED] hilarious that I came in out of nowhere and now we're just like pushing disclosure harder than anybody has ever

(1:03:30) pushed disclosure ever and I possibly have better sources than the rest of these people have like I just think it's it's just too funny to me man you gotta realize like I'm just a normal dude before all this just a completely normal guy and somehow I'm just now in the middle of [REDACTED] disclosure and we're just like pushing the envelop so hard that like actually starting to scare me a little bit H none of this could ever be possible without the mh3 70 videos being real by the way guys no way no way I

(1:03:59) mean we're talking about literally rewriting the laws of physics man uh mechanical engineering is exactly what it sounds like it's the most extensive the oldest and the most compartmentalized we have crashed craft in various states of complete we had a recovered craft that worked almost perfectly that was shot down by ourselves I saw this coming it's part of why I quit there's a lot of information about this Wing in the public sphere part of their job is to determine what each shape of the craft is used for

(1:04:35) this is an important job because we're unsure of the non-human intelligence intentions if we discover their designs or intend to hurt us action will have to be taken I don't know what that means in practice but it's what the engineers mostly study consider this lecture around the 10 minute Mark about the differing characteristics of an F22 versus a passenger plane now imagine trying to figure out the purpose of a passenger plane versus the F22 since we're humans and those are human designs eventually a team could figure

(1:05:12) it out it's not as easy as the uh when the designs aren't for us or purposes we fully understand triangles are the most impressive design and we don't have one it's likely China does leadership is mad about that this team discovered a long time ago that the reason why the craft appears so bright to us humans is because it's not really light but rather a product of the crazy amounts of power these craft require sort of like smoke coming out of an exhaust pipe well this is wild chat this is wild so I already know what

(1:05:50) he's talking about right here um and serpo you're going to get banned buddy I gave you a lot of opportunities man all you had to do is not be a [REDACTED] so you're getting banned um but while that's going on um they're talking about Bob Lazar here and they're talking about the forchan leaker as well uh because those are the ones that are in the public sphere right let me pop out the chat here where's the chat so that's that's what they're talking about here when they're talking about the

(1:06:30) stuff being in the public realm they're talking about like Bob Lazar this I mean this very closely matches Bob Lazar's explanation of the different crafts and then the same thing about the different the different shapes and stuff like that as well it's interesting because Dave Rossy when he went on the Tim pool podcast with me talked about the shapes and Which shapes are more simple and more complicated where triangles apparently are one of the more complicated ones right so anyway I think that's pretty

(1:07:07) interesting uh yes I'm gonna block this guy real quick Sero Sero Pro oh yeah so he's a he's like a brand new account too the problem is a lot of these trolls s and stuff so he's blocked um a lot of these trolls I deal with like they keep making new accounts so like if you are replying and you are in any way trolling in at all in my replies and I see that you have zero followers you're gonna get blocked immediately immediately block I means I know you're a redditor I know you're a troll I know

(1:07:44) you're a CIA piece of [REDACTED] or whatever you're gonna get blocked right away I don't really care okay let's move on I don't want to deal with the trolls okay biology is something I personally suck at even at a high school level I can say that nhi looked like the aliens from Close Encounters as far as I know we never have one alive my source who told me this was unsure if it was true or not I didn't learn much about this Wing it's mostly it's it's the most secretive I do know its headquarters is

(1:08:11) hidden in almost plain site I still feel like the guy who told me where it is has to be lying because it was just too obvious there are bodies stored in other locations apart from their main headquarters so this is really interesting because is um this is similar to The ebo Scientist guys so the ebo scientist as well mentioned that it's like basically just hidden in plain sight and that the area where they hide the bodies is like not even the highest level of biohazard level like there's I forget there's like different levels of

(1:08:42) biohazards and they were saying that this the one where they store the bodies isn't even the highest level which is pretty wild uh if you guys are in the Discord somebody posted a link to this in the Discord that's how I was able to get the the wording out there guys you can you can troll the trolls just don't troll me guys and if you don't have zero followers then it's less likely but like a lot of these guys just keep making new accounts because I keep blocking them and so they just keep

(1:09:10) making new accounts over and over and over and over and over again and I just keep blocking them so if you're a zero follower you have like less than 10 followers and you are in any

way shape or form trolling me you're going to get blocked immediately I really have no patience for it uh weapon research is a large wing and it's fairly new I was absorbed by the space force for it was absorbed by the space force when it the space force was created okay so this right here is like whoa the weapon research is a large wing

(1:09:37) and it's fairly new it was absorbed by the space force when the space force was created so this is what I had already assumed was that space force was created you don't just make a new wing of the military for no reason so space force was potentially created because the technology just got too out of control and we needed to have a whole branch of the military to support it and who was the person that started space force Donald Trump and Joseph F. Dunford jooose the same Joseph F. Dunford who was supposedly showed the MH370 videos and

(1:10:13) didn't laugh at them wow that's wild frustration with the space force as a whole is part of why I left shortly before it started I don't know much about it it has a high turnover rate is a dangerous job to work in people were injured and compensated by a large private Aerospace contractor instead of the USG its main job is to strap a nuke on reverse engineered craft and just see what the hell happens well that's scary here's another really interesting thing um there were rumors that salvator pasz had worked for the

(1:10:48) space force and so in my first interview with him I asked him do you work for the space force or do you work for the Navy and he was like very standoffish he was like I work for the Navy I was like whoa that's a weird answer man so the question is like do these people have like stints with the space force when they see the crazy technology space force is definitely the area if you want to see some crazy [redacted] that's where I would go I would go to space force um computer science is or was as it may have been moved after I left

(1:11:23) headquartered at a facility in my home state so the headquarters for the various wings are all spread out as well that's very interesting this is definitely an interesting live stream this is rare because most of the other wings are within Stones Throw of DC or Nevada huh I can see why they deleted this they're giving away a lot of information here here this is mostly based around researching the Craft's navigation system the navigation in every craft is the same the craft uses a system that originally befuddled generations of

(1:12:07) researchers but it's essentially a 3D ditch Kyra algorithm I got no idea what that means chat I'm guessing this is some kind of like the same thing that they use for uh like Tesla autopilot presumably the if anyone knows what a dig kistra system is let me know yeah we're drinking martinis tonight chat uh guys for the people who say can we verify the info yeah I mean I verified that the source is legit um I can't I can't advocate for every piece of information we're reading so that's

(1:12:47) where we have to use our own discernment in terms of what we think checks out what corroborates with the information that we've learned independently uh and that's how these things go right like the person said they can't come out and they need whistleblower protection this is dangerous uh did Kyra this algorithm algorithm for finding the shortest path between

nodes in a weighted graph sorry which may represent for example Road networks wow that's cool okay it finds points around the craft and

(1:13:18) chooses the most efficient route through SpaceTime to get to that point some of the parameters it uses to gauge efficiency are totally unknown to us and are serious point of contention it's not autonomy but rather obstacle avoidance not unlike what you would see in a self-driving car there you go but the self-driving car could not could go through the air space and water without worrying what medium it is there's your trans medium craft right there Additionally the algo accounts for the Craft's place in time well that's

(1:13:47) [redacted] weird what additionally the algo accounts for the Craft's place and time okay so I have not dug into the whole time aspect very much but there's definitely a question of like how time travel works with respect to this um what does is there a way I can do hold on oh nice okay guys oh you ready watch this was it Tak yes yes yes oh I've got it set now oh yes I wish I'm gonna get Chick-fil-A girl set up on there as well for us so I can just flip Chick-fil-A girl on when we need to um I don't think that this means that

(1:14:50) the craft tra time travel in a way we think they can but rather go so fast they experience Di ation and can hit objects in the future and potentially past at their target destination it's possible they do this on purpose sometimes I don't know much about the internal programming of the computer or how it actually does any of this there are a few senior scientists that hold the information that information dear one of them joking refers to as AC c as in C for non-human intelligence I don't get it I know that

(1:15:24) he doesn't work with a computer only a pad of paper and a pen yeah so that is wild guys because yes there's a time dilation effect here right so we know there God I mean this is right on the money because you can time dilate into the future so the question is when you show up what's going to be there when you arrive so what they're saying here is it's like predicting the movements of objects in space and time in a way where if you show up a thousand years in the future you got to know that you there's not

(1:15:53) going to be a wall there when you show up so let's say that you imagine that you are going to go through a wormhole and you're going to show up in the uh Alp centuri four light years away well what happens when you get there in four years and now there's a building where you were supposed to show up it's like in X-Men Nightcrawler when he's teleporting he has to be careful not to teleport into a wall that's the same idea here as well is that when you time dilate to the future if you go the

(1:16:27) speed of light and you show up somewhere you're going to show up in the future but for you it's going to look like it's instantaneous this is wild I mean that this seems very credible to me in terms of the propulsion and the science computer science side of this but I again I don't know let's just prectect this is just this is a fanfiction guys fanfiction if the government's uh watching this is we're just doing fanfiction here we're enjoying some Star Trek fanfic um although the algo is extremely effective

(1:16:56) nuclear explosions and experiments somehow interfere with this navigation craft particularly avoid Diablo Canyon even if we put something they really want there they mostly avoid previous crash sites as well [REDACTED] crashes later so this part's we know why nuclear explosions knock it out so we we've already figure that part out we don't need any help on that uh the reason why nuclear explosions knock it out is the EMP and the EMP is going to take out their their Mech their flight mechanics because they're using Electro gravitics

(1:17:30) and scalar potentials and it's essentially the equivalent of like knocking if they're imagine riding on the wave and you just knock over the like you knock the wave out underneath them that's why it's going to cause them to crash so emps are the reason why it's going to take out like the same way where you can just shoot a radar beam like we could shoot a radar Beam at a UFO and it's G to knock it out of the sky people think that these UFOs are invincible because their technology is so Advanced but it's very fragile agile

(1:17:55) as well like you hit it with the the right thing like you're it may be Invincible to like a like a missile like a missile might not be able to take it down but you can just shoot an electromagnetic Beam at it and it's going to knock it out of the sky because you know they're just surfing basically pretty wild huh do I think that Jet Lee is involved in The Disappearance of MH370 uh what I don't know is he uh okay I don't I need to if you guys know anything about Diablo Canyon maybe we can look at that later

(1:18:31) on yeah I'll put a Discord invite Link in here as well the Discord has been growing pretty rapidly so I just I can't keep up with the chats in the Discord because there's like too many of you guys now uh but I'm doing my best but again please no trolling I had to ban somebody yesterday for trolling in the Discord no no no trolling in the Discord guys there's an invite if you want it okay let's keep going uh where are we at speaking of avoidance tracking like I mentioned is or was part of NORAD the nhi deploy

(1:19:03) craft of various shapes and sizes all the time I don't want to claim that they have advanced cloaking techniques but from what I've heard the tracking Department basically is an eternal game of cat and mouse they don't have adequate technology to track the trans medium craft all I would say on a record is nhi know we can track them and know how to avoid us okay um they usually avoid detection by going underwater especially in the case of particularly large by human measurement enormous craft it's interesting that

(1:19:41) historical UFO sightings mimic the design of buildings and vehicles of that time period it's interesting that historical UFO designs mimic the design of buildings and vehicles on the time period huh whether this was Just Some Humans not being able to reference what the designs look like or a form of mimicry uh is anyone's guess someone in leadership knows the answer I don't the part about them going to underwater is really interesting Diablo Canyon is now the only operational nuclear plant in California as well as the state's

(1:20:14) largest single Power Station wait is that the one outside of uh Long Beach no it's okay that's up north weird okay huh they avoid that huh supposedly weird jet Lea not caused a

MH370 guys guys I don't know we're gonna talk more about this after this is It's kind of blowing my mind there's a lot of corroborating information here a lot um okay so did I oh I skipped some of this okay yeah it's important to note that not everybody at NORAD was part of the tracking team but the tracking team is

(1:21:07) embedded in nored it interfaces with them on a minute-by-minute basis this leads to scenarios where NORAD will uh report an object and the tracking team will silently acknowledge but give no explanation this led to a catastrophic incident that happened after I left but knew about from a colleague supposedly tracking is being moved to the space force to clear up these miscommunications ah so this is another reason why you develop space force right you need to have a compartmentalized tracking program for UFOs if I were working there I probably

(1:21:43) would be working on that onboarding process NORAD was moved to Cheney Chene Cheney whatever not only to protect from a foreign adversary but also because the facility is uniquely equipped to track United to track NH craft okay well now we're we're Googling that the Cheney Mountain Complex oh wow this is the one with the giant Dome entry okay guys feels like we are definitely putting ourselves at risk here is there there a map of this where is this Colorado Springs huh where is it this is it right here oh it's in the

(1:22:52) mountains here huh I'm getting like a weird feeling like getting a weird feeling about this like my D my Spider Sense is going off my danger sense anyway we're gonna keep going um the wing I called anthropology is the weirdest one by far it focuses on a few different things they originally studied nh's intentions and culture if it's possible to call it that the reports I read from this early research change the way I see the world uh okay um the reason why this is weird is remember ebo scientist says that he

(1:23:45) was given something about the the belief system of the non-human intelligence and he said that they believe that the bodies are are containers for the soul and something like that okay oh boy chat it's getting it's getting dark in here chat anthropology and computer science were at one point decompartmentalization with the components of the craft is not as sophisticated take this video although it's in a mature video the way he interfaces with the Piston that moves the gas pedal is similar albeit much

(1:24:31) simpler than the way the nhhi interact with aircraft they send signals using their body to systems that control the craft it's hypothesized that they can prefer to control the craft remotely but I'm not sure if we were really researching this well that's [REDACTED] weird chat that's weird man this is the part where like I'm not sure I'm all in on but this is still pretty goddamn creepy okay a few more paragraphs take note that if the driver of a Jerry rig death trap in the vi in the video panics the car would

(1:25:24) accelerate due to the heightened brain activity when people wonder how a superintelligent being can crash this is part of the answer in conjunction with the navigation system malfunctioning which I think is how we what we described I personally don't think that the nhi feels stress as we do but if they heighten their activity and overrode the path finding

system instead of letting it do its job there could be an accident this does make you wonder yeah if it's like a biological AI God damn are we going to have to be

(1:25:56) inter interfacing with computers sooner than I thought and Adrien diman would love this conversation guys if you don't know Adrien dipman he's the guy that sounds exactly like Elon Musk and he loves interfacing with computers like posthumanism he would love this maybe Adrien dipman really is just like AI Elon Musk maybe it really is maybe that's like how it plays out huh okay um a smaller subset of this Wing focused on how humans can interface with a craft they are currently in the SK that are currently in the sky I'm

(1:26:31) sorry what a smaller subset of this Wing focuses on how humans can interface with craft that are currently in the sky if you see an image of a large disc above a gas station in the snow it was someone in this department summoning a craft not unlike how cheap RC car controllers can interface with each other when used at the same time some people are better suited to interfere with nhi craft than others we're not sure why okay I'm just going to pretend like that's not real uh on somewhat comedic Note One colleague was harshly punished

(1:27:12) for using this research to encounter nhi craft at a party there was an outdoor bonfire alcohol on questions about what she did for work she wasn't killed or anything just called a dumbass and told to never ever do that again this does kind of link to the idea of C5 and Chris bleado or whatever summoning the orbs and [REDACTED] I'm gonna pass on that some people in this honestly maybe I will go outside and summon some orbs after this guys I'm gonna go summon some orbs after after the stream some people in

(1:27:45) this department are BYU graduates who believe they are directly interfacing with what we recorded in the Bible as Angels there's even a smaller website of this Wing that focused on non-human intelligence communicating with humans all I know about them is that they did the work at some juncture but probably have other jobs now this now this is the part where it's too far in the in the weeds for me personally this is this is too much like I believe that we can teleport an aircraft and I'm I'm I'm very skeptical

(1:28:16) here crash recovery probably has the most people involved it's split among several parent orgs but funding is funneled away from it and to other departments when there is little activity this is common among the entire agency as funding and staff get balance between different Wings based on progress or lack thereof most of the crash recovery staff are are staff from tracking and security that are involved in Crash recovery it's also made up of members of all of our favorite three-letter agencies huh crash recovery overall

(1:28:51) structure was referred to as a volunteer fire department it's typically some people playing pool and watching movies but when the need Ares all hands on deck from the current staff and on call Members okay I'm actually pretty sure that Bob Lazar is legit now if this person's legit then Bob Lazar is legit because people didn't understand like why would they pull some random guy like Bob Lazar and the answer is because the CNN brain people think that they're recruiting from MIT or whatever no no they're not recruiting

(1:29:23) based on what [ ] at what Ivy League school you went to they don't give a [ ] about that they care no they're recruiting based on your psychological profile what kind of person you are uh your formal education means literally nothing to these people that's the part where I don't think people realize like people that are full CNN brains they think that it's all about I went to MIT I went to Harvard I went to uh you know Stanford that [ ] is that maybe that gets you somewhere in politics when it comes to

(1:29:57) these type of people these people aren't messing around they know that that [ ] means nothing nothing at all yeah they want to know what your IQ is they want to know how smart you are they want to know what your emotional intelligence is they want to know are you g to freak the [ ] out when you see some crazy ass [ ] that's what they want to know about crashes are exceedingly rare also they want to know if you're going to shut the hell up when you disappear as well and make sure you're not going to

(1:30:23) talk by the way yeah I'll post a Discord link one more time for you guys damn this is wild chat this is a lot weirder than I thought this was going to be I did not think this was going to be that crazy um crashes are exceedingly rare the number of crashes goes down exponentially because they learn to avoid the causes of the crash when they crash they make no effort to retrieve the debris save for one instance I personally believe some of the crashes weren't crashes but were nhi parking a vehicle for us because there was no body

(1:30:54) recovered and the craft was in perfect shape I wonder about the whole Las Vegas aliens kid now too and some of this you can tell this is coming from secondhand information like this stuff here with this uh crash retrieval this person was not in the crash retrieval program you can just tell based on the way they're talking about it this is how they heard it from other people that were probably part of the crash retrieval program if I had to guess at this person's background since we know they're in engineering

(1:31:25) they were probably in like the mechanical whatever the mechanical maintenance part of this uh program was and that they they learned about the other ones um because of the uh the background like they from their friends and stuff like that yeah this whole part about the AC thing is pretty weird I don't know what that means security to put it mildly are terrifying Imagine The Very Best of the seals and a and Secret Service all working together they are short staffed but that staff is not only Elite but dedicated their Numero Uno rule is that

(1:32:08) people that mention their agency name are killed okay uh just want to say that I'm not suicidal in any way shape or form and that if I were to get disappeared you should presume that it's probably the seals NSA or Secret Service uh as well as private defense contractors that took me out um oh boy this is getting dark guys it is not a question and it happened during my time here's something else I'm never that I've never revealed that I'm going to reveal right now I've heard this as well from sources

(1:32:56) that I trust as well that this is not a joke that yeah if you cross the line then you're done uh you'll hear more and more about them as news uh I mean and just for the record that's

why I continually say that I'm not suicidal as well like every week um you'll hear more about them as news and the retaliation Dave comes out what the [ ] the retaliation Dave you hear more about them in the news and as the retaliation Dave comes out does anyone know what this means I wasn't directly interviewed by

(1:33:40) him but I know several people who were the security team figured it out quickly and you could say they aren't his fans they constantly monitor all discussions about the topic but rarely act in real life unless absolutely necessary they the staff facilities like the second one I worked at this team is also actively engages in disinformation gaslighting and other similar campaigns their goal is to keep the US's secrets about this tax secret because other countries are close to

(1:34:14) breakthroughs they also conduct counter Intel on what other countries know and counter counter Intel about what they know about what we know not to sound crazy but the security team will see this at some point or another so a friendly hello to them can't touch this okay so we now know 100% that we've been getting monitored now the good news is I've been under the impression since uh the middle of August of last year that I've been having every single thing I say and do be monitored so that's

(1:34:57) fun but now we know no doubt whatsoever that not only have we been getting monitored but that they are most likely helping to coordinate some of the disinformation campaigns against the the uh the investigation wouldn't surprise me at all at this point uh we are definitely on the radar with what we've been revealing we've been revealing all their secrets so this team that they're talking about right here this team is absolutely trying to make the MH 370 videos go away like We Are exposing the

(1:35:27) technology to the world 100% and uh it wouldn't surprise me if they are part of the people that are finding the **debunks** like you guys wonder how the one day old **Reddit** accounts are finding the **debunks** guys this is how they're finding them like what what we see right here this is how they're finding one day old **debunk** accounts these are the people pushing the one day old **Reddit** accounts with the **debunks** on them to try to make stuff disappear on social media it's extremely effective because then you have total idiots like

(1:35:55) the **debunkers** and they pick it up and they run with and they go what does it matter that a one-day old **Reddit** account found a picture on the clouds it's literally impossible for someone to have found right that's this is how it operates you're looking at it right here this is why they deleted this person's post and like the the dumb asses out there probably think that this is impossible and this can't be done it's actually trivially easy to run these kinds of gaslighting smear campaigns

(1:36:24) this is also what they're trying to run against me to try to discredit me as well same thing right because they think well we don't need to make the the MH370 videos go away just discredit the person now the good news is that I have a full security clearance so I went through a background check so this is why I was one of the people that chose to come out with this

because it's very difficult to discredit me you have to use like personal attacks and find some skeleton and I don't really have any

(1:36:51) skeletons in my closet so good luck [REDACTED] good luck [REDACTED] okay uh I have a hunch that the current state of public fa uh public facing task forces are actually their own Wing within security a friend of mine texted me once Shaner Patrick you can get your ass kicked what don't confuse these public facing task forces with the work Dave and Co are doing Dave is the real deal I still don't know who retaliation DAV is sounds like a badass though yeah yo yeah we need someone to write a song about the uh the

(1:37:37) disinformation task force we just need a meme on these guys too man let's meme on the Navy Seals and the NSA and the Secret Service and all these people that are trying to hide the videos let's just meme all over these [REDACTED] honestly I would even care if I get taken out if we just get the meme on them once it'll be 100% worth it [REDACTED] thug life baby I should mention that leadership is kind of its own Wing it's not on paper but they operate above all other departments leadership is made up of managers who can pay close attention

(1:38:09) to each Wing they discuss info they know and bring up uh contradictions to Upper managers uh it looks like Lulu wants to be picked up I don't know how far this chain goes up I reported it to someone who reported to someone I believe it goes higher than that I have no idea who is at the top or what their credentials are I suspect that they're in the private sector with their bankroll disguises R&D for government contracts leadership Honestly made the right choices with the information they had at least when I was

(1:38:37) there some bad people started to get in charge and changed the way things worked among middle managers and individual teams this pissed people off and led to multiple catastrophes I don't even want to know what that means as far as I know they face no discipline okay I'm GNA try to pick Lulu up come here oh no no you want pick up it's okay I guess I guess that's a no chat I thought she wanted to be picked up but she instead said she said no sorry guys Lulu hates being picked up like with a passion of a thousand Sons

(1:39:22) um but sometimes she me do it but that was that was not one of those times I don't know she just has a full meltdown sometimes okay okay here we go so we're almost done with this as far as I know they face no discipline so that was exhaustive those are the wings of the agency that I knew about during my time there it feels good to get this off my chest I've been sort of keeping up to date on topics coverage in the mainstream media and want to give some of my thoughts on this if the US comes out directly and says we have craft we

(1:39:55) have bodies it means that we are on the verge of a serious global conflict like we've never seen before well that's that's not a good sign if the US comes out and directly says we have craft we have bodies it means we're on the verge of a serious global conflict like we've never seen before feels bad um they will only reveal this to the public if absolutely necessary the way the information is going to come out is through people like Dave does he mean Dave grush I think he means David grush through people like Dave and

(1:40:32) further probing from Congress imagine if he was talking about Dave Rossy here how crazy would that be dude if he was talking about Dave Rossy here I might have to text Dave like Dave is this random guy on **Reddit** talking about you I think he's talking about David grush Dave is a pretty common name it could also just be madeup name as well I don't know not all of it should be public information but I believe the technology that is is just sitting somewhere would completely revolutionize the way we live so this part is really crazy too

(1:41:07) because everybody says I don't think all of it should be made public because they don't want the super weapons to be made public but they want like the medical healing the the transportation you know the anti-gravity floaty orbs want the Stargates to become public knowledge I don't think that anything significant will happen in my lifetime that's pretty sad so this person's name was uh hooers 1968 which would imply if they graduated college in the 90s that yeah they probably were born in 68 so

(1:41:43) that would make them like in their 50s so they don't even think it's going to come out in the next like 30 years crazy right it was frustrating job because everything was so stagnant and had so so much potential we were talking about technology so Advanced it could render every single current Global issue obsolete so this is there this is debt on the money right guys we're talking about free energy right here we're talking about free energy if we solved two major issues with the craft and we

(1:42:11) were able to manufacture them we wouldn't know what to do with ourselves I wonder if the two major issues are the navigation presumably navigation would be the one thing they mentioned that I don't know what the other issue would be the technology being incorporated into our technological Revolution is a hoax I heard one Theory from a guy at a bar that the transistors of the Bell Labs were inspired by Area 51 this is a joke the technology makes transistors look like sticks and stones I actually heard

(1:42:39) that as well I do think the technology is being incorporated into our technological Revolution this is where I would disagree I just think that it's not happening the way this person's imagining it I think this person is presenting it like they're leaking information out to the public the way it's happening is the engineers that see this go and develop stuff and then that's how it gets out into the public right uh no the person said it's not the university that they think so this person doesn't work at Indiana

(1:43:07) University at IU but yeah that that would be the hooers um but they probably are like from there or something like that and I think that you know these guys all talk right so they go out and drink and they talk that's that's how this happens because they know each other like you know the person that hangs out in the tracking or whatever tracking and all the different programs pretty wild huh I believe multiple species of non-human intelligence is misinformation spun up by the security team well that's

(1:43:43) interesting there are mystery wings of the agency that I didn't get to learn about during my time it's possible that one of these researchers researches other species but I doubt

that non-human intelligence potentially experiment on us and definitely experiment on animals we have no idea why the main reason you'll never see organized disclosure is because nobody can agree on what to say we simply don't know enough namely the nh's intentions sort of we have a good theory in where they come from so we don't even

(1:44:14) know where they come from we don't even know where the non-human intelligence come from the anthropology Wing believes that nhi are controll by an intelligence that is beyond our current understanding of how life works the biology reports conflict with this which is why things can't be compartmentalized if the government were to disclose info they'd have to get the story straight we also have no idea where they are where they are from we as an everybody I work with it's possible someone higher up in leadership knows I

(1:44:47) don't think the answer is as simple as another planet or caves on Earth wow well that's weird that's really weird answer this is why guys I say I have no idea what the nature of non-human intelligence is because I if these people don't know then I definitely have no idea I really have no idea what the nature of non-human intelligence is and I just don't care I just want this technology man I want the technology about if we solve two major issues with the craft we wouldn't know what to do with ourselves

(1:45:16) that's what I want I want the free energy um the reason why specific facility locations are kept from the public is because some of them are sensitive and also not entirely nhi research based it would be possible for some ticktockers or hippies to storm the first office I worked at if they were careful every place where the agency work is also home to other operations which is why it's hard to identify where they are lower leadership is headquartered in DC and the upper management is split between Nevada

(1:45:50) Australia and another foreign country whoa Australia they're talking about [REDACTED] Pine Gap they're [REDACTED] talking about Pine Gap that's the military base in Australia we literally like got one of the prime ministers that wanted to shut down Pine Gap we got him kicked out holy [REDACTED] upper management is partially at Pine Gap wow so Nevada's probably like Area 51 Australia another foreign country what if it's Diego Garcia what if the the third option is Diego Garcia yeah yatsi chat holy sh what if

(1:46:45) the third I I don't know I just have a feeling what other foreign country would it be in Diego Garcia is the perfect location right Diego Garcia is the perfect location to have one of these things set up at I'm I would almost bet anything the last option is Diego Garcia what other foreign country would you put it in I can't think of one that that would work that the pine Gap one is crazy because it's one of the secretive bases what you guys should do um no not Antarctica anartica is too difficult to

(1:47:18) get to although I'm sure there's some type of thing going on Eric hacker told us or something going on there there's there's not that many people in Antarctica is the problem Diego Garcia Diego Garcia's got to be it yeah yeah I Diego Garcia Australia and Nevada seem like the best spots because they're also separated out throughout the the globe security are

everywhere and potentially even working remotely without a headquarters huh yeah so security are like on call I was contacted by a documentary filmmaker when some of my uh

(1:47:57) some of my friends were but I turned it down due to my specific involvement and how easy it would be to track me down if I gave them particularly juicy info I believe the story will come out soon I no longer work in the field and teach full-time after a quick proof read that's my post I'm not tuned into discussions uh other than what major outlets have to say but I hope some of my information is interesting and felt good to type even my post doesn't get accepted I feel tempted to sign off with my first name how I always do in emails

(1:48:27) but I have a feeling that would end badly I'm currently on a camping trip with my family but I'll be around to answer questions at various times please don't DM me anything too weird thanks for giving me an opportunity to talk I've never done anything like this before I'm sorry I couldn't provide information that proves who I am I like not being paralyzed or dead I'm sorry I couldn't provide information that proves who I am I like not being paralyzed or dead well then let me just play this

(1:49:03) again okay chat we are in some [REDACTED] chat was it even a good idea for me to post this okay I'm sure you'll see others make the same claims in due time well this is a lot I checked my post earlier this morning and didn't see anything I'll try to respond to what I can I'm recording recovering from a back engine will be up for a while well I'm going to go ahead and save this on my hard drive that was [REDACTED] insane so we have already heard corroborating information we've heard the 4chan leaker we've heard

(1:49:48) the ebo scientists A lot of that corroborates what they were saying right there um we can potentially what were the things that we could figure out oh yeah uh the base foreign base uh hidden in plain site okay they said there's likely a paper trail that exists to find the name of the organization that would get you killed because it's just in the public they said the stuff is not classified oh man yeah I'm I'm probably going to end up getting myself killed here uh because I want to figure this

(1:50:25) [REDACTED] out uh so wow okay well wow guys that was already almost two hours holy [REDACTED] okay um that was worth it though that was incredible I didn't think that was going to be that crazy let me address okay so somebody asked about the Amy esgd stuff so I'm just going to post this I I don't think it was that big a deal but I I did talk about it on Emerald today so I guess it's worthwhile to talk about they thought it was cool everybody was like oh you talked about this thing I felt that was the first time I've ever felt

(1:50:54) like I was like this mainstream thing because um like I don't think they realized like what the implications were of it but this was just some letter that I found and I was cool because it was Amy esgd letter and I definitely believe Amy esgd was legit but this does not mean that Trump read this letter right here uh so this letter right here is like basically talking about the atip program mentions Lou alzando uh mentions the defense intelligence agency papers uh as well here says that there's a race

(1:51:25) to acquire Technologies displayed by the advanced Aerospace vehicles that penetrate our atmosphere so this is very consistent with what we just read right here uh their presence Spurs every major nation's desire for such useful and dynamic abilities the purpose of this paper is to identify these abilities as well as to show that geometric energy conservation GE or Corporation and blah blah blah so basically these people are producing super Advanced [REDACTED] there you go so I kind of told them that yeah you know

(1:52:02) this is written by somebody who got disappeared I said that you know supposedly she was troubled and you can imagine how troubled you would be if you know about magical technology and your dad has like potentially discovered a a unification theory that was out there so that's pretty wild um we're not going to get to the other scientific papers that I mentioned because I'm getting very tired now but we will talk about them tomorrow uh unless I don't stream if I don't stream tomorrow we'll do it on

(1:52:31) Wednesday I'm we've been doing a lot of streams chat uh okay so let's look at the MH370 videos again uh I think we need to show these videos all day every day all the time these videos are the most important leaked videos in the history of the world no wonder that there's all this disinformation and attacks on me how many these UFO people are bought and paid for right how many of these UFO people are just bought and paid for guys uh somebody wants me to look at Elon Musk thing is that new I it doesn't

(1:53:09) let me copy and paste from here look at these videos man these videos are look at this man we literally just showed the United States government is [REDACTED] hiding gravity manipulation technology man yeah man I can't uh see I see your post man um I'll try to write this in real quick 23 okay somebody wants me to look at this I don't know why we're going to look at it okay what Earth uh earth looks like in radio frequency from the starlink

(1:54:13) directed phone satellite so I mean this looks like uh Australia right yeah this is Australia you can tell this is Australia because everybody lives on the Coast in Australia radio frequency huh interesting okay I mean it's cool but I don't know why we're why it's so important okay and then let's look at the second video I mean these are this is what they're hiding this is the technology they're hiding so to even break this technology out really makes you wonder I mean the biggest question

(1:54:46) in the case of the MH370 case is like why did they risk this why did they sh show this like why were they filming this man look at this why were they filming this why did they take the risk of filming this it's unbelievable why did they take the risk of filming this this is the biggest leak ever in the US military ever this is their technology this is our technology uh Nick Nordstrom thank you very much thank you Ohio gaming I was just looking at Taran Howard's Russell uh table of elements and wanted your thoughts on the location of Bas

(1:55:29) Element 115 Gary Nolan's material bisou magnesium zinc okay I can give you a weigh in on that after this yeah what were what the [REDACTED] were they thinking recording this man what were they thinking this is just I wonder it makes you wonder what other [REDACTED] if they've got this

what other [ ] do they have classified recorded that they never leak to the public doesn't even have to be classified imagine this is a defense contractor video it might not even be classified it's just hidden somewhere in some

(1:56:01) company like what kind of [ ] are they hiding they're showing like [ ] floaty orbs warping a object away absolutely makes you wonder right this is wild yeah way worse than this so guys no matter what you think about the videos here there's crazy [ ] floating around in our skies it's undeniable lawmakers have been talking about it Marco Rubio talked about the fact that there's like stuff floating around the skies it's a danger to our aircrafts because there's stuff floating around the skies there's something

(1:56:39) floating around in the skies I don't know if it's aliens or whatever but there's something floating the [ ] around in our skies man these videos are the best thing that we've ever gotten to disclose whatever the [ ] it is floating around in the sky ever by far shows gravitational manipulation technology very clearly shows it consistent with scientific papers that are out there anybody in the UFO community that isn't like 100% honed in on this is absolutely suspect in my eyes absolutely suspect this is the

(1:57:17) exact technology that we need in order to explain the entire phenomenon everything about it everything that's been made publicly available is all explained just in that uh I need to show Sam Reed's reply guys I just don't give a [ ] that much man okay I'll show it I don't know why you guys care so much about this it's not that crazy we've already gone through all the JD papers I mean I guess for the people who haven't really seen that much where's oh here it is okay yeah

(1:57:54) I mean you guys can watch you can go look at my Twitter if you want this information I'm not I'm not trying to do a entire recap here so Sam says that he talks to Scott Pace Scott pace is some dude I don't know what all these letters mean whatever secret something or other whatever here's all the dird papers you showed them it yeah we already looked at all the dird papers man this is why they've got all these dird papers out there these dird papers are probably linked to the exact program that we were

(1:58:19) just reading about from The Whistleblower this is the technology like all these papers explain our best understanding of that technology this is where all this stuff comes from I'm basically sure at this point uh and then this is just you know defense intelligence agency this is or uh here's what I'll say guys a lot of people don't like General Flynn listen to General anything General Flynn says about UFOs or advanced technology listen very carefully man those papers are from the defense intelligence agency General

(1:58:53) Flynn was the director of the defense intelligence agency 2 plus 2 equals four guys 2 plus 2 equal 4 unless you're Terence Howard then 1 Time 1 equals 2 okay speaking on Terence Howard uh I think I have another clip I can play we're going to get ourselves uh whatever um copyright stries this one okay yeah here we go I guess he wanted me to support bore or shringer or or Fineman or any of those people and I'm looking at the Fineman diagrams I'm like you made

all these things up you've got you're basically

(1:59:47) doing the Mr Spock thing if you want to find the answer to something then you cancel out all the possibilities all other possibilities and you root it down to one thing so that means going through the whole universe to answer one question and that's the problem with probability that's the problem with with uh Heisenberg uncertainty um uncertainty so the problem with Terence Howard is he's a little too out there you know you open yourself up to being discredited when he's he's talking about

(2:00:17) real scientists right here like these are not madeup people these are real scientists that are very big heav weights in the realm of physics that's the problem with schro anger all of those were just these probabilities because they had taken The Ether out they forgot the electromagnetic wave mhm it had to have a medium in which it followed on yes yes 100% correct the electromagnetic wave needs a medium water waves require a medium sound waves require a medium atmosphere the only reason why we can talk is with there's sound that there's

(2:00:55) an atmosphere to talk through electromagnetic waves also require medium The Ether it had to have something in which it was moving on they don't exist in isolation no they do not and it it cannot be the cause of its own action an effect can never be the cause of the action the chicken cannot come be the egg cannot be come before the chicken the chicken has to be there first in order to lay it it has to mate and what Einstein left out was the equal and opposite of magnetism so when he back to Neil degrass when he wrote his response

(2:01:38) so he gets completely sh**redded** by Neil degrass Tyson uh and the equal and opposite I think the better way to describe is there symmetry there's always symmetry in science and in nature there's symmetry everywhere we look always symmetry look at our faces symmetry why is there not symmetry in the vacuum of SpaceTime what's the opposite what's the what's the opposite side of what's the flip side of the coin The Ether The Ether is the flip side of the coin to my paper and he said if you have any other

(2:02:06) questions you're going to have to see somebody else and he wouldn't take my calls anymore I was like okay so I wrote the book based off of those responses and I reached out to another guy um Dr David Tong that okay so that's the uh I think that's the only clip I'm going to play regardless yeah Neil degrass Tyson is a [ ] I don't know he's a liar he's just a [ ] idiot uh but whatever that's his his uh impetuous uh General Flynn is probably not going to get indicted I don't know what he would get

(2:02:33) indicted for at this point uh I don't know I have not talked to General Flynn I probably wouldn't mention it even if I had but um I have it and the only thing I would say is just listen to what he has to say man guys if I have one power uh it's my intuition and my intuition tells me that General Flynn knows some [ ] okay he knows some [ ] and he's smart guy these guys are smart people man they know what to say in public they know what not to say in public so listen very carefully to General Flynn when you

(2:03:04) hear him talk about anything related to Advanced Technology UFOs or non-human intelligence now if you don't want to listen to the other stuff culture wor stuff political stuff fine ignore that the stuff that we're talking about here crosses all political boundaries I posted about uh AOC and and Andrew Tate today that's about as far apart on the political Spectrum as you can possibly get and I don't give a [ ] I don't give a [ ] I'm just trying to disclose advanced technology that anybody wants

(2:03:32) to listen man that's Andrew Tate that wants to listen if that's AOC that wants to listen I really don't care um so my opinions on yeah Tucker of course I'll talk to Tucker Tucker is awesome I like Tucker a lot um so my opinion on Terence Howard is that some of the stuff is way out in the woo right the sacred geometry stuff seems intuitive to me seems intuitive that maybe that's how it works with the do decahedrons or whatever shapes they are I think that that can be expressed in the sense of The Ether and our SpaceTime

(2:04:12) interacting with electromagnetism yeah okay sure uh the 1 Time 1 equals two stuff is way too out there for me uh that's not I'm not I don't really agree with that but that's whatever um but the ether stuff he talks about the stuff about the Morley the Mich Michaelson Morley experiment I I totally agree with all that I think he also understands the scientists that came before Maxwell anyone who's bringing up Maxwell they're on it like they're they're they're they're honing in the phase conjugation

(2:04:41) as well so phase conjugation like imagine two waves the two waves can intersect any number of different directions any number of different ways but if you get them to perfectly overlap and make love then you would expect there's going to be some specific reaction to that same way where if you have them being completely out of phase like constructive and destructive interference you're going to have some effect some visible effect there so phase conjugation to me seems very intuitive uh just from a simplistic

(2:05:09) perspective so that's my opinion on the Terence Howard stuff I thought that the interview was really good I went and read uh some comments and he's getting like Trashed by people and what have you uh and that's because he's opened himself up to it so this has been very important for me because when I think about how I would express myself on Joe Rogan I have to look at it through the lens of these morons and redditors and [ ] out there that're gonna be like this guy is like uh taking DMT like

(2:05:38) you've really got to ground it for people you've really got to break it down logically and most importantly you have to explain the concepts in a way that people can understand not just out in the woo like You' got to say you know the ether is is the medium by which electromagnetic waves uh um propagate right the way electromagnetic waves are longitudinal Through The Ether just like a sound wave is longitudinal through the air you explain it like that you explain that Maxwell's equations were improperly

(2:06:09) reduced and we lost the scalar potential you explain it away you say what is the scalar potential it's the stress in the medium I can pull equally on both sides that doesn't mean there's

nothing there stress in the medium is gravity when it comes to SpaceTime and the interaction between The Ether and space time the different the pressure differential which we can see with the Casmir effect when the plates come together the negative pressure you can argue that that is fundamentally equivalent to gravity so that's the post I made today

(2:06:44) and actually let's watch that and then we'll probably close out for tonight I'll make sure I didn't miss anything so that leak today was pretty wild any other questions out there yeah Malcolm Bendle I think is going to agree heavily with what we've been talking about and it wouldn't surprise me at all if Malcolm bendle's science ends up uh overlapping in a major way as well now in terms of my investigation what I've been doing I am trying to make sure that I keep it as grounded as

(2:07:19) possible because I'm talking about airplanes being teleported out of the sky and the biggest conspiracy ever so I am going to be avoiding sacred geometry and 1 Time 1 equals to like the plague uh even if I agreed with it I would avoid it same way where even if I agreed with 911 conspiracies I'm still avoiding them my conspiracy the conspiracy I'm promoting is already way way way too out there for people man um and I think the only reason why it doesn't have the same level of disinformation attacks on it is

(2:07:49) because nobody's been talking about it nobody out there talking about warping airplanes like I'm the first guy to be like hey we can warp an aircraft like I can take credit for that I'm I'm the first person out there in the whole world that's gone yep we can warp an aircraft at least from a public influencer perspective you know definitely separates me apart from everybody else that's out there uh and that's enough like I've said that technology free energy that comes with it and the conspiracy of MH370 which of

(2:08:23) the videos we just showed earlier that is enough for me man if that's all I do in my life is reveal that I will have give me an A+ right I don't need to reveal anymore any more than that but uh so hopefully we can get to some answers on that hopefully the AO stops ghosting me we are going to watch this we're going to watch this clip about The Ether that I posted right here so that you guys if you need to understand what the ether is then you can check it out here this live stream you can find this live

(2:08:52) stream on my X profile you can find it on YouTube We're recording this you can watch it all so if you missed anything today go back and check it out that was a CRA this has been a crazy uh live stream guys like really crazy here we go we call SpaceTime the combination of time and space coordinates The crucial point of the graphic interpretation of this four-dimensional coordinate space is to imagine it as being filled with flow fields then we can reintroduce the old image of space ether filling all space the vector potential corresponds

(2:09:30) to the flow velocity and the scalar potential to The Ether pressure guys what the [ ] scalar potential equals ether pressure when you look at the diagram of ether pressure you're looking at gravity right there ether pressure is Gravity the Mass interacting with ether SpaceTime so in a sense you could argue that SpaceTime itself is kind of like just the painting on

which The Ether you know painting on top of the ether that's what that is it's like if you have again the canvas that you're going to paint on

(2:10:12) you Splash a bunch of paint on it the paint is all the mass we see in the universe The Ether is whatever's left such an ether is subject to the laws of fluid mechanics as we know them from air or water flows and thing is let's say you you spread the paint all over your canvas now you don't see the canvas anymore the canvas is still there we don't see it because it's covered in paint that's like Imagine The Big Bang and The Mask spreading out all over the canvas all over SpaceTime All Over The

(2:10:48) Ether same problem people say well why don't we see The Ether that's why we don't see The Ether because the paint is spread out all over the canvas we can't see it we have to rip the paint away if we want to see The Ether so this ether movement can be described by carton geometry acceleration of ether then corresponds to torsion so behavior of ether is described in the same way as in electrodynamics and dynamics of mechanical systems in contrast to previous ether models the EC ether is subject to the laws of general

(2:11:24) relativity and is thus described by objective laws that do not depend on an observer's point of view we know that galaxies move against each other in space we can consider this movement as a swimming in the background ether like with swimming with a water current yeah so there too they give the analogy of water once again right because water is the medium like you're swimming through the water uh somebody asked a question Carter one is a great idea raon so it is not dangerous just changes things or will it cause panic I didn't I

(2:12:04) didn't understand the context sorry um this is going to explain Dark Matter dark energy and it's going to explain why we see red shift as well a previously unsolved question has been why stars on the outer arms of a spiral galaxy move at a uniform speed Galaxies have a core that consists of a large number of stars and accordingly generates a strong gravitation if this gravity reached to the Galaxy arms the Stars would be pulled from there to the center this is the result of both Newton's mechanics and Einstein's

(2:12:39) general theory of relativity however this movement does not occur therefore additional invisible matter at the edges of the galaxies dark matter has been postulated which exactly compensates for this effect so we added dark matter at the edge of the we needed more mass for things to be sticky because we couldn't understand why these Stars far away from the Galaxy were not being pulled in why they were not moving faster moving slower I'm GNA say it wrong here um I think is we didn't couldn't understand why they weren't getting just

(2:13:17) shot out into deep space well the answer again is The Ether The Ether is keeping everything nice and stuck and tight um I'll answer the question about reeside after this however this type of matter could not be detected by any known scientific method there is no dark matter we can explain the shape of the spiral galaxies quite simply using the ECE fluid mechanics spiral galaxies are formed by a rotating flow field of the SpaceTime ether rotating along with the Galaxy Core the Stars swim in this current as

(2:14:00) it were angular momentum is conserved in the flow field this results in a speed of the stars in the direction of rotation that is independent of the radius so no dark matter is necessary for the explanation yeah and if we have an ether like this then the idea is that we can extract unlimited energy from it unlimited now technically there would be some limit but the number is so high that it's fundamentally unlimited techn unlimited the light from stars is red shifted the further away they are from us from this one concludes that the

(2:14:40) universe is constantly expanding yeah so the reason why we think the universe why there was a big bang and why we think that the Universe was constantly expanding is because the red shift everywhere the red shift is due to tired light I'm ready to go all in on it people don't like the tired light explanation tired light's the answer is that as light transmits through the medium it's losing energy and therefore you're seeing the red shift we know this now because we have the James web Space Telescope and we've

(2:15:09) already pushed back the age of the universe like 10 billion years like it we used to think the universe is like 13 14 billion years old because of Hubble and now we have the James web tap Space Telescope and it's showing us no it's like 26 billion years old and then the answer is it's going to keep getting bigger and bigger because the unit we misunderstand the red shift we've just misinterpreted that for I don't know 40 years alternatively the red shift can be explained quite easily with an optical

(2:15:36) model since the ether is a medium in which light propagates light will lose some of its energy on its Journey over many light years and transfer it to The Ether this is a well-known process in Optical media whose index of refraction is slightly different from one yeah so if the index of refraction is not equal to one then you lose some level of energy as it transmits through the medium so there you go tired light that's the answer such an idea is not new it has been known for years under the name the theory of tired light but

(2:16:09) it has not yet been able to gain Acceptance in science although the counterarguments can all be refuted thus the expansion of the universe can at least be called into question okay okay so uh red somebody asked about r deid on thought they were in touch with me no I stopped contact with the person that claimed they knew registered on because I presumed that it was fake uh it was around the same time when I had the whole **scam** thing go on so I'm not interested if people are not willing to give me some type of corroboration or

(2:16:41) vetting on who they are I I don't care I don't care if it's reges sideon non or whoever else honestly at this point I don't need reeside and on to come forward for any of this so we've already got so much evidence the videos are real just simply does not matter to me uh it's more likely that I'm going to get **scam**med by some douchebag than anything else um okay donations here oh so yeah um with respect to the table of elements for Nick hopefully you're still around nick uh Element 115 I don't think we need

(2:17:14) that's i' I've said that many times I don't think we need Element 115 for any of this now there maybe there's some exotic use for it that I don't understand certainly possible I do think

Bob Lazar is probably telling the **truth** and if that leak was true about the spacecraft that we've got the mini shapes then it almost seems like they're alluding to Bob Lazar uh also the way Bob Lazar told his story he comes off as very credible to me not somebody that's trying to make that into his career or anything like

(2:17:41) that so I I whether or not he's been told misinformation is one thing I don't know the material bismuth magnesium zinc uh is supposedly a metam material and from the people I've talked to would seem to have a very specific purpose related to some of these electromagnetic and electrogravitic uh Electro gravito electromagnetic uh um capabilities so I do think that there is something there bismuth is a very interesting element um and I think it's the idea that you have like an insulator between two

(2:18:15) potentially different conducting surfaces I haven't really dug into it too much but definitely seems like it's a very uh specific and it's at the like Atomic layer where there like one layer of atoms that is producing that so it's like a meta material that the you know if those things are producing craft a spec like the leak says then that would potentially be the purpose so hopefully that uh answers your donation question thank you Nick thank you again Ohio Austin awake says Okay that was the

(2:18:42) question about reges side and on Austin thank you very much for the donation appreciate it uh for the record I do answer questions in the chat from pretty much anybody you don't have to donate and if you need your money please do not um please do not send me the money uh but I do appreciate it and anyone who does donate I am going to try to read off your question or whatever so hopefully that answers your question on the reg side and non thing sorry to let you down but um unless they were to reach out to me more directly I'm not

(2:19:07) really interested uh and then Ben love can you pass the Discord I keep missing it on the YouTube yeah I'll put another Discord link I'm gonna do a brand new one here okay so this one has 25 people if you guys want to Jo jump into the Discord again no trolling in the Discord um there you go so I put that in Discord if you want that you have to be in the YouTube in order to see the Discord or there it is right there you have the name in the bottom left if you're on uh if you're an X you can just type that in and you can

(2:19:40) invite so thank you guys very much yeah sorry Regina we won't be doing the 360 anymore I apologize we're not doing 360s anymore um I don't like having my microphone go flying down so we're not doing 360s uh maybe when I get my new setup we'll be able to do 360s again but for now we can't um let's see any other last questions I think that's probably it guys so tomorrow we definitely will be the ne let's say the next stream we will be doing science I will try to start getting the

(2:20:14) streams more consistent with a specific time for you guys as well so it's easier for people to accommodate their schedules I would like to try to do them a little bit earlier so I'm not up so late uh but we'll find out how that goes um right now it's just me doing all this by myself it's a lot and I have to try to set it up after work so I don't get a lot of time to read them

so once again check out some of those scientific papers we'll dig into some of the science tomorrow talk about

(2:20:40) those scientific Concepts tomorrow also if you guys have videos scientific videos that you want to watch uh make a note of them and then tomorrow when we're doing our our science streams you can link the videos or tell me the best way is tell me what to search for in YouTube or wherever to find the videos or put it in the Discord and then that way I can link to them when I do the live stream and we can watch the videos together so thank you guys very much I appreciate it it was a good stream tonight let's

(2:21:10) see what I uh let's play our country song and then we'll play one of our other songs to close us out tonight guys I'm tired this is a good stream oh this is one last thing I want to show you guys here as well I'm gonna have to steal this gift somehow here it is so this is how I want you guys to think about gravity everybody this video right here is how I want you to think about gravity because when you look at the gravity like this then you can basically see The Ether you can see The Ether The Ether is The Ether

(2:21:50) space time interacting with mass there it is it's it's the frames around space the pressure the negative pressure all the time that's it right there this is this is gravity right there that's what gravity is when you look at that picture right there guys okay where's my song here this one [Music] time [Music] mh37 fin from the sky world on wondering why Secrets here can't where did you go lost in the no good just fin way they all say microscopic waves worm holes in

(2:22:56) space hidden te secret raceone satellite Li truth so C buers truth on these cement running hiding from the eyes governments they all L MH370 where did you go where did you [Music] go where did you go where did you go where did you go [Music] I love these [ ] songs chat uh that

(2:24:03) gift I just showed is gravity not necessarily electricity but it's gravity gravity okay that was great guys have a great night everybody love youall m370x peace everybody later it's I m m m m h37 until you do some research don't talk to me I'm going to find the truth while I sit this Mar your opinion it means to me it's m m m mm x370 not all heroes makees I glasses to see I'm going to find the truth while I sit this Mar the trolls hate seeing me [Music] succeed but guess what m m h37 [Music]

(2:25:29) 1 mm m370 not all heroes with gles to see I'm going to find the truth this Martin your opinion it means to me your opinion and then M h37 now hero keep glasses to see I'm going to find the truth why I this part guess what

Rogan/Howard Review & Iranian President Helicopter Crash - YouTube

Transcript:

(01:26) wel walk step right up ask cre up to a rock with fls like these who needs Deckers will be be through space while they D the CL a four be I'm a fall be this investigation is legit we back the buckers get St off with the B split oh no y the name name B what doesn't the best in the corridor crew while the theories are a mess who knows where this all goes bless the sky and those below but Liars Ain deniers can suck my black hole don't come at me bro be a 4B I'm a 4B this investigation is legit be a FY

(02:08) buckers can step off with the [Music] bullpit what up everybody let's go have a I hope everybody's having a good Sunday or maybe Monday morning if you are in another country uh yeah my sound is messed up guys uh one second okay hopefully you guys can hear me right now I yeah wow what is that what's the sound just keeps changing automatically is it because I'm muted I don't know anyway guys welcome hope you guys are having a good night uh

(03:11) hope you guys are enjoying the weekend or you had a great weekend uh so yesterday we uh we jammed out we had a great time we did our uh kind of uh message Joe Rogan I got pinged about a hundred times about the Joe Rogan Terrence Howard interview I finally finished it that's why I'm late tonight uh so and wow what an interview so we are going to take the risk and see if we get copyright strike we're g to play some clips from it I took some notes on some um timestamps in it I can't believe like

(03:51) I don't believe in synchronicities but dude what the hell Terence Howard's talking about like all the same stuff that we are talking he's even talking about phase conjugation he's talking about The Ether he's talking about the uh was it michelon Morley experiment as well like ju I just posted a thing about it I'm just sitting there like what is going on this is wild uh definitely feels like we're in a simulation this is uh the science is coming out like it's actually coming out faster than what

(04:25) people think like I just I can't believe just I'm gonna riff for a second I can't believe that the ether is real and even a thing if you had asked me about The Ether last year this time this this last summer I'd have thought you're a crazy person I'd have been like what are you talking about The Ether you're one of those people who talks about The Ether now I'm like Yeah The Ether is a real thing and like that's what we need to explain gravity and uh negative energy densities and uh the Casmir

(04:57) effect and a lot like dark energy all this stuff that just had no answer for Terence Howard at one point during the interview literally says like people just make up stuff for like dark energy and and like that The Ether can explain all this I'm like holy [ ] dude it's exactly what I've been talking about like wow we need to talk with Terence Howard man my God now the thing about Terence Howard though as well is that like he's I can see why people wouldn't take him very seriously because

(05:29) he's kind of like you know he's he's very far down the sacred geometry path you know very down and you know what I believe everything he's saying I really believe it it's just that like a lot of mainstream people aren't going to be able wrap their heads around it and I'm not going to show this but he talks about how he tried to reach out to Neil deGrass Tyson so Terence Howard talks about how he tried to reach out to Neil deGrass Tyson to like look at his work and look at his his like kind of

(05:56) discoveries and Neil deGrass Tyson just like takes the red Market is work and is just like trying to poo poo all over it and I just sat there listening to that going man NE deGrass Tyson's like the last person you should go to for a science review and he and it's funny part is he said like oh I went to Neil grass Tyson because I saw him on Cosmos which was the reboot of Carl Sagan's old show and it's funny because I that's where I gained respect for Neil deGrass Tyson as well and then I lost all that

(06:27) respect later on um yeah Neil responded a very predictable way and guys this is the problem the **truth** is I don't think that Neil is like controlled I just think he's an idiot like the problem with a lot of these old school academics and like Lawrence Krauss is another example as well like these guys just got to die off like they are too stuck in their own mindset of how the physics and science has to work and it's makes no sense to have that level of ego and uis because we know there's stuff we can't explain

(07:03) so we obviously have something wrong like that's undeniable we can't explain Dark Energy we can't explain dark matter we have all these Concepts we can't explain we have no unification theory of quantum field Theory and general relativity but we just are sure that what we know is right obviously there's something missing and this is what Terence Howard puts forth is that okay here's here's another option so by the way guys thank you very much everybody who's in the chat who jumped in here

(07:30) early I know I haven't been saying hi to everybody it's started to get impossible we've got so many people watching and following these days uh which is incredible um so let's go ahead and let's jump right into this because I don't want to be up all night tonight uh I'm G to try to limit this to an hour or like maybe a little bit more than an hour uh but I do have a bunch of interviews bunch of people have reached out to me that are relatively large uh that want to talk to me about this stuff

(07:54) so I will announce those when they're like fully set in stone what I can say is tomorrow I will be on with uh Emerald again I'm going to do a followup with Emerald if you guys uh didn't see I went on her show it's only like a 10 15 minute spot but I don't know for those shorter Spots I'm pretty much just gonna give my Epiphany you know my my pitch to the people that are out there that are the people that are skeptical and we will see um okay so what do I want to start with oh wow yeah my basketball team is about to win

(08:28) right now as well which is pretty awes awesome um so we're going to start with Twitter and then we're going to jump over because guys this if you guys have not been following this

Iranian uh like helicopter ju just disappeared pres Iranian presence helicopter just disappeared off the face of the Earth they can't find the debris they can't find it crashed it supposedly crashed like 15 hours ago and early on they were saying oh some signals got released and they're going to find it I been just

(09:00) super busy so I haven't really been following it that closely but now like they're saying like they have no idea where it is it was clear skies so it's not like a Kobe Bryant situation where it was like foggy by the way if you guys don't know when Kobe Bryant's helicopter crashed I was living in Southern California and it was one of the foggiest days I've ever seen where like the fog like was so thick you could just see it and it was very low and you knew it was dangerous to fly in that was not

(09:26) the case in Iran like it was a clear sky there was no was in like hard fog like that so everybody's been pinging me about this uh Iran helicopter situation uh I'm not saying that it's an MH370 situation some James is already in here where's Pig James I miss Pig James guys um it's not I don't think it's an MH370 situation uh but at the same time like I do think that we can take down any helicopter we want at any point in time like we've got weapons that can shoot beams from outer

(09:58) space onto uh onto helicopters and just make them crash or a plane so like this is why I made the post where I was talking about like you don't want to be uh the president adversary of United States government like that's that's like the the worst thing that you can be on this planet right now I I would be so afraid of getting on an airplane if I was like the Iranian president or like North Korean uh leader Kim Jong uh which one are we on un ill whichever one we're on these days uh and this is why like

(10:30) this is what they did with MH370 like when you look I'm G I'll pull this video up while I talk about this real quick while I give the intro into this situation uh when you look at this video here and they're definitely filming this for intelligence purposes here like that's the reason why we're gonna I want you guys to look at this drone video because we're going to compare it to the Drone video of the Iranian search as well uh this is a situation where like if you if you're like China or Russia

(11:00) and if you are looking at at this video and you're watching an airliner disappear out of the sky you are going to be freaked the hell out this is a message to the adversaries that would say you know like if you get on an airplane we can take you down in a second and there's nothing you can do about it nothing you can do about it did they find the crash site now this part of the reason why I haven't I'm not I mean a I don't want to link anything else to this case but look at this if you're watching this video and you're

(11:29) you're Vladimir Putin you're going oh [ ] I better not mess with the United States if I get on an airplane like they can just take my airplane down anytime they want anytime they want at will no problem oh they just found it right now interesting okay so let's switch over let's take a look at that um man this Amy esgd thing today is also taking off guys like wait looks like

Skyfire news just reported on it as well this man there's been some drama today guys okay we better just get right into

(12:10) it okay move this also I posted both the videos today I hadn't posted them in several weeks so if you are new to the investigation and you uh wanted to see the videos I did post them today although if you're watching the streams you're seeing them like every single day so you probably don't care uh here you go oh man and for the record like if people message me uh I'm getting so many DMS now it's crazy uh yeah the Amy ESD stuff is such a deep rabbit hole it's actually crazy like it's I I'm trying to

(12:47) avoid going down it because I've been told like be careful I've been told be careful about going down it um it's get it's getting real real chat okay so let's look at this here I just retweeted uh um this message here I dropped it who's your daddy thing because man I just can't imagine being this scar look at the clouds from the MH370 video the only difference is it's not color and here's the thing about that why is the MH370 video In Color if you were a hoaxer you would have made it

(13:18) black and white and you'd make it look like this this is what you'd make it look like and these and look how realistic the clouds are just like in our video they're like real volumetric clouds they're not somebody didn't paint paint a picture of the clouds those are real clouds we're looking at the reason why we don't see the detail like we see here where a little bit sharper is because it's color thermal instead of black and white the way the Drone pans around to me looks very still argue that

(13:46) they that they can't do color thermal but they can we found the proof that they could so it's like why would why would a hoaxer make it in color they would make it like look like this black and white if they if they were Faking It let me see if there's a new any kind of update or anything like that damn Dom's thing got three million views on that guys if I was a clout Chaser by the way I would be posting like all these things that would get me like tons and tons of views like I could have posted I'll mute it sorry sorry

(14:22) Hermes uh if I was clout chasing I would be posting all these news things I would I probably could have got a million views from posting this Iranian helicopter crash thing right and I've been avoiding it because I just that's not what I'm going after you know uh I would love in the future to be like post mostly focusing on like geopolitics and news and other science stuff but I I want to get closure on this MH370 stuff and I'm gonna like keep pushing it and and making it um make it more and more

(14:52) Awkward until like AO finally responds so how do I does anyone have like a name of anybody who's got the updated video probably like one of these uh big people Mario n narwhal or whatever his name is narwhals oh helicopter wreckage found conditions not good okay here we go we found something guys we found something why did it have that ridiculous music narwhal Nar naral Narwhal I'm just going to call him Mario narwhal Mario narwhal guys here we go uh what am I even looking at here chat what am I even looking at here

(15:41) chat I'm just going to leave the sound because it's super annoying hopefully the sound is fine at fine sound levels oh this dude's definitely dead guys yeah I don't I would he didn't even get Co man there's no way I think this thing was my guess is this is really suspicious man for the Iranian president to get wiped out like in the middle of this whole like Israel Palestine conflict after they just shot a bunch of missiles at Israel uh pretty suspicious pretty damn suspicious guys that's all I'm gonna say

(16:13) this is supposed to be proof of something what am I looking at here chat I have no idea what I'm even supposed to be looking at right here uh okay here we go here's something thing here uh first picture of the location of the present's helicopter that that's the helicopter that's it can we zoom in on this what can't even like Twitter doesn't even let you zoom in uh that's it right there what am I looking at here chat this looks like a dildo is this a uh John Greenwalt dildo we got going on

(16:54) right here chat what am I what am I supposed to be looking at right there yeah where's the smoke shouldn't there be like a plume of smoke in the sky from the helicopter crash crashed a few hours ago like what what is this that's it wow it's a black Hulk Matt Gill you're on it buddy yeah dildo Mountain what what are we doing here what is this that's it guys I'm trying not to be a conspiracy theorist but like this is like a blurry Bigfoot video like this is like uh uh Whatchamacallit the not the Peruvian but

(17:33) the South American like uh Viagra aliens or whatever they're called Viara Virginia aliens why why this is the best we got this is the proof I don't know guys I don't know I'm getting trying not to be a conspiracy theorist here but that's not really convincing me of a plane of a of a helicopter crash uh okay that's all we got okay I thought I saw a different one where there was like some kind of drone with like thermal or something let me see anyone else got any others who else uh is doing it Iran Iran

(18:23) President let me search real quick and see if we can find any others oh here we go here's here's another video Justin Trudeau's ego perfect perfect any account called Justin Trudeau's ego perfect so what what is this these are the best videos we got huh people out there saying that the MH370 videos look fake uh well what the hell are we looking at in these these these uh uh Whatchamacallit drone videos that we got here these look even Faker if you gave this to the corridor crew they would 100% that this say this is fake F

(19:00) they'd be like no this is fake this these clouds that you see in the front is just a After Effects overlay they'd be like I could fake this in five minutes I could fake this in five minutes chat what what am I even looking at here is that supposed to be a crash site wouldn't there be like pieces on the ground somewhere is this are there trees here I can't I have no sense of scale says 4519 ft and then what is this what is this this what am I looking at right here uh oh wow yeah we won okay I guess

(19:37) that's a Splat huh okay yeah this is just some Cloud brushing guys this is just artifacts these these uh clouds you see that are in front of the camera here these are just uh are just

artifact okay well we looked this enough I don't know maybe it'll be updates tomorrow on what that was all about let's move on to the next thing I don't want to spend too much time on that let's let's fire rapid fire through some of this okay boy this this Saga of this Amy ESD letter was this was weird weird

(20:18) so let me set the tone for you guys uh I was just you know I'm doing my normal looking around on on Twitter and uh I see this post I don't even remember who posted it anymore and it's got this weird letter on it normally I ignore everything UFO Community related uh but I thought it was interesting because first of all the typing of it it looked like you know it's got these weird markings on the top so it does look somewhat official and then it's directed to Scott Pace executive secretary of the

(20:53) National Space Council which is some random guy that most people have never heard of I've never heard of but he's actually that he was appointed by Trump in 2017 and you can see it also says CC president Trump and Mike P that doesn't mean they read it but it means that it's like trying to get to them you know so it does mean that there's something going on related to this letter um guys don't be like what the the Dan Islander like guys I don't know people like this they Wonder like why do I get

(21:26) blocked why do I get banned from the channel like if you're going to act like a little like 5-year-old [REDACTED] then yeah you're going to get blocked you're going to get banned like I'm not ever unbanning or unblocking anyone either so if you are like the kind of person that can't help but like be a horrible [REDACTED] all the time every day in your life then just go somewhere else man no one's making you be here bro peace you're gone I don't get it I just don't get why people are like that you know anyway um

(22:01) so the other interesting thing here says due to the leaks of the dirds the defense intelligence research documents dird from the DIA ASAP program or ASAP program and I I recognized right away those are the papers we've been reading those are the papers what happened to freedom of speech in the chat what happened what happened to our freedom of speech for the record people don't understand what freedom of speech means it means that only thing freedom of speech means is that you your government cannot come

(22:36) down on you and they can't arrest you for the things that you say that's that's it and there's even exemptions to that you don't have any freedom of speech on Twitter you don't have any freedom of speech in my chat you don't have any freedom of speech in my replies you're not entitled to harass me or to even be in my replies there's no there's you have no entitlement no legal right to any of that stuff just people need to just wrap that through your brains if I block you it means you're not welcome

(23:02) and you should go about your way and do something else that's it okay um this is interesting now because we've been going over these papers for a while oh somebody donated thank you very much Lone Wolf 36s I think it was a weapon not necessarily uh a teleportation more a dematerialization your thoughts this is a a question I get a lot is why is it not like a

destructive event and I would say I only think there's about a 1% chance that it's a destructive event in the Drone video here or you know in both

(23:34) videos and the reason for that is when we get to the end here is that first of all if you wanted this this plane to dis to uh be destroyed you could just let it crash you could just let this plane crash uh it's already on fire it's it looks like it's attempting emergency landing if it lands in the ocean everybody's going to die um so right away there's no reason to destroy it and there's too much going on with the the orbs like you just send a missile up at it if you want to destroy it or an

(24:04) antimatter missile you don't go through all this effort of having these dancing orbs spinning around the plane uh there's too much purpose going on there you don't need to have the whole mapping of the plane if your own intent is to just destroy it you know uh you can make it look like a crash in an accident and then you could destroy it that way but I do think this technology can potentially do what you're saying which is like you know destroy a plane and leave no Trace theoretically I think this technology

(24:31) could do that um and there's high value intellectual property on board as well and there's easier ways to destroy a plane as well so those are the main reasons why I think there's like less than a 1% chance that it's uh some type of destructive event um but you could also argue that they accidentally like that they were trying to teleport the plane and then it didn't it didn't go well like something went wrong horribly wrong I think you could argue that as well and I think you could argue that

(24:58) this is some type of version of like uh cloaking as well although when you you see these frames where this is this is like consistent with a wormhole when we looked at those dirds uh especially the one about uh traversible wormholes this what we see here with this cold endothermic event is consistent with a wormhole so this is the reason why you know I I believe that what we're looking at there is actual teleportation but it's not dematerialization the op options are some type of warp drive which would be like uh like macroscopic

(25:34) phase conjugation which is like reverting to a wave function uh versus like a literal Wormhole of actually traversing through a wormhole and then just appearing somewhere else so hopefully that answers your question thank you very much for your donation appreciate it uh so then going back to this though but that's what's crazy about this letter is that it's referencing the durge so no matter how you look at this letter it's pretty weird it talks about people like Lando atip I I don't care about any all that

(25:57) stuff there's so much drama was a tip real not real whatever the point is that somebody was sending this letter and they wanted it to get to Donald Trump they were trying to pass some information about these papers that we've been reading that are consistent with what we're seeing in two videos and to the point of the cloaking yes Philadelphia Experiment I think that that's why the difference between cloaking and teleportation or or like a wormhole is very slim because just in the same way where

(26:27) if you produce an over Unity device a free energy device it begins to lose Mass it actually gets lighter there's this side effect right you get free energy you extract it from The Ether and now your device cools down and it starts to float or get lighter same idea when it comes to cloaking when you try to cloak all the electromagnetic signals around your object you're actually displacing it from SpaceTime and once you've displaced it from SpaceTime that's a wormhole you know that's that's

(26:57) anti-gravity like so that's why like there's this blurred line between like some type of hyper Advanced cloaking if you can cloak all the electromagnetic signatures then what's even there anymore it's like when you're looking at a wormhole and not even light or a black hole and not even light can escape like what is that you know so it kind of had brings like those same questions up which what makes it very confusing uh yeah creates a bubble pretty much and that's what I think that the

(27:24) Philadelphia Experiment accidentally did I think the Philadelphia Experiment ACD acally displaced a battleship from SpaceTime and that's why it teleported it didn't really teleport it it changed the flow of time for the people inside the on the the ship relative to everybody on the outside which made it appear somewhere else pretty much instantly pretty wild yeah black caulks and and black holes lots of interesting talk tonight so this was interesting anyway then I got a call from uh David Alman he replied back to oh it's a hoax

(27:56) it's a hoax it's a hoax and I'm like oh man I don't know dude I don't care so I make this follow-up post after looking through some replies back and forth and here here was the thing apparently Amy esgd drafted this letter with Sam Neil I didn't know who Sam Neil was I don't know who any of these UFO people are or any of this stuff Amy ESD drafted this letter I was like what and then I'm like this just got 10 times more crazy like I just thought this was a random letter that was being sent to

(28:29) you know Trump or whatever and then I find out that Amy esgd who was an anti-gravity researcher who like mysteriously took her own life a couple years ago uh who was like experiencing I don't know if it was Havana syndrome but she claimed she was getting like some kind of micro wave attack D her she is the one that sent this letter what I was like uh okay and then apparently it got to somebody related to the the UAP X the nimit incident this is a real letter though I so the argument was that somebody's claiming that it was

(29:04) hoaxed as in like somebody sent this to somebody else under false pretenses that's not what a hoax is though the letter is a real letter at least that's what I gleaned from talking through both sides and trying to figure it out and then I said that you know if at a minimum if this is true then it shows Amy was trying to get prominent people to take note of the DIA science papers which include warp drives reversible wormholes manipulation of gravity and Zero Point Energy and also manipulation of extra

(29:34) Dimensions so I mean to me that's pretty wild and then the final followup uh was this one here where then Sam Neil or Sam Reed so it wasn't Sam Neil Sam Reed sorry Sam I

apologize I got your last name I was hearing it secondhand um he says that he met with Scott pace and that he and Amy wrote this he says he and Amy wrote this never intended to be public and he met said that he met with Scott Pace the guy who's like in the two line he says he met him in person so now I'm like what do you mean hoax somebody literally met

(30:13) with him here's the post the docu here's the guy Samuel Reed right here the do he didn't follow me before this either by the way guys like uh he says the document was written by Amy and I with someone working with the a agency S&T Science and Technology maybe office it was never intended to be public a leak surreptitiously disseminated it through nimt incident to people so oron opset changed I don't know what these acronyms mean I don't care I did meet Scott Pace in person results of Defense intelligence agency

(30:54) male attached well there you go defense intelligence agency Washington DC says Samuel Reed right here **foyer** requests March 17 2022 and then here's the list of all the papers look at the list of all the papers right here here's the dirds materials for advanced Aerospace platforms uh the role of superconductors in Gravity Research warp drive Dark Energy manipulation extra Dimensions I mean what hold on **[REDACTED]** guys I got to get my I wish I could get this post up here we go what right I mean I it's pretty wild to

(31:53) me chat so um I I just thought that that that was crazy so I don't know this thing is this whole letter that Amy esri wrote is pretty wild man um Sam Neil's response was really wild so I don't know why people were trying to convince people as a hoax when the guy that like literally helped write the letter came out and like no I met with this guy and everything and this guy was appointed under Trump like there's definitely powerful people that are paying attention to this science that's out there and that's consistent

(32:29) with what I've said about people that I I there's people out there that are powerful that are looking at the MH370 videos whether or not people think they're fake or not whatever I I know there's people out there that are taking a keen interest in them so to speak now let's go ahead and play my letter to Ash for if you were here yesterday you've already okay this was not gonna be anything new to you I literally just clipped this from my yesterday's stream by the way I'm rocking the shirt

(32:58) Joe it's Ashton I'm really sorry that I **leaked** the DMS I did not mean any personal uh disservice towards that uh it was a situation where it was beyond my control I was being called a liar I had to show the DMS I'm sorry about that I'll never leak DMS ever again um I want to be on your show Joe the reason why I want to be on your show is because I believe I can convince you I can convince the whole world that the MH370 videos are real I am willing to refute all the VFX **debunk** attempts that have

(33:29) been out there on your show spend time and do that as well but I also want to talk about stuff like Thomas Bearden phas conjugation free energy The Ether and how UFOs potentially fly uh anti-gravitational technology gravity manipulation space-time manipulation em drive and I want to talk about where the trajectory of our civilization is after this I just want

to give information to you Joe **Rogan** and to the world if at the end of the conversation you think that I'm in any way disingenuous or that you just don't

(34:09) believe that m370 videos are real then I will stop investigating MH370 entirely cold turkey won't mention the plane again I will agree to not even bring up MH370 for an entire year I am willing to put everything on the line everything just for one chance to help inform the world about what might be the biggest Revelation in the history of our civilization you've had people like Terence Howard on who've talked about The Ether talked about phase conjugation you've had other people in the past who've talked about things like

(34:49) teleportation uh warp drive capabilities um as well as advanced physics and how the science has been suppressed from us you've talked about gravity researchers going away disappearing like ning Lee we can talk about all of that I'm willing to go through all the case of MH370 I'm even willing to go against any kind of other expert on the MH370 videos on the MH370 investigation or and any physicist that's out there that you want to bring on the show I will argue and debate against any of them on it and you can be

(35:25) the moderator that's my proposal to you Jo I hope you consider it thank you very much this is Ashton okay so that was the uh post I made uh earlier today that was from last night where we did that I think it's a good deal so the context is uh I'm pretty much just reading right off here the MH370 videos are never going away they're never going away we've already gotten the Ze I at this point uh people are polarized one way or another uh some people who've been following the case know these videos are real people that

(35:58) are uh Skeptics and **debunk**ers you know they think that it's hurting the families and all this other nonsense that's out there so you know I figured let's put some skin in the game let's go ahead and say you know what I'm willing to risk everything if that I will go on Joe **Rogan** and if Joe **Rogan** is still skeptical at the end of it you know thinks that the videos are fake or whatever or thinks that I'm somehow not being honest and I'm just trying to rft people or whatever the other crap is you

(36:30) know if he comes out at the end and says yes **I want you** to stop investigating this because he doesn't think that it's legit then I'll stop and I won't ever talk about oh I I was gonna say I'll never talk about MH370 again but that's not really reasonable right like what if something comes up and turns out the videos are real right so I said that I won't mention MH370 for a year so people were asking like what do you mean when you say like you're not going to talk about it anymore so the answer is I

(36:53) wouldn't mention MH370 for an entire year let's just leave it at that let's say that's the right so a whole year of not talking about it uh presumably if it's fake by a year later everything would have died down and been let go right um so I think that's the clarification on that uh somebody asked about leak DMS there's a whole drama about leak DM so if you're not familiar with the story of what led up to this back in February Joe **Rogan** direct messaged me and asked me to come on uh

(37:25) and then he backed out the next day after we were we had set a date and all this stuff that was out there um and I mentioned it on one of my streams that he had reached out and immediately every all the people that hate me were like Ashton's lying he's lying blah blah blah and I was like and so then there was this big space where I'm like guys I'm not lying about this like you guys are just digging your hole deeper which is what they do every single time and uh so then I **leaked** a just like one direct

(37:56) message like Hey Joe **Rogan** blah blah blah and they all the **debunker** people said I Photoshopped it they said I Photoshopped it they're like oh it's missing the check mark and this stuff and I'm like what I was like I just took it on my phone I don't know dude like it's just a message from J **Rogan** and uh so then I had to like do a video I had to make a video scrolling up and down so it would show people it was a real it's really from Joe **Rogan** with his 12.2 million followers that he had

(38:30) at the time he probably has more now um and so it became this whole all this drama like the Skyfire news people made like four posts about it they were huge all my posts had hundreds of thousands of views related to it um and so I can see why he might be like a little skeptical about talking to anymore but so the next day he came back and he he sent me a a link to like uh the Danny Jones interview like I think this is hoaxed sent me a link to one of the **Reddit** posts uh I don't know if it was the cloud one or the other one but one

(39:03) of them being like I think this has been faked and then uh also the um I think the **debunkers** ended up reaching out to somebody in his area and they um they found out that he had really invited me and that he backed out or whatever so um yeah the haters always ruin it and then apparently we found out after words from Kurt meter that Kurt Meer went on and he apparently told Joe **Rogan** about me he was calling me the autistic guy which is okay coming from Kurt meder is a little a little hypocritical but we we'll let it slide I don't mind um and

(39:43) then Joe **Rogan** revealed that Jeremy Corbell had told him that he thought the videos were fake uh which is a real [ ] move on Jeremy corell's front like Jeremy Corbell is a [ ] like I can't imagine [ ] blocking somebody trying to prevent them from getting on Joe **Rogan** especially when you're somebody who claims to be for disclosure Jeremy Corbell is a fraud 100% dude's a complete fraud uh I'm throwing it out there uh the guy wouldn't last five minutes in a debate with me about science or UFOs or

(40:20) anything that's the sad part and this is a guy that pushes like pictures of flares and bokeh and uh what's the other thing to **debunkers** say floating jellyfish Monsters the sad part is I defended Jeremy Corbell in the past I defended him against the people that **debunked** all his stupid videos um and then he goes and [ ] blocks me and he he was one of the first people to follow me big name people back in like October September and I dm' and just never dm' me back so yeah Jeremy Corbell definitely a fraud uh I would be

(40:55) very questionable about George knap as well who he hangs out with a lot I I used to respect these guys and I lost all respect for them this is why I don't deal with UFO Community

people at all they're all [ ] weirdos and grifters and people that are like have all these agendas behind the scenes I I just don't do any of that [ ] guys not interested okay so that's the whole drama if you needed to be caught up on it it's funny too because I I used to tell like uh Jeremy ree who's the alien

(41:22) scientist hates Jeremy Corbell and some of these other guys and I kept telling him to like chill out on him let's not try to start any drama but then I find out that Jeremy Corbell is like literally preventing me from going on Joe Rogan and telling the world the truth about anti-gravitational technology like I've got proof of gravity manipulation SpaceTime manipulation in two military videos that were leaked to the public there these the MH370 videos are infinitely better than anything Jeremy corbel has ever shown the world in his

(41:50) entire life combined better than everything Jeremy Corbell has combined shown the world and it infinitely better than anything Jeremy carbel's ever shown in his whole career in his whole life to the world and for some reason he's trying to prevent me from showing it to the World on Joe Rogan that's pretty damn weird chat pretty damn weird yeah I I did Coast to Coast AM guys with Richard CET and it's weird because it wasn't with George knap who you would think would be the one who would want to do it so I've been

(42:28) suspicious of George knap for a for a while now and I've been suspicious of Jeremy Corbell for a while especially because Jeremy Corbell said that commander fraver of the nimit incident we were just talking about he was told by the CIA that what he saw was locked Martin technology and Jeremy Corbell just wouldn't believe it refused to believe it what bro defense contractor technology like we've we figured out gravitational manipulation like we figured it out the CIA I ly told Commander frer so okay um the other thing is that

(43:08) apparently uh Bart Cil probably butchering his last name is Apparently one of these people that thinks that the moon landing was fake or whatever and he's going on Joe Rogan I've never heard of the guy maybe I'll I'll look him up real quick Cil how do you spell his name Cal uh apparently he's going on Joe Rogan which is kind of wild oh yeah yeah I here's a clip right here so you can have people to go on Joe Rogan and talk about the moonlanding being fake but uh a plane that disappeared uh 10 years ago without his

(43:56) Trace where they never found anything in the South Indian Ocean where the coordinates that's that's too much for people or we got two perfectly in sync military videos that were leaked to the public that show gravity manipulation and a wormhole that that's too much huh wait he's the guy that punched got punched by Buzz Aldren no is he you got the guy that got punched by Buzz Aldren that's that's what's his name Bart seel hold on I might have to pull that up I don't think it's him

(44:32) right and then let's get into the Terence Howard thing is that true Chad is that true that is him come on man Joe Rogan come on bro if you are platforming a dude who got punched by Buzz Aldren because he's bullshitting about not landing on the moon and somehow me with more evidence than any most court cases if not all court cases you walk on the why don't you on

the Bible that you walked on the moon not to get get out here call the police come on in here we call Poli why don't you swore in the Bible that you

(45:26) walked on the moon doesn't sir I don't have nothing to do with this but you cannot solicit on this property we just paid to run out the penthouse to shoot up there so you can't solicit keep keep all right well then where in the Bible you you walked on the moon you gotta keep shooting man okay well you can put on your shoulder don't be shy just come with me buz really like you're the one who said you walked on the moon when you didn't calling the kettle black I've ever thought of it

(45:53) saying I misrepresented myself away from me you're a coward and a liar and a thief calling the kettle black I've ever thought of it say I misrepresented from you're a coward and a liar and a thief you got you got [REDACTED] dunked on oh man I mean I honestly gotta respect ball Buzz Aldren there and that one I mean you get my face and you try to say I'm a liar and a coward or something yeah you you might get slapped down probably not but wow okay uh sure yeah I mean that dude was asking for it so that guy gets to go on

(46:41) Joe Rogan and people are worried about me harming the families this guy's talking about we didn't go to the Moon getting slapped by Buzz Aldren anyway okay guys uh Wild let's go to the next thing okay so real quick um why we're not doing the science tonight is because I'm tired and I didn't get time to go through all the scientific papers and make notes because I was busy editing uh the clips that I was working on and doing the post of the Drone videos takes a lot of effort man that's why people

(47:18) talk about oh somebody just made this in a couple hours guys it takes like an hour just to edit an existing video down to like one minute and add like the captions to it takes like an hour to do that people think they made that both MH370 videos in like a few hours you're out of your mind dude some people just have no idea how long it takes to like edit stuff and that's just video editing not even CGI stuff and like zero mistakes uh somebody just donated Manel thank you very much again how does the infrared satellite sense photons from

(47:50) the clouds how does the infrared satellite sense photons from the clouds that's the same question twice um I don't know what you mean when you say photons from the clouds I think that what you mean is that there's more infrared radiation on the top of the clouds compared to the bottom of the clouds uh but in the end of the day the satellite video when we look at it is a false color infrared and it also might have inverted heat temperature settings as well we just we don't know what the settings are

(48:21) so I can't claim to know unknowable information uh but when we look at this as well and it's we know it's false color as well because of uh the fact that it is nighttime and there's no Shadows anywhere there's no Shadows anywhere on here some people have tried to argue there is directional lighting and then I just say from what direction we know the direction of travel the plane is to the east over here from the from the north it's going south into the East so where is the directional

(48:48) lighting like when we look at some of these clouds why is there no directional Lighting on almost any Cloud out there and the answer is because this is an infrared sensor here sending information to a groundbased computer system that's building the computer terrain um and and it's funny because the **debunkers** it's actually pretty similar to probably how you would create it if you were faking it it's probably how it really gets produced and we've even recently found some uh documents that basically

(49:16) indicate that using like nro uh computer systems they can be create a project and then they can basically the way I imagine is like look somewhere on the world pick a date and time and you can make a project to develop an operation or from intelligence purposes from historical information uh and then produce these videos so I imagine that's the system that they're logged into here and how they they created this because this wasn't done in real time the person that filmed this and this was something

(49:48) that I struggled with right away is like how is like how is this being recorded is that this was recorded after the fact and uh this was a situation it wasn't being tracked in real time we know that because they they moved the screen over at the end as well so somebody logged in later on after this disappeared so they must have probably witnessed it firsthand and then they they created this this recording um and that's why we know they got caught for sure uh because if you were doing this in real time it

(50:17) this isn't what you imagine it's going to look like which actually helps the situation because these satellites are beaming the data these computer databases and presume they can track stuff in real time as well but it's a lot easier to rationalize if it was something that was recorded after the fact uh that they pulled up the data afterwards um and there's also like we found cameras that can show that they can produce like turn nighttime into daytime like just pitch black nighttime and they can make it look like this with

(50:46) blue colors and stuff like this as well so when you see this shining here of these clouds really most likely what you're seeing is more infrared radiation on the top of the clouds compared to the bottom and again you can tell there's not directional lighting because this Cloud on the bottom doesn't isn't illuminated like these other ones are if this was the sun beaming on them you're going to see this Cloud lit up and when the the airplane goes past some of these clouds we're going to see a huge shadow of an

(51:11) airplane on one of them no matter what the angle we can't really tell the exact angle but this Cloud go this plane goes past several clouds and there's no Shadows anywhere like right over here somewhere presumably especially when it goes right over this uh cloud formation here this thick fat cloud formation we should see a shadow of this plane on top of one of these clouds somewhere here we see nothing so hopefully that answers that question no survivors in the helicopter crash that feels bad feels bad rest in

(51:46) peace and I also think that if it is uh heat uh signatures which infrared technically is then it's most likely inverted remember a second ago we were looking at the Drone video of the

helicopter like uh crash Zone that we were just looking at Ian it was all black black is hot so when we see that black spot there that's hot so it's hot black sometimes so they have a type of inverted uh infrared where you can flip it between black as hot or black as cold so probably what we're looking at there the

(52:19) reason why it's all white and not black is because that's a cold event that's why people say well why is it white in the satellite video so when I when I pull up this satellite video I'll pull it up one more time why is this event white that right there why is that white like that it's white like that because it's cold if it was hot it would be a black explosion this would be all black but it's not and we've seen other infrared sensors that show black is hot we just looked at one earlier with the Drone

(52:52) with the infrared it's called a bow pallet okay I don't know what that means but that's cool if you have a any information about the bow pallet or anything else you want to help with our Discord I'm going to go ahead and put a Discord invite in right now into the chat because we're always looking for more evidence more information um the beauty of these being real videos is like we would never have found like half this information unless these videos were real like this there's way too much

(53:22) corroborating real world information about how the cameras work how all this stuff works Etc there's your Discord invite and by the way I only post Discord invites for the last for one day because we get a lot of trolls so no trolling that's the only uh requirement in the chat or in the Discord okay next thing let's get on to the main event here we're already 55 minutes into this yeah Iran's now learning never to F with Israel yeah and Israel is Allied the United States and you don't mess

(53:56) with the United States unless you want to get your plane orb'd away into another dimension uh no problem em glad you're here guys and thanks everybody for being here as well uh I just saw another good comment if this was a fake video how the bloody hell would somebody know the satellite info on the bottom left yeah exactly the satellite info in the bottom left the silite video that should have been enough that should be enough proof like what hoax videos like nr22 I didn't even know what the [REDACTED] nr22 or any NR

(54:23) meant before this like normal people out there like random kids and [REDACTED] they don't even know what N means National reconnaissance office launch like no one even knows what that crap meant before the fact that it says nrl22 which is the first launch of the cber system in 2006 like that should be like dead proof right there that we're looking at a real satellite video not to mention that the coordinates like if you put coordinates in there you would just have them be like 92.

(54:53) 3 or something like that you wouldn't have six decimal places they move accurately when the shift moves as well like it's real coordinates it's a real coordinate system that's not like somebody put random numbers in the bottom left it's real coordinates and real coordinate shifts accurate to six decimal places when it moves all the coordinates are moving realistically

and it's not like it just goes from one location immediately to the next location like you can actually see the little number switch as it's moving like that is

(55:24) that's already absolute proof the videos are real but for a lot of people they just need so much proof um oh another donation wow man you guys are on fire uh new nuam mua is that how you say nuam mua is that how you say that name guys man I'm so bad with names I know you don't like euphology God I can't believe I just called it euphology but it's honestly pretty hard not to link the technology that could be responsible the sightings going back to 1940s much further or do you think uh do you think this technology was reverse

(55:54) engineered so great question I get that on several podcasts as well I I'm on the record back in November saying this has got to be reverse engineered the **truth** is I started thinking this had to be non-human intelligence and then that only lasted about a week and I looked at that drone video like 10 times I'm like wait no I'm like this we knew what was about to happen here like we knew and then I started talking to the scientists and I was like okay this is us and then I thought okay we must have reverse

(56:21) engineered it and now I don't know anymore so what I've been saying on the most recent podcast is like the more I learn the less I'm sure about where this comes from now I'm thinking maybe we accidentally figured it out the same time where we learned how to split the atom and drop the bomb and this could go back to the Philadelphia Experiment in 1943 it could go back to the Foo Fighters and Nazi stuff going back before then so there's even a possibility in my mind that we've been just covering this up with the whole

(56:50) aliens thing uh and that this is just we've discovered this and that's just how we've been hiding it for like 80 years is just we keep talking about UFOs and aliens when it's just been us the whole time the **truth** is I have no idea I really just don't know could be anything everything's on the table aliens uh cryptoterrestrials ultraterrestrials future humans just it's a big scop everything that's that's the crazy part the more I learn about it the less I have any idea of what the

(57:18) nature of it is um and that's the funny part is that even if these videos are real it's not going to change anything in ufology because everybody in ufy just wants to know about aliens and this doesn't answer any of those questions it just it begs it brings more questions up like okay well the hell if we got some floaty freaking orbs plasma orbs that can defy gravity and have warp drive and teleport objects like what does that mean about the nature of our universe and our reality and where this stuff

(57:45) came from and now it opens the door to aliens be able to visit us so it's just going to get weirder chat that's that's the beauty of these videos is even if the videos are real it's just the answer is just the questions just keep piling up and that's what I want to like dig into after this is like you know if we can get an admission from the AO that these videos are real and we've got some crazy advanced technology out there then the next step is okay let's let's try to figure out where this all came from like

(58:11) this is this is pretty crazy I didn't know we would have floaty orbs that can do uh you know teleportation okay okay let's get ourselves copyright strided everybody so if you're watching the uh recording of this on YouTube you're probably not going to see anything after this because it's most likely going to get deleted uh but if you're watching live we can enjoy this I'm gonna go through a few Clips um and yeah Rob thank you very much appreciate say I like ashen's perspective stick to what you can prove

(58:45) stick to the facts that was the advice Florence to Changi gave me she was one of the MH370 initial investigators yeah I can't prove aliens I can't prove Atlantis I can't even prove where the plane went that's why everyone's like where' the plane go what happened to the passengers I can't prove any of that I don't know I have circumstantial evidence that says the plane ended up in Diego Garcia but I can't prove it I can prove I got two videos of the playing game warped away and I've got three

(59:10) different sources that corroborate two videos witness sighting and a Mayday call only reported in the China times um so I can prove that I can prove a fire event I just can't prove where the plane went and aliens are real or any of that stuff and I just don't I don't really care about AI whove been watching no I don't care about what the alien situation is I literally don't care if aliens are real or not does no bearing on my life it'll have no bearing on my life going forward unless we start to

(59:35) get in the Star Trek world and then there's like Klingons or something out there then that'll be pretty cool uh but no doesn't have any immediate impact in my life I just want free energy my man uh and so I'm just going to correct media box yes media box yes the videos are real the Drone is not standing still there's actually accur camera Shake because it's a real camera that we're looking at uh the clouds are not standing still either um and I'm just going to go ahead and prove just for

(1:00:04) people like media box who are like there's a lot of people out there that just are objectively wrong about everything related to these videos and they don't do any looking into them or whatever again I'm going to show you another video right now for Medi box and everybody else who think the P the clouds move or whatever you're objectively wrong the clouds do move in the Drone in the satellite video 100% they move not do they not only do they move they evolve they evolve okay you understand they're not

(1:00:32) fake H so here you guys go I'm going to show you for the people who think that the clouds aren't moving enough your whole life is about to change okay get ready for it hold on what so here you go okay guys are these fake are these clouds fake too what do you think media box are these clouds fake they're not moving are these clouds fake everybody clouds aren't moving are these clouds fake too what do you guys think where's media box hey Med media box are these clouds fake too do the clouds look like they're

(1:01:32) moving no so every time I get some idiot like the corridor crew trying to claim that the clouds move more I'm just going to show this video right here this is going to be the video I'm

going to show that proves that from from space from a thousand miles away or a thousand kilometers away over a 5-second period clouds do not look like they move this shouldn't be even controversial because you can literally just go look outside at your clouds and it's not going to look like they move I don't know why the whole Cloud movement

(1:02:00) thing is even controversial like you have to be literally brain dead to think that the clouds are going to be flowing by over a 5c period realize that when we look at the clouds in the satellite video it's only five seconds for each frame you think that the clouds are going to be flying by in a 5-second period you're looking down from a satellite bro a satellite in outer space I don't know what these people think man my God so are we good here the clouds don't look like they move this isn't I

(1:02:35) couldn't believe that was even a controversial thing it goes to show that the corridor crew are some of the dumbest [ ] on the whole planet they're not even VFX experts they're frauds they're 100% frauds if you follow people like the corridor crew you are an idiot find better Heroes find better people to tell you the truth I I could take on all the quater recruit at the same time their combined IQ is probably less than like room temperature combined they're total morons and Flo man I I don't want all

(1:03:13) caps I'm putting you in timeout man don't spam caps and stuff like that also don't tell me what to do as well guys um when you're raging in the chat and stuff like you're gonna get put in timeout I'm not I'm not Banning you I'm just putting you in timeout so okay I think we're done with that let's go back to our Joe Rogan thing here the joean exper go to the clips here okay and somebody asked another quick question can you give a brief overview of what free energy is of what

(1:03:50) does that mean for uh Humanity so free energy first of all you have to understand like how can these orbs be how do they even get energy when they're floating around uh the way this kind of played out is that we found Thomas Bearden and we found out that in order for there to be a wormhole like we see in the Drone in the in the videos you need to have an ether that's really what is required an extra Dimension and then once we found out about the extra Dimension we realized well the extra Dimension POS uh presents unlimited

(1:04:24) negative energy and to explain that you can look at the Casmir effect Google the Casmir effect right now Casmir effect is when you put two plates together the plates are going to attract to one another and when the plates attract to one another that's because there's a negative energy pressure between the two plates with normally you would think if I just put two plates next to each other nothing should happen they should just stay there but no put them too close and they they kind of go together one

(1:04:52) another this is the same idea of what Terence Howard we're going to review it here in a second the idea of the ether is it's IDE The Ether is like this negative pressure Zone that our reality is painted on that's why we don't see it because it's like a self-correcting mechanism and if you rip through to that then we're going to have this collapse right away and you can imagine

that there's several ways where you could manipulate that energy that we see there to produce unlimited free energy uh

(1:05:21) Thomas Bearden as well talked about it where you can configure a device that can use that energy by capturing the magnetic fields so that they don't spread out and then you can have a situation where your device is getting energy from The Ether and you're putting energy into it and then the total output of energy is greater than what's coming into it that's the idea of free energy so the idea of free energy is building a device that can extract energy from The Ether so to speak um that you can plug

(1:05:53) it in and it'll start running you can unplug and it can run forever Run Forever that's the idea of free energy and that's what this all leads to is that in order for any of this to work you need an ether and when you need to get the ether you have unlimited access to free energy um and when you think of negative energy don't think of negative energy is like some exotic thing uh it's just I don't really know how to exactly describe it very well but it's still energy it's just like the inverse

(1:06:22) pressure uh between our SpaceTime and whatever the fabric underneath it is like that hopefully this what we're about to show here should answer some of those questions but if not uh we will do more uh science streams on it and the **truth** is I'm still learning as we go as well I've been only I've only been looking at the science for like six months and we've already come this far so you'll be able to catch up pretty quickly if you're not sure um okay so I'm going to start I'm

(1:06:49) going to post some of these clips and you guys can ask more questions as we are listening to them so where do we start here okay 12 minutes we're going to start at this and sorry Flo for timing you out but I don't like when people are spamming me telling me what to do uh so do not spam the chat with caps telling me what to do or not to do if you can't hold the back then just don't post um okay so he talks about this periodic table is pretty interesting here I think we'll play it like right around here

(1:07:20) it's unwinding and you see there's a relationship that hydrogen so you you had figured this out at a young age I so this part here is interesting he talks about this periodic table you see in the bottom here and that the periodic tables we know it doesn't really mesh and that each element has a frequency and if you double the frequency or half the frequency then you are creating your other elements so he gets this idea of geometry being the basis so you could imagine it like this in fractals as Pier

(1:07:52) points out yeah the idea where like okay this is our base thing like two lines intersecting then maybe we make a triangle out of it then we make a cube out of it and then you keep adding to it and making more and more complex same thing could be true of elements that elements are simply frequencies uh and wavelengths that are increasing or uh um that are fractal I guess would be the explanation if you want to know what fractal is it's like dividing it or duplicating it that something Builds on the on the last I

(1:08:22) had already seen this this is this right oops I went too far's first rap is so tight that's the first one that Walter Russell did yeah but go back to the um the wiggly one this is how I saw it more so but as a Vortex but you'll see there's a relationship between hydrogen carbon silicone Cobalt rodium they're all bonded they're all sit as the middle point between two Noble G es so those things don't really exist it's only one substance now the problem is the first thing that we're able to perceive is

(1:09:06) hydrogen that's the first visible element because before it is too dense for us to perceive it you understand what I'm saying so this is kind of hard to track I'm going to probably skip past this but if you're interested in the sacred geometry stuff then here you go I saw a question related to MH370 I'm going to flip over right away uh why do you claim the debris could never have washed up in the east coast of Africa when all Maps show the currents in the Indian Ocean at possible latitudes of a

(1:09:33) crash area going west well I'm going to go ahead and **debunk** that in about five seconds here here I have an actual uh map that I've been using there you go what does it look like which direction do you see these currents going down here here's the crash zone right here these currents flow to the east the currents don't flow to the West you can go go go go go and you're going to find that all currents down here flow to the east it's literally impossible for debris not to have washed up on the western coast of

(1:10:04) Australia you can see here then it flows back way up here to the West towards oh look Diego Garcia is right there now look at where some of this debris is look at this one in South Africa down over here look at this one down here in South Africa how does a piece of engine cing a piece of engine cie this is like one of these pieces of the engine like this the side of the engine that do there's nothing sticks out of the water how does that get from this crash Zone floating all the way up over here around this doesn't doesn't was the shore in

(1:10:34) Diego Garcia somehow goes past here and gets down here to South Africa in 18 months that's over 3,000 miles away do the math literally impossible I mean when I say literally impossible I mean literally impossible most of this debris is literally impossible for it to wash up here even you'll look into it if you ask even anyone who's really investigator they will say it should have washed up in the western coast of Australia how can no debris wash up not one piece wash it up in the western coast of Australia there you go okay

(1:11:05) let's flip back okay but as you reach into the next octave the carbon octave and they call that the a **bisexual** tone because the carbon has two tones to it it has a negative side and a positive side the part where lithium behaves lithium is a is contractive brillium lithium I think he mentioned does he mention lithium again oh he does he mentions lithium ion batteries later on guys pretty weird uh so okay I'm gonna skip ahead because this one's not that exciting but anyway check into that also I didn't mean to be

(1:11:45) rude to you as well there but uh if you look at the stuff like some people really underestimate how much knowledge I have about this plane and the evidence like like when the

BBC guy came at me yesterday and this pilot like guys when I say I'm the expert at the videos it means like I literally know more than anyone on the planet related to the videos and I know as much about MH370 and all the evidence and everything than anybody else out there like I can stack up against any expert you want that's just as I not me being egotistical just

(1:12:14) the **truth** I've just spent that much time on it um okay so let's skip ahead to 34 minutes because now he talks about these stable structures this is really cool horizontally yeah it has four contractive POS because electricity is Seeking a higher pressure condition and forcing it in where magnetism is Seeking a lower pressure condition and spun out so the vortices those tips that's the magnetic field that's where they begin but it has an equal attractor and an equal amount of repulsion so if you go

(1:12:46) to what happens when eight bubbles me they gave me the patents to that I called that the tetron this is so this is the negative space in between eight bubbles eight bubbles this is so this is really interesting because he's basically showing this idea of the pressure differential between The Ether and our reality represented as electricity and magnetism and he's looking at electricity and magnetism is equal and opposite and which is interesting because when you look at the longitudinal waves longitudinal waves

(1:13:20) like a sine wave the magnetism is perpendicular perpend yeah perpendicular to the electrom to electricity electricity will flow like this and then magnetism flows perpendicular to it uh and they create a I guess I need to find a picture to make it make sense but um you get the idea here so when he he really I think that Terence Howard really sees it intuitively he sees the situation intuitively um and that's that's the thing that like I I know I don't I kind of he loses me a little bit but I think he understands

(1:13:53) and visualizes the universe in are very profound way it's a negative space where eight bubbles meet and you can scroll around and this is ignored when they're concentrating on straight lines completely cuz this if you look from the top I haven't violated anything it fits perfectly inside of there but this is the negative space where eight bubbles meet but you'll notice it has eight contractive poles but it only has six magnetic po six vortices so it has a greater electrical potential than a repulsion so so that's interesting so if

(1:14:25) you take like the pointy bits as the electricity and the in the indented um what's the word I'm looking for not inverted whatever the concave part uh as the magnetism then you don't have an equal number you have eight uh pointy parts and six indented parts that's the word I was looking for uh so he's saying that there the potential electric potential is positive that so maybe this is the strong nuclear force and the previous one was the weak nuclear force so I I was like okay concave yeah I

(1:14:57) called this the hunon after my son so I was like what happens when six bubbles meet if you'll go to the one right in the center now you see that they has these huge bubbles fast moving but there's six strong spheres that's going around this but the greater attractor has grabbed the two weaker attractors and so I mean and just we're going to be critical that's fine so

dder says Terence Howard is a read his paper on  $1 + 1 = 1$  I actually that was the part I think I agreed with him the

(1:15:30) least on was this idea of like 1 Time 1 doesn't equal one and there's no you know that I think that's a little it's a little bit out there um but I do like the way that he visualizes the universe and this is one of those things too guys where like just because you don't agree with somebody on one thing doesn't mean you should discredit everything they're saying um you know I think that we should be able to be critical and be open-minded about people's opinions from the perspective of how he visualizes the

(1:15:56) universe and the uh The Ether and the and our reality and the electromagnetic forces it feels pretty accurate you know intuitively and this looks just like a photon and guess what it has 30 poles what is the speed of light 299 792 458 something they rounded off to 300 300 million kilometers per second squared but if you look at it from the top you'll see see that I haven't violated anything this looks like what happens in nature so I was like okay so they gave me the patents to this but you'll see that there's six

(1:16:34) unaccounted electrical poles to it so I was like what happens with 12 bubbles meet if you go to the one right next to it so yeah anyway this is pretty cool I just like these visualizations I don't really understand it I don't understand it all but it does seem interesting because it's the idea that like do we even understand what uh like an atom really looks like you know we perceive this idea of an atom but what if it's like really geometrical shapes if you were to really be able to look at it you

(1:17:05) know uh we can't like see an atom but we we we have these models for what they would look like whereas Terence Howard I think is actually trying to explain it you know in a way that people can understand what it would actually theoretically look like and yeah some people say although maybe he's logically right you know what if one times one does you know why does  $1 \times 1 = 1$  and I don't know it's at the end of the day I think it's just a matter of interpretation and your perspective I

(1:17:33) didn't really agree with him on that part but uh whatever so let's look at the The Ether and the next part 46 minutes in uh all other possibilities and you root it down to one thing so that means going through the whole universe to answer one question and that's the problem with probability that's the problem with the Heisenberg uncertainty um uncertainty that's the problem with schinger all of those were just these probabilities because they had taken The Ether out they forgot the electromagnetic wave MH it had to have a

(1:18:12) medium in which it followed on that is very profound he is dead on on that all waves require a substrate a wave in the water requires the medium the water a sound wave guys sound waves require air if you go to an outer space and you try to yell there's not going to be any sound sound waves require air waves in the water require water is the medium what is the medium for electromagnetism what's the medium for it we can predict we can shoot electromagnetic waves radial waves through space how what's the medium

(1:18:55) the medium is The Ether it's The Ether and this is the part where sound electromagnetic waves are longitudinal Through The Ether the same way a sound wave is longitudinal through the air pretty cool huh it had to have something in which it was moving on they don't exist in isolation no they do not and it cannot be the cause of its own action this guy feels like the cat Williams of science right where he's just like hey guys so there's an ether and uh sacred geometry is the answer to the building blocks of the universe and

(1:19:35) everyone's going nah this dude's crazy next thing you know like you're gonna have Neil deGrass Tyson talking about how there's an ether on uh you know some stupid TV show or something like that you're gonna be like oh turns out that we just got peed you know we just p'd The Ether an effect can never be the cause of the action the chicken cannot come before the egg cannot come before the chicken the chicken has to be there first in order to lay it it has to mate and what Einstein left out was the equal

(1:20:07) and opposite of magnetism so when he back to Neil deGrass when he wrote his response to my paper and he said if you have any other questions you're going to have to see somebody else and he wouldn't take my calls anymore I was like okay so I wrote the book based off of w those responses and I reached out to another guy um Dr David Tong so anyway so that's an interesting quote there also whoever Mario is Buddy like don't make me embarrass you my man just quick quick uh free advice right like if

(1:20:41) you try to talk down to me or condescend me it doesn't matter how many phds you have or how smart you think you are it's not going to go the way you imagine man people better than you have tried and it always fails it's funny because I I always warn people and they always uh every single time they double down every time and every time they get embarrassed wait was Mario that guy who was arguing with us on in Twitter the other day telling you man it's gonna get dunked on okay so let's go to another

(1:21:10) minute so he talks about the uh the mikkelson uh Michaelson Morley experiment here as well in a second which I just thought was wild that they everything that they had taught was this and they gave the best understanding and interpretation that they had of it but it was all a lie because they didn't understand how it worked I think think it's like here I don't know where it starts maybe here with such vitro that I I was like oh okay maybe I need to walk away from y he made me feel bad for him right here that when he says

(1:21:47) that vital part right there that's where he was talking about how Neil deGr Tyson like pooped on his ideas and he just like wanted to give up that feels bad man I feel really bad for him there like dude I I he really humanized himself in that moment where he's like yeah Neil Tyson like he was my hero I saw him on Cosmos I wanted to look at my ideas and he just crapped all over them damn man Neil Tyson you're a piece of [REDACTED] Neil deGr Tyson even if I didn't agree with Terence Howard on his one time one

(1:22:18) equals two or whatever stuff like so what still listen to the guy he's obviously pretty smart guy David Tong from Cambridge a professor of Cambridge did a video on on on physics of

the world and he said it's all a lie and he explained that there was these 16 Fields you know that they everything that they had taught was this and they gave the best understanding and interpretation that they had of it but it was all a lie because they didn't understand how it work why because the Michaelson morle experiment so here comes the Michaelson

(1:22:54) morly experiment also what who just said that great thing not having a formal education or brainwashing might make it easier to understand it's actually I think somewhat true I was talking to my buddy Dave Rossi you know he's a DOD contractor and engineer and I was like man I wish I had known known you years ago or known about the science years ago I would have studied electrical engineering he's like it might be better that you didn't learn it earlier because a lot of people you get indoctrinated

(1:23:20) into this idea that this is the way it must be especially when you're in school like I think if Mario is that guy that uh you know that was in Twitter I don't know if he was or not but there was this guy in Twitter that was talking about oh I go to a prestigious School therefore I know everything and you don't like that's the exact kind of hubris that prevents science from advancing you know because obviously we don't know everything because we don't know what dark matter is we don't know what dark

(1:23:47) energy is there's a bunch of stuff we can't explain at all we have no unification Theory we can't explain uh Quantum field theory in terms of why it's not represented in general relativity and yet they Proclaim like they know everything when obviously we don't obviously something is wrong this is why we can't solve anything because we are so hu we have so much ego as a species that we can't just go back and think well maybe we messed up somewhere back then maybe when we reduced heavy

(1:24:13) sides equations we screwed up we know gravity waves are a thing we see them with ligo we can see gravity waves so the question is why can't we manipulate them we know they're related to electromagnet ISM why can't we manipulate them it should be obvious we messed up when we reduced Maxwell's equations and the problem is that when you learn that heavy side wrote it correctly and it's fine that we reduce 20 equations down to four then you blind yourselves to the **truth** and that's what happened to that

(1:24:42) guy and then instead you become condescending and cocky about it instead of just admitting you were wrong and learning science the correct way from 1887 where they were trying to Define The Ether or the Earth in this etheric space problem was they kept with Newtonian laws so they thought the ether didn't move they thought it was steel but there was another guy lore that did it in um early 1800s and he went off of Thomas Young who influenced the forel lens came you know influenced Fel came up with the Fel lens

(1:25:20) but he talked about a a moving ether that had opposing vortices so there's two major uh Revelations related to the Michaelson Morley experiment one was that either there is no ether or that The Ether was moving with the Earth and they just moved away and said okay well we just we're going to move away from The Ether because Einstein's general relativity came

about and we said oh well that explains it better this is where we messed up we got to go back to some of these old science Concepts we got to

(1:25:53) bring the ether back we got to realize like wait the Michaelson Morley experiment was 1885 or how sure how confident are we of those interpretations and that's why I showed the experiment earlier which I'm going to go show again right now real quick um because this experiment and it's only two minutes long this cast doubt in on the entire Michaelson Morley experiment I was able to find somebody sent it to me whoever if you're the person who sent this to me thank you I spent like an hour editing

(1:26:21) it down to two minutes but it's pretty Prof found uh Martin goruck was the guy that had posted it or this the his video that I found um there it is so let's watch this so here's the setup it's a very simple setup there's a laser there's a mirror here it so we spin around horizontally there's nothing nothing happening here in the in The Fringe I don't know if the sound is on so you shift it 360 Degrees spinning around absolutely nothing happens the interference pattern stays exactly right

(1:27:18) there doesn't move so you could argue that this is equivalent to Michaels and moley where they looked at it they did their experiment and they realized oh the interference pattern is not moving so this means that there must not be an ether you should detect some disturbance if there's an ether so they switch it around and then he says okay well what if we don't do it horizontally what if we do it vertically now why is vertically important because there's more gravity at the surface of the Earth than there is above now in

(1:27:53) this case of this experiment the difference in gravity between the top and the bottom is basically negligible uh because it's just not that far of a distance so I wouldn't expect there to be a major difference here but what happens look at it boom it's it's moving it's moving a lot look at that look at that look at that movement why is that happening and so it actually stops at two points and then he shows it because you can actually see it goes one way and then it goes the other way and the

(1:28:53) reason why it's doing that is there's two points on the on the 360 degree rotation that are like the equilibrium points and where are those equilibrium points they're exactly where their mirrors line up with the flatness of the earth wild get ready I'll show you right there so this is what he's saying is the parts where it stops moving are right where it perfectly matches where the mirror is this is the mirror right here the mirror right here the mirror is perfectly parallel to the flatness of

(1:29:39) the Earth at the part where it stops moving whoa when I look at this experiment I go we are missing something here this is a very very interesting experiment one of the most interesting experiments I've ever seen up there with a Double SL experiment I can't believe this has been ignored why has this been ignored who can explain this so I don't know what 11 to 11.

(1:30:27) 5 Peaks is but sounds like a lot I mean we can literally just see that thing moving

around right so this definitely makes me wonder about the idea that maybe there's an ether okay I'm gonna skip ahead of that I don't know if you guys can even hear this hopefully you can oh yeah you can't hear it okay uh sorry I must not have been sharing the right way so anyway he was saying that there's like 11 Peaks there so it's been a lot of change I think I explained it well though uh for you guys so if anyone can

(1:30:58) explain that please let me know no I'm not a flat earther I don't everybody everybody wants to try to say I'm a flat earther God the flat earthers hate me as well because I said that Tesla's right guys and that they're like well Tesla's right that means Einstein's wrong no they're all right everybody's right Einstein's right Tesla's right everybody's right uh okay let's do let's get through these there's a few more Clips we're going to do okay so let's finish this

(1:31:21) Michaelson Morley oh I didn't learn all of this stuff until I was getting ready to have conversations with people cuz I was looking where has this work been done but if you look at at um gioro Bruno's work it looks a lot like my stuff but he still had okay so we already did the Michaels and morle stuff and how the potenti was misinterpreted then he talks about the real world implications here somewhere around here the people that want that our entire world economy is based off of the politicians and the authorities that

(1:31:55) give the politicians their accreditation and those authorities those universities are all based they their entire curriculum is based off the platonic solids and our world economy is based off of 1 Time 1 equaling one you think they [ ] with your I don't know what plutonic solids are chat and I'm too afraid to ask but remember yesterday the BBC guy and it was telling me Oh just write a scientific paper write a scientific paper we're conducting a criminal investigation into a missing plane but who am I who's going

(1:32:31) to publish my scientific paper about my missing plane that gets warped out of the sky like I swear to God some of these like BBC CNN brain people are [ ] idiots they have no idea how the real world works write a scientific paper did these guys don't even know how it works you have to have somebody like they're not just going to be like I'm a random guy they don't just take scientific papers some random dudes even Salvador Pas is a Navy engineer he couldn't even get anybody to sign off to

(1:32:59) publish any of his papers like they I swear to God like these people that are out there and just think that the TV tells them the truth they have no idea how the real world works at all none at all it's crazy phone oh and the truth here is that this type of Technology free energy all this stuff that he's describing has huge geopolitical and socioeconomic impacts giant impacts to the world uh that's why I'm going to do a quick shout out to the cosmic Summit that I'm going to be on next month

(1:33:34) Cosmic Summit you guys want to meet me I'll be there hanging out uh gonna party with them I'm gonna hang out with some of the smartest guys some of the people that are going to end up changing this world uh it's going to be awesome guys so check out the cosmic Summit I'll post a before I go offline I'll show you guys where you can sign up if you want to either uh get

an online pass or if you want to show up in person let me see here let's go to the next thing Saturn yeah you know who owns the

(1:34:01) newspapers we're not going there um okay let's go to 118 so this thing about Saturn was really cool right here there it is where is it somewhere about here you guys can recreate planets yes this is a this is a particle simulation of the physics involved in making of the planet Saturn so this is a particle simulation in the making of the physics of of Saturn and so you can see the like how the Rings would form out here and then the crazy part is in the middle here you can see the hexagon and there's a real hexagon so this is a

(1:34:42) simulation that matches how Saturn really looks if you were to look down it you see a hexagon on the North Pole and everyone wonderers why is there a hexagon well when they model the electromagnetic uh theory that he's talking about it is how it looks like he I mean it's a it's not like proof but the **debunkers** would say it's proof they'd say it's a perfect match and this means it has to work this way but it's strong evidence like all the yeah so the the heavier particles are creating the the red and the green

(1:35:15) can I pause this for a second yeah so is he saying that just by doing these calculations it created the exact form of Saturn including the Rings just the exact form of it just with so you change the angles of incidence that these Lynch pins cuz remember each one of these has these are opposing vortices so there's 12 vortices to this that that are opposing so once the angles of incidence change you can you change the motion and pressure conditions you can now change the condition I truly think that Terrence Howard understands it

(1:35:48) intuitively but he struggles the same way I do where he's not classically trained so therefore he doesn't know like the equations or what have you but he understands it intuitively uh because even I'm losing him a little bit there but uh the pressure situation I think he's definitely on the idea that gravity is the the differential and pressure between The Ether and our reality I think that's I think that's pretty much dead on and The more mass there is then the more of that pressure effect you're

(1:36:14) going to see um that's how I think it potentially Works makes a lot of sense to me or the crystallization it all so I was saying with the periodic table now because we have the angles of incident material engineering can now separate the space between carbon and nitrogen or carbon and Boron and and have the same elements of titanium vadium chromium magnes and okay um somebody earlier asked me to send me a large file no I don't want any large files uh and if you're going to send me something please tell me what

(1:36:49) you're trying to send me ahead of time I don't want to play secret games I don't want people to tell me I've got something important to you just tell me what it is uh I don't it's no offense but I have people that want me to look at all their videos people that want me to investigate their cases all this stuff I guys I'm busy I'm I'm booked up uh if it's related to the case I obviously want to know what it is the best way to get information to me is join the Discord and post your

(1:37:14) information publicly in the Discord not direct message it to me post it publicly in the Discord in the evidence Channel if it's related theories Channel whatever tag me on it in there tag my name in there and I'll take a look at it oh Thomas beard and documentary on The Ether Tech are large files yeah you should uh and again I I can't take large files my emails are full um but if you post in the Discord post links to where it can be like the Dropbox in the Discord that would be the best way to do

(1:37:43) it so once again Discord is the best location for all that stuff I will post another link to the Discord right now in case people didn't get in so next clip we only have a couple more clips and then we're done for tonight uh where is it sorry I took some notes okay The Ether the we're gonna talk he talks again about the ether right about here what they did with the Michaels and morle experiment because they could not get out of the ether they couldn't wait let I'm me go back just a little bit

(1:38:26) and then you compare them after you you see it so  $a \text{ over } x$  is equal to  $B \text{ over } r$  \*  $b \text{ over } r$  is the result or the change between them  $B$  is the change that occurs  $r$  is what fraction or the  $x$  that you use in order to get back to a or to convert it to  $B$  what they did with the Michael and morle experiment because they could not get out of the ether they couldn't step outside of The Ether because it's everything around us so so that's another way to interpret it so I was talking with Tom Monto and he was

(1:39:04) giving some feedback on the video that I posted and he had like a link to Wikipedia that argued that like well the length where the light was transmitting uh is shorter it gets it's scrunched down but there's also just the this idea that the ether is everywhere that the reason why you're not going to see a difference is because the ether is simply isn't a there's no ether wind that's not how it works the idea is the ether is the fabric you know so the fabric of your painting there's no wind

(1:39:33) on it you just paint on it so that part like maybe we just need to change our perspective of what the ether is and how it interacts with our universe maybe that's the other way the Michaelson morly experiments wrong and that's why I think that people need to be a little bit more open-minded we need to look back at some of these things that we threw out before and that we will find that this explains Dark Energy maybe dark matter as well maybe it'll explain virtual particles for us virtual particles I think is the most silly

(1:40:01) Concept in the world oh it's the quantum fluctuations in spa in the vacuum or the virtual particles okay well where are they coming from they're coming from nowhere they're just coming from nowhere people I had somebody literally out there going yes there's there's no there's no latent energy but there is energy and I'm going well what is it where's the energy coming from it's coming from nowhere that's what what do you mean it's not how things work they couldn't tell a difference whether they

(1:40:30) saw no result no change so they assumed there was a void that there was no ether there and that's when particle physics took off lorence lorence a great physicist that everybody

loved entered a paper in 1904 where he was continually explaining The Ether the same way that Maxwell all of his the came off of their being an ether but he was still limited by Newtonian laws and Loren Loren's Transformations frame dragging uh I think I think Loren maybe that's not the same but uh Loren Transformations and then the Maxwell

(1:41:08) believed in The Ether that's pretty cool so again Maxwell like seems like Maxwell was on it guys and yes PBS SpaceTime is awesome that's how the only way I know as much as I do is before this I used to watch all the PBS SpaceTime things that's where Quantum decoherence came from uh double my understanding double slit experiment if you guys are interested in physics and you want to hear it from a like just you know in a layman's terms listen to the PBS SpaceTime uh YouTube videos watch all of them you'll get

(1:41:39) caught up pretty quick the column force of opposit attracting I think he means kums Force there but he calls it columns Force so he's he's name dropping all the same stuff Loren ether Maxwell well kum's Force kum's law guys when I'm talking about the or orbs converging I'm looking at kum's law kum's gauge the positive is the things that are alike that attract but he believed that the ether was still and space was flat and so SpaceTime or Einstein relativity came as a result of them taking The Ether

(1:42:17) away I there's I he's saying all the same stuff all the same said no wonder so many people were pinging this to me today like and yesterday like this Terence Howard said everything that we've been saying and we've been saying it for months and months and months I didn't realize he was so on it so once again people will say like what do you think about Terence Howard I don't think I don't like what he says about one times one so what I don't like what Dr Greer says about beu from the Andromeda

(1:42:47) galaxy doesn't mean he's wrong about the technology he's 100% right about technology I think that Terence is 100% correct about The Ether I think he understands and dug into the science similar to how we've dug into the science and come to the same conclusion Maxwell was right The Ether is real it's out there and he just takes it a step further and he's trying to explain it from the perspective of um from the perspective of sacred geometry which is great I'm not going to do that because I

(1:43:15) don't care that sacred geometry is the cause for it I just want to know how it works I just want to know how we teleport an airplane from one location to another location just I just want to know how we create a wormhole guys I don't care if it's sacred geometry or hexagonal shapes or tetroid or toids or any of this stuff doesn't matter me same way I don't really care about aliens I just want to know how do we make that thing happen how do we teleport that plane you show me how to do it and I'm

(1:43:45) happy and for 100 years we've walked down this particle physics phys physics world that's all theoretical and here I've patented these wave conjugations now we talking about phase conjugation wave conjugation too he's also talking about phase conjugation now so he talking about phase conjugation he's like having your waves perfectly overlap and cancel each

other out either constructively or destructively like uh Dave Rossy said have the waves either make love or make war when they're when the waves are

(1:44:20) fighting you get an explosion when the waves make love you get phase conjugation I mean it makes logical sense right if you have two waves you get constructive and destructive interference it's it's the the math and the science isn't that complicated wow that is the ether is the contraction of the E and here's a good point that ma says just because if you repel gravity and go at infinite speeds what you perceive is teleportation could just be high speed yeah it starts to get really weird because also you have

(1:44:56) frames like relative frame reference so yes in theory I mean teleportation literally is in a sense just high speeds the difference is that you can't move the object at high speeds we know that I can't move at the speed of light I'll be ripped to shreds but if you make a bubble around me then you move the bubble then technically I'm moving at a high speed from the outside perspective but from my inside perspective I'm not moving at all I'm just sitting there like a conveyor belt imagine conveyor

(1:45:24) belts pulling you along that's what's happening with warp drive the orbs are on a conveyor belt the conveyor belt is pulling them forward they're not walking they could also walk if they want but they're on the conveyor belt being pulled forward ether and the expansion of it and on top of that the proof of it was I've been able to build new industries from it if you go to um okay so we got that one pretty cool yeah like the stream guys we've been guys popularity of our CH our live streams have been

(1:45:55) going up and up and up if I do end up losing my job we'll do like long live streams and it'll be fun uh okay 145 is the last one so this is the last one I had the the the second half of this isn't as as fun the first two hours is the best um I mean the rest of it's fine too I I watched it all earlier today so he talks about lithium ion batteries randomly here somewhere around 145 let's just go to like here doing there's go to the very first video there's four in a row on it oh that's

(1:46:28) how it came over to you well let's see which one this is this is four of them that's going to come together to pick up a barrel what what's powering them what is this um right now they're we're we're going to use hydrogen fuel cells but I have another system you know that I was going to talk about in a second but um it's an unlimited source of power he just said unlimited source of power what unlimited source of power you know what's weird about this when we just watched what we just saw there

(1:47:03) where these objects were converging remember the letter to Ashton Forbes the letter to Ashton Forbes says that you can take a simple structure and you add upon the structure and you can have an unlimited power source and now Terence Howard's talking did Terence Howard write the letter to Ashton Forbes Terence Howard if you're out there and you wrote the letter to Ashton Forbes let's talk about the plane yeah it's pretty weird so hydrogen fuel cells or you can use lithium batteries at I'm sorry

(1:47:35) what he just talked about unlimited power and then he just dropped or you can use lithium ion batteries what uh H interesting interesting interesting we've got 487 pounds of lithium ion batteries on board our plane that just disappeared now I'm actually starting to wonder like maybe there is a situation where the batteries are somehow connected to what we see happening to the plane maybe they literally are absorbing the energy out of the batteries in order to produce what we see happen to that plane pretty weird pretty damn weird

(1:48:13) guys so I think that's the last part what's is what are those is is that like a are those like propellers yeah those are props but okay but right there what we have right there is um uh it's it's a it's a pitch the uh okay well that's good enough yeah he's talking about other ways of producing energy which is interesting because somebody else earlier today I want to show you guys this let okay we're done with this let's go move that somebody found this weird sidekick which is cber which is some kind of it's

(1:48:54) this is not same as cers this is a different cber this is some kind of government contracts website and this part here is very interesting this creates a barrier to deploying such systems which explains why the iot hasn't lived up to the lofty projections of trillions of devices utilizing proprietary ultr low power IC designs developed at everactive specifically for batter LLY less sensors we built a completely self-powered sensing systems that do not require batteries or maintenance can be deployed nearly

(1:49:34) anywhere and unlock new data systems that generate significant value for a customers these people are developing sensors like for satellites that don't require batteries what how how is that even possible makes no sense whatsoever I just read that I'm like wait so you can make you can make a satellite that has no battery system whatsoever on it how's it where does it get energy from How does the energy get stored what is this what is this DOD cber what is this man weird so anyway I just thought that

(1:50:15) was a weird little thing to share with you guys uh and especially when I heard that thing with Terrence Howard about the you know being used batteries for some kind of limited power source pretty bizarre guys um I thought solar as well maybe but even if you have solar power you need to have a battery to char put the to put the energy into if you have no battery then you must be producing the energy on demand anytime you want the satellites aren't always in the Under the Sun huh very unusual I thought um okay any other questions

(1:50:50) before we close out yes I did have salvator Pas on I I still don't think the orbs care about the batteries I just I can't quite connect the orbs to the batteries I just think the batteries related to the fire uh and I think the batteries had to be set on fire intentionally it just it makes the most sense it's kind of I mean it's hard to wrap your brain around but yeah some people think that the batteries were connected to the orbs I don't know I don't fully agree but whatever I again I can't know unknowable

(1:51:20) stuff it's already wild okay any last questions before we drop out for tonight guys Julian Assange day today nice feels like tenant that's funny you bring that up because when it

comes to the time travel I've been told by people my source is that the way the time travel works is like tenant or like the show dark where it's like all deterministic where like if you traveled in time then you always traveled in time weird uh what time does Ashton usually live stream usually around 8 o'clock uh tonight it was a little bit

(1:51:58) later because I was finishing that that uh watching that so usually around 8 8:30 uh sorry I don't really have like a set schedule but it's usually around 8 o'clock uh roughly four or five times a week just depends the problem is I have my job right now so it's hard for me to commit to streams every night tomorrow night we will dig into the science so we will look at these scientific papers that I have up right here I'll show them again so the scientific paper linearized turbulent fluid flow is an analog for

(1:52:30) linearized general relativity we will look at that halp off paper we're definitely going to start looking at some of halp off stuff Hal Poff is definitely been getting discredited and he doesn't deserve it uh electromagnetic flux potentials for energy density and power flux this is basically uh this this paper might as well say how the Maxwell equations were incorrectly reduced I think that's pretty much what this paper says this one here for the turbulent fluid flow is basically explaining how you can use uh gravity

(1:53:01) manipulation in a three-dimensional space and potentially how it connects to The Ether then we're going to look at this one here uh counterfactual quantum teleportation protocol which I think might be like the essentially like the coding of how you can uh you know teleport an object from one place to the other potentially using phase conjugation turning into a wave and saying okay now you're over here pretty cool yeah you can rewatch The Stream if you want uh we'll probably look here's the Loren Transformations I was talking

(1:53:36) about maybe it is frame dragging lorence frames dragging we're probably going to look at a little this because there's so much to learn and then I want to look into the experiment demonstrating the effect of light on gravitation there's definitely a connection between between light and gravity and that might be a way where we can make this stuff happen so we got some papers to dig through we're going to have a lot of science streams coming forward I'm G to try to read these and have some notes ready to go for you guys

(1:54:05) uh and then yeah so I'm G to retweet out uh the the space there's gonna be a space between ma love okay so that's it for tonight guys I am G to SP uh tweet out the space for ma love and Dustin I think it's going to be on Wednesday I'll go do that right after the Stream uh check out the cosmic Summit I'll pull up a link for that real quick as well let me just see how many people we had join as well I'll put a new Discord invite just in case uh I'll do a brand new one here in case we hit the

(1:54:47) max so if you want to join there's a Discord invite you have to be in the YouTube channel to see the Discord invite so here is the cosmic Summit I'm gonna start promoting the cosmic Summit every day for people uh Johanna James Randall Carlson Hugh Newman uh I don't know all the rest of these people I know Jordan's going to be there Robert shock is g to be there

uh Bob Green is going to be there Malcolm Bendle is going to be there I will be there it's going to be fun I can't wait to listen listen to a lot of these guys

(1:55:24) and ladies uh that are there you guys know I SIM for johanah J Johanna James uh she's like you know what Archaeology or something all ancient Earth stuff pretty cool um so it should be sweet guys yeah I'm glad you guys like it here's the link to the cosmic Summit if you guys want Uncharted guy which one's that which one of these guys Uncharted this guy Scott Walter I don't know who a lot of these people are I'm going have to do some background on some of them okay guys uh that's going to be it

(1:55:53) I'll play us out with some music there's a couple new songs somebody else sent another new song I haven't even heard this song yet so I'll play this one first and then we'll go to some of our other songs that we've already played in the past okay uh where is it how do I get to my bookmarks oh they they are okay bookmarks BL oh also real quick this is how I think we should perceive gravity if you look at this and you this if you imagine gravity like this this is where you can understand that what we're

(1:56:31) seeing here is the pressure differential between The Ether and SpaceTime The Ether and our reality that's what like you look at this you go oh that's what gravity is if you look at it from this perspective this helps you understand why there's an ether 100% okay now where's oh wait oh no I just closed it oh God okay sorry let me pull it back up oh skyfighter news is all over the uh the Amy uh esgd stuff the government definitely doesn't like that everybody's talking about Amy esgd okay uh wait that's the other song

(1:57:11) where's the new song oh here it is here it is here it is wait I don't hear anything oh there it is okay new song everybody here we [Music] [Applause] go out in the fields where the skies are wide talking about a journey through the cosmic ride Einstein and Thorn they set the stage for trip through time across the Space Age worm holes connect distant points in space traversable paths to a far off place no black holes pull no crushing weight just a cosmic tunnel to a distant gate worm Stargates negative

(1:58:08) energy travel through the cosmos it's our destiny MH370 where did it go bow Triple 7 through a wormhole we're talking Wormhole Stargates negative energy travel through the cosmos this our destiny 370 where did it go trip through a [Music] [Music] wormhole exotic matter negative energy the key to stabilize the Wormhole for you and me Quantum vacuums squeeze so tight creating conditions for this wondrous flight static fields and lasers in the lab they play generating forces in a new kind of way gravitational

(1:59:05) squeezing cast Force negative zones we need to stay the course talking worm Tates negative energy travel through the cosmos it's our destiny IM 370 where did it go B Triple 7 do a wormhole FL shell formalism play so fine spherical geometry we realign energy conditions that we must defy for a stable Wormhole let's give it a [Music] try on forces balancing the plates creating the throat open the gate damn that is a fire song Garfield guys E8 Garfield I had never heard that yet E8 gar Garfield uh thank you very much man

(2:00:02) you're gonna get a follow just for that uh Awesome song that's that's amazing I love how talented this community is incredibly talented uh Regina I can't do 360s I have a literal microphone plugged into me and a cord here I can't do 360s so I won't be doing any 360s I literally can't do them last time I did that my microphone went flying on the ground so we're not doing any more 360s sorry um yeah the the music's amazing okay so I'm going to play the other music as well I love that people are

(2:00:32) making the music guys this community is so talented it's crazy how talented this community is so where's the other one this one right here Dansby credit to Danby Jones you get a follow as well [Music] oh we have secret here can't where did you go lost in the night no good just fin from way they all say [Music] in mopic waves worm holes in space hidden te secret race drone satellite Li **truth** so clear buers

(2:01:41) try **truth** government running hiding from the eyes governments they all know 637 where did you go where did you [Music] go where did you go where did you go where did you go [Music] where did you go yeah these songs are incredible guys I just I want to be known that if I get taken out if I get Amy esed or whatever or boinged uh **I want you** guys to play those songs in my funeral those are amazing **I want you** to play every single

(2:02:43) one okay guys have a great night I'm gonna take off uh we will get another um check me out on Twitter and uh check out the emerald interview tomorrow I've got some other big podcasts coming up as well I got to do some replies I got to retweet some stuff and I'll play you guys out with uh we'll play out one of Heather birdy songs guys peace everybody love yall peace MH 370x later wel welome step right up cre or to a rock withs like who needs you buckers we be be through space while they drive

(2:03:18) that CL a b I'm a fall B investigation is legit we these buckers get St off with the B split oh no y made me but what doesn't know best than the corridor crew while the fies are a mess who knows where this all goes bless the sky and those below but liars and deniers can suck my black hole y'all don't come at me bro be a for B I'm a fall B this investigation is legit the the buckers can step up off with the bull [Music] [Music] bit Play We meant to fly PLS ain't supposed to fall from the sky but if

(2:04:15) they do they'll leave behind more than are to ples just be flying I know you think I'm lying the USA Baby hiding the **truth** and I ain't buying ples we meant to fly CR L supposed to fall from the sky but if they do they'll leave behind more than P are to they'll leave behind more than you think I'm ly the USA Baby hid the **truth** and [Music] I ples they're meant to fly planes they supposed to fall from the sky but if they do they'll leave behind more than a

(2:05:21) pce are to I a just be flying I know you think I'm lying the USA they be hiding **truth** and I they'll leave behind more than a piece of two they'll leave behind more than a piece start

The MH370 Challenge - Joe Rogan Letter Part 2 - YouTube

[https://www.youtube.com/watch?v=IfyHa\\_FcFjQ](https://www.youtube.com/watch?v=IfyHa_FcFjQ)

Transcript:

(01:24) Rock step right up ask cre or up to a rock with FS like these who needs your buckers will be be through space while they TR that CL a b I'm a fall B this investigation is legit buckers get off with the B spit nothing doesn't know best than the corridor crew while the series are a mess who knows when this all goes bless the sky and those below but Liars a deniers can suck my black hole yall don't come at me bro be a be I'm fall be this investigation is legit the effects these buckers can step off with the bull

(02:07) [Music] spit out the SWAT buing all the bells out the I just hit the L with the Box had to put the sck in the Box P the whole damn I'mma get lazy I got the Mojo deals we been traing like the 80 what up chat how's it going wow how was that you guys like that yeah copyright strike right away probably I don't know it was like 10 seconds hopefully not guys uh hope everybody's doing great tonight uh hope you enjoyed our new song uh we've actually got two new songs that we're gonna be premiering tonight

(02:51) because I'm not holding back we got some amazing stuff uh for you guys tonight thank you guys for being here uh appreciate it all FH 370x all Forbe uh gemap good to see you as well in the chat gap's been hanging out with us for a long time it's funny because I was never a streamer and I would occasionally watch streamers years ago and I always wondered like do they recognize people when they see them in the chat frequently and not only do I recognize people in the chat but I recognize people from months ago that

(03:23) date back to like the early early investigation uh so pretty amazing uh it's it's been guys for the people that have been hanging out wow Anthony whoa \$37 thank you very much appreciate what you do hope for uh a future where we can all come together in crowdfund an energy project or on a mission yeah I agree man um cheers uh this is uh apple juice cheers guys uh yeah we're we're having a good time tonight we're hanging out we got some updates tonight we got uh uh we got an update on the challenge that I posted

(04:04) today we got an update on some uh minor Twitter drama some minor debates out there with a BBC uh weatherman and a B7 pilot I've got a new plea to Joe Rogan I thought about it I have a deal that I think everybody's going to be able to agree to uh including the debunkers maybe Joe Rogan would be interested um and everybody I I think on our side we'll be a little bit a little bit scared but we'll see it's going to be um it's going to be interesting so I think that we're we're uping the stakes

(04:38) we're getting serious with all this I want people to know that we're serious that this is a serious investigation that I'm willing to throw put it all on the line put my personal reputation

put my personal well-being put the case on the line put the MH370 videos on the line put it all on the line that's how sure and confident I am of the evidence in the investigation my abilities to debate any expert out there so I think we're at that point where we just have to keep making noise keep escalating it up and we'll

(05:15) hopefully get to a resolution that we want at the end of the day we're just trying to get the **truth** no matter what you know that's all we're trying to do um so first let's start with some uh relative news here uh so let me find the picture oh boy the sign the four orbs sign is going to be coming up soon hey thanks Dolores yeah there's uh I think the blurry creatures is going to drop I think that um man in America I was on with him as well uh a couple other people have asked me actually quite a few people but um I'm

(05:50) being somewhat selective uh at this point just because I don't have infinite time uh but we're trying to get as many uh do as many podcasts as I can do there within reason uh now the four orbs sign you guys ready for this I have exclusive premiere of what the four orbs sign is going to look like we got this is this thing is going to be fire I can't wait for this to come here we go let's share this boom look at that oh man oh man that's going to be sweet look at that can I make this bigger

(06:31) uh yeah look at that that is going to be nice chat wow I love the rectangle background as well I think the rectangle background was definitely the way to go with this so we're gonna have a dope sign I'm GNA put that over here I'm going to rotate my thing a little bit so it's got more depth to it it looks huge too this is probably 35 or more inches wide so it's like the the post you see behind me here this is uh I think 31 in so that's even going to be wider than what you see behind me there so that's going to be uh

(07:08) pretty awesome dude I'm excited and shout out to uh drippy goo from the Discord who helped get this sign created for me uh so if you guys know drippy in the Discord if you're interested I I presume that this is what he does for maybe a side job or a regular job so if you're interested hit up D drippy goo in the Discord uh apparently he makes dope signs he's just out here making dope uh you know um neon lights so that's awesome just makes me love this community even more that we have all these talented people who are willing to

(07:41) help out you know and and yes I paid him for it he I didn't ask for it for free or anything like that um so here you go I'm going to put an invite into the Discord if you are watching the YouTube channel there is an invite into the Discord I just dropped it in there uh it is 25 invites so 25 people want to join today you can Jo the Discord uh only rules in the Discord is that we just don't be rude to one another we don't have to agree or anything like that uh although the Discord is primarily

(08:08) focused on trying to solve the mystery and solve the case so uh you know preferably no **debunkers** um but no trolling that's really all you got to do otherwise feel free to Jump On In feel free to check out the channels we got evidence channels Theory channels off topic channels news article channels media channels uh Etc it's pretty sweet guys okay next thing uh we have

another song that we're going to play here uh country song I don't know how to download it so we're just going to play it uh so let's just play

(08:39) that we'll see if we get I have enough time today if you guys have questions in the chat I'm going to answer questions in the chat as much as possible about the investigation or whatever wait there's another whistle blow Boeing whistleblower dead I might have to buy a gun guys I've never owned a gun before I'm I'm absolutely 100% pro gun rights but I've never owned one um but man three bowon whistleblowers dead it's like I don't know guys it's uh it's pretty suspicious it's a lot it's a lot

(09:14) of blow boow whistleblowers is that true Chad can somebody corroborate that if that's true it's not looking good just leave at that leave at that for me okay um here we go we got our song nice uh someone tell me how to download songs from sunno or have Dan Dansby Jones here I need him to get hook me up with the um man yeah I need him to hook me up the hard link for this guys okay here we go hopefully tell me if you can hear this [Music] okay [Music] m370 fin from sky world on wondering why Secrets here [Applause]

(10:17) [Music] can't microscopic waves worm holes in space hidden Tech the secret race drone and satellite Li truth so C buers try truth allise government rning hiding from the eyes government they all know where did you go where did you go where did you [Music] go where did you go where did you go where did you [Music] go where did you go MH370

(11:30) where did you go chat this AI music stuff is Gonna Change the World my guys s these music songs are so good this stuff's better than stuff you hear on the radio it's ridiculous I can't believe it so you guys Danby Jones uh ether bunny uh Heather birdie Heather Birdie started this fat up uh started making songs next thing I know we got a rap song we got a country song we got a old timey song we got a pop song we got a rock song we got five songs out there guys wow guys I love this [ ] Community like literally this is the

(12:20) best community ever isn't it like we've got the best story going on out there on the internet right now we've got you know not only do we have the best story going on on the internet just the best drama on the internet we got the best memers on the internet if you guys don't know what a memer is like do not try to meme this community you will just get destroyed I mean poor kim.

(12:46) go my God just ruined in 24 hours um and we got the best scientific minds too we just we got the triple threat you know investigation memes uh artistic artistic capabilities and some of the best Minds on the planet right we have stuff coming out like every day some new uh thing comes out that corroborates what we're saying like best scci best science streams for sure I mean I think out there at least in breakdowns uh you know we've got talking about The Ether and Terence Howard is out there talking about The Ether today

(13:23) like what like the same day I post a clip from Tom Monto about how the ether is real and how this like they did this experiment out there like in in 1885 that they said Oh meant The

Ether couldn't be real that's like the the last major experiment that was done to disprove The Ether The Ether is real we just have to like figure out how it ends up making sense with uh common with like real physics um or Le like I guess contemporary physics is the way to put it but Terence Howard was out there talking about it I made a post the same

(13:56) time I'm not into synchronicities guys and all that but what that is weird M more yeah John John with the MH370 is his profile picture I love it dude absolutely love it um and then stuff like the Wormhole papers and stuff that are more Wormhole stuff's coming out more teleportation stuff all the superconductor updates like this is happening so fast it's absolutely wild so I was thinking about that and that's why we're going to do the Joe Rogan thing in a minute uh um yeah the kim.go techno song was

(14:34) amazing but I don't want to play it too much because I think he might actually try to sue me like Kim is like one of those guys who like he's got a lot of money and he could definitely just try to come at me so I'm gonna not play that anymore unless he threatens me some more if he threatens me some more then I'll play the song every single day from now until the day I die um but as long as he chills out and stops coming at me and defaming me what have you then I'll I'll leave them be on it we'll just

(15:00) we'll keep that song for the Discord everybody if you're not familiar with the kim.com song uh you can we'll put it in the Discord you can watch there I don't want to post on stream uh he's a smart guy maybe he's just being used I don't know um let's see money Penney says I lost a message something about disappearing planes there was this rumor that uh the free scale semiconductor people working on like some kind of advanced cloaking that's been out there for a long time uh I

(15:34) never really ran with it much because sure it's I mean like what's the difference between Advanced cloaking and teleporting a plane like the line gets really blurred really quickly especially when you look at like macroscopic phase conjugation and how this stuff works we're going to talk a little bit about the science at the end I'm G to give you guys homework to look into uh I actually have to find out like where I even put it but I was looking at one in particular that was about uh a lot of

(15:58) this stuff has to do with like uh coherence and um like uh what is it the the ways that you can tell Quantum teleport an object yeah I'm gonna have to dig through it damn can't remember I think it's called counterintuitive quantum teleportation or something like that anyway I'll show we'll put that up in a minute guys okay let's see uh what's coming up next here and hey hey I see uh crypto Alchemist in theat chat appreciate you man uh are you in the Discord I can only I can email too if you want but I I'm only going to

(16:36) put in Discord I'm not going to play on live stream we got enough stuff um people want to know how to donate money for now I don't really want donations at the moment I mean you can you can give on YouTube if you want but they take like 30% also and if you need your money I want you to keep it if x uh starts doing monetizations you can do tips on X I'll take tips on X uh

I'm hoping they turn that out pretty soon because then you guys could hook it up money Penny says she can prove it okay yeah if you can prove it make a

(17:05) post about it you know just don't have it be too dramatic just post the evidence and if it's good I'll retweet it um okay yeah uh crypto I put the Discord Link in the chat my friend here you go if you want to join Discord there you go yeah X is about to be sweet though and I stream a lot on X I have a lot of viewers on X so it' be nice if um they can uh set up like some kind of monetization where you don't have to use YouTube I'd move away from YouTube honestly okay John thank you very much

(17:39) appreciate that yeah take take nothing back from them okay um where's my list of stuff 18 minutes Jo okay here's my plan guys uh what should we start with let's start with the challenge first okay I want to go look at the challenge first and then we'll do do the Joe **Rogan** thing and then we'll get into some other stuff here and I'm not going to be up too late tonight because I want to watch the Terence Howard thing myself so if you guys yeah look at everybody's asking me guys normally I can tell when

(18:11) it's an interview I need to watch because I get pinged by like hundred people so same thing happened when the wi files dropped the free energy thing like all this stuff there we had a wi Files episode to dropped there's talking about salvator pz my buddy who I interviewed twice talking about his patents and he also talked about Thomas Bearden in that uh uh uh what's his name um Patrick B David as well also did a free energy thing and also mentioned Thomas Bearden and then I get pinged today by like a hundred people talking

(18:46) about uh the Terrence Howard Joe **Rogan** interview and so I've already seen some of the clips about The Ether like wow apparently he talks about phase conjugation as well like guys it's I independently have determined that this stuff is legit as well it's not a situation where like I'm some True Believer or anything like I just started following the investigative leads related to the MH370 videos and it proves there's an ether it proves there's an ether of infinite negative energy uh it proves that there is Phase

(19:16) conjugation is the mechanism by which this happens uh it means that free energy is possible it's just that's just the logical conclusion as an investigator so pretty wild man um do you think BBC Ian will interview you no no there was never a chance guys uh we'll go into that in a minute okay we'll talk about the little Twitter drama beef and back and forth you know of course we'll talk about that in a minute oh yeah so let's start first with my Challenge and then actually I want to do a quick update before we do The

(19:52) Challenge on the um the **debunk** stuff uh wasn't really **debunk** stuff I guess so so the last time I streamed we were super excited because we had showed that the um the VFX uh comparison assets had been uploaded January 25th 2023 which was 12 days after these videos had gotten posted on **Reddit** by a random account they never gained any traction but they got posted out there and they potentially were noticed when they got posted out there now here's the bad news the bad news is the archive that we showed could be updated they can update

(20:30) this archive it's not the same as the way back machine but it is the internet archive supposedly the uploader can upload the archive or up update the archive sorry change the archive and we proved that because we saw somebody change this image this image if you guys aren't aware had the comparison that **debunkers** have been using of the real video side by side with the one frame that they say matches even though it doesn't and I said well that's weird if that's in there and that was in there in

(20:56) January that means they set up the **debunk** ahead of time so somebody showed a screenshot from before A few weeks ago or a week ago or something like that and it showed that the update date said not May 16th whatever it was that they changed it removed it uh but December and their argument was that this meant that that that comparison wasn't always in there it wasn't in there since January of last year it could have been put there in December now I have no I looked back through all the screenshots everything I

(21:30) couldn't find anything so let me show you guys what I mean here I'll pull it up on my Twitter so you guys have some context of what I'm talking about okay this right here so this is incorrect so I've retracted this I've left it up here for some historical purpose so you can see it's not 100% proof that the **debunk** was planted now it doesn't matter match for sure that that I already we've we've proven over and over again this comparison that's being presented here does not match uh I don't

(22:07) know why people continue to try to claim that it does **Mick** West did show a way where he could reverse image search a frame not that frame but a different frame that it pulled up references to killing time which still pretty implausible but whatever I so I apologized to him said okay you showed a way where theoretically you can pull up this killing time reference and you know I guess maybe within three hours you could have found this this video that has it on there personally I I don't really care that much the thing that was

(22:37) weird is that we saw this right here that showed you could see the comparison down here in the bottom right and this comparison the **debunkers** have argued is that got added there in December which was just what five or six months ago which is still really damn weird just adding that comparison in there and then they removed it two days ago so this absolutely were sure about They removed this two days ago you can see it was there now it's not there my argument was that this got added last January not this January of 2024 but

(23:06) January of 20123 well before the videos ever reemerged and that would be proof that somebody had planted this on the internet with the intention of **debunking** it now that still could be true but if this video If this image here wasn't was planted like December just six months ago then that's after the videos reemerged so it's still really weird because it means that Wave Rider 3000 is a **debunker** like really weird because this means that the only person who would add this in here to troll would be somebody who's

(23:35) trying to discredit the videos and if the person who uploaded this is trying to discredit the videos why did they upload it January 25th 2023 that was a long time ago so this is actually still

pretty damn weird no matter how you look at this uh but it's not 100% proof I would still say it's like 70 to 80% chance that this was planted on the internet with the sole purpose of trying to **debunk** the video but we don't have 100% proof anymore so it's like in my opinion 60 to 80% 40% chance that this random guy

(24:08) turned into a **debunker** afterwards I don't know this is weird so w we know Wave Riders out there watching because Wave Rider two days ago changed the asset right after we had a whole stream about it so we know Wave Rider out is out there watching so Wave Rider 3000 should come forward and let us know wave riter 3000 is on our side or neutral they should come forward and say hey yeah I uploaded these assets here's why I uploaded them on January 25th 2023 here's why I added and edited in this fake falsification comparison into the

(24:44) screenshot which makes no sense whatsoever to do this um yeah so we should we should at least get an answer from them but I wanted to do a clarification about that uh so that's the clarification on it so it does throw a little bit of water on the situation but now I understand the reason why the **debunkers** haven't been attacking me over this saying that I'm a liar or whatever the reason is because it's still sketchy as [ ] and and this is probably one of them that uploaded this it's probably one of the **debunkers**

(25:13) the only reason why Wave Rider 3000 wouldn't come forward is if they are a **debunker** like a **redditor** or whatever and they don't want to come forward because they know that they have Mal inent so Wave Rider 3000 if you're out there you should come forward come clarify this situation I did apologize to mck West he said hey what about Ashton's apology I apologized to him and then I asked him for an apology since he faked three fake **debunks** he faked the VFX comparison **debunk** the one that you're seeing right

(25:43) here he's the one that promoted this far as I know there is no such thing as icy slide that that's not a real person uh unless icy slide wants to come forward and say who they are I'm just going to presume that it's **Mick** West or somebody in **Mick** West sphere of influence based on these time stamps so **Mick** West should apologize for one he should apologize for the jery contrails **debunk** that he pushed that uh was a product of the stabilization software it's been proven by two different sources and a third

(26:07) Source said that that that's accurate camera Shake we see in the Drone video um and then he should also apologize for the Philip wood **debunk** uh where his his **debunk** is basically turned into it's easy to fake exif data except for apparently on a cloud picture then the **debunkers** think that it's completely impossible um so pretty pretty bizarre so hopefully he is man enough uh to admit that he's wrong and to apologize but I don't think that he probably will be okay so that's an update on that uh

(26:40) Saga uh let's go to my challenge now also I'm just gonna give you guys I want to listen real quick to let's listen to The Ether thing real quick and then we'll go to the um it just popped up the sound uh then we'll go to the message Joe **Rogan** here as well so let me pull this up let's listen to the comparisons of The Ether because this was damn weird everybody is this it here it is

Terence Howard's just randomly talking about The Ether guys Michaelson Morley experiment from 1877 1887 he's

(27:19) talking about the exact same experiment I posted earlier right before this interview dropped like what what is the chance of that I didn't even know what this Michael Morley experiment would this morning when I woke up and then I went I I pulled the clip from Tom Monto and I looked it up and I started researching into it because I wanted to figure out how legit it was and now Terence Howard's just talking to Joe Rogan about it there they were trying to prove whether there was an ether or an effect of an ether or the Quint the

(27:49) quintessence that everything came from so the way this experiment worked is that they shot light beams perpendicular to one another because the idea is the Light Beam that's moving in the direction of the earth rotating around the sun should have a different uh should travel a different amount of distance than the one that would be perpendicular to it that's not traveling uh in the direction of the earth and I guess if you have a super sensitive instrument you can detect that but to me that experiment in 1885 seems like it

(28:18) could very well been prone to error and or misinterpretation the conclusion they came to was that either there is no ether or that the ether is is moving with the Earth and I have a feeling there's going to be more ways to interpret it that will negate that experiment entirely that used to be called the The Fifth Element that everything in that F element good movie everyone understood that nothing just something doesn't come out of nothing it's like when you look at the air it looks clear but you change the pressure

(28:53) condition the balance of the change of pressure condition we call that condensation it creates clouds and so he's right so what he's talking about here is changing the medium right he's talking about changing the medium so he's saying if you change the air it looks like there's nothing there when we look outside in the air but we know there's something there so if you change the pressure of it you get clouds you get weather you get hail you get rain and now we say well what if you change

(29:21) the pressure of the ethers do you get reality do you get our existence now what is pressure why is that important Imagine The Big Bang the Big Bang is a release of all this energy and matter over Imagine The Ether or you know the interaction between The Ether and our reality expanding outward pretty incredible because this is he's conceptualizing it for people that are out there thank you mangel wow you guys are on fire today appreciate you John mangel uh John again and Anthony athony appreciate you man you

(29:59) change the motion conditions whether it's moving quickly or slowly it's going to become snow it's going to become rain it's going to become hell so everything comes down to just one of two forces either you're breathing in and filling up something or you pouring it out but the scientists they ignored Walter Russell's work because he didn't include any inqu equations inside them yeah so here's another part of the problem is that a lot of scientists are say oh well if you can't show me the math even if

(30:29) you can conceptualize it from a theoretical physics perspective unless you show me the scientific papers unless you show me the math this is what holds science back the most honestly is that the reason why it's such a slow movement of information with science is that unless you have the right credentials nobody listens it doesn't matter if you're right or wrong so that is uh the reason why this was interesting guys is now listen to what I posted earlier today this is an interview from several weeks

(31:00) go um and wow 250,000 on this oh boy okay we're we're cooking tonight guys um does The Ether exist here you go with Tom Monto first question this one I don't have to worry about being copyright there is an ether in terms of uh you know do you think that's the answer for how a lot of this stuff is can be possible because I think a lot of physicists would say given our conventional understanding related to Einstein's theories that we can't do a lot of the stuff that we're talking about right now M what are your thoughts

(31:30) well you know the reason why modern physics kind of discounts the idea of The Ether it traces back to that Michaelson Morley experiment and that's where uh was it the early 1900s or late 1800s I always forget but anyway that that he said the words guys the Michaelson Morley experiment exact same thing guys what time did I post this what time did I post this chat so I I think I posted this the exact same time the **Rogan** interview dropped how how weird is that I've never heard of this experiment before today

(32:03) that's where they literally try to detect the motion of the earth through a stationary ether so they figured well you know the Earth is orbiting the Sun and if it's orbiting the Sun it's moving so therefore it's moving through uh a medium that fills the universe a medium that fills the universe and if that's the case then light in the direction of movement should behave differently than light that's moving perpendicularly to it it's it's kind of like uh it's kind of like the Doppler effect

(32:28) when you have a sound source that is moving away from you and then the frequency gets lower you know like motion affects frequency and wavelength of waves so they did an experiment where they where they compared how light moves um you know in the direction of motion versus perpendicular to it uh and they expected one of these to be shorter they expected this one to be shorter to have a different wavelength or a different frequency and what they found is that they're actually both identical which means either that The

(32:54) Ether was moving with the Earth or the ether did not exist that's that's what they were thinking at the time and and that's when Einstein came along and so Relativity Einstein's relativity went out because it didn't depend on an ether to explain a lot of these phenomena right the problem though was that that this interferometer experiment uh they're sending light this path into The Ether um but they weren't taking into account the fact that when you do that that this

(33:21) path length itself it also shrinks so there's length contraction in the way so the light that goes here it returns sooner than it would this way and that's so of that that ended up canceling

out uh any sort of change in the velocity of the speed of light you see so when they measured it and it ended up being exactly the same thing it's because essentially they were measuring light with light itself so when light speed slows down uh and your clock also slows down and your ruler shrinks well it's

(33:48) still going to be the same proportion you know so you're still going to think that oh well the speed of light is always the speed of light and that's the the central premise of Relativity that the speed of light is always constant no matter who the Observer is no matter if it's moving not moving in a gravitational field or in in in you know free empty flat space so I think the main argument that uh Tom was making there that I thought through a lot was well is what he's saying here is that like time dilation is correcting for the

(34:14) change um because if you if you're going up this way you're GNA have more time dilation or the time dilation is going to be different than if you're on the earth so potentially the distance itself is also shortening therefore this is the reason why they got the the incorrect exp um you know uh results from their experiment I don't know uh I really don't know I thought about it a lot I'm not sure Vic thank you very much man appreciate you uh man jillan thank you very much man appreciate you guys um so

(34:42) The Ether thing I know that there's going to be a way to explain the ether and that we messed up because we're looking at the answers we so if the MH370 videos are real and I just I happen to know they're real whether or not people believe I don't really care uh then the answer is The Ether exists because that's what we're looking at and video we're seeing this endothermic event this is an interaction between uh reality as we perceive it and the uh negative energy of The Ether like that's

(35:07) what we're we're seeing in that video uh that's how a wormhole can exist as well so everything's consistent what we would imagine theoretical science how it to work out um somebody mentioned would I set up uh subscriptions on X at some point in the future I probably will set up subscriptions both on X and on YouTube I'm just really lazy uh and I don't really need the money that badly although I know there's a lot of people who ask me they want to support I thank you guys everybody out there who says

(35:34) that who wants to support appreciate you guys uh you will have an opportunity uh I'm trying to hold on to my job as long as possible after that maybe I will need money I don't know I will say the semi-conductor stocks are doing pretty good though um funny comment by ski Moss pretty sure Terence Howard beat more women than Diddy also man my followers are brutal and don't don't come at my followers we got jokes for days uh if you have not followed P Diddy is a scumbag piece of [REDACTED] and he like not just like hit a

(36:05) woman like you could maybe find some way to rationalize like just one hit of a woman even though I I don't think that's appropriate at all but if P Diddy had done that I can imagine him weaseling his way out of it but like he beats the crap out of this woman kicks her while she's on the ground drags her on the ground dude is a literal monster absolute monster inexcusable I

can't believe that that they hid this video for like eight years I'm not even going to post the video because it's just that

(36:38) horrific I don't even want to watch it again uh and just to be 100% clear no in no circumstances do I condone touching a woman or hitting a woman under basically any circumstances unless it's self-defense and even then you you probably shouldn't do it uh but wow P Diddy straight up monster and the idea that Terence Howard heard some rumors about Terence Howard um potentially like hitting beating up his girlfriends or something if so I I honestly don't know anything about that if that's true

(37:07) that's real messed up man that's real messed up uh yeah but so just so people don't know yes they did this video you can find on the internet if you want to see or whatever like I don't need I don't need proof guys I'm looking at a video of him just literally beating the crap out of a woman like badly very badly so badly I I can't even post it on my on my YouTube channel that's how bad it is that's how horrific it is um and why do I talk about that kind of stuff people want to know like hey you talk about

(37:38) m370 uh but this is straight up monster level stuff like when celebrities are monsters and they get away with it and he puts out this whole thing about how he's been uh unfairly attacked and they the and the the lady's lying about him to get a quick payday and then there's a video like he just is so Brazen that he's doing this in the hallway of a hotel just kicking the crap out of a woman while she's on the ground not moving dragging her across the ground are you kidding me I can't even

(38:07) laugh at it that's how messed up it is he's not even going to go to jail over it because the statute of limitations has already gone by can you believe that they put a statement out related to that as well can you believe it like somebody saw that video and was like we're going to cover this up people wonder like how can they cover up a plane and stuff there's a video of P Diddy kicking the crap out of a woman in the middle of a in the middle of a hotel eight years ago and the government knew about it

(38:35) everybody knew about it and they just didn't show the world just didn't show the world because they wanted to cover up for his for the fact that he is like a you know Democrat donor and all this stuff and it would made them look bad and maybe he's an informant I don't know the exact motivations whatever how messed up is that okay so we've talked about it he probably if he beats his dog I'm going full John Wick when it comes to hurting animals like that's the one line I don't cross don't cross that with

(39:07) me um so okay we're not going to get too political with this let's move on to the next thing crazy though man crazy so people wonder why I talk about that's why I talk about it because that's that's just that's just monster man inexcusable level Monster uh okay let me see what else I got on here uh we were going to go show the so we did The Ether thing I mean how weird is that that they're talking about The Ether let's go to the challenge now first of all big uh thank you to lan

(39:40) and to uh I gotta make a note here I gotta me send a message I'm gonna do a space with Dustin and Maize so we're gonna do some crossover episodes I think this week we're going to do like maybe an MH370 or maybe advanced technology I don't know exactly what it's going to be uh with and Dustin some of the earliest twitch uh personalities or sorry twitch o x Twitter X Twitter personalities that do spaces that I I met early on that are really cool people so if you want to come ask questions debate whatever we'll

(40:13) do that later this week Ian Carol uh Big Ups to Ian Carol um now I said I'm not going to get myself too invested in other you know influencers and stuff but you guys know I have a bromance with Ian you guys know I do it's I don't know if it's as much as My Bromance with Lex fredman if you guys have been around for a while you guys know that Lex fredman looking at the picture of him but Ian Carroll he re-shared the challenge earlier today uh dude is legit he's I'm not joking when I say he's the

(40:52) best investigative journalist on the planet so if you're not following Ian Carol you probably should the crazy fact that he's only has 400,000 followers has mind-blowing to me this is a dude who's gonna have like a million followers or more by the end of next year and I absolutely see this guy being a uh powerful influencer in the years to come no doubt the mustache alone just the mustache alone probably should have 250,000 followers just the mustache you know the rest and the personality and the investigative

(41:25) capability that this man has and his ability to make you know videos which I don't know how he does it very impressive I mean there there's one look at this guy look at him how does he do this just got his camera going just knows exactly what it posts man legit 3.

(41:42) 2 million views too okay now let's listen to The Challenge I'm ashon Forbes and I'm the world's leading expert on the MH370 videos I have over 170 million impressions on X over the last nine months this is a message to all major media if you want to prove these videos are fake now is your chance you can bring any number of experts and I will debate them all at once I welcome a debate I'm trying to reach the largest audience possible with this information I have over 80 podcast appearances under my belts on this topic I am ready to go my goal is to reveal

(42:27) the **truth** of MH370 to the world and the Forbidden technology that the United States and other governments are hiding which includes gravitational and SpaceTime manipulation and free energy if you think I'm promoting a crazy conspiracy theory then what is there to be afraid of make it happen boo yeah make it happen chat make it happen Okay so if you haven't been watching and my stuff now you know uh make it happen man that's the challenge to uh you know all the major media all mainstream media and we wrangled

(43:09) ourselves we wrangled ourselves a BBC weatherman it's not you know it's it's not final boss level you know it's definitely Frontline you know peon uh level people but we wrangled we wrangled one and we'll look over that in a minute but before we do that so I'm I'm going to give you guys um here's another thing I've been mulling over and then we'll do a little short statement about it so I thought well a lot of people have been asking me to reach out to Joe

Rogan like a lot every single day people

(43:45) going you should be on Joe Rogan you should be on Joe Rogan Joe Rogan why aren't you talking to him blah blah blah and I said I'm not gonna message Joe Rogan uh I don't want to do that I'm not one of those people that randomly DMS people it's like hey you should have me um but Joe Rogan is the top of the mountain and early on I also said that there's three people I wanted to talk to you guys can go back to my August post about this everybody thought I was crazy everybody thought I was uh egotistical

(44:12) narcissistic I wanted to talk to Joe Rogan I wanted to talk to Tucker Carlson and I wanted to talk to Bill Maher I wanted to talk to Bill Maher because I don't know I could handle on a panel or in a one-on-one interview with him uh I think that I I've respect Ed him and looked up to him a lot as I've grown up I've watched I used to watch real time Bill Maher every single weekend on Friday nights and then Tucker Carlson Amy Eskridge wanted to talk to Tucker Carlson uh and I had the same opinion

(44:44) that the Tucker Carlson is the one to reveal this story to the world he does UFO related stuff he's open-minded uh he's not afraid to talk to people that are controversial he's not mainstream media he just he checks all the boxes people trust his opinions he's not going to be a [ ] or anything like that as well and then uh the last one is Joe Rogan which is the biggest podcaster in the world uh I've I was in college and we would joke about the Dave Chappelle skit with Joe Rogan this isn't the first

(45:17) time I've had to taste of penis for whatever it is uh that he says uh and he Chomps down all the pig penises or whatever they are hilarious um so yeah those would be the big three that are out there so here's a thought that I had Tucker Carl Bill Mars not going to happen CNN type brain people probably not I've learned that like the people that uh you know are more into that mindset where none of this can be possible that's just not going to happen we we saw it today we'll go over it in a

(45:50) minute whatever Tucker Carlson maybe it'll happen I don't know uh you know there I have some connections now to him indirectly so maybe I'm not sure just kind of depends on if he gets on board with this kind of stuff potentially being real and then Joe Rogan I thought okay well what if we present uh a deal an agreement an accord and I want to make a deal with the debunkers that are out there the redditors that are out there the Skeptics that are out there I've been thinking about it for a while and what I'm thinking with respect

(46:26) to Joe Rogan is what if we tell Joe Rogan that after the discussion with Joe Rogan if he wants me to no longer investigate MH370 I'll quit I'll just quit we can even say that I won't talk about MH370 at all not say a word about it for an entire year maybe three years what whatever you want it to be I just want it to be like a definitive time frame just as like a buffer so that if something ever happened that you know and I were to be proven true in the in the future it wouldn't be forever you

(47:01) know some reasonable amount of time that way let's say okay so I go talk to Joe Rogan and if Joe Rogan B at the end of our conversation says that yeah you shouldn't talk about this anymore this is gonna hurt the families or I think this is [ ] then I will stop talking about it entirely I'll just move on I'll do other stuff I'll give up the investigation cold turkey not talking about it anymore at all and I thought that seems like a fair deal it's a lot of risk it's a lot of risk out there debunkers would want it

(47:33) right cuz Joe Rogan he's not going to be convinced right he already thinks the videos are fake so I'm already coming into the situation uh where I could be ambushed um he just might not be a believer he might be a true skeptic and that way that can be my last harra on it and it works out this way as well is that if I'm a grifter and I'm grifting off MH370 this is the best bet because this is the end game you know if I if he doesn't believe after this then the whole thing's over and I'm I'm

(48:02) not making any more money off of MH370 so anyone who thinks I'm a grifter then like they should want that right they want me to stop making money off the case that seems like a good compromise for me and the debunkers could even give him stuff they can Ambush me if they want I'm I'm willing to go into a situation where I know it might be a trap ahead of time that's what I'm that's I'm willing to bet it all willing to risk everything so here's my message to Joe Rogan Hey Joe it's Ashton I'm really

(48:34) sorry that I leaked the DMS I did not mean any personal uh disservice towards that uh it was a situation where it was beyond my control I was being called a liar I had to show the DMS I'm sorry about that I'll never leak DMS ever again um I want to be on your show Joe the reason why I want to be on your show is because I believe I can convince you I can convince the whole world that MH370 videos are real I am willing to refute all the VFX debunk attempts that have been out there on your show spend time and do that as well but I also want

(49:06) to talk about stuff like Thomas Bearden phase conjugation free energy The Ether and how UFOs potentially fly uh anti-gravitational technology gravity manipulation space time manipulation em drive and I want to talk about where the trajectory of our civilization is after this I just want to give information to you Joe Rogan and to the world you can take it or leave it you can believe it or not believe it either way doesn't matter to me if at the end of the conversation you think that I'm in any way disingenuous or that you just don't

(49:48) believe the MH370 videos are real then I will stop investigating MH370 entirely cold turkey won't mention the plan again I will agree to not even bring up MH370 for an entire year won't mention it I will fol so solely on science that has nothing to do uh with those videos whatsoever if that's what you want I am willing to put everything on the line everything just for one chance to help inform the world about what might be the biggest Revelation in the history of our civilization you've had people like Terence Howard on

(50:30) who've talked about The Ether talked about phase conjugation you've had other people in the past who've talked about things like teleportation uh warp drive capabilities um as well as

advanced physics and how the science has been suppressed from us you've talked about anti-gravity researchers going away disappearing like ning Lee we can talk about all of that I'm willing to go through all the case of MH370 I'm even willing to go against any kind of other expert on the MH370 videos on the

(51:01) MH370 investigation or and any physicist that's out there that you want to bring on the show I will argue and debate against any of them on it and you can be the moderator that's my proposal to you Joe I hope you consider it thank you very much this is Ashton what do you guys think chat how did that go I'm going to probably clip that and stream and uh post that later uh 49 may have to edit a little bit but it seems pretty good oh Shawn Ryan as well I mean Shawn Ryan has a lot of people that are like Spooks on there so

(51:41) I think that for him if somebody told him was an interest you know in the interest of National Security that he wouldn't do it but I actually just think he just doesn't believe it either like a lot of people got like um tricked by the VFX **debunk** like a lot of people did um that's the **truth** so have I been on Danny Jones let's not talk about it uh that's one of the reasons why Joe **Rogan** canceled the initial interview was the Danny Jones thing uh Sean Ryan the format would be good but I don't like that you just sit

(52:09) there on a chair like I need to like bring visuals up for this you know and so I can talk about it and it's like I'm to the point now where I've memorized everything so I could talk about it but I prefer a situation like Joe **Rogan** where like he can have my Twitter up and I can be like pull this clip up pull this clip up pull this clip up and we can reviewed all the **debunks** and we can go through everything right even The Joe **Rogan** interview I would want to go like four hours with him because I want to go

(52:36) through everything I want to go through everything all the evidence I will debate anyone he wants to bring onto the thing onto the podcast does not matter and I guess I haven't said in like a week so yes Ashton forb is not suicidal apparently there's three Boeing whistleblowers who have mysteriously uh died um you know no comment on that Boeing is you know maybe maybe they're good company maybe they're P Diddy who knows uh but I do know is that I don't want to be on a 787 Dreamliner I'm GNA

(53:05) avoid that like my life depends on it at least say my prayers before I get on and yeah this is a good point as well that Joe **Rogan** has had stuff on that's at least as crazy as what I'm doing probably more crazy people that say that the moonlandings are fake I mean has he had flat earthers on as well like he's had a lot of people on that what they're saying is way wilder than me I mean even ter even Terence Howard Terence Howard allegedly beat up his girlfriends and is sitting here talking about The Ether I

(53:35) mean he's way more out there than I am the stuff I'm saying is grounded in just straight up reality and pure hard evidence uh so I don't know I mean doesn't seem like that should be the thing holding it back we'll see he has done flat Earth yeah so I mean okay if you've doing flat people are trying to call me flat earthers I'm literally feuding with the flat earthers because I'm

saying that Tesla was right and there's an ether and they're going that means the Earth is flat that means

(54:02) the Earth is flat no guys it doesn't like it doesn't curvature definitely exists no doubt it's everywhere in fact I'd argue that there might not like Terence Howard says there might not even be straight lines so unless you think that we don't have three dimensions like there clearly is curvature that's why like an orange is round and not just a circle but whatever man if you guys want to believe there is flat I don't care doesn't bother me I just want to be clear that I'm not a flat earther

(54:27) nothing against them um no guys and here's the thing too guys everybody wants the people to be compromised or what have you N I think that the **truth** is a lot of it is just like look at what we're saying is real like I know that you guys were following the case you're very passionate like I'm passionate about it uh and you know we look at it we go oh well anybody that doesn't believe must be compromised I wish the world's not that black and white the problem is that a lot lot of people are just brainwashed and then uh

(54:59) and so some percentage of people are Brainwashed the CNN brain people some people are delusional the **Reddit** brain people and then you've got a lot of people out there that they're normal people but like they just can't believe that we've like leapfrogged like hundreds of years you know in terms of technology which is what the videos are representing like this teleportation type technology that's out there uh Wormhole technology anti-gravity like this stuff is way way too advanced for a lot of people to accept a lot of

(55:29) podcasters to accept I think that's the main reason why they don't do it is they are very certain that it can't possibly be real now for us we know it is just because it's not just the science that we found but just the whole investigation naturally leading to this and US discovering that this is the reason and US discovering that that's how the technology works that is like something that changes you on the inside this is why I'm so sure the videos are real it's like these aren't just some

(55:57) random hoax videos they're showing real science that's been out there some hoaxer didn't have some master 10-point plan to convince people that free energy is real this is not that complicated it's just real military videos and that's the real technology they're hiding from us um so I hope people will you know come to terms with that now we'll go to the Twitter drama in a second so here's my thought okay before we get to this Twitter drama that I want to get to I've got another

(56:32) thought we talked in the past about giving amnesty to the people that did this MH370 let's pull up the videos let's pull those damn videos up we haven't showed the videos today so people that aren't familiar with what we're talking about people that maybe just jumped in today and they're like what is this dude talking about this is the high quality satellite video okay so when you look at this video and I begged the Triple M uh b b 7 pilot that I was arguing with to just look at the video that's a b 7 with consistent

(57:08) turning Bill if you fly these planes every single day then you're going to know when you're looking at a real plane one of the hardest things to fake about these videos is the real capabilities of B 7 all of the Reconstructions they can't fake this there's no reference copy to fake this from this is the hardest part potentially is getting the B 7 flight characteristics correct walls uh performing some kind of looks like an emergency descent maneuver going towards the ocean in some kind of circle formation if you fly one of these

(57:44) planes a ble 7 like this you're going to recognize that it's real just by looking at it just by looking at it you're going on to be able tell that's a real plane as if like if I'm a person who drives race cars and I see a video a race car uh I can tell that it's real versus one that's a CGI one when you look at it you can just tell right away there's like something off about the capabilities of what you're seeing even if it just looks really realistic you know um and that's the the biggest thing

(58:11) about some of these videos is trying to fake the whole aspect of the realistic capabilities of the plane and especially when you look at the second one there's no doubt we're looking at a real B 7 here like the way it turns right there naturally just like gets flowing like with the smoke lining up like that and then when it zooms in on it there's no question this is a b 7 and of course it's MH370 because of the time frame and because the location of the coordinates is the real location of the

(58:41) plane in the nicobar islands that's not a coincidence so it's like you look at that if you're a B7 pilot and you're looking at that you've done that turn like a million times you got to know that's real you also have a simulator in your house so you know this isn't VFX you know this isn't a video game you're looking at here there's no video games that look like this period anywhere that's a real drone video we even found the camera the West cam mx25 is like the exact manual tracking the **debunkers** they

(59:10) always make stuff up so they they made up this lie that like drones don't manually track like that with the cameras well we found the clip that proves that this camera literally does uh so I wish they would just stop lying all the time like every single time it's these lies about that's not how camera looks that's not how the color looks that's not how that the Drone looks like it's just lie after lie after lie after lie and then we just find the answers and show that yes that does have color

(59:37) capability yes it's exactly what the mq1 C Great Eagle looks like yes they have cameras underneath the wings we find that as well yes this is the camera with the manual tracking it has night vision capabilities in addition it's like yes every single aspect the videos is real we've looked it all up this this not a hoax video nobody does what you're seeing right here to a hoax video it's got super slow-mo and zoomed in versions of the orbs so that you can see these exotic vacuum objects in super high

(1:00:06) quality to realize there's no chance this can be faked somebody's faking the video they're trying to cover up any discrepancies or mistakes they made in a real video you slow it

down because you want to show people all the details that these were not manipulated frame by frame for thousands of frames or hundreds of frames or however many it is that's not a VFX from some video game that you're looking at there it's a real video man I don't know how many times I got to say it to people the sad part of

(1:00:34) the debunkers is I don't think there's anything that would get them to change their mind even if the government admitted it's real the debunkers are still going to claim that it's VFX they're gonna be like the government doesn't know their own videos planes just crash in the ocean without leaving debris Fields people literally think this it's just I wish people just had common sense man it's wild to me so this is why I'm willing to just go all in on it because like I don't know we're like I said when

(1:01:03) I first retired like the world just needs more time to uh catch up to what we've been pushing out there and I push so many scientific papers and uh articles about science updates uh teleportation protocols being perfected wormholes and and and warp drives being possible wormholes being humanless reversible warp drives being possible without exotic matter even though we have an unlimited reservoir uh what I don't know what I got to do you know so we'll see there probably there could be another video from the left camera we

(1:01:40) don't know that's always a weird one uh we saw people said oh here's one from the left one but there's inverted versions or mirrored versions of the Drone video but it's not a third camera angle we used we looked into that in the past there's one out there where it's like been color changed uh that dates back to like like mid August but it doesn't appear to be it just appears to be the same video mirrored so yeah um also there could be like a sign sensor on the other side on the left side so it

(1:02:08) might be like signals intelligence sensor camera underneath and then camera on the right we we really don't know we have seen videos that show cameras on both Wings though so don't know guys yeah so for people like CMB concrete says I wish of Common Sense ashon Forbes also as forbs I want you to believe a big plane went poof into another dimension um Ron White is a good comedian but yes uh this plane did Get Zapped but I'm not talking about you know it didn't go to the Bizarro Dimension when I talk about extra

(1:02:41) Dimensions I'm talking like scientifically extra Dimensions like I'm talking like a wrinkle in time you know I'm talking about like this receipt and going like this that's what I'm talking about extra Dimension when I talk extra Dimension I'm not talking about like an extra Dimension you go hang out and have a holiday on no I'm talking about the extra Dimension is what explains qu or uh what do they call them uh Quantum fluctuations in the vacuum and uh virtual particles where where do virtual particles come from

(1:03:13) where do Quantum FL fluctuations in The Ether come from they're they don't come from just nowhere right you have physicists go out there and go they just come from nowhere what what what the hell does that mean does it mean anything does something comes from nothing how does that work what if something comes from The Ether does that not make just

more basic sense same concept just different interpretation on it that's it so when I'm saying that this plane's getting warped I'm saying go look at the

(1:03:44) double slit experiment the most mysterious experiment in all of physics just look at the double slit experiment and you tell me what the answer is you tell me what dark energy is what what is dark energy what even is that exactly dark energy is how we explain how the universe expanded faster than the speed of light but how does that happen there has to be a reason it's not just I don't know there there is a reason we just maybe don't understand it but there must be one why I'm proposing one there is an ether it

(1:04:16) has unlimited negative energy that's what caused the expansion of the early Universe if you believe in the Big Bang I'm not 100% sure but sure I don't care fine this negative energy is also why we have the Casimir effect when we put two plates together why do they just mysteriously attract it's a negative pressure Zone because there's some interaction happening between another dimension that we don't perceive the interaction between our reality and the vacuum state if you want to call it that The Ether

(1:04:46) whatever you want to call it we're bringing The Ether back so yes do I believe that we teleported the plane uh you know what sure technically I think that we warped This Plane through a wormhole uh but if you want to call it teleportation great just realize I'm not talking about dematerializing people and rematerializing them though though you could argue that what is happening here is that they are reverting to a wave function if it's reverting to a wave function then just like in the double slit experiment it goes from a

(1:05:22) probabilistic point in SpaceTime to a or a deterministic one sorry deterministic one to a probabilistic one a wave function and then it reverts back to a deterministic location this is how you can get something that can do what we needed to do like this but the Wormhole like I think we're looking at the mouth of a wormhole in this video guys so it's not a matter of like me wanting to believe wormholes are real I really don't care to be honest with you uh I never thought wormholes were real

(1:05:54) things before this investigation and that's the conclusion the investigation has led to so just that people are 100% clear that's what we're looking at right here this is a wormhole and we know because this is the first endothermic event ever shown in a video as far as I can tell if somebody can show me another endothermic event like this please show it to me I've never seen a thermal video that shows a cold endothermic event like this in my entire life this might be the very first one ever shown on video

(1:06:26) anywhere it's definitely the first military video of an endothermic event that's ever been **leaked** to the public uh which I think should be pretty telling when we're looking at this here I mean this thing is gone in five frames it four frames is all we have and this is what 24 or 30 frames per second this is a fraction of a second one tenth of a second and this plane is gone one tenth of a second guys the Pyromania VFX is at least half a second long maybe a full second so the VFX isn't even the same

(1:07:00) time as this as that look how fast that's gone that was in slow-mo that was in slow-mo guys how fast I was gone so the reason why I'm so confident and I put down a lot of these people who are like these skeptic people that try to make fun of us it's because I'm literally looking at the answers I'm literally looking at we are looking at together we are looking at the answers to how physics really works and how we can explain the aspects of physics we do not understand we're staring at it right

(1:07:30) here so when people say oh you think a plane teleported yes I'm saying I'm looking at it in two videos and it's scientifically accurate so I'm looking at the answers to the test to say  $2 + 2 = 4$  we're looking at that and then we have people come up to us and say well I don't know what  $2 + 2 = 4$  but I know it's not four and I go yeah it is yeah and they go well how do you know that well because I'm looking at it I'm looking at the answer sheet I've got it right here

(1:07:58) in front of me says  $2 + 2 = 4$  and they go well you have no evidence that  $2 + 2 = 4$  and I go well yeah I looked into it I looked how numbers work and figured out how arithmetic and adding two things together works and turns out that yes when you take two things and add two things to them it does equal four uh yeah take it or leave it and they go no no CNN Told Me  $2 + 2 = 5$   $2 + 2 = 5$  everybody and then they just kind of give up so I never thought I'd be in a position

(1:08:35) where I could literally have the answer sheet in front of me and just be able to Lord it over people all the time and that's probably what's made me into kind of a [redacted] about this which yeah I mean kind of how can you not be when you have the answers like this and people are just trying to be [redacted] to you all the time every single day you know just staring at it this video here and the other thing I want to say as well is that um sorry one sec what was I going to say crap uh crap okay well I'll probably think of

(1:09:14) it um so here's the thing as well in terms of the debunkers the Skeptics before we go look at this out here I think we might offer an offer amnesty to all the ICS and the debunkers out there you know what these videos end up being real I'm not even going to hold it against you not going to hold it against you don't really care no I'm not going to unblock you for all the people that are unblocked I'm going to keep everybody blocked but uh I will stop making fun of you and treating you like

(1:09:43) crap every time that people come and uh talk [redacted] or whatever uh all the time which happens every single day and normally I just smack them down and usually I'm as sarcastic back to them but I'm thinking we just you know what we'll kill them with kindness so we'll kill them with kindness and I will I will not react in a hostile way to the people that are the people that are calling me flat earthers or crazy or whatever other the stuff they do um I'm kind of over it you know and I thought

(1:10:20) okay in the early part of this it was important to be pushy to really assert myself on it and now I'm thinking let's not even bother with that anymore you know let's move to a

personality where we don't attack the other people or we don't push at them where we just do our own thing you know um and so that's what I think I'm going to do from this point going forward uh Johnny party I appreciate you man I do think uh we've got one of the best communities here for sure and I'll take

(1:10:52) a drink for you guys for that uh oh looks like Lulu wants to come in um so the other thing too I'm I'm considering but I'm not sure if I'm ready to commit to this is uh giving the amnesty to all the the people that tried to **debunk** the MH370 videos okay I gotta let Lulu in one sec guys we're gonna get Lulu okay Lulu okay come here I don't think she wants to be picked up chat I was going to pick her up but I think she'll she'll freak out some of you guys haven't seen Lulu yet she's

(1:11:39) my dog she's uh a Husky she's pretty cute but there's a pretty good chance that she'll freak out and try to bite me if I ever pick her up so I don't like a like a like really good chance like really good chance um okay so we'll see so here's the thing and the reason why I bring this up to everybody I know you guys want me to move on do some other stuff but the reason why I bring this up is because **I want you** guys to also uh be nice to all the other **debunkers** and people that are out there I've seen a lot of you guys

(1:12:14) trolling them uh I don't want any more trolling of the **debunkers** or trolling of the lur Lodge or **Mick** West or well Corridor crew I probably will forgive you if you do it but just kidding uh just don't troll people out there related to it right so let's just do our own thing let's be confident in our own thing and let's try to be nice to everybody else that's out there let's not try to argue with them a lot of people can't be convinced so let I'm going to move on to the uh the Twitter

(1:12:44) beef from earlier today let's see here um where is it that's my streamyard how come I don't see it whatever here you go y some of you guys wink wink I worry about y'all Flint fancy I see you I see you yeah for the record as well guys I will always uh tell the **truth** even if I get something wrong I will retract it and because I feel like even as a citizen journalist it's important to maintain uh as much Integrity as possible uh I've always just been in this to find the **truth** that's all I've ever been into the only

(1:13:26) reason why I'm so passionate about because I know these videos are real at this point and I'm just trying to get the information out there however I have to however however it needs to go but we've reached such a huge level at this point where we've got big awesome people following us May's love was helping out today Dustin Ian Carol probably a lot of other people that have retweeted uh we just don't need to be rude to anybody anymore okay so POV a BBC employ tries to **debunk** you so this is probably going

(1:13:57) to be the last time you're going to see me trying to be rude to some of these guys and a lot of times as well the reason why I'm rude to people is that I just reflect the way they act onto me back onto them H so if people act like **[redacted]** to me if they are dishonest and what have you which guys like I can detect dishonesty like that okay like I If you present a bad faith

argument I can hear I I immediately can tell you're going to see that here in a minute I'm going to go through some of these

(1:14:24) messages uh with this BBC guy so that you can see for yourself the kind of person that he's that he is um and so in the past I would have like push back my new goal is going to be to try to kill them with kindness and just present the evidence to them okay so this guy here Ian Ferguson good picture with your dog Ian F1 forecasting for BBC Sports and a BBC weatherman yeah and I'm going to start being nice right now cheers I'm going to do my best right now guys good old BBC they're they're an

(1:15:07) awesome organization guys I have nothing bad to say about them so oh boy what a message so starts off with this guy with his uh you know face palm logo because obviously none of this can be real because you know he tells the weather it's got to be real this sort of pervasive garbage needs indeed must be called out I imagine being this self-righteous chat this self-righteous this sort of pervasive garbage needs no indeed must be called out always and then you just get completely destroyed in the replies like

(1:15:52) you try to have a debate with somebody and you don't even last one question and so I had replied like please set up the debate stop crying about it and stop being a coward like he says it needs to be called out right like we need to call out this kind of pervasive garbage and I'm just sit here telling him straight up man like I'm looking at the answers to the test it says 2 plus 2 equals 4 and he's just going this pervasive garbage needs to be called out 2 plus 2 equals 5 how dare dare you and

(1:16:26) I'm just like well I don't know what to tell you man like you can keep doubling down but this just isn't going to go the way that you think it's going to go like I'm I'm staring at the answers you know um and so let's go look back let's just flash back this is gonna be hard to follow maybe it's easier if I go to his replies and figure it out I'm afraid it's into the territory where fairies exist there's little hope I'll stick with the science so the irony

(1:16:57) is a lot of these people they don't even know what science means like this guy if I were to ask him I guarantee he doesn't even have if I were ask him what science means I guarantee he's going to go science is what uh Einstein came up with he's not going to realize that science is a scientific method that's actually what it stands for the a study of observable reality so I say the science says it's po it's warp drive is possible and a new paper came out like 10 days ago we we we posted that and it's clear

(1:17:25) that his science is as bad as his knowledge of MH370 that's some of the rudeness that I'm going to probably try to get rid with but I say collect your experts get a pilot an investigator into MH370 VFX artist and a physicist I'll take them all on four on one five on one if he wants to join them as well I mean it seems like a fair deal he's crying feigning some false sense of superiority I mean I think shouldn't it be easy for him to take me on on National Television wouldn't that be a good way to make this

(1:17:54) go away so I thought I was offering a pretty good deal there um now let's go look at his other replies earlier people are like fairies do exist five minutes in West Hollywood will prove that you got them do I have the damn I need to get one of my my Martini drinking thing I don't have my Martini drinking thing up Dam okay uh I'm going to go back to some of the earlier mes I just want you guys to see the bulk and potatoes of it oh uh let's just start okay let's see what we got here this where did our argument go I

(1:18:37) think it was here let's see oh wait that's not it h okay here we go here we go here we go here we go H so he wouldn't answer the questions about how a plane crashes into the ocean I asked him like three times I explained the debris situation to him I'd explain the fire situation to him as well and he ignored all of it um he kept saying there's no evidence of fire and then I explained the fire evidence to him let's go back to his other posts where is his post about the fire this guy man it's hard the problem

(1:19:20) is it's hard to follow these guys cuz they don't reply like linearly they just reply to like themselves sometimes as well uh so it's super annoying oh here we go here we go here we go here we go this is the this is what I wanted to get to okay here this is the stream okay perfect perfect perfect oh this is it guys okay here we go here we go I think the best advice to you is submit your theories and evidence to the responsible investigative body like the atsb is going to take my random dudes report and

(1:19:52) they're going to be like yeah we're going to listen to this guy there's literally no chance like this immediately shows like CNN brain mentality right he's like or perhaps you put a publication in a mainstream peer review journal can you imagine being asked to put your conspiracy into a mainstream peer review Journal like I don't know what does this guy think I'm doing here like I'm running an investigation I'm not trying to uh you know write a paper on uh quantum mechanics here

(1:20:27) these guys are just have no idea this guy has no idea how the world Works no idea how the world works works whatsoever right and I said you know sadly this shows how misguided you are we're dealing with the largest verifiable conspiracy in the history of the world here several governments are implicated the only way this gets revealed is by people waking up on the largest platforms possible the ones responsible for the cover up and or incompetent search failure to produce results are not interested in exposing

(1:20:54) themselves eles like do they just think that the governments that control the academic papers and the people that don't believe that you know a wormhole can exist are just going to change their mind overnight go you know what go ahead and expose us we were incompetent we lied on all the media but you know what let's publish those papers of course they're never GNA allow that to happen guys no chance and then he says oh you have evidence of your narrative evidence narrative includes a this clear misguidance where I was talking about

(1:21:26) they couldn't dump the fuel because they were out of power and because it would been over the max weight so they say we get into this argument about um and and I tell him

here's my first question you how does the B7 the size of a city block crash into the ocean and I show here as well after he says well what about the debris from Africa I post this image it says the Rolls-Royce engine cing that washes up down here in South Africa literally could not have come from this crash location you can see the currents would flow the debris to to

(1:21:58) Australia the debris should have washed up in Australia right and so then he focuses on this idea that well you can crash you can you can land a plane while it's overweight which sure you can land a plane while it's overweight it's a risk but you can do it now if you're plan's on fire and you've got eight hours of fuel seven hours of fuel in your tank I don't know I'm not a pilot so if he wants to argue that you're going to make that judgment call and you're going to do that take that risk

(1:22:22) as opposed to getting a message from the government and going for a rendezu location for a water landing I don't know man I'm willing to concede the point if he's a pilot he wants to say that that's the better move it doesn't matter to me why the plane didn't land in panang the options I always were before this that maybe the runway lights were not turned on because it was two in the morning and the airport would have been closed uh maybe they were on and maybe they couldn't get the landing gear

(1:22:49) to come down maybe the landing gear was damaged by the fire we really just don't know **truth** is we we don't know and what came out recently was this evidence that well you can't dump the fuel we had talked about well why wouldn't they dump the fuel we had speculated that maybe because of the fire event but reading through this the stuff related to fires is that it's not necessarily a huge risk to dump the fuel but now we know that if there was no power then you couldn't dump the fuel so

(1:23:17) whatever um and then he's focused on like oh okay well you don't know what the flight manual is well I do know the flight manual flight manual say says you should land immediately no matter what and then it says if you can't do that if you can't land with your landing gear you should land on your belly on the ground now I'm going to go ahead and say that there's no chance you should land on the belly on your ground if you have another seven hours of fuel in your tank that's a lot of fuel your plan's going

(1:23:39) to explode seems like just standard physics to me um and that would make sense why you would go for a water landing in that situation you're still pretty much doomed but it might help out uh at that point so I asked him to review the evidence because um I explain all the fire evidence 487 pounds of stacked up lithium ion batteries twice unscreened two pallets in the forward cargo bay 19 witnesses to the fire event including Mike McKay Katherine T lithium ion batteries were banned from the cargo of passenger planes in subsequent years the

(1:24:16) plane did an emergency descent after it was after it went dark and eight fishermen saw it consistent with that as well uh we know there communication uh because we had heard it from another pilot that heard the radio um the plane flies directly to panang under manual control again the closest airport to go to a fire emergency uh as well as there's a Mayday call as

well that I don't have listed in here um so then I explain the manual to him as well so then that's the answer and he comes back and says okay please

(1:24:48) point to the manual or a standard operating procedure that alludes to not attempting an overweight Manual of course it's a judgment call so now he's being deceptive like a lot of these guys do right where they claim well well point to the part in the manual or you can't do it well okay fine you got me there you can attempt an overweight Landing I never said that you couldn't do that that's never something that I've claimed of course you can give it a try but you know if you're overweight and

(1:25:14) your plan's on fire and maybe you have damaged your landing gear it's you know obviously going to be a judgment call in my opinion so I tell him I'm done answering his question still the answer is mine but I go ahead and answer it anyway later on on down here um so because then he calls me you can't answer the question of course I can answer the question yes they can attempt an overweight Landing we don't know we know they didn't attempt a landing they they didn't land we know right the plane

(1:25:39) moved on the co-pilot cell phone pings the tower so this is where you just push back at them and you say why don't you what what do you think why do you think they didn't land right I don't know why do they think the plane didn't land the plane didn't land it flew directly over panang airport and it was line low enough that the cell the co-pilot cell phone pinged the cell tower so if it ping the cell tower they're like below 7,000 ft that would seem to indicate they were trying to land otherwise I

(1:26:05) don't know why you'd be flying that low in addition to maybe the fact they were trying to keep the the passenger uh oxygen in the passengers to stay alive so this is the reason why they won't answer the question uh and so then I say okay I could attempt an emergency landing okay great this is completely inconsequential um and then I tried to get him to answer the question about how a plane crashes in in the ocean the problem is here is that he was replying like different posts so I can't get to like the exact

(1:26:41) chronology of our back and forth because like he kept replying to the the like not the same thread which got super confusing uh and then he was replying to himself here A bunch of times as well which made it difficult instead of replying to me got super confusing here um so then he says of course he goes to the answer of the ocean is really huge and it's deep so this is just like straight up CNN brain NPC uh Behavior right the ocean is really big and we know that people are going to say that because it's been

(1:27:15) brainwashed into people like people that are brainwashed say that the ocean's really big there's like no original thought there because it doesn't even make logical sense you can break it down right away cu you just say well so the satellite pings are wrong then like where exactly do they think the plane crashed look at this huge swath this is the whole seventh Arc that they know the plane crashed in we searched above and below water everywhere this is they have the plane running out of fuel did so you just

(1:27:43) asked them do you think planes can run without fuel do you think that the satellite pings are incorrect because the CNN brain people they have to have these contradictory opinions in their head like they say well the satellite pings are real but also the plane crashed somewhere else but like wait how can I have both those ideas in their head this is what causes them to self-destruct is that the CNN brain people only listen to Authority but then then you just show how the authority contradicts itself the satellite pings

(1:28:12) are not consistent with the debris we can see looking at this image here there's no way you can have a crash down here and then have debris washing up over here to the West the currents flow to the east but the CNN people go Wella no it just wait how did it do that and then you tell them okay well that rules out the satellite ping so do you think the satellite pings are fake and then they go no the s pings are real and then you go okay well we searched with 40 boats and planes and we search underwater with

(1:28:39) the submersibles map the entire ocean uh at least in the area and you go okay so what's the deal where's where on the map is the plane here's the map where on the map do you think the plane crashed exactly like put a spot put an x on the where you think is consistent with the facts that you think are real that where this plane could have crashed either the satellite pings are wrong you know or there's something else going on here the ocean's really big but planes don't fly without fuel it's it's

(1:29:09) not super hard even the Navy didn't know what happened to this plane so then now he's going well you think he changes the topic back to like they could have attempted an overweight an overweight Landing the plane couldn't land on the ground great okay I can see the point you know so the plane could have landed on the ground I'm wrong about that they could have attempted an overweight Landing there you go it's completely immaterial to my argument uh because they didn't land we know they didn't land and we know there

(1:29:43) was a fire we can see it in two videos we have 19 Witnesses Katherine T sees the plane uh consistent with battling a fire there you go uh so I don't know what their argument is and they don't have any counterargument for like why they think the plane didn't land what what is their answer because if it's that there's a rogue pilot took over the plane I'm willing to listen to the evidence there isn't any but I'm listen I'm willing to listen to it uh so I said why they didn't land is

(1:30:12) immaterial to the overall story I'm I'm happy to concede the point in an honest debate so this is why debates are good right is that we can have a flow of information and ideas I'm not against you know admitting that they could have given it a chance to that they could have attempted to land the plane you know like that doesn't that's totally immaterial to my story but what's not immaterial is how a plane crashes without leaving a trace that's detrimental to any narrative that claimed it ended in the South Indian

(1:30:43) Ocean he says it did leave a trace in the form of buoyant verifiable components carried by the ocean currents over considerable distance over the passage of time then he says the Hulk

sadly REM LS on the ocean floor well he's objectively wrong it's not down there which is why we never found anything um but also it's literally impossible he obviously hasn't looked at the the drift analysis that's been done because it's not actually possible for this debris to get to like the South for

(1:31:11) example take the one that's one of the furthest away the engine Cen says big RR on it this one down here in the South Indian Ocean it's actually literally impossible scientifically for that piece to even floated 3,000 miles and it's certainly not going to float all all the way around these currents somehow Dodge all this and then float down through here and get to South Africa not in 18 months or whatever literally impossible no debate about it just literally totally impossible uh so if they're the

(1:31:36) type of people that think that this debris is from MH370 then they've got to admit that this is not where the plane crashed and then the problem is this is what breaks their brains because once they realize plane couldn't crash down here you look at the map the reason why I have Diego Garcia Pinn right here the debris is completely consistent with an end near or on Diego Garcia this debris was either thrown in the water or this plane crashed somewhere around Diego Garcia that's much more consistent with

(1:32:01) where all the debris came from literally impossible for it to have crashed down here so I'm confident saying that because I've looked at the debris and this is the sad part is that for people who are brainwashed uh and I don't mean to be rude here I'm just I'm I'm speaking just right off the bat for people that are brainwashed that are out there I know exactly what they're going to say and the only reason why I can know exactly what they're going to say is because they're brainwashed and they

(1:32:24) been given been told what to think they're not using original thoughts so it always starts with well the ocean's really big every single time the ocean's really big and then you just counter like I just said well where exactly did it land where did it crash do you not believe that do you believe that planes can fly without fuel do you believe that the satellite pings were fake like where exactly is the plane that we somehow didn't find it and then that freezes them up and you say how does a plane

(1:32:49) crash without leaving a debris field that we would have seen from space even if we weren't tra backing it that day via satellite we would have seen the debris field the next day with our satellites that are persistently scanning the whole globe the whole globe USA 229 scans the whole globe every single day it slightly moves and adjusts so there's literally that's just one satellite there's no chance that we wouldn't have seen the giant debris field from a Boeing Triple 7 on March 9th 2014 like that's just a completely

(1:33:18) indisputable argument especially crashing into the ocean where the debris spreads out we would have seen it from space and yet we've got 40 planes searching submarines searching 40 boats searching nobody finds one piece so this is how you brain you break them down guys um so this is why I will give them the answer the questions ahead of time because I I don't want

to just like Ambush them with this obvious arguments I want them to think about it ahead of time so they come prepared this is the real reason why nobody is going

(1:33:53) to is going to debate me because they know the questions ahead of time they know they have no answer and just like you see right here once you explain this to them no response no response planes don't crash without leaving the debris Fields only three pieces are confirmed to be from MH370 it's impossible for the debris to have washed over here some of the debris even has burn marks on it um where's the other post I wanted to show there's one more post I wanted to show God man the way he replied made it

(1:34:31) so difficult to track this conversation also they when I mentioned Mentor pilot they thought that both this this guy's a oh sorry here we go this other guy is a b 7 pilot and oh it looks like is he retired no dble uh he's American Airlines pilot I pray to God I'm not if I get on American Airlines flight and Doug Ferguson is my captain oh boy I'm probably getting off man I'm probably getting off uh this guy was a giant clown giant clown so I don't know he was trying to be funny here with some nonsense and he

(1:35:16) thought that I talked about that I'm getting my information from YouTube no I'm not getting my information from YouTube Mentor pilot is not on my side mentor Pilots one of these guys who's a YouTuber I make fun of the YouTubers I do not I just I am familiar with everything about the case I'm familiar with the YouTubers who've talked about it all the news articles everything that's ever been investigated with this case I'm familiar with it and so then he's making a boomer joke here which just sad

(1:35:42) honestly at this point um and like I I knew he was a boomer and then immediately after this he talks about how he's tired and has to go to bed even though it was like six o'clock at night I'm like yeah okay buddy um okay let's see and so I pointed out that he doesn't these guys don't even realize that Mentor Pilots one of their own I have total faith in the investigative abilities of the atsb even though they literally found nothing as should any rational person who isn't credulous to

(1:36:21) conspiracies uh as one popular TV says the **truth** is out there but history demonstrates this almost always as science suggested like the irony here is he doesn't understand that we are explaining the science that he doesn't understand like I I told him he can bring a physicist on board so I don't know why this Ian Ferguson guy dodged every single I mean if he if he's so confident just set up the the the bait I literally told him you can bring a physicist you can bring a VFX expert he can make Pilots with him whatever he

(1:36:50) wants man like put it on TV if he so confident let's put it on TV let's get it done man you guys saw my challenge um you know if he wants to help the families out put this scary conspiracy theory damaging conspiracy theory to the test let's do it like I'll I'll make a clown out of this guy in National Television people will be making memes about this guy the next day on social media that's how badly I'll destroy this guy Ian Fergus and the name will become synonymous with a clown uh so you know if he wants to do

(1:37:24) do it let us know guys oh here we go thank God okay so this was the report I showed him of the emergency descent every single thing he asked I refuted I gave him answer to it he says what radar shows that the emergency descent there was a link I I don't have it right here but I showed him a link to the recent analysis that shows that the radar showed an emergency descent he says the last Transmissions were nothing to do with Mayday or radar that's because he did he wasn't familiar with the **China** only uh

(1:37:57) Mayday so he's not familiar with the evidence unfortunately um and then he assumes that this stuff wouldn't have been covered up oh this is the the pilot guy so again like the whole point is there's a cover up they obviously hid Communications the reason why they hid Communications is because it would show there was a fire event we know they hid Communications because the Malaysian Minister of Defense admits that the military knew the wasn't hostile how could the military know the plane's not hostile they can only know

(1:38:29) it's not hostile with Communications this is the reason why they didn't send up Jets this is the real reason why they didn't send up Jets guys because they knew the plane wasn't hostile and I tell him about all this and then he doesn't respond at all because they just these guys cannot respond to anything that they don't have any counterargument to I even tell them there's another B 7 pilot headed to Narita that hears the pilots 10 minutes after the plane goes dark so of course there's

(1:38:59) Communications and the Chinese steal they hack in the Malaysian government and steal communication they steal classified information about the plane the next day the next day on March 9th why is **China** stealing classified information about the plane why is there classified information about a missing airliner on March 9th guys we just have to use common sense why is there classified information about a missing airliner on March 9th the day after disappears what could be classified what could be classified Communications they classified the

(1:39:36) communications there's nothing else to be classified I I just don't get it what do they think would be classified no citation of any M calls described in the official reports yes cuz they didn't report on it because it's classified what does this guy just not understand basic logic and and common sense like does he really think that if we were to go on TV he's not going to end up looking like a complete fool does he really think this this interaction went well for him no further at ATC or inter aircraft

(1:40:11) coms are cited yes well it's out there you can just Google it another pilot heard the plane on 1730 UTC it's not rocket science summary of MH370 space **truth** with kim.com huh weird um and then do I trust the **China** times whoa not good imagine posting this man like do you guys ever wonder why do you guys ever wonder why BBC is just a failure of an organization like complete failure the reason why no one listens to Legacy Media you're about to read it right here you trust what **China** times reported as

(1:41:01) 100% factual whoa not good this is just like yikes dude how can you take yourself seriously of course I don't just trust them Define emergency descent okay so this is the last post

about this guy that we're going to do and then we'll go on to the other guy fire event is corroborated around 1840 UTC in the Nicobar islands by three independent sources three different independent sources corroborate the fire event the MayDay call reported in **China** Times Katherine T seeing the plane in glowing orange and

(1:41:39) descending in the location of the Nicobar islands the same location the satellite coordinates show and we also have two videos two videos two videos in perfect sync from different angles from different assets both showing the plane flying low descending with smoke coming out of the back of it literally descending into the ocean to prevent emergency in that location three corroborations including the **China** Times report that's more than the BBC runs with most stories just run with one corroboration we've got

(1:42:14) two why did **China** hack Malaysia and steal classified information about MH370 on March 9th that's pretty weird it's like they were trying to figure out what happened what could be classified about a missing commercial airliner air traffic control on March 8th the day the plane went missing the same day the plane went missing said they lost contact with the plane at 1840 UTC what why would air traffic control the day the plane disappears say they'd lost contact with it at 1840 UTC isn't that just like a very clear statement that's

(1:42:48) the same time that we have the plane disappearing in two videos the Catherine he saw it that the plane was in the location we see in the coordinates in the satellite video like that's absolute proof you convict somebody just off that alone in a court of law we don't need anymore and I've got another 16 pages of evidence that would be enough in a court of law if this wasn't some kind of Wormhole technology nobody would have any question with it they'd say 100% that proves it right there's just not

(1:43:18) debatable notice there's no reply to this not notice there's no reply to this the the moment you break these people's brains and and they realize in their heart of hearts that you're not lying to them just that's the end of the debate they just shut down like NPCs literal NPCs like the moment you get does not compute short circuit does not compute does not compute completely meltdown has complete meltdown after that obviously the communications have not been released to the public the families were

(1:43:49) even trying to get classified information released in their lawsuits what what could still be classified that the families were trying to get released that they're holding back what could they be holding back everything I said up here is true and verifiable you can verify every single piece of evidence that I'm posting up here I've tweeted about every single thing that you see here there's a historical record in my Twitter profile it's on my evidence list all of it is it's all there uh and then here's the source of

(1:44:18) the emergency descent right here just just so like there's no confusion I click the source right there uh here x okay and then you go and this is a recent report from April or this yeah so this is actually April guys they this is if you guys are American this is not November this not the future right here this is uh UK they they flip the month and the day backwards they're

backwards like that new Revelations data analysis by the program manager air traffic control and former Captain also found a likely climb before an emergency

(1:45:05) descent maneuver was performed after the aircraft was depressurized guys it's right there there it is this is proof of the fire event 30,000 32,000 feet is not high altitude 30 to 32,000 ft planes fly at 35,000 to 40,000 ft regularly and again you can't lie to me about airplanes because I literally flown millions of miles in airplanes I'm very very very familiar about airplanes and how they fly so then there was an emergency descent maneuver and a depressurization the only scenario consistent with an emergency maneuver

(1:45:42) and a depressurization is a fire event fire emergency event you're you are flying low to get the passengers enough oxygen to breathe you're depressurizing the plane because the uh the fire extinguishing device sucks oxygen out of the plane there it is no response of course because I did the exact thing that he wanted I gave him evidence of the claims that he thought I was not being **truthful** about or that he thought he could get me on and he got proven wrong on every single one of them every single one of

(1:46:13) them uh so I'm happy to debate Ian Ferguson whatever his name is if BBC ever gets the balls to debate me on this happy to do it uh let's do a couple quick donations and I'll answer a couple more questions Jamal uh M to have a plan in place to boost message direct to people after JRE you want to stay in the Jo **Rogan** frame ver Fame verse you'll be swamped with fake **debunks** and CIA **sex** guys that sounds like a party to me man cheers CIA **sex** we're gonna be swamped in CIA **sex** everybody boy sounds like a good time

(1:46:56) guys if the CIA wants to swamp me with CIA **sex** you know what we might just have to go with it Manel third donation of the night brother thank you very much \$499 appreciate that that'll get me a ice cream cone that's awesome appreciate that man awesome yeah Ian Ferguson doesn't want any part of this I shouldn't have wasted any time with him like I knew this was going to lead nowhere the moment he didn't agree to the debate right away we should have known that was the end that he was going to **[redacted]** out of course he

(1:47:27) pussied out he has he went last five minutes in a debate with me he couldn't even get through one question he couldn't even get one question he couldn't even answer the very first question of how a plane crashes uh the ocean's really big Ocean's really big you know hey I'm goofy it's like wow man come on and then you just drop them with okay where did the plane crash do can planes fly without uh fuel are are the satellite Ping's correct or not oh no my mar short circuiting short

(1:47:59) circuiting why does this keep volume keep lowering weird Okay um somebody wanted to know where the plane went okay so I haven't showed this too much and not for any reason but uh I just I get tired of answering where the plane went it's got to be the number one question that I get asked is where the plane went what happened to passengers I can't tell you how sick of the question I am uh I have done multiple frequently asked questions uh again guys I am not psychic I just want to repeat that I am not

(1:48:30) psychic I don't have any psychic abilities so I I can't remote view stuff I I don't know exactly where this plane went what I can see on two planes or two videos is this planes disappearing and I know where because I can see the coordinates so I can follow the factual information and and tell you what that says uh I can come to a pretty good conclusion of the motive but at the end of the day we don't know exactly where it went but based on the right hand rule in physics with the orbs circulating

(1:48:57) around the plane we think this plane is going to the West somewhere so it's it's teleporting away here where Katherine T sees the plane this is where we have the coordinates in the satellite video that's definitely where it's happening yeah the volume is is literally manually changing guys I'm watching it manually change on my mic here I don't know how are why it's doing that sorry about that I'll double check and see maybe I'm touching it so we this is we know this is the

(1:49:29) location and then it's going somewhere over here to the West the reason why we think it's going over the West here is that it is potentially in the malds the Maldives there's a sign in the malds there's a B7 fire suppression device in the Maldives that washes the shore that had to be empty so the Maldives area seems to be right area the 20 people that's there's 20 people on an island see the plane okay 20 20 people 20 Witnesses so 20 Witnesses plane appears to then go to Diego Garcia based on the

(1:50:05) witness sightings in Cuda huvo did I say that right Kuda Hua Duo kuaao don't try to say that three times fast okay um so there you go guys yeah also for the record guys I I might start turning on no DM rules I am getting way too many DMS it's nothing personal but I just if you get ignoring DMS it's not personal man I am just too busy uh I get probably a thousand messages per day about people wanting me to look at stuff so nothing there also please don't send me stuff asking me to retweet your content just don't do that

(1:50:49) it's not going to happen um that's not how I roll so if I like your content retweeted I'm not going to retweet stuff at request I prefer if you just don't request um so anyway that's where the plane went Diego Garcia there you go that's your answer I think the plane went to Diego Garcia uh I can't prove it but whatever I don't even really care all I really care about is that we can show that this is what happened in the plane plane got disappeared right uh and yeah to the person here

(1:51:17) that asked like Ohio gaming like if you guys aren't familiar with apparently having a big following you get spammed DMS non-stop from people non-stop uh some people are out there that just want to send you every single thing that they see then they send you links to it uh it is what it is I know there's no way to stop it in general um but I just want people to realize like if you get ignored it's it's not personal man it's just that's what I'm getting spammed with all the time and I've got my own

(1:51:44) stuff going on I'm investigating my own stuff um but I but I totally understand it I'm going to miss out on the thoughts no I don't get enough uh not enough honey potting happens

only a little bit honestly anyway the sign should be sweet looking forward to the sign um somebody asked I might have missed it because of X keeps freezing advantages of targeting a passenger plane it's not am of advantages of targeting it this was not a weapons test you might be able to argue that this was a a test to save

(1:52:24) the passengers in my mind there's like a 20% chance that this was a situation where it was a rescue operation that the fire was accidental and that they were trying to save the plane probably because some VIP on board the plane that seems plausible uh but I think there's about an 80% chance that the fire was engaged and initiated at that specific location and that it's all part of this counter Espionage plot and the plan was because they knew the plane would turn around and then I don't know maybe they

(1:52:56) remote controlled it or again I don't I don't know 100% the reason why they didn't land I think the most likely reason is because the FL plane was overloaded with fuel and that uh it was too dangerous because of the fire maybe landing gear was damaged not sure uh so those are my thoughts on that uh but I think this technology is most likely not just experimental I think that it's been engineered and proven uh it's I me what we're seeing with those or the reason why everybody reacts when

(1:53:24) they go that's got to be aliens the reason why people react when they look at this video here I'll pull it up again the satellite video shows this the best and I'm showing you guys the high quality one instead of the side by side there's two different versions that were uploaded on the internet uh the reason why when people look at this video that they think it's aliens is because it just looks way too advanced you go like those are orbs and isn't UFOs about orbs UFOs are usually about like flying saucers and weird

(1:53:54) shapes like that only recently has it been about plasma orbs so people look at this go it's too advanced and I would say yeah it is it is too advanced to just be something that this is not the first try of gravity technology like we had groundbased systems and probably Satellite Systems before we had floaty orbs that's the scariest part about this is that this technology is too advanced to just be we're just going to try out our new floaty orbs that can float around a plane and warp it away nah this

(1:54:23) goes way back the question is how far back does it go what's what's been the iteration of us developing this and this is the reason why they don't leak videos like this this is why the government comes down so hard on people that leak these videos because when you look at the videos here um you can glean so much information from these videos not only can we glean what happened to MH370 we can actually pretty well deduce a timeline of the development of this technology I would say this technology

(1:54:56) probably started getting developed in the early 2000s and then in the early 2000s we started to have floaty orbs like we see here and started to have these kinds of effects not just with Radars not just with satellites but with like objects that can float around and it was probably some type of development and uh Discovery related to plasma physics that allowed

that to happen and if you can glean this much information about just two one minute long videos then this goes to show the idea that like you cannot give this to your

(1:55:31) adversaries if some random Twitter guy can figure this out and figure out all this information this history out there that's why you're hiding it that's why you're hiding it and when we look at the Drone video why why are they filming this why are they filming this drone video look at this like why are they even filming this this is super high quality nighttime color uh color thermal vision from a high multispectral super Advanced Camera they're filming this because a it's an operation like Ohio gaming Ohio gaming

(1:56:08) you're on it B they're filming this for the science purposes they're filming this the same reason why we're able to reverse engineer it they're filming it because they want to collect information about how this technology works that was the point of filming it like this that's why we look at it like this is that this was filmed so that when people look at it because they're going to give this to military scientists and they're going to go here is the time where we deployed that super weapon here's how it played

(1:56:37) out does it m fit with the criteria and how can you make this better how can you improve this to the next iteration that's wild I've only recently been able to deduce that they actually were filming this that's probably the reason why it's slow-mo here right right here as well I don't think reeside and non added this slow-mo stuff to it I think this was always there I think that they actually presented this as like we're going to film this to like collect intelligence about how the science

(1:57:07) Works which is the same reason why we've been able to deduce it yeah whoever just said that Flint fancy thanks for the video yoink yeah absolutely right like when you look at this you're like this is the biggest leak ever like this is like this is why the government came down on Edward C Lynn because you look at this leak and you're like dude you just leaked all of our secrets you leaked all of our secrets they can figure out everything just from these two videos even though you cropped it even though you were just

(1:57:39) trying to solve the mystery of the plane they can figure out everything from this like this helps our adversaries so much and the reason why I don't care is because it's already out there it's nothing I can do to make the situation any worse yeah can you imagine watching that live and that's part of it too when you watch that video at the end like watch the plane disappear right here the camera operator doesn't even Freak Out camera operator's like okay gonna zoom out and uh yeah what's for lunch what's

(1:58:07) for lunch if I was the camera operator that camera would be FL flying left and right I'd be like what the f just happened we just watched off effing B7 just straight up disappear that camera would be going nuts this dude just like yep zooming out and that's the end of the operation and I'm going to have a sip and we'll go get lunch we get some burgers tonight absolutely wild the whole videos just the this one especially the way they zoom in with the manual zoom in they manually are zooming in here and

(1:58:43) there's a delay this is the reason why they're struggling to keep the plane in screen because there's like a one second lag like if you're playing video games against people from Korea and all your clicks there's like a lag to it it's the same problem here because the person who's operating this camera could be in like Houston Texas they could be anywhere on the planet they don't have to be in the uh you know nicobar Islands that's why there's a lag that's why they're struggling to keep the plane in

(1:59:09) view like that's why it goes off the screen right there because he's trying to keep it in View and he's zooming in he or she is zooming at the same time the only reason why you zoom in like this like look at them zoom in like that why would you even zoom in like that when they zoom in like this super close like they're trying to show because someone has directed them they want them to look at these orbs they want to get the highest resolution on these orbs that they can get and this is the one

(1:59:37) where you can tell clearly the smoke is not coming from the engines the smoke is not coming from the engines look at this that smoke right there does not line up with the engines It lines up with the smoke coming out of the plane right here and wrapping around the hole of the plane and and then creating two Trails behind it it just looks like it's coming from the engines because there's two Trails but it's not so that's why like I'm I get more and more certain it's smoke as opposed to some weird somehow contrails which

(2:00:09) seems impossible or exhaust I don't believe that's exhaust at all no how are the orbs deployed how do you deploy these weird look at I mean look at these damn orbs guys I'm going to show you a different video that's even crazier than that one while I talk about how they were deployed and then I think we're going to wind up after this I've been I always say I'm going to always do a short stream and I end up doing all these super long streams every time uh where's the good one sorry guys

(2:00:36) I have so many Clips I made honestly I don't even blame people now at this point for saying that I somehow made these videos because I'm actually done so much editing now so there's the the plane so I sped up the beginning so you can watch when you watch this zoom in right there you can see these 3D parall clouds that's why I did that so to see the parallax clouds and then I show the slowmo you can see the second orb is going to come in on the bottom right watch the second orb right there you see the second orb come

(2:01:02) in and it's just instantly in formation instantly and then the third orb just immediately pops up as well um and I already just forgot what I was going on to say crap what was I gonna say chat okay with the fire and the zooming in what was it um but yeah I mean the way that they are zoomed in here that they have followed and tracked that plane with the camera Shake being accurate as well it seemed uh seems dead on the money oh yeah where are they deployed from so we believe they could be launched from I don't

(2:01:43) think they're launched from the Drone I think they're either launched from a submarine a boat a plane or from a satellite I think they could be launched from any of those

any and they might actually have just like floated all the way over here as well I mean you see how fast they are going when they come into the screen they're coming at like 2,000 miles an hour then they immediately match the speed of the plane they immediately match the speed of the plane they're having no gravitational force no gForce whatsoever are impacting

(2:02:13) these orbs uh so they could come from basically anywhere that's the hard part the problem is people ask what's the material oops because there are too many messages it's a it's definitely a plasma sphere around it so this is the part the reason why the scientists have come to talk to me and they wanted to talk to me is because I had nailed so many aspects of this without knowing anything about the science it's a plasma field around a smaller object inside there and they they realize that I realized that and

(2:02:44) you look at it you can tell that's not a metal sphere you're looking at there that heat signature implies it's some kind of ball of plasma some kind of field I I had figured out super conductivity early on in this investigation that's like one of the requirements that ties the semiconductor employees to this as well um and what were some of the other aspects oh and then uh wormholes and the double slit experiment the idea that you can rebuild the wave function that's actually how this stuff

(2:03:13) works there might be multiple ways to T teleport a plane you can have warp drive what we're seeing with these orbs is warp drive so you can see these dark lines I'll show you guys a different version of this where you can see the dark lines in front of the the orbs that's that's a warp drive that's them literally pulling space around the orbs the orbs are not floating forward like they're not propelling themselves they're literally just pulling space around themselves and if you look at it

(2:03:41) you're like holy crap that's Advanced I say yes it is it's the most advanced thing I've ever seen in my life which is why the first couple weeks I thought myself like that's got to be that's got to be some kind of uh like aliens non-human intelligence because I just thought there's no way we could be that advanced but the more I looked into it the more I realized like no we are just that advanced actually like we've literally been hiding this technology for decades and we just haven't

(2:04:08) mentioned it yeah double slit experiment ether all and The Ether thing is relatively new I was not all aboard the ether I like other people I would have thought the ether is nonsense if you would asked me like a year ago and now I'm like no the ether's real guys like that's the only reason why I believe the ether is real is cuz I'm looking at a wormhole where we have unlimited negative energy we can see the negative energy happen on this this one the black and white one is pretty incredible although this isn't my

(2:04:36) favorite the the blue one is probably my favorite uh I'm actually G to switch to the blue the blue one yeah this one this is the one okay this one is the one chat this is the one where you want to see the trails you want to literally watch look at this maximize this on your screen you can see that orb come in look at the dark Trails look at those dark lines guys holy smokes that is

literally pulling space around the orbs look at those dark lines in front of the orbs nobody made these videos guys I know it's impossible to believe but

(2:05:18) somehow this is real look at that look at this look at this in slowmo can I slow this down I can't even slow this down anymore you can even see the the lines in front of the orbs even in super closeup on this version even in the super closeup you can see the dark lines they're using a laser as well I had also figured out they were using a laser to project the gravitational effect and that's also true that's probably how that's being produced that's what salvator P's paper says that's why salor pus wanted to talk to

(2:05:49) me he probably thinks I'm like somehow got some kind of of download from some alien species or something I didn't get any download or anything like that I'm not one of those people I don't think I have psychic powers I just have the power of intuition I know what I'm looking at here because I I know enough about science uh over the last like you know my whole life I love science to figure out what we're what's going on here like I figured out 2 plus two equals four we're looking at the answer and at the

(2:06:15) end there poor Ken Ken as well thinks there's some kind of masking there's no masking what he's seen when the plane disappears here right here you're right there you see this these are the trails these are lines in front of the orbs that's not a masking this isn't signs of editing that's literally where the orbs were creating space in front of themselves and then they warped away this is exactly what we're seeing right there those two dark lines you see are the leftovers of the gravity propulsion that

(2:06:47) they never flew through because they created a wormhole instead and they disappeared crazy right no it wasn't Frozen okay any other questions on that guys anyone know about rbr 2 plus two does equal four can you believe it So eventually guys this is why I'm so Cocky and Confident is like I'm looking at the answer sheet here these videos are real I'm looking at a real Wormhole and the only way I can rationalize what I'm seeing here scientifically is that there is an ether that ether has unlimited negative energy

(2:07:21) and it turns out Thomas beard in not is he talking about this he's a literal he was at least a literal government engineer that worked for private Labs he's admitted it he's worked for the very private Labs of Defense contractors that are hiding this technology why don't people just listen to the people that work in the labs Hal POF just talks about it openly as well my buddy Dave Rossy if you haven't watched my interview just listen to my interview with him watch the Tim pool culture wars

(2:07:47) episode with Ashton Forbes and Dave Rossy he literally says he's seen these effects in the labs like I had to say that Dave wouldn't hurt himself after that because I got afraid for him I'm like dude you probably shouldn't be talking about this man like locked Martin doesn't mess around you know we've seen people getting boed every single day now I'm just a random dude with a big following they'll be really suspicious but like for some of these Engineers I get a little bit worried for

(2:08:11) them and then people say well what about what about people like Eric Davis who's like out there lying to people and stuff like that well some of these defense contractors like Eric Davis they're they're covering it up they've got millions of dollars he wrote a lot of those Dia papers I think that's the rumor so he's literally writing the papers about wormholes and and warp drives and then he's going to lying and telling people that it's not possible and stuff like that like what

(2:08:36) the hell dude you wrote the papers you have a teleportation physics study by Eric Davis VM teleportation literally explains what we're seeing here what do you mean what do you mean it's not possible why are you writing all these papers about it then like these these guys are like literal government engineers and defense contractors just listen to what they're what they're saying these people there's this idea these debunkers have out there as well that like oh uh they're they're just they're making these stories up

(2:09:03) just because they want to get more money guys the government is not paying people that don't produce okay like I know that because I'm a defense I'm I'm not a defense contract I'm a contractor as well I'm means I work for a private company and we have a contract with the government and that's how I know that like if you are not producing in the government everybody's freaking out there's Congressional hearings about it so this idea that like these people aren't producing anything real and

(2:09:29) they're investigating goblins and stuff like that and they're making writing fake papers that's not that's not what's happening guys uh these people are even paid lots of money I wouldn't surprise me if some of these people are making like a half a million dollars or more maybe a million dollars a year to not just from the government but from their private contractor stuff as well where they're getting paid tons of money to develop super advanced stuff those people are not paying them to write

(2:09:54) papers about goblins and make disinformation up no they're getting paid for like real science like advanced stuff that is like would blow people's minds and when you make imagine making a million dollars a year and you work for a defense contractor that will disappear you or Boeing you at any moment of course you're going to go and lie about it [REDACTED] I'll probably lie about it you want to give me a million dollars a year let me work with magical technology and I get a walk through Stargates uh yeah

(2:10:22) I'm gonna lie to all you [REDACTED] uh yeah I mean like Bob Lazar said you get to work with uh secret super magic technology and the world has no idea and everybody's just an idiot like these CNN brain people and this pilot who's like says that lithium ion batteries aren't banned and I go here's an article that says that they're banned and he's like well I fly and there's like 40 wheelchairs every time I fly the the pilot guy earlier guys I'm not going to show more the stuff messages but the pilot guy tried to tell

(2:10:54) me that it's very common for him to fly his airplane with 40 wheelchairs with lithium ion batteries in the car in the cargo 40 wheelchairs how many people do you think fits on a

plane like one out of every five peoples in a wheelchair what is he flying the whole Special Olympics around dude I've flown on I've flown millions of miles hundreds if not thousands of flights the most wheelchairs I've ever seen on a plane is like four it's like it's not some common thing to have like everybody be in a

(2:11:28) wheelchair on your airplane guys so I just thought and the worst part was like you can have like a wheelchair in the cargo I'm not arguing that there's not the situation with MH370 is not that there was 40 wheelchairs in the cargo bay of MH370 there's literally 500 pounds of lithium ion batteries stacked up it's been banned from cargo of passenger planes because it's so dangerous this I can't even keep a straight face guys you guys are laughing too it is that funny he tried to Gaslight me into saying that

(2:12:01) like no lithium ion batteries aren't banned I fly around with 40 wheelchairs commonly I'm going dude you were 100% full of [redacted] dude there's like no no chance I believe that not in a million years I've flown way he literally says it guys you can find the replies I'm not lying to you I really wish I was I might have to post it I don't want to be rude to him but my God this guy dude I play 40 wheelchairs around commonly dude I'm looking for it right now guys I'm looking for it I don't know it's in there it's in

(2:12:40) there somewhere the problem is these guys these guys are like two Boomer where like they don't even reply to the messages correctly they don't know how social media works so they don't reply to the messages chronologically I don't get why they end up like replying to themselves instead of replying to me I'm just like oh man so um 40 wheelchairs guys I can't you guys got me just completely cracking up now because I'm talking about the 40 wheelchairs nonsense okay so recap guys uh oh so

(2:13:12) here's I'm GNA give you guys a heads up on the what we're going to look at next for science okay before we log off tonight give me one second to see if I can find it so exotic superconductor I was in the middle of posting more science papers and next thing I know I got BBC weatherman and B Trip 7 Pilots that say that they fly around with 40 wheelchairs in the cargo bay commonly um you know replying to me so it pushed me off course in terms of what I was trying to focus on uh that's free scale stuff Terrence Howard I'm going to watch

(2:13:50) that in a minute oh here it is here it is chat God I only got through like halfway through this paper so many papers chat you guys if you guys saw how many screens I have open my God I have like a dozen different uh chromes and each of them has like five Links at the top so this one experiment proposed to demonstrate traversable Wormhole by counterfactual Quantum teleport protocol what April 26th 2024 this just came out this just came out this I'm not going to read through all this with you guys but the more I read through this

(2:14:35) especially when I got to this part it is very similar to the double slit experiment and also bye Dave bye Dave this is very similar to double slit experiment in fact what they're trying to do here is they're trying to show that you can hold something in super position now if you can hold an object in super position and you're right my my sound just went down again what if you

can hold an object in superos then that implies that you can release it later on in time so for some of you lost uh friends and uh fam out

(2:15:09) there and um casual manifest enjoyers there is this idea that the plane could just go through one side and then it could come out at a different point in time very weird and the way that this this protocol works is that it argues that you can measure the state like down here I think in D3 where like you're not breaking the superp position you're not breaking the entanglement that's required that the entanglement can exist still you can still keep your thing entangled uh but that you can measure it

(2:15:44) and this is weird because it kind of opens the door to where we can literally teleport an object and we can revert it to it wave function and then it can rematerialize somewhere else now it's not dematerializing and rematerializing in the sense where you're de atomizing it you're not de atomizing the object but you're basically turning the object into a Bose Einstein condensate where now your whole object is a wave function the only way this makes any sense to me is with an ether there's got to be like

(2:16:14) an extra Dimension and it's like instantly transmitting from one location to the other it's pretty wild have I seen the new show dark matter no what what does anyone know what channel that's on I might try to watch it later I don't know yeah uh so somebody else this might Factor you adding H<sub>2</sub>O to lithium ion batteries causes an explosion and they'll burst in the Flames you're actually supposed to happened again you're supposed to actually put water on the lithium ion batteries so in the cargo bay they have

(2:16:46) these bags or sorry in the passenger they have these bags and you put the phone or whatever it is in the bag and then they pour water on it but I think that what happens is that it releases bromine when you do that and I think that's what they did and I think that's why the bromine got released and and the plane glowed orange because bromine is a hallogen gas and that's what's in the fire extinguishing devices so anyway check this one out guys I'm going to put the links in here if you guys want to read up on these

(2:17:13) we're going to talk about these tomorrow I don't think the plane is going to show up in 50 years but it's possible the plane like rematerialized like a several hours later Imagine This Plane showing up in the malds like four hours later and now some Islanders see it floating around and now some pieces of it are falling off into the ocean and then they wash up in Africa that's more likely that's still pretty damn crazy but it's more likely and again I can't know for sure yeah the audio yeah literally my

(2:17:45) audio literally just keeps changing it just keeps changing I I don't know I'm not touching it I I don't know what's going on with it I'm going to probably have to unplug it and replug it back in after this just literally just keeps changing the sound just keeps changing automatically okay so this is the counterfactual one now I was looking up Lauren's transformation is this the howp off paper Okay this one's also interesting guys we're going to look at this as well so tomorrow you can find

(2:18:15) that first one that I just showed the counterfactual quantum teleportation we're also going to look at this one further experiments demonstrating the effect of light on the graviton yeah just the sound just it all just changed again yeah okay I'm going to probably have to go with the lower sound I it's just I apologize for that guys I'm literally watching it every two minutes just sound just change weird one second uh I don't want to unplug it might mess the whole sound up so anyway this one the reason why this

(2:18:49) is important is this idea that light light itself light the same thing where we have the speed of light the speed limit of the universe might have an effect on gravity H very interesting the effect of light on graviton attraction published in 2010 by Rancourt uh a purpose built horizontal torsion pendulum apparatus based on the Cavendish apparatus was used to measure the effect of light on freely moving masses test indicated a laser light on one side of a freely moving mass caused the mass to move towards the

(2:19:24) light it was hypothesized that light has a screening effect on gravitational force in view of these findings the the present authors uh designated a series of experiments using specifically designed light system to further test the effects of light on gravitation this paper describes a series of experiments in which the laser layers of light are directed above and below a test mass connected to a sensitive weighing device the aim being to determine whether or not light affects the weight of readings now okay for you

(2:19:56) guys yeah the Cavendish if you guys are excited some of you guys are getting excited some of you guys know where this is going already um uh the Cavendish experiment so this is similar to that this is also similar to John Hutchinson a lot of my followers out there like John Hutchinson and his anti-gravity using light potentially so there's a lot of connections there to this I have been looking into some of that stuff but I don't have that much time for it so we are going to look into the idea that light can manipulate

(2:20:25) gravity somehow yeah here's my Regina it's not the spoon that bends it's your mind's eye that bends The Matrix everybody I'm not going to post that because I'm already going to get copyright strike so I gotta be careful take me to your torsions very interesting the reason why there's no heat the reason why the endothermic event is so cold you could argue is because it's just literally separating like imagine when you take a piece of paper like let's say this receipt I have and if I were to take a

(2:20:55) lighter to it to like the middle of it so the middle of this paper it's going to burn a hole in here imagine burning a hole here burning a hole through reality what's left on the other side The Ether what's in The Ether zero temperature negative energy zero temperature negative energy that's what you get when you burn a hole through reality that's what we're looking at when we're looking at the the MH370 videos how do I know that uh I'm just able to deduce it that's that intuition from looking at it

(2:21:32) that's what it that's what it looks like a cold explosion it's uh it's like the inverse of it's an inverse of an explosion so explosion is a release of energy it's an absorption of energy you're

just ripping through okay two more papers we're going to look at real quick so those two papers first one experiment proposed for counterfactual quantum teleportation qu the counterfactual qu quantum teleportation is basically like taking quantum teleportation and now we can do it without having this like trying to read

(2:22:04) information on one side versus the other which the way that I interpret that is you don't have to take a measurement which means like we might not even need a beam we might not even need a beam to do this like we've been saying that okay you've got your orbs over here and you shoot a beam at it from over here and that the plane goes over there the idea that you can do it just with this counterfactual quantum teleportation is like we don't even need to have the fourth orb we might just be able to like

(2:22:29) have it appear wherever we want it to appear the idea of like finding an entangled particle anywhere now that might be a misinterpretation uh but that's kind of how I've been imagining that oh also I said I was going to show this Okay who wants these t-shirt these t-shirts are apparently selling out like crazy guys this these t-shirts are in 16 carts okay so once again I am not related to this I make no money off of this everybody just asked me about the damn t-shirts that I was wearing the other day on the Ian Carroll thing this

(2:23:02) is the t-shirts here you can see them in all colors I have the yellow one I have this one I have the blue one the blue one looks real good the yellow and the blue are my favorites and I also have the green one I literally have three of these t-shirts I bought three of these t-shirts uh I supported it uh this is not related to me I do not make any money off of this I don't even get a referral fee off of this I am uh hold on let me go back and I'll post the link this is the link to the t-shirts though if you want the T-shirt oh I crap

(2:23:36) uh can I delete that sorry I put a a weird thing at the end okay here you go the person that's making these their name is Arana uh I don't know where you can see that or wait this is a different person John yeah AR oh an Arana so this is why I couldn't find them it's an Arana an Arana John is making these I don't know who they are I don't care hey look you can even see this is I this is my picture did I oh yeah Ashton Forbes right there September 17 2023 guys there you go there you go guys I didn't know that

(2:24:13) this showed up here I don't remember putting a review here so I guess I did a review and they somehow uploaded it to the website so there you you can actually see me September 17th this is me I took a picture of the shirt when it arrived that's that's my real picture that shirt's over here somewhere I don't know where but somewhere over there that's hilarious uh so yeah if you want to support these shirts I like it because people look at it and they're like what is that they're like is

(2:24:41) that is that legit they're like and you just tell them MH370 still pretty nice right okay we're closing that okay I'm going to show you guys the other two papers is this one of them okay this is one where's oh yeah they're both right here nice okay I have them all ready to go right here okay the other two papers are by Hal POF okay I've been busy I've been busy chat

reading paper scientific papers I got so many scientific papers under my belt it is insane oh you bought the dark gray

(2:25:16) shirt yeah a lot of you people somehow found that website cuz 16 people have it in their cart so we're giving them the m370x bump everybody pretty sweet any other questions following okay so some people as well there's a lot of people that are like you don't have any evidence you don't have any way to prove this guys I literally gave the evidence to the AO I'm just waiting for them to respond I gave it to the people that are underneath the Pentagon and the dod we're just waiting for them to respond

(2:25:49) they can verify these videos 100% we don't have to fight with anybody about it we can just see what the government has to say uh what can the government say they can lie they can lie and say no no no we never filmed that that's very dangerous if they lie then we and it ever gets proven in the future then those people would have legal liability that lied and if they make somebody lie to me like the person that I spoke to that person could have legal liability so lying you could say yes can lie of course they can lie

(2:26:22) government lies all the time but they don't usually boldly lie to you usually they just ignore you so they can lie uh they can distort the **truth** or be subversive so they could say like we detected something we can't say but we detected something I imagine that's what will happen is they'll say they detected something but they can't speak about it anymore that would be huge because everybody's going to know that means the videos are real now **debunkers** will still say that oh well they said they detected

(2:26:54) something but they weren't clear about what they said so those videos aren't real I mean if they come back and they're like we found something but we can't talk about it obviously the videos are real there's not really like any other logical conclusion because otherwise they could just say that they're fake right so they could come back and say that they're fake and be telling the **truth** as well but if they come back and they're like oh we found something we can't say anything sorry then obviously they're

(2:27:18) real and then the other answer is they could come back and they could admit it they could say yes the videos are real we we saw the videos we we looked into Edward C Lyn it turns out he **leaked** these videos uh which I think is pretty damn obvious of course Edward cin is the guy that **leaked** the videos um you know they could do that as well and if they did that I mean that would be that' be great because I can stop doing this forever because then I can just be like whatever I'm the dude to figure out Mage 370 and just hang out

(2:27:44) with you guys all the time and then we could talk about other weird conspiracy stuff and other fun stuff that's out there and there'd be no more pressure on anything anymore it would be great so I hope that some one of those things happens so uh once again it doesn't really matter whether or not you believe it doesn't really matter whether or not you think the weight of the evidence is powerful because I've already given it to the people that can verify the videos so let's just wait for what they have to

(2:28:06) say and I am in communication with other people as well that are interested in doing uh real verification of the videos I'm not talking about having some VFX expert that says oh I think I could do this blah blah blah no I'm talking like literally doing technical verification of the videos to show they haven't been tampered with and Technical verification the videos that show they're not CGI so I am in uh discussions with uh at least one person uh potentially more I'm not going to give more specifics about

(2:28:40) doing some analysis right there and I've had other people reach out to me as well that are independent that are swayed by the weight of the evidence that they want to dig into it multiple people that want to dig into it and they want to figure out like if this is real or not and they're not **debunker** people they're people that understand logic and reason and understand logical fallacies and how falsification works and uh proper methodologies for determining if something's fake or real for the record

(2:29:12) the bunkers that are out there this isn't good news for you like prosaic explanations when you say like that's a balloon or like this looks like this I modify it these types of people aren't swayed by terrible arguments like that those are not logical or or arguments that have Merit when it comes to True uh methodology of proving if something's real or fake and the reason why an argument of saying well somebody modified this and then that is close enough to this that means it's that's

(2:29:39) what that is the reason why that's not a logical argument and why there's no merit to that argument is because that would prove a lot of false positives I can modify anything and say it looks like something that's and say well that means that this was that but it doesn't prove that it might be argu might be evidence it might be an argument it's an opinion but it doesn't prove that situation I can modify you know one of the blast waves that we've seen I can make it look like the sun and

(2:30:07) I can say well the sun is fake obviously I modified this VFX and that's the Sun but it doesn't prove that it's just an argument so these people that are looking into it they know those types of arguments don't have Merit and so it's not going to probably go the way that the **debunkers** are thinking uh and again I don't know and I don't care everybody's entitled their own opinions all I've ever wanted to do to find the the **truth** so I don't sit there and ask people or demand uh any type of fty or

(2:30:34) that they must come to a certain conclusion when those people come to me I say yeah just take a look at the evidence let me know what you think I'm willing to work with you I'll talk to you um the evidence is overwhelming and I think that the people that do real forensic analysis on the videos uh are going to find that they're authentic 100% I think they're going to fine too there's no editing in them either because there is the last thing I'll say on this as well is that there's uh there

(2:30:59) is a chance that these are real military videos but that the CIA edited a portal into them this is what Ken's argument is who for the record guys do not harass Ken if Ken doesn't

want to believe that the portal part is real that's fine who cares he doesn't have to believe the portal part's real I have absolutely nothing against anybody who's trying to solve the case and has a different conclusion okay so Ken thinks that the portal part's not real the orbs are real and that the CIA edit in there doesn't

(2:31:29) matter fine either way if he's right if I'm right we get the answer we want we are just trying to get the answers from the government about this stuff so let's don't harass anybody that's trying to solve the case please I don't need everybody to have the same exact opinion as me same reason why I talked to Florence to change and you know she might think the plane was shot down or was hijacked or it was flown to whatever I I don't care as long as she's trying to solve the case got no beef whatsoever

(2:31:55) none um but the CIA I mean they have these videos so these there's a real possibility that the videos are real but that somehow they were edited now the reason why that's not true why I would only give it like one% chance maybe lower is because it doesn't make any sense doesn't make any sense what's the what's the argument we edited some orbs into the real video to what we were going to convince the world that aliens took the plane but we never promoted it we're still trying to hide it every day

(2:32:26) if the CIA had edited the videos they would have had AO come back to me and tell me that already they wouldn't be hiding it they wouldn't care anymore they' just be like yeah sorry we we filmed the plane the reason why they can't do is because then they also have to admit that they were filming the plane and then there's a lot of questions like well where the hell's the plane then that's the number one question we never found a plane so if you were filming the plane on two assets

(2:32:49) where is it right now this is the reason why the orbs and the zap are not faked into the plane uh now if the government wants to come out and say hey we we we faked it great honestly I at this point I'll probably let them get away with it because all I want is them to admit that we took MH370 at least that way we'll get the you know answers for the families um but no that's not what happened unfortunately the whole videos are real they're consistent scientifically uh the CIA didn't edit them or whatever but I I do leave the

(2:33:21) option open I mean anything that is possible um that we haven't ruled out by the evidence is you know it's out there yeah and then uh Joe says like they would ever lose a plane after 911 I'm just going to leave the volume because it just keeps changing so I'm going to just speak closer to the mic yeah how would we lose a plane after 911 no chance guys you guys got to look at our satellite surveillance system it's very Advanced we have the most satellite Advanced satellite surveillance system

(2:33:49) in the world there's no chance that a rogue Triple 7 flying for eight hours Rogue would not have been seen by our satellite system it crashing into the ocean would have been heard by our sound surveillance system the Sosa system things been out there since like the 60s we've been able to like detect tiny acoustic vibrations in the ocean anywhere in the ocean triangulate

the location what found it we have phones ringing we have over the horizon radar uh Pine Gap and Diego Garcia most likely could have tracked the plane from

(2:34:19) takeoff to Landing two different military bases and the Jordan system in Australia would have seen the plane the CNN or the BBC guy and the pilot we didn't even get to that part I didn't even get to my second question which is how did the United States government not see the plane we've got satellite surveillance we got s ocean acoustic systems and we got over the horizon Radars that can see for thousands of miles how how do we not see a plane like they'll be like broken like these guys the problem is

(2:34:52) the reason why I can't debate anybody I can't even get to the second question with a lot of these people like we get to the part where the debris fell and then they're already having meltdowns like I just say like how does a plane crash in the ocean and people are having total meltdowns I don't even get to my second question which is how does the US government not know exactly where the plane is because even before I saw these videos like even before I saw these videos I knew the United States

(2:35:18) government knew what happened on this plane of course they know what happened in this plane it's crazy to think the United States government doesn't know exactly what happened in this plane we've got the Malaysian Minister on record saying that they were in touch with the uh us about their spy satellites like just listen to this let's just listen to it ourselves I forgot that I actually have this us SP regions in we are in touch with data rewind what did he just say there are us spy satellites over the

(2:35:59) regions are we in touch with them are we in touch with yes we are in touch with yes we are in touch with them this is the guy that was lying on the Four Corners interview to Carol my potential future wife Carol I'm just joking I'm just joking tell us you receive data from the engine manufacturer did you receive engine data from the manufacturer rollsroyce yes yes yes okay so I mean do you guys really need more proof in this are we in we are in touch with Reed data from the engine manufactur yes we just literally caught this dude

(2:36:53) red-handed like how could anyone think that we didn't see the plane yes we have data from the Spy satellites yes we have data from Rolls-Royce where's the Rolls-Royce data where's the Rolls-Royce data me looking around for the Rolls-Royce data where's that Rolls-Royce data chat it's 10 years later still waiting for that Rolls-Royce data it's like oh What's spy satellite well we went and did the effort for you guys we went and literally found every single spy satellite that's out there we

(2:37:22) were like hey let's just look up the trajectories for all of them we looked up the trajectory that's a hard word to say trajectory we looked them all up on the there's a website called like Planet 365 they have all the historical trajectories we looked them all up and we found it we found USA 229 originally we were thinking South Indian Ocean and then when we looked at the coordinat and saw was nicobar Islands everything immediately clicked into place we're like oh well if it was nicobar Islands

(2:37:53) what time would it be oh 1840 oh well here's the spy satellite literally staring down at 1840 at the dam coordinates and it's a low earth orbit satellite so it's got super powerful sensor capabilities and just for bonus points it's got a sister satellite right next to it so if we have stereoscopic vi video well we have an answer for that as well I guarantee if we only had one satellite here **debunkers** would have claiming this can't be true because we have stereoscopic video instead when we

(2:38:25) prove that we have satellites that can take stereoscopic video they go oh well uh the YouTubes did it Jesus man and here's the satellite stereoscopic like this is the this is the earliest version you're looking at right here when I first looked at this I didn't know what the hell I was looking at I was like why is there two side by sides like this why do they mirror it they didn't mirror it these are not the same these are two slightly different angles this is stereoscopic imagery this is literally 3D imagery

(2:38:59) just like our eyes where we're looking through two things that's literally what we're looking at here two different cameras two different sensors that are sending the data technically YouTube claims to have had a capability to do this but I've had people tell me they've looked at it from a technical perspective and that like no this is real stereoscopic so I don't know **truth** is I don't know what I do know is we turn this into 3D we literally turn this to 3D and we have a 3D video version of

(2:39:27) this so just what you see here this is the literal 3D version of it you can see if you guys put the glasses on we took that and we were able to Overlay it and turn it into literal 3D video because it's a real 3D video crazy huh yeah so proving it you know I mean we just have to have a o come back so there's like two answers right we need either the AO to step in and just tell us the videos are real or we need Lieutenant Commander Edward C Linn like I'm so absolutely certain that Edward C Linn is the guy that if he were

(2:40:02) to just come forward and say he's the guy that **leaked** these videos then that's it that's game over we got it 100 per. so the the best part is like not we we can either wait for the science to prove us right and when we get when it first gets proven that we can teleport a macro object which it will probably within our lifetimes Maybe maybe within the next 5 years I don't know how long it's going to take but whenever that happens then we're going to have proof or we can have the government admit its reel uh or we

(2:40:28) can have Edward cin come out there's a lot of options man there's a lot of ways for these videos to be proven real or we might do a technical analysis with real forensic experts that can show that these videos are real all of those things could happen in the near future so the reason why I'm so confident and why I'm not worried at all and not in a rush at all is because like all of these things could happen all of them could oh Lynn's deal definitely precludes any public statements about

(2:40:58) the case but if he goes and becomes a whistleblower because all these new whistleblower laws if he were to come out as a whistleblower he's going to be famous Edward C

Linn has a very good chance if he **leaked** these videos he's G to be one of the most famous people in the world you think that David grush is a famous hero imagine being Edward C Lyn and you **leaked** the most important UFO videos of all time of all time he would be a folk hero in the UFO Community forever forever he's the real hero he spent six

(2:41:33) years in prison potentially for leaking these videos he deserves to be a hero more than me or anybody else more than David grush even D it's like if David grush **leaked** real videos people would love him they would love him well Edward C Lyn already did that man he already did that um but I will take that Pitzer send me that Pitzer BBC I want to rip it up in front of that uh what's his name Ian I forgot his last name already some British name Ferguson I want to rip up the piter in front of Ian Ferguson

(2:42:06) and the and the entire BBC you guys like why do I want to people might wonder like why do I want to rip up a Pitzer because I have no respect for mainstream journalism whatsoever I want to get the pulzer just to rip it up on stream just to show people how just completely useless mainstream journalism is to show that like one dude and a bunch of like dedicated followers as part of an organization can do more journalism than all the mainstream media Outlets combined like can you imagine these videos were **leaked** these were **leaked** on

(2:42:37) the internet 10 years ago the m370 videos 10 years ago not one mainstream journalist even picks up the story doesn't even try to run with it random dude who's in healthcare comes out it's like I'm going to investigate this begs the people to look into it after we basically proven they have to be real no no still nobody will look into it like that is just like it's the biggest punch in the face to mainstream journalism it's some random dude figures it out love it man yeah Edward cand appreciate you guys okay

(2:43:11) guys um I'm gonna go to sleep this has been great uh it's pretty late as well I'm G to try to give some of that uh Terrence Howard thing a look oh I forgot the two other God I forgot the two other papers real quick the two other papers so four papers to review tomorrow guys if you are into science tomorrow is your day we've got this teleportation experiment we've got the light affecting gravity we've got linearized turbulent fluid flow is an analog model for linearized general relativity gravo

(2:43:39) gravito electromagnetism by halud off so I don't remember which paper was which but there's a second paper here as well electromagnetic potentials as the basis for energy density and power flux so this is also how P off here as well uh one of these papers literally describes uh The Ether I believe and how fluid flows and how you can basically uh crack through to The Ether and then the other one also explains uh the Maxwell equations and the electrical engineering equations where the Maxwell equations

(2:44:14) were incorrectly reduced uh so we're going to look at those I'm going to reread them as well take some notes uh so that for my people out there who don't aren't good into the scientific papers so I'm going to post both of these as well this one is the electromagnetic uh potentials bases for power density and energy density this one here is the linearized turbulent

flow turbulent fluid flow so one of these has to do with the rewriting the equations to be able to produce gravity and the other one has to do with like

(2:44:46) how you should perceive like think of like the Matrix or the ether how we should perceive uh if we are to produce fluid or like a plasma in space how it's going to interact with the ether that's how I perceived it when I read it pretty awesome so hope you guys enjoy those papers which song should I play us out with tonight guys which song should we play out we have five songs now uh I need to get whoever that person was with a country song I need you to uh download that country music song for me so that I

(2:45:21) can play that I want to put that on there I think we should play the Dis Track I think we're going to do the Dis Track and then we're going to do the parts one because we didn't play the parts one guys now we're not going to do the mmmmm one tonight next time Ashton I would never kill myself I don't like to use that word I would never hurt myself you're 100% correct no chance no chance no chance yeah arrow is pronounced Arrow but I like to call them a a Aro just like I call ufology instead of u

(2:45:48) euphology or whatever they call I can't stand euphology I just call it euphology I do what I want chat I don't care I do what I want oh which diss track oh you were in you were in for treat we might do three songs Tonight chat let's start with the the country music one because I have to pull that up on my uh Twitter because I don't have the download of the country music one chat someone needs to do that also once again shout out again thank you very much for the uh where is it uh for our new four orbs sign that's

(2:46:25) going to be fire drippy goo thank you uh Heather birdie thank you Dansby Jones for this awesome song that we are about to listen to right now it's time to do the country music song let me pull it up let's get the country music song let's end this on a good note we got three songs for you tonight I hope you enjoy them we are on fire chat let's listen to this Play Lost in Time [Music] mh37 from sky world on wondering why Secrets here can't where did you go in no just all in Flash another day [Music]

(2:47:21) microscopic waves worm holes in space hidden te the secret race drone and satellite don't lie truth so clear buers truth on theise running hiding from the eyes governments they all know MH370 where did you go where did you go where did you [Music] go yeah this is whiskey [Music] whiskey I mean it's uh apple juice [Music] where did you

(2:48:25) go love it love it song songs are epic guys well that's been awesome guys uh play out a couple their songs hope you enjoy them have a great night everybody we'll chat again tomorrow catch up on the science let's talk about it tomorrow let's keep this moving appreciate everybody tonight love you MH 370x walk step right up or to a rock with FL like te these de buckers will be be through space while they drive their CL a b I'm a fall B this investigation is legit buckers get St off with the B spit

(2:49:02) oh me what doesn't the best in the corridor crew while the series are a mess who

knows when this all goes bless the sky and those below but Liars a deniers can suck my black hole y'all don't come at me bro be a 4 be I'm a fall B this investigation is legit the effects these buckers can step off with the bull [Music] [Music] spit place we meant to fly PLS ain't supposed to fall from the sky but if they do they'll leave behind more than PE are to ples just be flying I know you think I'm lying the USA B be hiding

(2:50:03) **truth** and I ain't buy ples they me to fly CR ples to fall from the sky but if they do they'll leave behind more than a p are to they'll leave behind more the you think I'm ly the USA bab hi the **truth** and I [Music] fine BLS them me to fly ples they ain't supposed to fall from the sky but if they do they'll leave behind more than a piece are twoo I just be flying I know you think I'm lying the USA they be hiding **truth** and I

(2:51:19) they'll leave behind more than a piece of two they leave behind more than a piece of [Music]

### **MH370 Videos Are Real - VFX Planted 100% Proof, **Mick** West Implicated - YouTube**

<https://www.youtube.com/watch?v=1B99Xv69idU>

Transcript:

(00:08) it's I m m m m h37 until you do some research don't talk to me I'm going to find the **truth** while I sit this Mar your opinion it means to me it's m m m m m h37 not all heroes my capes I wear glasses to see I'm going to find the **truth** while I sit this Mar the trolls hate seeing me [Music] succeed but guess what H3 [Music] M

(01:21) M37 not all heroes with glasses to see I'm going to find the **truth** while I sit this Mar your opinion it me to me your opinion and h37 my hero keep glasses to see I'm going to find the **truth** why I this party but guess what [Music] play they meant to fly PL they ain't supposed to fall from the sky but if they do they'll leave behind more than

(02:27) PE are to ples just be flying I know you think I'm lying the USA B be hiding the **truth** and I ain't ples they meant to fly PL L supposed to fall from the sky but if they do they'll leave behind more than theace are to they leave behind more than who you think I'm lying the USA Baby hi the **truth** and [Music] I ples they me to fly ples they Expos to fall from the sky but if they do they'll leave behind more than peace too things just be flying I know you

(03:34) think I'm lying the USA they be **truth** and i't they leave behind more than a piece of two they'll leave behind more than a [Music] PE what's up everybody Welcome to the stream hello we are here holy crap let me turn that volume up a little bit let's get it going wow emergency stream guys emergency stream tonight holy crap this is wild what an update I know why you

guys are all here right now while you're here early um first of off let me get my blue cheese olives ready to go yes I

(04:37) have a martini ready to go tonight uh I had to run out get uh blue cheese and some olives to make this thing happen look at that Quadro olives it's happening cheers everybody cheers MH 370x oh man so what we start I just want to absorb this all for a second while people trickle in so that way we don't have to repeat it a million times I will go ahead and give a a quick summary of what has been going on for the people that are unfamiliar that have just jumped in maybe they just got off work and just saw uh so a quick rundown of what just

(05:23) happened in the 24 last 24 hours uh several days ago in fact I did a live stream where I went through some evidence of the **debunk** attempts that were out there and one of those was going through uh the Pyromania VFX and the history of it where it came from this one day old **Reddit** account and in that we had noticed that there are images in that archive website that have the pictures of the various effects that are in the package the asset package but weirdly in one of the boxes you can see the Drone video endothermic event it's not an asset from

(06:07) the package it's literally the Drone video you can see like the endothermic events in there and side by side next to it you can see the one frame that **debunkers** have used to claim that they're the same which you would say okay why is that a big deal well it's a big deal because that was uploaded January 25th 2023 but wait Ashton I thought the Deb was found in August 19th of 2023 that's 8 months later so why when we look at the link and this is the link that you can find on the metabunk we're gonna go

(06:39) through all this in detail why in that link is there a picture of from the Drone video and the comparison that supposedly wasn't found until August 19th 2023 well there's only one answer this was planted out there with the intent of **debunking** the videos that's the only logical answer the Pyromania VFX **debunk** was 100% proven to be falsified to use to be compared and and to be preemptively out there on the internet to be found to be used to **debunk** the videos and some might say well if it matches why does it matter

(07:13) because it doesn't match that's the rub it actually objectively doesn't match uh not only does the one frame not match which we'll go through this as well but the whole asset this stock asset this say explosion isn't even similar to ours so literally this **debunk** was put out out there to as literal disinformation uh and it was pushed by **Mick** West it was pushed by the corridor crew who got it from **Mick** West and never said anything and the lur Lodge all falsified this comparison they modified

(07:43) it and they tricked their audiences of millions of people modified it only showed people the modified comparison to trick people that it was an exact match when it wasn't and now we have 100% proof that it was falsified and planted on the internet eight months before the videos even reemerged which again 100% proof that this was a fabricated **debunk** that was pre-planned ahead of time with the so intent of **debunking** the videos and the best part is after I made the post about that we did a stream about that I showed

(08:15) everything on the stream then yesterday I wrote it up with all the hyperlinks all the all the proof to it and I go back today and I get online today and I go back and look at it because I I was going to do a followup on it like imp implicating **Mick** West because I realized that the one day old **Reddit** account that posted it that claimed to have remembered where it was one- day old **Reddit** account claims to remember this **debunk** all of a sudden and post a hyperlink to the thing where we can see the falsified comparison from

(08:45) January he po the one day old **Reddit** account posted at 10 AM 10 AM **Mick** West three less than three hours later on his metabunk website claims that he somehow found some YouTube video from an obscure video game that no one has ever heard of before called killing time an hourong video claims that he somehow found the asset there which the only possible answer is that **Mick** West was already knew ahead of time that this **debunk** was going to drop **Mick** West wasn't looking around YouTube for hourlong videos of random obscure 90s video games for the

(09:21) five seconds where the this asset shows up and the asset shows up like an hour into the video like there's no CH of that and we'll show that as well guys so **Mick** West is directly implicated in this **debunk** reappearing he either is icy slide he either knows who icy slide is or he was told ahead of time that this **debunk** was going to drop no matter how you look at it he's implicated in the cover up uh and he's the only one who's com to found it we're going to go through all this information tonight uh

(09:52) the best part is just they might have thought so what went down was after they saw me point this out that this this falsified comparison was out there that date back to January of 25th 2023 somebody in the last 24 hours went and changed it they went back and changed it the only reason why you go back and change it is you got caught red-handed and they were afraid and they went holy [ ] he saw the falsified comparison out there and he caught it and they realized that the dates proved that it was pre-planned so they went

(10:24) back and changed it thinking nobody would notice except for I randomly went back to the website today and I was like like wait a minute I was going to take a new screenshot and I'm like wait it's changed how the hell is it changed and so you guys can see my tweets we'll look at it here in a minute you can see my tweets I'm like why is it changed all of a sudden so then I people go back and they check the logs sure enough the person who uploaded it changed it in the last 24 hours they reverted it back to

(10:50) the asset before it had been modified to get rid of the MH370 drone videos app in it and the comparison that you can see that dates back to January 25th now the part because the **debunkers** might have said no well you misremembered you have no proof that it used to be there we have this stream from three days ago and I'm going to pull that up as well that shows 100% that it used to be sitting there on that thing so we absolutely have 100% proof that this VFX comparison was falsified we have 100% proof that it

(11:22) was planned back in January of 2023 eight months before the videos reemerged and we

can connect **Mick** West to the person who found it within a three-hour time frame amazing guys amazing you could they screwed up so badly when they went back and modified this we've been waiting for who the intelligence Community the bunkers whoever did this to make a mistake they made the biggest mistake they've ever made in their whole lives they gave us absolute proof that they can change the way back machine they gave us absolute

(11:51) proof that they uh had pre-planned the VFX **debunk** which was used to shut down all conversation on **Reddit** it was used by the lore Lodge to their six million followers I think it's got like two million plus views on their video that they fabricated uh the lore Lodge sorry the L Lodge only has 1 million the corridor crew their their video has like two million all these people lied to their millions of followers they 100% lied they 100% falsified a fabricated **debunk** they 100% didn't tell people where it came from and that it had been

(12:20) pre-planned and it all links back to **mcwest** H I never could have imagined this happen plus now the fact that they can do this to the way back machine also implicates that the cloud picture which we've already ruled out as well and we've already **debunked** that now it it basically calls into question the authenticity of the cloud picture in general as well if they were willing to fabricate this **debunk** months and months and months in advance and then drop it in August then they you know the only reason to even do that is that the

(12:45) videos are real Nobody Does this there's no pre-planned **debunks** for fake hoax videos you only do that when you're trying to hide something that's the only thing so at this point we've got proof that there there fabricated **debunks** out there we're going to go through the evidence tonight uh it's extremely strong proof that the videos are real that somebody's trying to cover up the videos uh absolutely wild and this **debunk** that was used was used to trick Joe **Rogan** this exact one was the one

(13:15) that was that Joe **Rogan** linked to me that was used to uh on Danny Jones with respect to the lore Lodge um so all of these people all of these podcasters the ones that promoted this they are all imp at uh they should be issuing apologies as soon as possible after watching this um for a the way they treated me uh lying to their fans being deceptive and people like **Mick** West should be calling up his lawyer ASAP he should be calling up his lawyer right away because I am going to send the families after him to take everything that he has all his

(13:49) money every single penny he has shut down his website metabunk take that away as well uh I'm going to recommend the Department of Justice investigate him as well and I'm going to give them all the evidence that we're going to go through tonight as well as more evidence that I have here as well he's 100% bad faith uh dishonest and potentially criminally implicated in the cover up of MH370 now people may say how is somebody who didn't disappear the plane criminally invest implicated in the coverup because

(14:17) there is something called the Pinkerton Rule and the Pinkerton rule says that if you're involved in the cover up of a conspiracy then it doesn't matter if you're the person that did it or not if you are the one who's trying to perpetuate the conspiracy even if you were not the main

perpetrator you are criminally liable for it the Pinkerton rule go ahead and look it up guys um yeah so I mean we don't really have much faith in the DOJ but that's worst best worst case scenario if we can't get him

(14:43) criminally implicated and thrown in prison where **Mick** West belongs the rest of his life uh then we're going to try to get his money taken away and take his website taken away and then if we can't do that then we're going to destroy him in the eyes of the public I'm going to say his name on every single podcast I go to I'm going to bring this up on every single podcast from here on out uh and I'm going to make sure that the world knows that **Mick** West is a piece of [ ] the worst human being on the planet

(15:08) uh that he tried to cover up MH370 with at least three fake **debunks** this isn't even the first one he tried to cover up the Philip Wood ex-f data picture he was objectively wrong about all of that he perpetuated a fake **debunk** about jittery contrails that was proven to be due to the stabilization software he used he never apologized for that and he's also responsible for the VFX **debunk** as well **Mick** West is in my opinion a criminal uh he in my opinion is legally responsible for the cover up of these videos and

(15:38) what happened to 239 people and he made the biggest mistake in his life trying to **debunk** what happened to 239 people on a plane that disappeared so there we go um yeah let's get down to it guys okay and people trolling in the chat you're going to get banned and blocked so mods if anyone trolls just immediately block them no questions asked uh we're not we're not playing around tonight and I'm gonna make sure I get in the Twitter chat so I can ban and block people in there as well give me a

(16:19) second how do I get the chat up there it is okay great sweet okay chili Turtle you're getting banned okay great yeah chili Turtle you got banned and so will everybody else that uh acts like you do in the chat okay great where should we start guys okay let's start with a little recap actually uh let's go with let's start with let me see what we got here okay I think we're going to start with the recap

(17:28) guys you guys can see this okay sweet yeah and for the record there's not going to be any more debates there's no reason debating with frauds and criminals uh at this point all I'm looking for for **Mick** West is I by the way **Mick** West already dodged all the debates with me he dodged all the debates and right now I'm just looking for an on the record statement that we can provide to the Department of Justice for what his connection was with the slide and the fake **debunk** efforts related to The Disappearance of 239

(17:57) people uh you don't debate Criminal uh he's had his chance to debate me in the past so at this point we're not looking for that we're just looking for an on the record statement AI also everybody please harass **MC West** as much as possible to get an on the record statement from him uh he's been dodging uh on record statements yeah before we do that as well uh so I somebody's already been trying to get an on the record statement from **Mick** West about this and he uh won't respond so uh he

(18:23) was asked specifically the questions that I want people to ask **mcwest** are the follows are as follows uh what is your relationship to icy slide 7698 how did you know that the how or did you know that the **debunk** would be pushed on August 19th at 10:15 a.m. and how did you find The Killing Time video uh at 100 PM less than three hours later that has the asset uh within it so uh we have him on the record on all those things I just mentioned so the question is how did he find all of those uh because I think the Department of

(19:02) Justice the fames going to want to know for the court cases against **mcwest** um his response was I don't know icy slide I did a reverse image search reverse image searches don't work on um don't don't work on videos so I don't know why he's lying you can't do a reverse image search onto a YouTube video and then he says the effect goes back to 1997 there's multiple examples of it that's not the that's not the question we know that the VFX doesn't match that's already a statement of fact

(19:29) the VFX doesn't match the VFX is not in the MH370 videos we know that again as a statement of fact the only thing we're trying to get from **Mick** West is why did he lie and what's his relationship to the person that pushed the fake **debunk** and we're going to go through and show the evidence for the fake **debunk** here in a minute so if you you guys can get **mcwest** on the record here related to this we're not interested in uh you know his arguments about the VFX we know it doesn't match already that's already

(19:52) given the question is why was he pushing three fake **debunks** the Philip wood fake **debunk** the contrails fake **debunk** and now we have proof that the VFX **debunk** was also fabricated ahead of time as well so we just want to get an on the record statement from him on why he pushed those fake **debunks** and why he's covering up the fade of 239 people uh and if he wants to issue an apology and retract his **debunks** and delete his YouTube video where he tried to **debunk** the videos you guys can actually see in my Eric uh

(20:20) Hunley uh interview that Eric Hunley actually superimposed **Mick** West's false claims into that so we have 100% proof now and forever that **Mick** West fabricated three fake **debunk** attempts and then promoted them to his YouTube channel as well with intention of getting people to think that the videos are fake uh he should be prosecuted under the Sandy Hook uh presedent uh where Alex Jones was fined \$1 billion uh I think 1 billion dollars sounds about right for what **Mick** West should be fined as well uh that would take

(20:50) everything that he has uh seems appropriate he had many chances to by the way to apologize before this and retract his claims and what have you and he never has even though his claims have been proven 100% to be fake and fabricated and also by the way here we go guys so keep harassing him until we get an on the reccord statement from him a public statement uh about those three questions so what's his relationship to icy slide did he know about the icy slide **debunk** before icy slide posted it on **Reddit** which is a one day old **Reddit**

(21:24) account uh and if he is icy slide and then the third one is how do exactly did he find the um The Killing Time video with the asset in it one hour into it in under three hours I'm pretty

sure no one's ever heard of that game before uh and I don't think that there's any chance within under three hours of that being that post going on to **Reddit** that he's somehow finding that without somehow knowing ahead of time uh and yeah before we do that here we go before we do that we're g to post this

(22:03) this is how I feel about the **debunkers** right now oh let me taste your tears Scott your tears are so yummy sweet I think it might be best for us to never piss Cartman off again oh the tears of unfathomable sadness yummy yummy you guys yummy yummy yummy guys tears of unfathomable sadness de bunkers tears of unfathomable sadness turns out your life is a lie turns out we have anti-gravitational technology and you were so mentally ill that you tried to **debunk** what happened to 239 people uh yeah just consider this real quick guys how messed up in the

(22:52) head how messed up in the head do you have to be to try to **debunk** real video of what happened to 239 people that were never found how messed up how just psychologically [ ] in the head do you have to be to be trying to **debunk** real videos of what happened to 239 people just because you don't want to believe what's on the video this is equivalent of a cold case where a murder was never solved where we never knew what happened and all of a sudden two videos from two different angles come out of a guy shooting somebody killing

(23:22) them and then the **debunkers** coming out and trying to prove that the videos aren't real that that never really happened that that person was never really shot just think of it from that perspective that's how [ ] in the head these **debunkers** really are like it's actually insane and then that's like saying like oh I'm gonna take those videos of somebody being shot and now I'm gonna pretend I'm gonna send it it's it's an animation somebody added an animation and a and a stock effect of a gun into

(23:47) it like this is how just completely Wackadoo these guys are disconnected from reality entirely I truly hope that the bunkers get the help that they need they need very serious psychological help help and if they're still trying to **debunk** the videos after this like please man do yourself a favor and do something else go outside touch some grass go for a walk whatever you got to do the videos are real 100% okay so let's go back to this let's do the quick rundown of what happened here and then I have all the stuff up as

(24:24) well all the proof up that we're going to go through as well after this uh but I just want to show you guys give you guys the quick rundown the quick recap for everybody who's just joining right now as well appreciate you uh have another sip of the the martini okay yeah and just quickly for the record as well anybody who gets blocked is never being unblocked ever again so if you are defaming me talking [ ] on Twitter whatever uh if you're retweeting people that are doing that uh you're going to get blocked you're never going

(25:05) to get unblocked ever in this world so be you know be cognizant of the stuff you're engaging in with respect to defamatory content and slander about me uh at least if you want to be part of the investigation if you want to follow along if you don't care about that you don't

care about seeing the stuff then you know do whatever you want it's a free country but uh I just I want to make sure everybody has fair warning out there uh you're never going to be unblocked there's no circumstance where

(25:28) you will be unblocked uh so just be cognizant of your behavior on the internet okay um now let's show and actually before we do that I just want to show this video as well so we looked at the uh the other day we looked at the satellite video and I went ahead and and and edited it up so you guys can see that these videos are 100% real and every day more evidence comes out that shows that the videos are real uh so the vi the evidence that came out like three days ago was a rundown of the spy satellite capabilities of the

(26:04) United States so I took all the important pieces I turned it into a one minute video here we go us has by far the largest and most capable network of satellites and space capabilities of Any Nation what does that say right there cbers provided technical data to the intelligence Community to help solve the mystery of Malaysian Airlines flight 370 on Earth in fact many of the drones flying missions in the Middle East have been directed and coordinated in real time from over 10,000 km away in Nevada the newer space-based infrared system

(26:35) can detect much smaller and shorter range missile launches like isander and even track them in real time and even track them in real time if you can track a missile in real time then you can track an airplane in real time pretty simple provide not just a precise impact point but also relay it to missile defenses to try to intercept it the latest series of satellites being launched are the beginnings of networks that will take it a whole step further to detect and fully track Hypersonic weapons and assist in shooting them down

(27:04) also speaking of the current space-based infrared system they likely also carried a payload for the Trump fit elant or electronic intelligence satellites elant is just a subset of Sig so El is just a subset of Sig here is an image of signin this shows you the satellite relaying to the spy plane relaying to the boats relay to a helicopter relay to a ground troop relay to another satellite relay to a drone okay we've got literally all the assets that are going on right now relay through Sig all you have to do is

(27:35) Google Sig you'll find this image yourself uh I don't know how much more proof you guys need or signals intelligence today virtually every aircraft in Satellite has some form of signant sensor on board virtually every uh plane or asset and satellite has some form of sant on board tactical signant payload you just Google Sig payload top hit mq1 C Great Eagle there it is every satellite also has signant on board as well uh this was something that people that tried to **debunk** it uh argued and again this goes to show that the

(28:08) **debunk**ers just lie and they pretend that they have information that they don't they'll often say oh this doesn't have that or this can't do that or whatever and they just lie like they don't have they don't know that they just make that up uh Victor ananello is the one that made that up about the satellite uh I think the **debunk**ers have lied about that several times related to some of this stuff as well about that's not how cers Works blah blah blah yes it is yes they do

have those payloads that's 100%

(28:33) proven also the US has another signing class called NOS another sign class called NOS Naval ocean surveillance satellite there it is USA 229 100% you heard the man Sig class called NOS absolutely and of course it has Sig on it it's a low earth orbit satellite it has to be able to relay information to groundbased computers it's moving too fast and are typically used for detecting ships at Sea detecting ships at Sea if you can detect a ship at Sea you can detect an airplane there it is real location of

(29:08) NOS USA 229 March 7th 2014 the exact time that the plane was flying right over here into this coordinates that we see there 100% no doubt NS USA 229 this is a smoking gun shows that we knew where the plane was we have a spy satellite with a sister satellite right next to it capable of taking 3D stereoscopic imagery Declassified history of Gambit and this is just for a bonus so here's another **Mick** West being wrong once again uh when we when uh kim.

(29:41) com came out and posted the cbers video **Mick** West lied and said we didn't have that kind of resolution capability I don't know why he would make up such a bold lie like that but once again shows that how these mentally ill **debunkers** mentally ill people like **Mick** West make false claims that they don't know are true and they pretend like they are true this is what he does with the **debunks** as well is he he makes claims that are not true and passes them off as fact uh and he's claimed that we didn't have satellite capabilities that

(30:05) had high resolution listen to what he says where it mentions better than four inches better than four inches better than **Mick** West dick **Mick** West dick has a micr penis is most likely less than four inches this satellite can probably pick it up and this was shot up in the 60s 1968 so in the 60s we had satellite imagery that was better than 4 in that is extremely good that was 60 years ago that we had that or 10 cm the weird thing is if you go look at this document today on the nro's website they actually

(30:39) went back and redacted this part only through the way back machine can you actually see the original but better than 10 cm is about the limit possible due to atmospheric Distortion better than 10 cm is what mck Wes wished the penis pump would work on his dick to make it larger and from Trump's tweet and here is Trump's Tweet now this is great because I've been promoting this tweet showing people what our satellite capabilities are the best part about this was that **debunkers** thought this picture was fake they thought this

(31:07) picture was fake they didn't think that we could have satellite imagery this good if we can make out a car and all this stuff we can definitely make out a plane in the sky no doubt no doubt whatsoever they thought that the atmospheric interference would be a problem clearly it's not this is a real picture put the image it's also this is one of the last Optical teles or last Optical satellites it's about the same as they can achieve today as for today the US really doesn't have many look at the numbers here USA

(31:38) 224 USA 224 was the one that took that image that Trump satellite image USA 224 these

are the last Optical satellites out there there's only five or six left all the rest of them are infrared or radar sensors I'm pretty sure we can still see stuff without optical telescopes what do you guys think unless this is all limited to five satellites so once again basic logic and reasoning uh proves Beyond a doubt the United States saw the plane we have the satellite in the cap in the area with Sig capabilities on it oh by the way

(32:11) Edward C Linds uh chart all the a lot of the articles about Edward C Lin shows that he was experienced with signals intelligence is that just a coincidence as well that he has the exact requirements in order to have to have access to the videos Imaging satellites there's likely only five or six k1s remaining okay so this should have more views I mean that is undeniable proof the videos are real consistent with the real capabilities of our spy satellite surveillance stuff and and this is to why I'll switch back over in a second um

(32:45) this is why even the white hats are lying about the videos and why they won't talk about the videos is because they know the videos are real they know the videos are real and they have people telling them to not talk about the videos because if if you have an NDA if you have connections to the government or whatever like you cannot talk about us spy satellite capabilities it's our most secretive stuff you can definitely not talk about super super weapons that nobody knows about like the orbs this is

(33:12) why people like Ross kohart this is why Jeremy Corbell is lying to Jo Joe Rogan about it this is why the government's not issuing any statements or talking about these videos this is why the media has been directed not to talk about these videos because it's literally a matter of national security from a surveillance perspective and from a weapons perspective the only things you can't talk about in the media now me I don't give a [ ] so too bad they probably should have reached out to me and I can't wait for Arrow to try to

(33:37) Gaslight me because I've got more evidence than any other court case in the history of the world and if they try to lie I'm going to catch them in the LIE okay let's get back to the the task at hand uh this is the one right yeah okay first before I show that take another sip here's a good question why all the personal insults well cuz man I don't give a [ ] I'm just a normal guy and I've had these nut job debunkers coming after me defaming me uh Banning my subreddit talking [ ]

(34:27) lying about me claiming that I'm a scammer claiming that I'm a grifter lying about the videos lying about what happened to 239 people uh covering up anti-gravity covering up free energy so I'll tell you what I'm not a good guy I'm not everybody's hero I'm not somebody that you should be looking up to I'm just somebody who's going to give you the truth and I'm gonna take down every piece of [ ] that try to cover this stuff up as well I've promised that from day one and I'm going to live up to

(34:55) that so once again if you want to keep doubling down on being wrong it's going to backfire every single time and yes like I said I'm going to stick to what I've said which is I'm gonna have the families take everything that mcwest has everything that the corridor crew has

and now everything that the lore Lodge has as well they've had opportunities to come clean to retract their false statements to retract their fake **debunks** and to apologize to the families they have not done that that's not on me

(35:24) that's on them okay I keep giving them opportunities and they keep keep doubling down over and over and over and over and over again so once again there won't be any apologies I'm not going to be when this is all over and said done with I won't be accepting apologies from people people don't want to come out say sorry I treated you like a piece of [ ] but now that it turns out that it's real I'm sorry I'm gonna say [ ] you apology not accepted is that clear to everybody

(35:48) out there uh so adjust your attitudes now ahead of time before that start switching your opinions ahead of time there we go we are m7x okay so first thing I'm going to do is show you the media silence image so this is one thing I did about the media silence and this image is the most important one right here this is the one this is the one that is the Pyromania VFX zip file from the archive that you see in the top and I had missed something and the thing that I had missed people looked at this back when the

(36:30) **debunk** first appeared uh in August and they said well it only goes back to 2017 that pre that postdates the videos and then the bunkers including **MC West** came in and said no we found it before then so therefore it doesn't matter this wasn't uploaded until after the videos that was the real argument and we noticed this thing at the top though that it had been updated in January and so we went wait a minute let's go ahead and take a look at what happened in January and that was when we found out that the video had been uploaded on

(37:16) the UFO sub**reddit** on January 13 2023 and we went wait a minute that's before that update had happened so we went back and looked at the updates again we found out that those assets had all been updated on the archive on January 25th just 12 days after this had reemerged I'm going to go ahead and show it to you guys right now does that work oh it doesn't switch over uh hold on one second guys oh God going on to Red it's going to be a pain in my ass hold on so here it is this is from January 12 for some reason when I hover over it you

(38:05) guys can't see it or January 13th January 13th 2023 by cuddles or something like that there's a YouTube link to Ashley Burl's YouTube video here this this used to be downvoted to zero but after it reemerged in August people started coming back and up voting it so this used to be at zero but it worked its way back up and all the votes here have been changed now from where they were before this is where we saw a bunch of people saying oh this is obviously fake as [ ] this is distasteful as hell

(38:32) these are most likely Bots because these people are complete idiots look at look at this look how mad this would make people just looking at it no one they wouldn't even look into it these videos are 100% real people like dangerous Dak and some of these other [ ] are either just straight up Bots or they are uh complete idiots like someone here even pointed out the Tic Tac videos were just fake leaks as well and then people disregarded them and they ended up

being real which should have been the real kicker because literally the the 20177

(39:00) 2018 Fleeer videos those were conclusively **debunked** for like 10 years and then it came out and they ended up being real and the **debunkers** Never apologized for lying about that they never said that they were wrong uh they went back and tried to **debunk** them again so expect more of the same with MH370 videos even if Arrow comes out and says yeah those videos are Declassified they're real the the bunkers are going to still claim that they're fake there's nothing that's going to change the Bunker's mind and the ultimate irony of

(39:27) that is they always ask me what would convince you that the videos are fake and I say find the plane or find the hoaxer for the **debunkers** there's literally nothing that will convince them that the videos are real whatsoever **Mick** West is totally brainwashed completely delusional idiot so are the rest of the bunkers out there uh there's nothing that will convince them and that's just the **truth** like people say are you insulting them no I'm just literally telling you the **truth** they're they're the kind of like totally

(39:51) [ ] people that have no mental or critical capabilities whatsoever to think clearly uh and they're never going to believe they're never going to believe in objective reality doesn't matter how much evidence there is we've already provided more evidence that's needed that that convinced videos are real so um yeah and somebody else point out yeah if you're not a conspiracy theist at this point then you're not thinking like conspiracies have just been coming true pretty much non-stop

(40:14) for the last what several years at this point okay so that that uh so this video comes out and then all of a sudden what we i' also found out the Pyromania VX posted by I slide on August 19th where they linked to was the same location where this had been updated on January 25th now you might say okay well you know icy slide found that location right and so here's a link to that location now it's already been updated when I clicked on it this has been changed guys and I'll go and show you this in a

(40:55) minute this bottom right Square down here that my I'm hovering over hopefully you guys can see that can you oh wait you guys can't see this why can't you see this why can't you see this oh oh I'm not sharing the right thing hold on let's try this this bottom right Square down here has been changed in the last 24 hours because we had caught absolute proof that this **debunk** was pre-planned back in January so in January there was no mention anywhere about his VFX matching Pyromania thing or anything like that in

(41:31) fact the video's reemerged in August August 7th August 8 August 7th and it wasn't until August 19th that this **debunk** had reemerged the **debunk** had been planned on the internet ready to go okay some donations my channel thank you very much Susan goes time traveling Caucasian thank you very much appreciate you guys uh yeah and we'll we'll show I also have up here as well the direct direct link from the icy slide icy slide claimed to remember an archive VFX shot which tied it to the video so he just remembered this all of

(42:06) a sudden out of nowhere which is pretty suspicious considering when we look at it there's a falsified comparison in there now we can prove this **debunk** was planted with intention to disprove the videos because there are fabricated images that include the literal comparison that **Mick** West used to claim the videos are fake and I mean literal comparison like the literal sidebyside comp comparison that they use on one frame is actually on the archive as a fake image that is meant to appear like it's part of the

(42:37) assets the only way that would be possible is if somebody pre-planted that out there that **debunk** to have it ready to go on January 25th 2023 now since the upload in January predates the Resurgence of the videos in August we know that somebody planted it there to be found later uh in addition to this a fact check article came out and I'm going to skip over this fact check stuff this came out in January 20 or March 23rd 2023 this was posted by there's a quote from a guy named Scott Brando actually I'm gonna go through this real quick as

(43:09) well Scott Brando is a bot account that uh tries to **debunk** real videos and we can prove that because we caught him uh with the Bots posting his content not just on Twitter we caught three other Bots posting his content on Twitter word for word uh even the they even got the um the comma in the wrong spot on every single one which is an exact replica this does not happen unless it's a bot nobody I have people that convert my stuff into other languages and you still can't find stuff like this and I have

(43:41) 125,000 followers UFO interest is some loser that has like no followers not only that but somebody even posted it on **Reddit** exact same word for word this is literal disinformation that you're looking at here this is Bots pushing disinformation on the internet to try to make real videos go away 100% proof right there and he's quoted in the fact Chuck article from France 24 Newsweek copies it August 9th two days after the videos reemerge Newsweek copies the France 24 article and they mess up and change NRL 33 to NRL 77 neither of those

(44:14) is correct the real one is nrl22 okay so let's fast forward guys so today I'm like oh I want to go back and do a followup to clear this up for 100% proof that the Pyromania VFX **debunk** was fabricated just 100% proof I wanted to clear it up so I go in there I pull the screenshots from icy slide 7698 which by the way icy slide is just a play on words for intelligence Community Forum slide I slide and uh Forum sliding is a method of disinformation that you use to get people to uh stop stop looking at stuff that you don't want

(44:56) them to see and this was the whole point of posting this **debunk** was that there were so many people proving the videos were real they were pushing so much disinformation out there to try to get the videos to go away this was the one that finally caught on that if you read the comments and the thread is people thank God this is over with thank God we don't have to look at this anymore like it's straight up uh inorganic uh bot accounts for sure uh pushing disinformation out there Prett pretty crazy like we are actually catching the

(45:24) disinformation apparatus in real time get ready for it chat feels good okay yeah I've checked the user profile it was a one-day old **Reddit** account it had to get manual approval from

the moderators I called out the moderators of uh the UFO subreddit and and uh they ended up Banning me every time I would post and the UFO subreddit uh moderators are 100% corrupted 100% corrupted there was one that was in my DMs all the time he was lying to me non-stop making up excuses non-stop his name was uh syron something or other 95

(46:15) so if you see that guy he's a piece of [ ] uh and he's a debunker idiot as well uh basically the UFO subreddit is 100% compromised disinformation 100% um and they're the ones that allowed this one-day old Reddit account to post this fake debunk on their subreddit I told them that I would call them out nine months ago and I would prove that they're full of [ ] and now we're doing that right now today on March 16th 2024 uh also the the subReddit Reddit in general is implicated in the cover up of

(46:47) these videos uh Mick West is for sure um and so here we go so it posts this thing the plane video has VFX used for the portal and is likely hoax the plain VFX elements used for the portal and is likely a hoax the video effect is from an old video CD ROM from the 90s it can be found on archive.

(47:06) org website don't worry we're going to go to that website in a second um is titled Shockwave The Stills below are the best matches that I could find and is undeniable well it's about to be very deniable it's about to be very deniable chat so let's go ahead right now and prove that it doesn't match this is how easy it was to prove that it doesn't match so you can tell right away from the wording that this is a bad faith attempt here at disinformation just from the wording by them claiming that it's undeniable uh because when you just

(47:40) overlay them over the top of each other you can tell 100% that they don't match and you can tell that this was pushed on the internet uh and it was prepared ahead of time because it was close enough that it would fool morons it would even fool people like uh Joe Joe Rogan it fooled uh you know people like everybody who's on the cdor crew all got fooled by this you can tell no doubt 100% undeniable this is not a match certain dots aren't in the right spot we can tell up over here this doesn't even line up this is the best

(48:09) possible match based on the Big Dot right here this Big Dot is in the right spot everything else doesn't line up edges doesn't line up the middle is completely different it it cuts off over here on the on the window here as well uh so obviously what somebody did here was that they found a blast wave that was similar and then they resized it and then they tried to pretend and lie to people like it was a match and when you watch the lore Lodge those [ ] idiot kids uh when you watch them do their comparison what they literally do is

(48:42) they superimpose it over the top of it and then they darken it and that way that's how they get the middle to look the same because they know it doesn't match they're 100% Liars the lore lodges are liars no one should listen to anything they do it's most likely most of their content is probably fraud content uh and if they're lying about this then they're probably lying about everything else these people claim that they're like solving murders and other stupid ass [ ] out there uh the lore

(49:06) lodges are frauds uh I want that on the record uh they pushed a fake **debunk** objectively pushed a fake **debunk** to lie to people uh and this type of stuff like there will be consequences for it 100% so you can see right here no doubt this does not match this is the only frame that's even similar okay that's the only frame that's similar and that frame objectively doesn't match so there's no argument about it it objectively does not match the middle isn't even the same even even close the edges don't match

(49:39) that's not a debate that's just a straight up fact so then when you take the full comparison and put it over the top it's even worse so this is the frame right here that's the best possible match this one right here and it doesn't match you can see clearly it doesn't match this is the only frame that's even close when you take the whole asset the one that this guy's talking about the Shockwave move here it's not even close to matching there is no doubt this is not in the MH370 video literally

(50:12) impossible does not even look remotely the same Okay so we've addressed the fact that this a you know even if you want to say like it doesn't matter where it came from whatever it just doesn't it's not in there it's clearly not in the MH370 video it's not even the same kind of event uh doesn't have the same number of frames the rest of it's not even close to the same when you try to line it up the best possible way it's not even close uh so there you go yeah and the middle again is totally

(50:39) totally different totally different so let's go back to this and it it feels bad that Joe **Rogan** was fooled by this as well as many other people but I don't blame them because disinformation is very powerful especially when you don't want to believe something's true when you don't want to believe something's true then it's very easy for disinformation to uh get you okay so now here's the thing as well now look they took and and they prepared the exact frame that **Mick** West used the

(51:10) one frame that we just saw compared to this one down here now it's not even side by side it's not even side by side now why is that going to be important I have nothing to do with the making of the plane video the portal effects seemed familiar and I began to search and this is the product of the search sech so one- day old **Reddit** account doesn't explain how they found it they just happen to find this well where where did they find it and and let's go back you see the time at the top here right so the time at the top of the

(51:39) screen is 10:28 a.m. CDT which I think is Central Time 10:20 in the morning somebody posts this let's go to the next picture well look at this this is **Mick** West from his own website metabunk where there was a threat about this because they were desperately trying to prove the videos were fake the funny part is this is on page like 19 of the website here's the website right here here's the website uh August 10th they started a thread up that was from August 19th so for nine days there's like 17 pages of them trying to **debunk**

(52:17) the videos every time they tried to **debunk** the videos on this website they just proved the videos were more and more real they were trying to **debunk** the smoke and the smoke

ended end up being real oh wait why is this not showing up again the hell here we go here's the website they were uh they were trying to **debunk** the videos you have to go to like page like I said 16 or 17 to find **Mick** West thing they even have the nrl22 right here as well literally every single thing uh and they even have the NRL 33 on the first

(52:51) page everything they tried to **debunk** ended up being real and this is why they had given up actually and then August 19th they were so desperate all of a sudden the Pyromania VFX appears out of nowhere on August 19th after a week and a half of uh like 10 days of every **redditor** proving Beyond a doubt these videos are real all of a sudden this fake **debunk** comes up so let's see what it says **redditors** argued on the archive.

(53:18) org Pyromania CD images were uploaded too recently so it must be fake So within three hours 1:15 p.m. once again uh once again here we can see 10:20 a.m. 1:15 p.m. less than three hours later **Mick** West was already all over it and he had already seen the counter arguments which had up been up posted later so the people had to react to the original people were posting the original well we looked at the archive and the archive doesn't say that it was updated uh you know archive says the the latest went back back to was 2017 and he goes well that's okay

(54:00) because I already somehow found an obscure YouTube video this obscure YouTube video here killing time full play in one hour from a 1995 3DO video game so he he's also the only one the first one with his real name tied to this other than the icy slide one day old **Reddit** account that claimed to find this asset now you got to go like 55 minutes 58 minutes into this video it's like an hour and 30 minute long video to find the part where you have this asset you cannot reverse image search back to a video reverse image search only goes

(54:37) back to images and stills so **Mick** West seems to have lied to the people that were asking him about this let me see if there's any update it looks like mck West lied because he told somebody I'm looking at the screenshots of conversations of mck West right now he says he did a reverse image search well you literally cannot rever can you guys correct me if I'm wrong in the chat can you reverse image search back to YouTube videos he found this within three minut three hours obscure video this ties **Mick** West directly to

(55:08) the **debunk** the only way this is possible is **Mick** West knew about the **debunk** before it got posted on **Reddit** this ties them to icy slide that's out there not just that so Ray Tracer just point out no you cannot you cannot reverse image search back to videos so **Mick** West is already lying about his excuses now I have the screenshots if necessary I will post them on the Internet of **Mick** West claiming that he he found this by reverse image search which that's an objective lie as well you cannot reverse image search back to videos he's a lying

(55:36) piece of [ ] uh he's been caught lying about three **debunks** he's still lying right now you guys need to be pressuring **Mick** West for for a public statement about this I want to know what **Mick** West Connection is to icy slide I want to know if he knew the **debunk** was going to get posted on **Reddit** before it got posted because 3 hours is not enough time to be finding a

random 3DO Killing Time video game with an hour and 30 minute playthrough and get into the 50th minute in it to find the the asset um and then I want to know whether or not

(56:04) uh what was my third question yeah uh and I want to know if yeah the minute by minute on how he found this video because obviously it was not a reverse image search so let's get a real answer from **Mick** West let's get the **truth** from **mcwest** it's starting to get pretty pretty crazy yeah there's no reason to use a 90 game video game asset when you could just create a blast effect like that doesn't even make any sense not to mention it requires a 3D render so you're not going to use a 2d 90s video

(56:42) game effect you would use a 3d effect that you would produce because you need to get it from two different angles for two videos to line up by the way both MH370 videos line up in perfect synchronization this requires a full 3d render we have 3D lighting two videos from two different perspectives what's and we have 3D volumetric clouds clouds are actually almost impossible to render in 3D environment as well that's the reason why the **debunkers** don't want to admit it requires a 3D render because if

(57:07) they had to admit it required a 3D render then they would have to admit that there's no way the videos can be fake the MH370 videos are 100% real there's no denying it they're real uh the people that don't understand that are just coping like crazy okay now here's the real kicker guys this is the de blow this is where we caught them we caught them red-handed so yesterday this is a screenshot from yesterday that I went there and I pulled up that Wave Rider uploaded this January 25th 2023 that's literally on the

(57:42) archive it says that's when it was uploaded okay now when you look in the bottom here what do you see fabricated image of MH370 drone endothermic event on the left and look you see the comparison that I slide used but he didn't do it left and right his doesn't even match that if we go back to the icy slide look at this they're two separate images in icy slides I would maybe be able to argue if he put it left and right if he just literally screenshotted this if he just screenshotted this right

(58:17) here then I could argue that maybe he just found it like that but no no he's comparing them side by side icy slide is implicated in the fake VF effect icy slide knew where to find this knew that it was planted out there and then fabricated the comparison now here was the problem so I pointed out well this was like they literally added this into the set of like this is all the Pyromania assets these explosions that you see here they added it in here to confuse people to think that it was part of the assets but the problem is you can see

(58:50) the tail sticking out of the plane right here we can see the tail of the plane sticking out of the endothermic event so we know this is from the real video this is from the real video right here the fact that the real video is inserted to make it look like it's part of the asset is proof of fabrication that's the definition of falsification but it gets better it gets even better chat so let's read this out and before I get to the Cuda here so I I already said the stuff about **Mick** West's website I reported on this

(59:29) yesterday icy slide posted the **debunk** August 19th at 10:20 a.m. which includes the comparison that was included that was in the fabri image Fabrications available on the archive so he had linked to this which had this down in here that was what icy slide linked to in his **Reddit** post right here this this link right here went to that went to this location where you could find this image and that we know that image was uploaded January 20 25th 2023 8 months before August 19th then **MC West** was arguing that oh well it looked like

(1:00:03) it was uploaded in January of 2023 or looked like it was uploaded you know if you look back at those dates you can see that maybe it was uh 2017 or sometime beforehand so he went back and tried to find that the image the asset predates that which is irrelevant the asset doesn't match it doesn't matter how long it goes back but three hours later implies that **Mick West** must have known the **debunk** was going to drop he was already ready to go with counterarguments less than three hours later and a full one and a half

(1:00:30) hour YouTube video that cannot be reverse image searched so and then I went there and I went I was going to go back and make this post so I went ahead and I was like I'm GNA go look myself again at the assets so I went back here and look I this is the link right here this is the Pyromania sighting there it is Wave Rider updated January 25 2023 there it is you guys see it right here you can see it I went to the top and I was like wait a minute it's not there anymore I thought I was going crazy I started

(1:01:03) scrolling through this and I'm like wait why is it not there anymore somebody removed it somebody removed the MH370 comparison from this image that you guys are staring at right here in the last 24 hours on the way we're on the archive this is archive.org where we're looking at the internet archive somebody removed it from the internet archive in the last 24 hours why would someone need to do that why after I made a post about it just one day ago 22 hours ago I made a post about 22 hours ago here it is right here you can see it

(1:01:45) right there in the bottom left or bottom right there it is this is yeah this is totally wild they got caught red-handed it's I'm so lucky that I noticed this is fast I was just like I want to do a followup so I start pulling the evidence together I go to the website and I notice it's just gone it's not there anymore what the hell because they realized that the fact that it was there on January 25th 2023 proves that it predates the **debunk** proves that somebody set it up there not just set up like this wasn't like a

(1:02:19) random image from the Drone video this is the one that was literally used by **Mick West** by the corridor crew and the lore Lodge to claim that their perfect matches remember I'm on record for months and months and months dozens of podcasts saying that they've only matched one frame together that that is the frame this is the frame this is the one frame that all the **debunkers** have used to match and it was already out there in January of 20123 this also means that they're watching us that they're watching very

(1:02:47) closely somebody is watching what I'm posting on the internet and they realized it and they panicked they panicked they went holy [ ] he caught us he caught us falsifying the

**debunk** putting it on the way back machine that it was already out there in January of 2023 they panicked and so what did they do they removed it asset changed sometime between 51524 and 56 24 probably last night is when they changed it sometime last night they went ahead and they pulled it out and they changed it they removed the asset out of there

(1:03:24) because we had caught them red-handed and they thought oh well other people are going to look back at it and it won't be there anymore and they just won't put the pieces together but because I had just wrote a post about it one day ago just one day ago I posted this we had 100% proof that they pulled it out they literally changed the way back machine they pulled the asset out from there they made it go away so that people wouldn't realize so there's more guys they just yeah it's just gone it's just gone now

(1:03:57) I was like wait a minute so I was freaking out I was like wait is there proof that that it used to be the way that it was yeah this [ ] is insane for real guys nobody goes to these links unless the videos are real you don't go to **debunking** fake videos you don't go to these links setting up fake **debunks** having them out there on the internet eight months before and then having all your assets like **Mick** West Corridor crew lur Lodge all these YouTubers Danny Jones deploying all the assets to make the videos go away all using this debu

(1:04:26) bunk this comparison that we're staring at right now they all use this you don't go to these lengths unless you're hiding a real video this is intelligence Community [ ] now I'm not saying that **Mick** West is intelligence Community or the low LOD are I think they're probably just useful idiots for the intelligence Community that's my true opinion but they're still implicated but yes this is that is the final nail in the coffin for the Pyromania VFX we showed it doesn't match

(1:04:54) doesn't even match on the one frame that you see here here and we show that it's not even similar when you take the whole asset 100% proof **Mick** West needs to issue a public statement about why he was pushing a fabricated **debunk** that dates back to January 25th 2023 **Mick** West needs to issue a public statement he needs to issue an apology as soon as possible he needs to call his lawyer up **mick** West needs to call his lawyer up right away if **Mick** West if you're out there call your lawyer up you need to

(1:05:21) watch this full stream this is all the evidence have your lawyer watch it issue a formal statement of apology to the MH370 victims uh say that you are wrong about the videos being fake retract everything that you've ever said delete your YouTube video where you're **debunking** it with fake **debunks** that's the best thing you can do I just every time I give people the best advice they're ever going to hear nobody takes it and it always backfires on them so once again **Mick** this is me giving you honest advice buddy uh delete your

(1:05:48) YouTube video come out tonight with a formal statement of apology uh say that you are wrong when you **debunk** the videos that you apologize for pushing fake **debunks** uh and that you apologize to the families for lying about what happened to 239 people this is way different than some UFO videos this is 239 people that were disappeared and we have it on two videos

uh now so then I followed up and said can somebody please do technical analysis on this way back archive to see how someone changed the asset since yesterday it looks like we can catch

(1:06:22) them red-handed either they can manipulate the internet archive or some other Shenanigans as a foot so I was like what the hell how did they how did they pull this off because I I thought I was going crazy I was like wait a minute this did not look like this yesterday and I'm so glad that I looked at this today because can you imagine if I hadn't looked at this in like a week or two if I hadn't looked at that archive like a for a week or two then they might have been some plausible deniability but

(1:06:49) I caught them in under 24 hours oh and thank you Steve Fair Day cage yet no guys guys anything if I go down guys you guys live take take up 10 of you will rise up in my place like the Hydra if I go down I believe in you uh Corey thank you goodbye **Mick** West he says yeah **Mick** West's career is over this is the end of **Mick** West anybody that still gives **mcwest** credit after this they themselves have no credit H why are there like five things oh oh oh oh I see what happened I see what happened here oh these were all

(1:07:24) my failed broadcasts can I just delete these Jesus what was this hopefully guys hopefully it doesn't delete my broadcast let's see okay we're back we're back okay great okay so this then immediately JK Philly fan JK Philly fan didn't even need five minutes guys uh JK Philly and Steve thank you very much bro thank you very much yeah that was because of all the restarts so JK fan in five minutes pulls up the archive boom there's the record right there chat May 16th 2131 so I don't know

(1:08:07) what time zone this was in that we see here but obviously this had to have happened in the last day so whatever time zone they're using I have no idea my guess is like there're some kind of like near the uh the day time because you can see the time stamp on when I posted this and we checked so there's less than a 20-hour window they literally changed that asset some Pyromania sightings that's the one right there that's the one right there 1.

(1:08:33) 9 megabyte file May 16th caught them red-handed changing it you can tell the last update date is January 25th so there's not even any uh they can't make any counterarguments because the last update before this was January 20 23 they went and changed that the thing in the background yesterday and the last update before that was January so this is 100% proof of everything that I've been saying um that that that **debunk** was already out there it was out there on the thumbnail in January 2023 eight months before it

(1:09:12) was picked up by icy slide and pushed by icy slide to ban all discussion of the videos picked up by **Mick** West to fraudulently claim that the the videos were fake that it was then picked up by the corridor crew lur Lodge Danny Jones all these other people that they all used it to claim the videos were fake is a 100% fabricated fake **debunk** that goes back to January of 2023 it was pre-planned no doubt that there's no possible way that image could be out there on the archive uh back in January unless it was pre-planned that's the

(1:09:44) only explanation once again here it is January 2023 there is the fabricated comparison they added it in to the JPEG and then they removed it we caught them red-handed caught them removing it out of there to to cover the tracks because they saw my post and they realized that they got caught and when they saw my post and they realized they got caught and they realized they knew what it meant they went through and they removed it now some people ask well who can change who can change this here it is again on the actual website right now

(1:10:16) archive.org this is the internet archive they changed the internet archive and uh the only the uploader can change it only the uploader so either the intelligence Community has the ability to uh to change the archive or this person Wave Rider 3000 whoever that is they changed it there the only people so somebody saw it somebody saw my post somebody freaked out realized they were caught and they went and they changed the asset and removed it out of there so that people wouldn't see it in the future and they probably thought that

(1:10:53) you know we wouldn't recognize for a while and that maybe we' recognize like a month from now or weeks from now and that there would be some kind of plausible deniability about it they would say no no it never looked like that or whatever but we caught them in under one day there it is 100% proof that the VFX comparison was fabricated 100% undeniable proof that it was pre-planned back in January of 2023 to be used in August to make the videos go away they even went as far as to add it to the thumbnail add it to this image

(1:11:24) which they shouldn't have done if they just hadn't added this comparison to this this image here they probably would have got away with it but they went ahead and they added it here there's no record of this **debunk** ever being used before August so there's nobody can claim that somebody used it to **debunk** before that it 100% had to have been planned for the future just in case somebody in the future caught on to the videos being legitimate so because we were always wondered how did they find this asset

(1:11:52) right the big question that everybody always wondered about the pyromania asset is how did they find this asset that's so similar to the videos you know like that's that's so weird how did they find that and that's the answer they didn't find it it was pre-planned it was already out there the whole time we had speculated maybe they Ed some kind of search engine to find one that was similar and it wasn't even just that it was already out there in January they already had it pre-planned ready to go

(1:12:18) that's how they found it so quickly because it was 100% pre-planned crazy right this does not match the middle is not even close to the same not even close there's no moving this around or no matter how much you reshade the middle because they're like oh you just changed the shading around no you reshade the middle it's still not even close to the same and the funny part is they cover it up and what they do is they draw lines and do these boxes to like confuse you but they never show you a direct overlay like I'm showing you

(1:12:50) right now and this goes to show you the **debunkers** are 100% bad faith I don't know if intelligence Community or what but every **debunker** out there is lying to you the fact that

they're willing to lie to you about something like this tells you you shouldn't listen to anything they say I never lie to you guys never I've always been honest and I've been objective about all of my analysis I've even been truthful about my opinions about where I think the stuff comes from what we're looking at right here does

(1:13:15) not match and this is only on one frame this is how disinformation Works guys this is how disinformation work they plant fake debunks ahead of time for real videos in case they were ever to come out out and then they they get all their assets like Mick West and and various YouTubers that they have under their thumb to come out there and make videos to their millions of followers to convince people that you know the sky is green when the sky is actually blue they go no the sky's clearly green h and you're like wait no I'm looking at

(1:13:46) it it's not green it's it doesn't match there there it is I'm I'm looking at right there and they go no no your eyes don't believe your eyes don't believe your eyes don't believe what see they they just changed it all around and then you go well nobody's ever changed it all around like that before this asset's been used in five different places minimum it's never been changed the way you're claiming and they go well yeah ignore it right sky purple kind of stuff yeah Emperor has no

(1:14:14) Emperor has no clothes it really is like Emperor has no clothed situation uh totally wild guys so the question to me now at this point is can the way back machine be manipulated uh um because if the way back machine can be manipulated like we just saw then it we already had ruled out a 2d Cloud picture and the only debunk even remotely left and we've already refuted the 2D Cloud picture uh is that 2D Cloud picture but if you can manipulate the way back machine then there's no chance that that 2D Cloud picture has no

(1:14:46) credibility whatsoever it already doesn't have any credibility but it completely kills the 2D Cloud picture as well so the best part about us catching them here is that if they can manipulate the way back machine like this then that means the way the way back machine on the 2D Cloud picture only goes back to 2016 doesn't even go back to 2014 but if they can manipulate that and change the image retroactively like we just saw right there then that means that picture might not even go back to 2016 that

(1:15:11) picture might have been planted back in December they might have used AI in 2023 and changed the picture from what it used to be to a new AI picture that includes the clouds from the real MH370 video scary stuff uh I want to point out a few things about the cloud picture is there anything else we need to touch on this as well sorry I'm just looking through this let me look through my so we got that oh oh okay yep one more thing I missed one thing guys CL this okay so we have a little bit more evidence that we have to go through here

(1:15:50) because I we have to be 100% lock step on this this needs to be just straight up absolute proof so this is once again metabunk website this is metabunk website this is Mick West owns this website this is Mick West website he owns this website he runs this website he pays for this website Mick West is responsible for whatever is posted on this website this is why

**Mick** West needs to be calling his lawyer up right now uh because he's in big trouble big trouble here it is right here Pyromania effect CDs where does it go back to it goes

(1:16:21) back to what we were just looking at their link is directly to what I was just looking at there it is one more time for the people in the back **Mick** West metabunk link their Source the source of their VFX is what I just showed you there can be no denying it whatsoever they sourced the exact fabricated **debunk** that we just posted and we just proved was fake we proved it's fake **Mick** West link goes back to it it even goes back to the new version right there where the uh where the uh drone endothermic event is no longer in

(1:16:59) it there's the link that's what they're sourcing that's what they're sourcing on the pyroman that is literally **Mick** West Source right there and we have him on the record in his own Forum uh on August 19th claiming to be the one that found it on some Killing Time video game right so 100% **Mick** West is implicated it's linked on his on his website uh directly in there that's a link to it and yeah um yeah so beyond any Shadow of Doubt he is related to this he's linked to it we've

(1:17:34) caught them in 4k uh modifying the archive in retro in retrospect after getting caught on it uh and **Mick** West needs to issue a public statement as soon as possible I know he's seen it I've seen the messages of people messaging him about it he knows it's out there the longer it takes **mcwest** to respond the more guilty he is in this he better be apologizing and retracting his **debunk** that's out there I'm going to be coming down hard on him hard on him every single podcast every single podcast I go to I'm

(1:18:04) going to be mentioning that they fabricated a fake VFX **debunk** and I have all the evidence to prove it 100% undeniable uh and Chad from the investigator says I did reach out to him for a comment so he knows about it we're waiting for **Mick** West to weigh in on this guys um he's going to be scared because he should W hopefully he's watching this video to see how much evidence we have against this **debunk** uh We've caught him red-handed red-handed there it is and just in case guys just in case anyone were to say

(1:18:35) I'll I'll get the sound up here you know where it's going here oh no it didn't used to look like that or whatever well here's my live stream from two days ago guys Ashton Forbes live stream two days ago you know what's coming chat you know what's coming we have it live streamed guys we have it live streamed so there can be no denying it whatsoever thank God I live stream every night people wonder why I live stream guys this is why I live stream guys this is this is why I live stream chat

(1:19:13) because I want to make sure there's no denying it they can't say that it didn't used to look like that we have them 100% caught here is actual this is remember what I just showed you you guys the update this was the update here from uh this was a screenshot that we took before that that goes and shows that it was updated on January 25th now let's click through this and watch okay here is the upload we have the uh we have the archive upload here as well you can see right here Wave Rider uploaded by Wave Rider on January

(1:19:52) 25th 2023 so this is 12 days after that video had emerged we looked at the data right here there it is right there updated 20 January 25th 2023 it looks like somebody updated three days also these are the Assets in the zip file somebody updated the Assets in the zip file uh three days after that video emerged that's pretty amazing that somebody posted this on **Reddit** and all of a sudden somebody had the Pyromania VFX getting posted onto the internet now not just that I'm going to show you how they objectively fabricated this okay so

(1:20:24) we can see here's the the metadata related to it updated um January 25th and then look at the image the image actually took they literally took some of the assets from the ma370 the best one's here down the bottom right this right here is the actual I want to point out guys this is the literal archive website that we're on right here in the background so this wasn't a screenshot that I was looking at I was on the website two days ago proving Beyond a doubt that this is what it used to look like so nobody can deny

(1:20:59) that it didn't used to look like this we actually have it recorded on a live stream just two days ago with the actual drone zap in it right there guys I'm gonna switch over just to show you guys how badly we caught them whoever did this the intelligence Community whoever they made the biggest mistake they've ever made in the history of this investigation they just went and basically proved that the videos are real to us they destroyed all the **debunks** in one go uh especially the most prominent one that all these fake

(1:21:30) YouTubers have been pushing I'm actually going to go to the end part here for you guys where it's slow super slow-mo boom there it is chat there it is the real drone video that's the zap you can see the tail sticking out of the plane and that is what they put right there in the bottom left bottom bottom right down here of this image they literally have it sticking out right there they added it in here someone did this back in January eight months before the VFX was supposedly found it was already out there ready to go you can

(1:22:08) even see the tail if you look closely you can see the tail sticking out of it holy crap chat and the best part is they have the actual frame that **Mick West** used to **debunk** the videos right next to it so we know beyond any doubt what their intention was their intention was to claim later on eight months later that these two were the same when we know objectively that they're not the same I showed you guys the comparison I showed you the direct overlay they're not the same this is 100% proof that this is a fabricated fake **debunk** that

(1:22:40) was pre-planned ahead of time to trick people into thinking that it was used in the MH370 video crazy right yeah it even proves their intentions that's the best part what we see here this is why they panicked and they removed it because this proves their intention because they have it side by side it proves the intentions if it was just like a random screenshot from the Drone video then it wouldn't prove their intentions it would just prove that somebody saw it and they did something weird this proves the

(1:23:09) exact intentions this was the exact comparison used to **debunk** the videos in August straight up mic drop boom this was the best possible thing that could ever have happened to

the case best possible thing 100% shows that there are people out there acting in bad faith with with a lot of access and dark intentions to try to make the videos go away when have you guys ever heard of somebody trying to **debunk** a fake video to this level of degree never never the videos are real the government's trying to hide them the

(1:23:45) best part is we've already proven the science in the videos is real too the government's trying to hide technology probably from our adversaries and maybe the world that nobody knows about yeah how was the archive changed as well I want to know more about that how the hell did they change the internet archive apparently you can change the internet archive yeah if **Mick** West doesn't retract all his fake **debunks** uh I am on every single podcast I go on I'm going on one two tomorrow I am gonna talk

(1:24:15) about this non-stop I'm gonna talk about this non-stop every single podcast from here on out I'm going to just play this clip honestly and show them that exact the intentions that were out there there are people fabricating fake **debunks** the number one fake **debunk** that people used not only does it not match but it was pre-planned ahead of time eight months beforehand at a minimum uh image from the Drone video you can see the tail the plane sticking out right here this one on the right is the one snapshot that they've

(1:24:45) tried to argue is a perfect match to what we see on the left and I showed you guys the perfect overlay so you can tell right here this is proof right here that somebody was preparing this **debunk** in January of 2023 to be used against the videos you're looking at the absolute proof of that right here um so we can actually even figure out where this came from I'm just gonna let this play and they pulled this out of their ass because they had it prepared ready to go and then this was used to trick people like Joe **Rogan** into

(1:25:18) thinking that the videos were fake so let me pull up I'm going to switch over to my other share screen real quick to show you this is exactly what they did so then what they did you can see that this is the real one this is the real one on the left this is the the fake asset they use this and this is obviously doesn't match like you can see where the dot has been perfectly lined up right here it means that the the the edge doesn't match at all there's no way to make this a better fit than what we see right here this is

(1:25:48) the best possible fit that there is I don't know why the low Lodge uses a fabricated comparison but their comparison is not the real asset to the MH370 video uh so what you see right here is they literally took the real where is it they took the real MH370 video and they inserted the frame from it to make it look like it was part of this Pyromania as here it is there it is right there oh crap why is this all weird it's weird that it played right there yep there it is right there chat booya that's what they inserted they

(1:26:41) took this screenshot they had this prepared back in January incredible there it is oh I see it auto play back in January 25th 2023 8 months before this investigation ever began and **Mick** West is the one that claimed to find it in an hourong YouTube video in less than a couple hours after a one-day old **Reddit** account posted on **Reddit** to ban the videos from being

discussed anymore on on the **Reddit** pretty incredible right and this one right yeah so if you just showed up if you if you just showed up and just saw that and just had your mind blown

(1:27:20) yes your eyes are seeing correctly we just prove Beyond any shadow of out that the VFX comparison was 100% fabricated and 100% planned that put on the internet to be found later on going back on January of 2023 that's almost a year and a half ago that it was ready to go so that somebody a one-day old **Reddit** account found it in August on August 19th so a one-day old **Reddit** account that had to get manual permission to post by the moderators found it on August 19th and claimed they proved the videos were fake never mentioned the

(1:27:55) fact that it's sitting there in the image from January 19th don't you think that'd be a pretty important thing to point out if you randomly find that don't you think you'd be like hey I was searching around and I see this thumbnail and it has this comparison in it they don't even mention that they don't even mention that nobody's ever mentioned that I'm the first person to bring that up today uh it's May 19 May 16 2024 and **Mick** West uses it he doesn't mention it ever either nobody mentions

(1:28:20) it until I bring it up yesterday and mention the fact that this has been sitting out out there because I went back and looked at the dates and I went wait a minute this goes back to January it hasn't been updated since January of 2023 and then what happens somebody jumps in and removes it the next day this is like you're this is like you you you get caught shooting someone on video as murdering someone and then you realize that there's some evidence in the background that you're like oh [ ] [ ] I should have got rid of that

(1:28:49) I forgot to get rid of that evidence and so you go back to the scene of the crime and then you remove it that's what this is this is unbelievable man unbelievable I can't believe we caught them like this biggest mistake the intelligence Community or whoever's been trying to hide these videos they've ever made in their lives biggest mistake ever because not only does this completely 100% prove the VFX **debunk** is fake and fabricated and pre-planned but now it cast doubt as well on the whole Cloud picture [ ] which there

(1:29:20) already can't be a cloud picture guys but now begs out is like were they able to manipulate the way back machine on an image in the in on that as well because apparently they can manipulate images on the way back machine we just watch them do it so does that mean that they took a different picture before and they aied a new picture with the the satellite clouds in it and they replace the old one to make it look like it's older than it was is that why a Six-Day old **Reddit** account claim to magically use their uh

(1:29:48) mind powers to pick out a cloud picture out of the hundreds and hundreds and thousands of cloud pictures out there and be like oh that's the cloud picture picture and they say they found it in 20 minutes everything's starting to get super sketch around this stuff guys crazy huh this is wild chat wild so here's the other thing too guys so we have already found the science as well so not only did we find the fabricated **debunk** attempts that were out there we found how the science of the real videos works we found Thomas Bearden talking

(1:30:29) about scalar physics talking about cold explosions and being able to extract energy using scalar interferometry that's exactly what we see happening in the videos I have CIA papers defense intelligence agency papers all explaining what we see in these papers or in these videos we have all these papers saying exactly what we're seeing in these videos of course these videos are real this is real government technology that's why have all these papers out there so why Thomas beard has been talking about it for 40

(1:30:59) years because this is the real technology people wonder like the government's hiding some technology from us yeah you're looking at it you're staring at it in two videos Everyone goes I'm so tired of looking at lights floating around in the sky yeah well here you go we got real videos for you in the super high quality filmed by government assets that nobody knew about we've proven as well that this is what satellite footage looks like this is what the capabilities are this is actually from a technical perspective

(1:31:29) consistent with real satellite capabilities this is the cers system it's a cbers space based infrared system it's a groundbased computer system we also found a document that I haven't even pulled out there yet that makes it look like they can take this signals intelligence and they can build projects so they can like just pick a location use a build a project and then pick a time and it'll build back out whatever was there at that time and then they can do this kind of tracking that you see this is why they're not looking through

(1:32:00) a satellite like that it's just got the satellite scan in the whole world all the time and then they can run operations based on that that's what we're looking at right here groundbased computer system that that creates this crazy man and we know the real because there's never been two fake videos that are in perfect synchronization like this from two different angles that's not a thing that exists there's no such thing as fake videos that look like this that have two different perspectives like it should

(1:32:27) have been obvious there shouldn't really have ever been this much debate over whether or not the videos are real we can see real volumetric clouds in super high detail in the background these volumetric clouds are practically impossible to to create even now in 2024 in 2014 they were literally impossible you can see there's real 3D Dynamic Parallax in this video you can see that the operator is struggling to keep the plane in uh View we know this is some kind of like what is it the mx25 uh I forget what it's called we

(1:32:59) found the camera too we really found the camera that's used for this uh and it includes color video it includes the same TR manual tracking that we see has all the exact capabilities there's no way that these videos would be fake with all these details guys this is if these videos were fake this is better work than the best Studios that make the best movies out there and you only have a 70-day window less than 70 days because you got to produce it you got to make a storyboard there's no way guys this is

(1:33:28) the real this is the real deal you're looking at it this is what really happened MH370 anyone saying otherwise is just living in denial at this point yeah I like to show the videos I'm

probably going to show the videos like all the time from now on because people really just need to see how yeah West cam there it is that's the name of the camera they see how realistic this is it's ridiculously realistic there's just no way that they faked these details this is like taking a real video and

(1:33:56) then having somebody try to play that it's fake which you could say now because you have ai in 2024 but these videos are from 2014 10 years ago predates AI commercial deep fake stuff by I don't know seven eight years yeah this is the most beautiful weapon ever in fact I'm going to show you guys the other uh Beautiful video and it's not I don't really like saying beautiful when we're talking about maybe 239 people died like we don't even know what happened to these people I like to

(1:34:22) think that they're alive but look at what we're looking at the people just got zapped away here's a slow-mo the best part is that we're looking at anti-gravity technology if the **debunkers** had been serious they would have been helping us try to solve this case from the beginning because they could have helped us prove the videos were real instead they've been sitting out here trying to make the videos go away super dishonest look at that look how beautiful that is though wow incredible what we're looking at there

(1:34:56) chat is literally a wormhole a real Wormhole we live in a holographic universe that's a rip in SpaceTime and it corrects right away because that's how the universe works that's why we don't see The Ether all the time because you have to like rip it away through high energy electromagnetic fields rip it away and then it closes back up practically instantly that's why we don't see The Ether but we know it exists because Dark Energy explains dark energy and this is going to lead to free

(1:35:25) energy which you might argue this is why they're covering it up this is why they maybe have covered it up for 40 60 I don't even know how long decades many many decades these have been this technology has been covered up for decades this is not the situation where this technology just that's not their first go with this technology great question by Al Joy how long do you think they've had this Tech I think this might go all the way back to 1943 with the Philadelphia Experiment it wouldn't

(1:35:51) surprise me if Oppenheimer knew we could do stuff like this I I don't think he knew about floaty orbs but I think that they started with like radio towers like um you know antennas shooting up and then I think we moved to satellites shooting down this is also directed energy weapons as well and then the floaty orbs stuff my guess is probably 20 years early 2000s probably this is why UFO sightings have gone up so much recently UFO sightings have been increasing because now we've got floaty orbs floating around there this is why

(1:36:22) the government's literally saying that there are Tech technology you listen to Kirk Patrick and these a people and they're going it's our technology they literally just say it is our technology we're looking at it in these videos it's our technology doesn't mean that there's not aliens but it just means that most of the stuff that people are seeing floating around doing weird

stuff is our technology it might be **Russia's** or **China's** you know if we had this 10 years ago in 2014 **Russia** and

(1:36:48) **China** have definitely caught up have you guys looked up semiconductors there is a literal economic war going on right now between the United States and **China China** just invested \$140 billion in the semiconductor industry if you guys want to make money put your money into semiconductor stocks this is not official this is not a ad this is not advice for stock advice if the SEC is watching I'm just saying look at the price of semiconductors this technology uses semiconductors this is the reason why semiconductor

(1:37:23) stocks because everybody's fighting for control over this technology semiconductors plasma physics those are the secrets of this technology that's how you can create situations where you can achieve these energy densities that you need to rip away the fabric of reality and produce a wormhole crazy right yeah semiconductor stocks are going nuts guys and quick disclaimer I'm going to show you guys this I've been invested in so freescale semiconductors the one with these people on board the plane they became nxp

(1:37:58) semiconductors uh back in 2015 I invested a pretty sizable amount of money in this company back in end of October early November and I told people that I'm on record on stream saying that I did that I told people it's not not stock advice but I I just wanted people to know that I've invested in this company I have never pushed this company on anybody before uh I'm not trying to promote it I'm not trying to pump the stock or anything like that uh all I'm telling you people is I want to give you

(1:38:27) I don't have inside information I just know semiconductors allow this technology to work therefore it's a smart investment to be in technology that can create [ ] magical portals and wormholes you know if you got technology that can create a wormhole that can teleport a plane uh that's where I want to be investing my money so that's my impetuous to invest in them I didn't have any inside information about anything that this company was doing uh well let's go ahead and take a look let's little look in the last year see

(1:38:55) how this Company's stock is doing I just want I want just want to take a look see how they're doing here oh look at that it's up 60% almost in the last year hell if you got in that if you got in down here in November which is October 30th pretty similar to when I got in that was \$170 what the stock was worth at the lowest it's now 270 that's a huge increase guys now let's look at another one let's look at the biggest one is NVIDIA I'm not invested in Nvidia Nvidia let's go back one year on

(1:39:31) Nvidia what Nvidia was \$400 a year ago it was actually 200 down here back in May 18th \$300 it's now 900 900 their market capitalization is \$2 trillion 2.3 trillion dollar that's the net worth of their company base on the stock 2.3 trillion do not guys I'm just saying probably not a great idea to bet against semiconductor stocks if semiconductors can allow wormholes then probably don't invest against that just just saying guys um if you go back like five years look at this holy crap 2020 imagine you got in

(1:40:16) \$50 imagine if you got in even down here this was like what October of 2022 two years ago 112 \$ now it's 900 it's a 800% increase do you think it's just a coincidence that semiconductors are going crazy you just Google semiconductors you find a bunch of Articles let's let's just do like China for example look at this new tariffs on semiconductors Biden two days ago just announced new tariffs on semi why are we putting tariffs on semiconductors oh well probably because it creates magical wormholes in the

(1:41:00) sky we don't want China to have this Hawaii de chip development receives all out support from China how much does China Investing oh well this article doesn't say I think I read somewhere it's like \$140 billion dollars China's put into their semiconductor side because they know you can create wormholes from it wow chat okay so what a night chat well the plan originally was to go through scientific papers I've read like four or five scientific papers since yesterday uh and there's more to come as well but this

(1:41:43) was too big to uh not go into so I wanted to get into that um let's answer some questions that you have what are semiconductors made of material wise now that's a good question question I do not know I think they use different materials and different metals because the semiconductor the point is you're trying the semiconductor is the piece in between this is what creates the resistance in your in your circuit and a superconductor has zero resistance so if they can produce let's say 1k99 and that can achieve superc

(1:42:15) conductivity then that would be copper and Lead but that's a meta material I think that they can find they can create superconductors uh super like you know super conductive microchips uh without that um in fact we found the NSA security report paper I'll pull that up as well just for you guys I hate why this always publishes on a different so this also this is publicly available information I'm going to show you guys right here super conducting technology assessment National Security Agency office of corporate assessments I didn't

(1:42:51) even know the National Security Agency did this August of 2005 August of 2005 it basically says right down here the assessment of these room temperature superconductive uh or these superconductive microchips could be aiming for industrial maturity by 2010 or 2012 well that's two years before the videos two to four years before the videos happen before MH370 and at the end it talks about the the United States would need to invest a bunch of money in it and so if you look up free scale free scale semiconductors

(1:43:27) is listed nine times there it is right there freescale semiconductor free scale free scale free scale free scale free scale they're all over this thing of course the free scale semiconductor scientists or the motive of the of what happened to the plane there you go it's right there it's all right there pretty crazy huh what year did the iPhone take off uh probably early 2000s I imag is it truly debunkers run on pure retardi what company makes that that's going to be going through the roof that's we going through the roof chat oh

(1:44:05) did I see Thomas Beard's book energy from the vacuum no but I did just post a new uh link to where is it I don't know where I I have too many things up chat uh but there is a paper

we're going to look through the Thomas beard in paper as well about out uh whatever I just posted extracting blah blah blah oh let me let me let me see what's good here it was right before that here it is this one virtual State Engineering and its implications by Thomas Bearden wow this only has 6,000 views that's kind of

(1:44:44) crazy it was four hours ago we are look at that I think they was probably messed up because all my failed streams messed it up but uh all good so there it is virtual State Engineering its implications by Thomas Bearden 1978 uh this is pretty wild paper we're going to look through that as well we got a lot of science stuff coming we're probably gonna look at it tomorrow guys so okay Skinwalker Ranch stuff guys I I think it's full of [REDACTED] I'm just going to be honest with you guys I have nothing against uh Brandon Fugal or any

(1:45:15) of that there's not random worm holes and Skinwalker Ranch guys Skinwalker Ranch stuff is probably a gam uh I mean I I probably shouldn't say that ahead of time without having seen it uh but no what we see there has in the MH370 what we see has very specific requirements very high energy densities it's not the kind of thing that you're just going to walk down the street and you're GNA find a wormhole sitting around no that's not how it works in order to rip through reality like that and create a wormhole CES very

(1:45:44) very very high energy density levels uh requires very specific technology to pull off so if they're claiming that and skin walk thing I've never seen Skinwalker Ranch uh Skinwalker Ranch is a TV show it's a TV show meant to entertain you it's not it's not going to be uh the same as watching two **leaked** military videos showing exactly how the science works oh yeah the sign is coming I think I actually had uh you know I don't think I mean Sam but uh yeah drippy drippy goo from the Discord actually is going to

(1:46:21) produce a sign for me and he's already got it on the way so I'm going to get it way sooner than I would have got it normally it was going to take a couple weeks so I'm going to probably redo my streaming setup uh hold on a sec guys uh this weekend probably Saturday I'm gonna move my streaming setup I'm going to reorient everything here get it a better background so there's more depth behind me and then we'll we'll get that new thing uh should come probably next week I think at some point so we got a new

(1:46:52) sign coming guys I I think it's actually going to be multicolor I think it's going to be switchable so the red and the blue people and even the people who were in the green and the purple will be happy it'll be nice um some guest on Julian Dory a couple nights ago said that said about the MH370 guys why would they even be talking about that why would they even talking about that a guy faked these videos Julian Dory is Jersey Shore Trash Guys Julian Dory is a Jersey Shore trash podcaster he's a [REDACTED]

(1:47:25) [REDACTED] guy's a complete idiot and uh his guests are like dumber than he is for the most part I mean he had Jeff wise on I watched him interviewing these random like [REDACTED] YouTuber like you know Zoomer people like they're not a serious podcast he has idiots like Lawrence Krauss on Lawrence Krauss is a physicist who has no idea that we can manipulate gravity right

and he has no idea how to even do it a lot of these people these old school phys business like that they just have to die off we just got away

(1:47:55) from the die I interviewed Mark soal and Mark soal is like yeah you just got to wait for Lawrence Krauss people to die off so that we can move into the future uh Julian Dory interviews CIA agents and all this [ ] all the time he he's so controlled he doesn't even know how controlled he is it's it's honestly pathetic so you know any of these YouTube morons that are out there there's a lot of them and they all Proclaim to be smart even people like Mentor pilot like Mentor pilot is a huge

(1:48:22) fraud as well like any guy who's claiming to be a pilot who doesn't think 5,000 pounds of lithium ion batteries in the cargo bay of a passenger plane is something to be afraid of uh is not a serious pilot Guys somebody who's uh trying to claim that they're just going with the official report but then they're doing psychoanalysis on completely mundane Communications that's not a serious person if you are a YouTuber and you have a a advertisement that you're reading out in the middle of your video

(1:48:51) and then you have use Code Pilot for 60% off you're not a serious person you're a grifter Mentor Pilot's a grifter he's not a serious person and if you guys like Mentor pilot that's great but that's that's what I want you to realize is these people are there for the entertainment I'm an investigator I'm doing an investigation that's why we just caught people red-handed with a fake debunk right the MH370 videos are 100% real 100% real you don't have to believe me the evidence proves that they're real

(1:49:27) that's the best part so I have been grifting nobody if I wanted to I probably could be making a lot more money off of this and I'm not so it goes to show I'm the literal opposite of a grifter grifters are trying to get money here and there everywhere they can get it I don't even have memberships turned on on my YouTube channel thank you very much for that donation by the way and I've repeatedly told people do not donate to me if you need your money I don't want your money if you need your

(1:49:55) money if you want to just donate because you want to help out and you have the money to spare thank you very much I appreciate it of course and of course I'm GNA monetize my YouTube and my Twitter Channel why wouldn't I it's stupid not to there's no downside whatsoever doesn't hurt me at all if people want to watch and I'm gonna make money just for people watching then great it's not making the it's not changing my life in any way shape or form my job makes like 10 to 100 times

(1:50:19) more than what I make doing this at the moment uh semiconductors are up because of mors Law and AI quantum computers are going to make stock 100 times wor yeah we're not ready for yeah that's the thing too it's not just magical Wormhole Technologies it's AI supercomputers like all the advanced technology comes from semiconductors right yeah I'm living rentree in a lot of these debunkers heads man it's crazy that people like Julian Dory are still talking about me like eight months later

(1:50:46) on their podcast I don't even react to their their garbage stuff like you know somebody pointed out I think a while back that somebody else like they were talking he was talking crap about me and uh I think he was equating me to a a YouTube commenter Julian Dory calling me a YouTube commenter when he's like Jersey Shore trash that doesn't even wear a shirt you show up and he needs to take a shower when you get there because he's just like a dirty scumbag uh and he's like just one of the most underhanded people out there like

(1:51:14) Julian Dory his podcast career should end uh but it probably won't because he's getting propped up by the CIA and these other government agencies out there he's literally a guy that was born with a silver spoon in his mouth and he's failed at everything he's ever done in his life he couldn't make it as a banker and then he failed at that he uh like when I threatened to sue him for his defamatory video that he made about me uh his answer was that well his mom and dad know really rich Jewish lawyers

(1:51:42) so if I were to come after him they would work for free for him what kind of spoiled piece of [redacted] acts like that Jesus Christ you chose violence you chose violence you're so arrogant imagine saying that to somebody holy [redacted] meanwhile I'm sit out here proving that anti-gravity exists and that we have Wormhole technology and I'm explaining the science to people thanks Nobel or Nobel price appreciate you man oh how dare you you know what because you're a nice guy and you donated I won't even talk smack

(1:52:22) about the Packers even though now you guys know my weakness my one weakness my purple blood I won't talk smack about you you know what I'll even wish you best of luck in the future although we are gonna get Aaron Rodgers uh we are gonna get Aaron Rogers I'm just gonna leave that let's see anyway guys uh okay I think we're going to probably wrap it up there tonight this was a good stream um go ahead and share information when you hear people talking about how the videos are debunked just link them either this

(1:52:58) stream or link them the uh post that I made that shows that the VFX was 100% fabricated and pre-planned ahead of time and that it doesn't match skull Mega Baran skull indeed my friend skull indeed yeah it's the other thing too as somebody mentions here the science side of it the way the physics Community is they won't even listen to someone's point if they're if it's not proved you're not in their Circle that's that's what's wrong with really all experts and Academia is no different either uh

(1:53:31) Academia is a complete joke uh and Salvador Pas mentioned this as well is that he couldn't even get his papers published unless he had some co-author sign on that was like in the circle the physics community so up their own ass like this is the reason why anti-gravity can't be disclosed because these people think they know everything there is to know and they're all just [redacted] morons like most of these physics phds are just just morons there are some smart ones out there and some good ones the ones

(1:53:56) that are usually the most humble are the ones that actually like could figure it out but there's literally a [redacted] uh Nobel Prize waiting for whoever just realizes there's an ether and it

should be obvious there's an ether waves require uh a medium to perpetuate through you might say well that's space time but what if it's not atoms are too far apart what if there's a substrate what if the substrate's The Ether what if the ether explains Dark Energy what if the ether can explain

(1:54:25) negative energy why can we create a wormhole why what if it's just a holographic principle it's not that hard man just one physicist that's a prominent physicist just look into it write a paper about it free Nobel Prize nordic's number one guys Dei training manual mandatory Dei training for all my Nordic lovers out there okay I think that's it guys we talked enough smack for the night it was good um can you do a segment on the dirty politics of Science and how it suppresses progress yeah we can probably

(1:55:02) do that tomorrow we're going to do a science stream tomorrow we're going to dig into all that the art behind me this is a all the tallest buildings in the world as of like sometime in the 2000s so this this poster behind me is like 15 years old but you can see like back here the petronis towers right here that's the petronis towers that's in Malaysia actually the one with the thing in between them uh the Sears tow is there somewhere I don't the Burge Khalifa bur Khalifa which is the tallest

(1:55:30) building in the world's not even on there so it's I think that was like 2011 so this is pretty old poster the poster you probably won't see that anymore after I set up my new streaming thing uh because I'm gonna have the the four orbs thing in the background it's gonna be sick okay guys uh appreciate you yep arrogant AF guys arrogant Ashton Forbes it's what it is awesome stream tonight guys I'm going to play you guys out with the rock song and maybe another one have a good one everybody peace love you guys

(1:56:05) [Music] m37x monkey Scrolls like trolls while education real with macroscopic face conation macroscopic face conation technolog civilization can't walk to unnown [Music] destination Dr the station microscopic conjugation microscopic [Music] conjugation files and physics fls can lead to teleportation TD glass don't forget to smash the like button on occas the engineers that f appear they didn't go on vacation macroscopic conjugation macroscopic face conjugation the of the world all the technolog civilization to an unknown

(1:57:06) [Music] destination drop the human station microscopic conjugation microscopic conjugation microscopic conation microscopic it's I m M h37 until you do some research don't talk to me I'm going to find the truth while I sit this Mar your opinion it means to me it's m m m m x37 not all heroes my capes I wear glasses to see I'm going to find the truth while I sit this Mar the trolls ha See Me [Music] succeed but guess what m m h37 [Music]

(1:58:30) M M37 not all heroes GL see I'm going to find the truth while I this your opinion it means what to me your opinion and then and h370 now hero glasses to see I'm going to find the TRU why I thisy trolls hat [Music]

MH370 Satellite Solved & Science - YouTube

Transcript:

(01:28) n [Music] Play We meant to fly PRS they ain't supposed to fall from the sky but if they do they'll leave behind more than PE are to planes just be flying I know you think I'm lying the USA bab be hiding TR night BL meant to fly PR things supposed to fall from the sky but if they do they'll leave behind more than peace are too they'll leave behind more than who you think I'm lying the USA Baby hi the **truth** and I ain't fine planes they're meant to fly planes they

(02:41) ain't supposed to fall from the sky but if they do they'll leave behind more than P or two I just be flying I know you think I'm lying the USA they be **truth** and I ain't fine they'll leave behind more than a piece of two they'll Le behind more than a piece or [Music] two welcome to the chat welcome to the stream everybody tonight appreciate you being here I'm your host ashon Forbes and tonight we've got a pretty amazing stream here it's going to be awesome thank you everybody for being in here

(03:38) early I appreciate you uh we got a lot of people already in the Stream both on X and on YouTube thank you very much guys if you are on YouTube go ahead and uh please like the stream that's the minimum you can do just hit that thumbs up thing we'll get more people uh on the case here we've had a really awesome uh you know day today uh we had an article B bar stool Sports uh the Billy football interview dropped which was really great if you guys haven't watched it check it out I posted a couple Clips as well already uh

(04:09) on my YouTube channel or on my Twitter Channel um oh boy I just screwed up the thing and uh we also had the uh Steven Deer uh part like I don't know three or four I've gone on his uh podcast which is the uip podcast uh so check that out too as well uh that's an audio one uh if you guys want to hear more about about you know my thought process regarding the case the updates regarding the case Etc um pretty awesome uh the first thing is something that came up last night uh before uh we logged off was this foer

(04:46) request for my a uh that's what we're going to look at first after we look at that we are going to uh look at the videos uh and then I'm going to go through and there was a YouTube video about satellite capability uh that was sent my way that pretty much proves everything that we've said about the satellite capabilities so uh like there's no there's not going to be any denying after tonight uh what we're looking at is a real satellite video we've already shown the technical analysis on it and now we have some

(05:18) corroboration as well uh the only way that we could have corroborated like this video we're going to watch today comes out way after uh I had already deduced or we had already deduced the real satellite capabilities um so now you can understand why the United States government and the disinformation agents are pushing so hard to hide these videos because we

actually were able to literally deduce the real satellite capabilities which funny enough these are the most secret things that are on the planet for the United States

(05:42) government other than weapons satellites are the most uh closely held secrets and you'll see why when we look at the YouTube video here as well um and then after that we're going to look at uh a little bit of science I got a couple scientific papers from Hal POF that I was reading and if we have time after that then we're going to look at uh an interview on YouTube from Thomas Bearden talking about free energy so should be pretty awesome guys uh Ian Ian gay Ian geay says that he's gonna Foya John Greenwell's Foya of

(06:15) Ashton's Foya that's a Foy acception right there guys especially because we were just talking to Billy football Foy acception and that brings me to my big reveal guys are you ready for this if you are watching my Twitter account today you will see that I posted a clip from Aaron Rogers now I'm coming out guys I'm coming out of the closet as oh a Minnesota Vikings fan everybody wanted to know what is Ashton's football team there the the number one question I get asked is what football team does

(06:48) Ashton forb support guys I bleed purple blood skull Vikings I've been a Vikings fan my whole life uh my hometown is uh Minnesota uh doesn't matter where I've lived or where I live I will always be a Vikings fan uh so you guys wanted to know and you've been given the information now you know guys D Vikings fan there you go okay so that being said let's take a look at a couple of things on Twitter real quick uh I'm actually gonna show the Aaron rodgers piece right away because this is also pretty weird as well uh so

(07:24) let's go ahead and go to let's show the Aaron Rogers thing first Ain stop talking okay here we go we're gonna get right into it how dare you hey how dare you he uh to be honest with you Vikings fans are the most tortured fan base uh other than like lions fans and Browns fans uh we've never won a Super Bowl we've gone multiple times we've had some of the worst heartbreaks ever why did that just start up again um so yeah we we are definitely one of the most tortured fan bases out there so you know you can you

(08:00) can try to bat us down but you can't really hurt us any more than we hurt ourselves so just a heads up good luck with that probably the reason why I'm so good with the trolls is I'm just I've already been hurt so many times I can't be hurt anymore okay let's take a look at what we got out here uh let's start with this okay so first thing there was a Tucker Carlson uh um Aaron Rogers interview that dropped today and thank you I don't remember who exactly sent me this but someone sent me

(08:31) the link on here and this Tim stamp here is a pretty interesting one he talks about UFO stuff I grew up I always like when people talk about UFO stuff because I find it really interesting in terms of what people's perceptions are especially people like Joe Rogan Tucker Carlson the church the church you know that there's what why did that just start weird okay well um so here's Aaron Rogers let's listen to what he has to say I grew up in the church and in the church you know that there's a battle

(09:08) that's going on between the seen and the Unseen World between good and evil between the the powers that we can see and the powers that we can't see and there's some wild things out there that we don't know about and there's some government Seekers we don't know about okay so right away he dropped some pretty pretty good insights now people ask who Aaron Rogers is Aaron Rogers is uh an American football player who uh at least one if not still is potentially one of the best quarterbacks on the

(09:32) planet for a very long time uh and he played for the Green Bay Packers now why is that relevant because Vikings fans hate Packers fans in fact I hated Aaron Rogers for like 10 years and only now that he's gone to the Jets can I uh respect him once again he's also had some pretty controversial takes on certain political uh topics such as covid uh he got in some beefs with uh Jimmy Kimble because he implied that Jimmy Kimble was like uh had gone to Epstein's island or something like that and Jimmy Kimmel had a whole complete

(10:03) total meltdown over it so now you have your background on Aaron Rogers uh right there talks about the good and the evil and the hidden technology that the government potentially has at a bare minimum whether you believe in uh alien life UFOs uaps whatever you want to call it there's some technology out there that exists that's finally have some sort of disclosure that the government or the powers that be don't think we ready to be given that information which is kind of wild yeah so right there I

(10:32) mean that's the reason why I clipped it right there is that he's actually on point he's probably more on point than most UFO celebrities are because he's sitting there and he's going the government has technology that is like magical technology that they don't think we're ready for that's exactly correct that's what is boils down to is that and you can tell that people aren't ready for it I mean just look at the **redditors** and the **debunkers** like these people are not ready for the Future these are

(10:59) people that are just like they're basically the equivalent of cavemen they are essentially the clergy trying to burn Galileo at the stake because he says that the sun doesn't revolve around the earth that's that's essentially what **redditors** are Aaron Rogers is exactly on point he's explaining **redditors** he's explained bunkers they're frankly too stupid to come to the Future like that's that's what's holding us back is that mentality that like only whatever I've been told on by CNN or whatever my

(11:26) approved Authority tells me is what's real like people that are like that that think the government's bad in a thousand like I can't even rationalize it I was just at dinner and my waitress is a lady that I've been talking to a little bit uh about some of this stuff and I brought this up with her and he she's like how are there people out there that think that the government never lies to them or that the TV would never lie to them like how what kind of mindset do you actually have to have like it's we

(11:50) were talking about our Discord it's like literally NPC like somebody who's like not necessarily even conscious I really think there's a lot of people out there and most of the

redditors are in this category that they're not even literally conscious that they've never had an original thought in their whole lives like they think that learning stuff is just they're going to just Google what the answer is and that Google will tell them the answer because a lot of these people are like kids that have grown up

(12:12) in this age where they're like 20 years old and all they've never known their whole life is they Google and they find the answer and they think that Google couldn't possibly lie to them they only look at Reddit headlines and they absorb they absorb that as a factual information it's just it's literally brainwashing um and I understand that uh I don't actually don't understand it um the thought process is it's going to you know change the way that we look at life or religion or whatever that gets in the

(12:40) whole other idea about religion being as a you know a way to control people uh control thought maybe um which is pretty wild uh but but dis closure I think needs to happen uh it's going to be interesting to see how it happens where it happens but I you know in my space where I'm at where I do you know a lot of plant medicine the veils between World get worlds get and dimensions get very thin so the idea of seeing other entities um seeing uh you know Angelic type of being and demonic type beings is is very normal so right there tupacabra

(13:18) I don't know if tupacabra is in the chat but tupacabra is gonna love this clip because he loves it being Angels or demons or something like that so uh if tupacabra is watching this hour or later on there you go Aaron Rogers is like your biggest hero right now man too funny um and the idea that there's a demonic aspect to uh the uip phenomenon I think is very plausible and interesting yeah so pretty interesting stuff there how do I minimize this maybe I'll just stop sharing for a second so I can figure this out there we go

(13:55) okay let me move this back okay yeah so I think the a Rogers clip is very interesting um even though it's it's pretty short you know and it's it may be common sense but realize that this is a situation where people have to wake up and like Brandon posted there is literally like I think it's like 50% of people don't have an inner monologue like they don't when they think they don't want to actually like hear anything like that that is that's actually scary man that is literally

(14:22) scary guys um no and the reality is some of these people like a lot especially a lot of the younger people who like are you know full CNN brain Reddit brains they will end up growing up and realizing that their world's a lie they're just not ready right now to accept it you know and people say like I saw somebody saying like oh stop insulting people no I don't give a [REDACTED] I don't give a [REDACTED] about insulting people I'm not that guy if you're looking for somebody to be your hero I'm

(14:48) not that guy I'm gonna tell you right now I'm not that guy I'm just a guy trying to get the truth that's out there uh people are gonna get offended by the stuff that I say that's fine doesn't matter to me at all I am not trying to convince everybody on the world these videos are real like that's the difference between the debunkers and us they're trying to convince people to stop looking the videos I'm just going ahead and showing people the evidence that they're real you

know what and I'm

(15:07) not trying to make you feel good I'm not trying to coddle you you're never going to get that for me so if that's what you're looking for someone to make you feel good coddle you uh you've come to the wrong place go somewhere else this is a situation where you're going to get the hard **Truth** uh it's going to be ontologically shocking it's not going to make you feel good there's not going to be good feeling answers that are going to be coming out of this uh so there you go just a heads

(15:33) up and and that's actually part of the problem as well is that um yeah it's the internet wear a helmet is that the thing about **Reddit** is it's not even about what's true what **redditors** care about is what makes them feel good you know and this is why no one out there should be a **redditor** is that and you'll notice like just go look around on **Reddit** you'll find out **truth** doesn't matter at all what matters is how you make people feel and if you make people feel good then they'll they'll believe in you sorry

(15:58) guys that's not how World Works **truth** isn't dictated by how you feel you know neither is science science isn't dictated by popular opinion you could see that I was arguing or I I posted a comment on somebody who is like a a climate change uh person or whatever like climate change is the biggest **scam** out there and they'll go well 99% of uh scientists agree yeah well science isn't dictated by popular opinion and the fact that like you're trying to present it that way goes to show you don't even

(16:22) know what science means science is the study of observable reality you know so there we go okay so let's move move on to the next thing cyber bully me I think it's hilarious that people think that I'm going to make them feel good that's you come to the wrong place if that's the case the stuff that we're revealing is uh the opposite of making you feel good this stuff is going to break your brain uh that's that's what we deal in over here okay so this is where the joke comes from then so if you

(16:51) don't understand this joke right here uh this joke that's Aaron Rogers in a Minnesota Vikings jersey and the some you especially people who young are not going to understand this but Brett Favre was the quarterback they had before Aaron Rogers legendary quarterback he went to the Jets and then he ended up coming to Minnesota and we were like this close to going to the Super Bowl with Brett Favre and then we lost it in like the worst most uh spectacular meltdown way possible which is very classic Vikings thing to do and now

(17:22) Aaron Rogers went from the Green Bay Packers to the Jets so the joke has been in Minnesota uh with Vikings fans that Aaron Rogers is going to follow in the legacy of Brett Favre and go from the Jets to the Vikings again um so that's what the joke is it's undeniable it's gonna it's just fate guys it's fate so Aaron Rogers now here's the funniest part guys you ready for this I grew up in the church I'm gonna reveal this information uh actually yeah so I apparently someone messaged in this in

(17:53) the replies there that uh apparently Aaron Rogers's brother has a podcast called blurry creatures podcast and I was on it I was on that podcast I had to find the segment from it I didn't even realize that Aaron Rogers's brother was on that podcast so if I go back on that podcast again I'm gonna definitely have to bring this up I have to bring up this clip as well I mean I have to bring this up and then I have to ask when Aaron Rogers is going to sign with the Vikings I mean how would I how would I not ask

(18:27) that hopefully it doesn't get me kicked the podcast but yeah he's also a peer passer as well uh Warren Moon was great as well yeah so anyway uh science is going to come a little bit later uh science will be at the end we're going to do some satellite stuff too but we've got one more thing to do before that we're going to look at the Jimmy Kimmel or Jimmy Kimmel uh John Greenwalt clip as well uh so hold on let me pull it up and we're not going to watch the whole John Greenwalt clip I mean dude

(18:56) dude is like G he's so bored man um I don't know how people can watch this guy here we go change this oh man there's got to be a better way to change these like format these uh screen things okay here it is John Greenwalt's clip so red panda but this particular one had this start it up again red panda donated \$5 and the if you guys weren't paying attention yesterday last night people sent me this screenshot from John Greenwalt that's this dude on the left Black Vault uh sent me this uh thing saying that he had

(19:40) Foy uh the a for everything related to MH370 technically was like foing my communications or something like that I guess uh because some of these guys think that I'm like lying about the case with AO or whatever which is crazy because I've literally never lied about any of this stuff people are still trying to look for that Lie from Ashton Forbes I can't find it I proved that all the **debunkers** were lying in less than five minutes and these guys can't even find One Lie from me so he foed it and

(20:08) he got this weird response back where this has this Privacy Act data cover sheet that he's never seen before so I'm not going to listen to somehow he stretched out a 30-second answer into five minutes uh I'm just going to skip ahead to like the middle part here and apparently he's being ghosted now so I I guess right here came on the somebody had told me um Ashton was talking about me going after his Communications with the dod um and essentially what Aro was doing with the MH370 case and apparently he's being ghosted

(20:45) now so I I guess to me I felt like there was a different tone there now that he a different tone first of all John Greenwalt blocked me twice and I blocked him in response just let's just set the record straight John Greenwall blocked me after getting dunked on in aimore and then I blocked him in response so I'm not a biggest fan of this guy because he's like clearly CNN brain style but you know what he put a **Foya** in whatever the problem is I haven't even got back the record of memorandum from the AO yet they have

(21:16) emailed me back a couple times and I've said this email on podcast I've shown it uh and you know since April I think it was 11th which is over a month ago I've heard nothing back I've

sent them emails now since then uh and called them back once as well try to get a response they haven't replied back to me and so I don't know what he's going to do you I guess he might **Foya** and get the emails that I've already sent I don't really know but he got this weird response back from them my tone is definitely not

(21:43) changed just to be 100% clear I'm not worried about being **foyer** requested for my real Communications with AO I've been posting them all I've been posting them uh I haven't posted all the emails that I sent or back just because I haven't felt necessary yet felt like a little bit of an invasion of privacy if I do that but I might in fact I might do that like tomorrow we'll see so no there's no change in tone I was just making a joke about how like these weird **debunker** people are like so obsessed with trying

(22:11) to prove me wrong that they're out there like faking emails to the AO they they're so desperate to find me in a lie so desperate for it and it's not going to work but I do want to make it clear that if they haven't even given me the memorandum record yet which they said they would do back in January and it's now may five months later they haven't given me just the memorandum record yet um it's probably going to be hard to do anything related to it so this is why I said I've been ghosted because I'm

(22:38) sitting here waiting for them to get back to me the only reason why I can imagine they haven't gotten back to me is because they know these videos are real and they're trying to figure out what the hell to say because otherwise they could just say the videos aren't real like why would they come in and say that the United States they found something related to the search which I'm just going to post the email again just for out of transparency reasons here you we'll listen to the rest of this one going after the communications

(23:01) because he I thought I don't follow everything but from what I understood he was um talking with arrow actively and then it got circulated that I was going after records and then all of a sudden he's saying he's getting ghosted um so I don't know too much about everything he says so I'll let you guys figure out if he's got a chain chain change of tune there um but I did kind of find that a little bit funny but we'll see what comes up not only with the communications between him and arrow but

(23:31) what they do with it and and uh if anything when it comes to MH370 and we'll kind of go from there so back to this cover sheet it was really bizarre to see this uh so I'm gonna switch over and show the email real quick so this is the last email I've gotten from them and since then when I say ghosted this is why I say ghosted because let me make this bigger this email you can see is dated April 11th that's over a month ago and look at this email some of Arrow's initial research in MH370 has revealed the US

(24:09) government's search efforts after The Airliner disappeared from radar okay that's a weird ass response chat because why wouldn't the response just be we we looked and we found nothing nope the the first answer is yeah we found something we revealed something about the United States government search efforts I believe the Genesis and authenticity of the videos

may be helpful why would they say that why would they say I believe the Genesis and authenticity of the videos may be helpful let's just say that one more

(24:38) time really loud for the **redditors** in the back the ones that keep lying about the videos being fake this is for you guys I believe the Genesis and authenticity of the videos may be helpful can you confirm the date the videos were posted to the Regis sideon non YouTube channel why would they ask me about the date why would they ask me about the date I gave them Edward C Lin's case why do you guys think they would be asking me about the date obviously the date of the videos is after the plane happened so they want to

(25:08) know because they want to line it up with something that they found pretty clear right I think that's a logical deduction and yes a quick follow-up call may be helpful why would they want to talk to me again why would they want to talk to me again when a follow-up call unless they found something that's relevant why would Arrow be looking into a missing plane at all Arrow's remit is looking into UFOs and anti-gravity stuff and yet they want to talk to me more and that they found something and they're

(25:36) still looking into this case uh that's the last communication I got now I will reveal something I'm not going to show the emails but I'm going to reveal information which again I will be able to prove if necessary if anyone were to doubt it is that uh I responded back uh and I I've sent a couple responses one of them has been about the science macroscopic conjugation one of them was when we found out the information about the quick terrain modeler uh as well as Google Earth and then my most recent one

(26:07) which I sent today was that I said like please don't Gaslight me because I have got more evidence than any mil court case really in the history of the world so there's nothing you're going to be able to say to me to lie to me about this um and that's pretty much what I told them and I said that you know these videos mean free energy for the world we should just tell the **truth** about what we did This Plane because there's we just have to come clean at this point like there's no there's no denying that we

(26:34) took the plane we've got way too much evidence so we're going to go over it here in just a few minutes so I hope Arrow does the right thing I'm sure there's government agents watching the stuff that I'm doing uh so if they're watching this right now I really hope that you're coming up with messaging for how we're going to admit to the world that we stole an airliner the good news is I don't think the world I don't think the United States is going to care man people in the US like look at how

(26:56) polarized people in the US are in general most most of the people in the US we say that we took a plane because we didn't want **China** to get super weapons they're just going to be like yeah that was totally justified like no one's going to face any each like anything worse is we're gonna have to pay off the families which we should do anyway the families deserve more than \$30,000 should have been tried the United States give them like five1 million each and call it a day we're sending billions to Ukraine we can at

(27:22) least give a billion dollars to the families of the airline that we stole I made some phone calls and email and and created some emails today saying hey what is this is this a change of policy now like so John Greenwell's got connections that he's emailing and phone calling government agents probably Susan go is the I think she's the one that he knows so this is why I don't trust this guy either anybody who's got like direct connections to these DOD people like you know they're sus super sus he should

(27:52) just be able to talk to them and be like hey is there a guy named Ashton Forbes that Foyd something to you guys and they would just say yes like that's end of the conversation why all this roundabout nonsense I didn't take this and I think others did to where I couldn't release Foya documents because that's just against the law and it and it okay and then we're gonna stop because I don't care about the rest in this guy's nonsense or whatever um which is that he talks he doesn't know what that message means

(28:18) like the message is clearly because he's trying to get information about a private citizen I assume that's why he gets this color thing on the front of it but I don't know if it turns out it's because MH370 is the biggest secret in the history of the world that would be pretty cool I mean we already think it is so no surprise to us okay enough of that now let's get into the juice guys let's get into the juice okay first thing that we're going to do is we're going to look at the Drone video okay

(28:43) people asked me they want to see the Drone video in slow motion okay guys I'm going to show you the extent of my VFX capabilities because now people the funny part is people have become so disillusioned evidence is so overwhelming that some people out there think that I must be the hoaxer because they've realized that there makes no sense that there's not a hoaxer that's come forward so they think that it's got to be me which is the craziest thing ever like guys I'm not in some kind of

(29:11) 10year long con like what is the story for me being the hoaxer 10 years ago I made these videos and i' just been sitting on it for 10 years waiting for waiting for someone on Reddit to post it like the problem with that is like I've streamed everything I've done I've posted everything on Twitter I've done all these and interviews you like you're going to be able to catch me in a lie if that was the case like doesn't it's absurd plus I've literally been in healthcare my whole life I could get

(29:38) people to like verify my whereabouts like I used to travel for a living all the time 10 years ago I was traveling every single week going to different client sites all across the country what do you think of my spare time I just became a VFX expert guys I can barely edit a basic uh video it takes me forever to do this crap it's annoying I certainly don't know how I don't I mean first thing if I was going to make the videos If I Was A VFX expert I would make a 3D rendered environment that would be the first step because we

(30:07) have two videos from different perspectives where the clouds perfectly match we have 3D lighting so I guess maybe I'm a better VFX expert than a lot of the a lot of the debunkers are

uh okay so let's go look at this uh has this got any personal information or anything no okay we're good so this is the software I use to edit guys I use wondershare filora I I don't know someone like recommended this like several months ago um and what we're going to do here this is how I slow stuff down the first thing I like to do

(30:37) is I like to take this first part right here and I like to speed this up the reason why I like to speed this up uh and I've gotten pretty good at doing the speed up stuff I like to do eight times speed here because I want to show you guys if we make this bigger here watch watch the you can see The Parallax on the clouds like look at how the clouds you see that the clouds get bigger like that this is not a static background we're not looking at a static background right there so that's the reason why I like to

(31:03) speed that up so that can people can see there that this is not some kind of static background we're looking at here like this is actually 3D Dynamic Parallax clouds and you can tell because of the like the Turning angle that it's coming at where you can see the the clouds get bigger and then like you can kind of see the clouds uh from a slightly different angle proving The Parallax um and then I usually cut out some of this part right here after that because it's just dead air so what I'm going to do here for you guys uh let's

(31:32) go ahead I'm going to slow down let's slow down this part because also people have been saying that like the the orbs don't match in the videos they absolutely match uh I think that's one of the funnier claims out there so we we'll slow that part down and let's slow down this part here so people can see the rot orbs and then it goes off the screen okay so this is what I do usually and I just do because actually when you see it slowed it's even more compelling and then when it zooms in

(32:12) here this is the part where I like to show it's super slow like just this part here probably we'll go to let's go to oh that's too too slow that's too slow 0.25 and then the end here this last bit will show this in the super slow and so let's watch this together so I slowed this down to a part where like you're going to be able to see all the details so here you guys go you ready for this chat wait hold on I want to see the chat while we're doing this okay so this is now the uh altered

(32:54) speed version of this oh wait why doesn't this pop up yeah why is it frozen yeah you guys wait yeah you guys can't see this what the hell well that's weird um H live video editing is so arrogant okay so what I'm going to do here is uh you guys for some reason I'm looking at it you guys can't see me moving the stuff around that's weird uh okay so I just I'm going to save this as a file real quick for you guys you think just redoing the screen share the problem is I don't think it's

(33:39) going to work I think there's some kind of bug so uh I'm just I'm exporting it real quick give me like 10 seconds guys thermal speed uh um let's call it thermal adjusted speed okay okay it's exporting right now and then we'll go ahead and pull that up so let me switch this back over just play the Jeopardy music I need to get the Jeopardy music in the background the problem is

like man the the copyright people are just they're brutal man they just they get you they get you every time okay so this is going

(34:17) to be the thermal adjusted speed that I just made let me pull that up again here we go okay here's the thermal adjusted speed I just made made this for you guys this is just for you right now so here we go so you can see it the speed I'll show that one more time it's a little too fast so you can really see the way the Drone Zooms in on the plane and how they and they how they're tracking it and then from the slowmo perspective so right here watch in the bottom right you see the second orb come in as well and it

(34:53) catches up to that plane and gets in formation right away and then the thir orb shows up right after that as well I've compared both videos side by side in the orb entry and they're coming in at the exact same time on both videos it's hard to tell it is it's pretty difficult to line them up because you're looking at from two completely different angles but there's no obvious spot where any of them are out of sync in any way shape or form um and then when you look at the rotations of the orbs here I mean look

(35:21) at the heat signatures spinning around does do people really think that they manually made all these heat signat spinning around look at the heat signatures like that does somebody think that they airbrushed each one of these these frames like I don't even know what **debunker** how **debunkers** even think they made this this is the craziest part is no one's even come remotely close to recreate this is actually just literally impossible to recreate like this is a real video it's it's undeniable that

(35:48) this is a real video I I don't know how people even think that they could claim that this is fake um like there's nobody who's able to like when you look at the or orbs the orbs are blurring naturally they go through the tail of the plane naturally and get blurred naturally the heat signature is spinning on the axis naturally like I don't know what people even think how they even would have created this and it's not like if if somebody had made this the Heat Signature would be very uniform it

(36:14) wouldn't distort at all and then right there you see right here you see the orbs reorient right here get ready for it right here when they blur right there they're reorienting that reorientation is in perfect synchronization with when the orbs slow down in the satellite video so there you go I gave you guys the slow-mo version that you wanted right there um now the next one is uh and guys comments like this don't help at all like I don't know there's a lot of people that are just defeatists I don't know why you think it

(36:53) would never be acknowledged as real we have more evidence than anything like they the more that they stay quiet about it the more more sketchy it becomes and this is also what I told Arrow as well is like I think it almost has to be acknowledged I mean it's undeniable amount of evidence we have them caught on two of their own assets like these are US military assets are filmed on it's like saying that like uh we would never be able to get admission of uh the Kennedy assassination if we had like two videos of the guy shooting

(37:23) Kennedy like people think that we killed Kennedy and we don't have a single video of the person shooting them we have two videos of it literally happening right here so I don't know maybe they won't be anything but I let's not be de Feist about it you know let's let's stay positive uh let's take a look now the second I'm not going to slowmo the second one because it doesn't really need to be slow mode okay so this video this is the video I want to go over tonight real quick with you guys we've already been

(37:58) going for 40 minutes here um so this is our satellite video so a lot of people have tried to scrutinize this video and every time they try to scrutinize it we are just able to prove more and more that the video is real and what we're going to do tonight is we're going to prove that video is real so we've already if you look at the technical analysis there was already a satellite expert who is also a pilot that went and showed that this uh that they believe that this video is authentic satellite video based on what they had seen from

(38:26) their experience in terms of like the pixel uh pixel capabilities uh of what was it one meter per pixel which was consistent with what they expected from satellite we've got a mouse on the screen consistent with a citric session so this is stuff that the debunkers literally cannot deny there's no denying this video is real we have a we have coordinates in the bottom left of the real location of the plane before the public Telemetry data was available we have Katherine T A Real Witness was in these location saw the plane consistent

(38:55) what we see here we have a third party Source this is three sources of corroboration which is the MayDay call that was only reported in China times uh the nrl22 in the bottom left is the cber system first launch of the cber system again this is not a coincidence this is just absolute proof and we have the citric session which is uh the mouse that we see there's no such thing as a hoax video with a mouse coming over the top of it in a different frame rate than the background this is literally because they have a literal crop session that's

(39:22) proof it's not camera there literally have a crop session here of the actual screen recording that they're doing here of this of tracking This Plane while they're logged in to the actual Intel spy satellite database we're looking at it right here again there's no such thing as hoax videos that have mice coming over the side of the screen coming off the middle of the screen none of that's a thing that's ever happened before that's not how hoax videos work in fact I don't think there's a hoax

(39:48) video in the history of the world that has a mouse coming over the top of it okay so again this is just absolute proof that the videos are real okay now there's more we know the satellite that actually took this footage so again this is not a situation where you're looking down through satellites that's not how satellites work you're going to learn about that in a few minutes okay so we're going to educate the people that are the idiots and the debunkers out there that don't understand how

(40:09) satellites work they're groundbased computers that are pulling data from satellites all the time that's how they track objects it's literally impossible to track an object through a

satellite that's moving 17,000 miles an hour that's not how it works yes the clouds are moving in the videos you're only looking at each frame for 5 seconds we we have some of these morons like what was that lure reviews idiot who they show time lapses of clouds over like many hours and they go look at the

(40:35) clouds move guys it's five seconds that you're looking at the cloud for here five seconds from 1100 kilometers away of course the clouds don't look like they're moving a lot if that's if you can't even figure that out then just go back to sleep man like if you can't figure out how clouds should move from for a 5-second perspective from 1100 kilometers away just go look outside just look outside take your camera film The Clouds for 5 seconds and see how much it looks like they move okay if you

(41:05) can't get past that then this science is going to be Way Beyond you just Way Beyond uh okay so how did we prove that the videos were real well not only everything I just showed you but we also looked up every single satellite in Orbit on March 7th 2014 every single one you understand what I'm saying here every single satellite out there we looked at all the trajectories every single one and this is how it played out for the new people we found this satellite USA 229 with a sister satellite next to it capable of taking

(41:41) the stereoscopic imagery that was posted on the reeside of non Channel now we don't know with certainty that this was the original format we don't know but this is stereoscopic meaning this is two slightly different angles when we look at this this was the the first one that was posted the one you're looking at right now this is not duplicated this is literally two different angles looking at it's been proven Beyond any shadow of a doubt this is also two satellites right next to each other when we found this

(42:12) satellite pair we can see that it says 1830 UTC at the top of the screen right here well we were originally thinking this plane had disappeared in the South Indian Ocean so we were initially looking for satellites that were looking in the South Indian Ocean if you look up there's satellite analysis that's been done uh to look for the plane and they looked in the South Indian Ocean in the early morning hours because they didn't realize the plane didn't go in the South Indian Ocean so after we figured out the

(42:40) coordinates where the nicobar islands where you see over here this Dome I went back to the satellite expert and I said wait fast forward this where what time is this satellite in location where it can see this Dome and that's what we did that's how this got created what you're looking at here is a 3D rendered Recreation of the real trajectory of this satellite pair USA 229 and at 1840 around within a few minutes of 1840 UTC this satellite pair is looking straight down at the coordinates it's in the

(43:11) exact right location to be able to send the data at very high resolution capabilities and this does not have Optical capabilities on it this is not an optical satellite we're not looking down through an optical satellite here it's sending infrared satellite information back to the groundbased computers to produce that groundbased system we saw that is speculated to be

Google Earth mixed with quick terrain mod Alert in order to produce that environment uh and this is a naval ocean surveillance satellite pair Naval ocean

(43:42) surveillance satellite pair **I want you** to remember that NOS Naval ocean surveillance Sal pair it's literally used to track boats so we know if it can track a boat it can track a plane simple logic right this is 100% undeniable proof that the United States government knows what happened in the plane because at this time you see in the top here this plane is right down here and we know this because of that Telemetry data the plane is somewhere right down here in the nicobar islands at the exact same time the satellites are staring right

(44:11) down at it 100% undeniable proof that the United States government knows what happened so we've proven right now the United States government knows what happened to the plane we've proven that this is a citric session that logged in using the real spy satellite database uh based on the other video and that it had nr122 which indicates was part of the cber system okay a spy satellite database that we know nothing about this is absolute proof there's no denying this there's no counterargument for this

(44:38) we're staring right at it this the two people have uh peer-reviewed this Victor ananello from the Independent group was one of them and Herald from the metabunk website so even one of the **debunkers** actually confirmed this satellite was correct and Victor ananello if you go back to like October he did the math incorrectly and he thought that NRL uh 229 was not there and he came at me saying no it's not there it's not there it's not there and I made him go redo the math like you can verify this he deleted his old post

(45:09) because he did the math wrong and then he confirmed that yes this satellite was in the correct location to see the coordinates then this is where the **debunkers** like or not even the **debunkers** the independent group had a meltdown because then they realized holy **[ ]** this guy solved it the the de the independent group realized that they were idiots and they had messed up and that we had proven that the United States government knows where to happen to this plane yeah for the people say time to arm yourself you might be right but I do

(45:36) not own a firearm and I don't plan to because I don't want to accidentally shoot myself with my firearm if you know what I'm saying guys if they're gonna take me out they just got to take me out like this is we we know this is what happened to the plane like these videos are it guys that's the only explanation here um so once again we have the satellite staring right down at okay so you've USA 229 get that stuck in your head right um and then people say well what about because you'll hear a

(46:05) lot of misinformation about uh nr22 well nr22 is the command satellite that's the command satellite so all of these Sates what you're going to find out is signals intelligence **I want you** to remember this too signals intelligence this is how the constellation of satellites it's constellation it's not one constellation of satellite means that they're communicating with one another and they're all sending sending the data down to the groundbased computer systems that are building the 3D

(46:31) playback or we I mean presumably 3D we don't know with for a fact but presumably 3D I mean why else would there be a second satellite right next to it the reason why you have two satellites is because you want to be able to produce 3D imagery that's the only reason why you have two satellites otherwise you just need one satellite you have two satellites because now you have Parallax you have you know what your eyes can create here right and left you can create a 3D environment that's the only reason why you would have two

(46:58) satellites so it actually makes sense with what we see in the videos as well it makes sense with the capabilities that we see from the the satellite video now there's going to be even more get ready for it so now we're going to watch a video this is a brand new video uh let me pull it up hopefully YouTube doesn't get me for this we'll see okay so this video is called the true extent of us spy satellite capability posted three days ago May 11th 2024 you like the smile on my face to bunkers okay first of all let's just look at the

(48:07) imagery that we see right here scanning big areas of the whole world all the time and these right here are low earth orbit satellites that you're looking at right here the geostationary satellites don't move they don't go around orbit they stay in the same spot looking down at the planet all the time so we're looking at low earth satellites right there uh also I got to I got to turn this off real Qui hold yeah if you just watched this earlier I watch it then you know it's going to be spicy

(49:16) wait do you guys not have sound can you guys not hear this oh you can't hear it okay hold on sorry let me uh sorry I played the wrong one guys here we go okay so let's let's do that again we'll just start here deny it's even their satellite that is launching let alone State the type or its purpose and that's just simply due to the high levels of secrecy around it as it's most often utilized by intelligence agencies but through Declassified documents some knowledge of orbital mechanics and electrical

(49:48) engineering and especially last year's Pentagon leaks we can gain some insight into just what they're capable of and it's pretty incredible some of the leak documents indicate the ability to detect missile launches and explosions intercept Communications from nearly anywhere on Earth and even identify the location of virtually every squad or soldier with radio and first real quick our sponsor seven days everything from communication satellites to early warning satellites to detect nuclear launches to Imaging

(50:18) satellites today they have a massive number including GPS communication satellites enabling real-time guidance and Communications between military units any on Earth in fact many of the drones flying missions in the Middle East have been directed and coordinated in real time from over 10,000 km away in Nevada but for the sake of time we're just going to look at what are most typically referred to as reconnaissance satellites okay so this whole video is about reconnaissance satellites okay so this is like the motherload when it

(50:47) comes to satellites on here uh yeah I mean and for the people like Bob here who jumped in like we've already cracked it like we've already proven that these videos are real people are

we're just trying to wake people up at this point and so I'm just kind of going over the same stuff and as I've said from the beginning as time goes on these videos are going to get more and more and more undeniable the science is going to come out and check out that the science is real we're gonna have more videos about

(51:12) the satellite surveillance capabilities like this that prove everything that we've already been saying since last October so we have already proven everything this video is going to say over six months ago before this video was ever published this video actually uses some Foyd information and private information that nobody else even knows in this as well for this sake those include the typical Imaging satellite that most people think of but also other forms such as radar and infrared Imaging as well as sign or signals intelligence

(51:43) what did he just say infrared and signals intelligence Sig oh that's nice let's just make a note of that on my list here 230 uh Sig infrared satellites and early warning satellites early warning satellites started out pretty simple they basically just had a primitive infrared sensor that would detect a heat signature from a ballistic missile as it launched and they suffered from the technology of the day at times even mistaking sunlight reflect off the clouds and ocean as a missile launch but since then they've evolved in Satellites

(52:20) with capabilities that reach far beyond simply detecting nuclear launches the newer space-based infrared system system can attack much smaller and shorter range missile launches like isander and even track them in real time man what did he just say there guys they can detect small missile launches and track them in real time if you can track a missile in real time you can track a plane in real time no doubt whatsoever so just gave away the game also how many missile launches are going around on on Earth I don't think missile launches are

(52:53) super common guys so you think that these sils are sitting around doing nothing all the time no of course they're tracking objects they're tracking planes that's exactly what you'd have them doing if you're not tracking missiles actively they just don't make that public capability known because they don't want you to know that they're tracking every single object that moves on the planet and provide not just the precise impact point but also relay it to missile defenses to try to

(53:17) intercept it they can even have the missile defenses intercept it so 100% if you can track a missile moving as fast or faster than a plan then you can track a plane easily now look at the scanning Geo assets do not have direct line of sight over polar regions yes because the Geo satellites are out here in a ring and they're mapping the whole world all the time look at these scans when you combine them there's actually like seven of them now I think when the 2014 the civer system was online and I think it had three or four like this so

(53:49) it was already able to see the whole world the latest series of satellites being launched are the beginnings of networks that will take it a whole step further to detect and fully track Hypersonic weapons and assist in shooting them and so the newer there's actually a new capability it's going to replace cbers uh in a couple years as well and it's going to be even crazier

so at that point I think they're going to basically be able to track every moving object on the planet um this includes the two hbtss

(54:15) satellites that were launched just in February as well as 33 space development agency satellites of a planned 1,000 satellite constellation by 2027 1 th000 satellite constellation by 2027 do you hear that 1,000 satellites just making some notes by 2027 so guys the satellite constellation they gave away part of it so if you followed along with this case you know as well that there was a Wall Street Journal uh video about cber system and they had Incorporated low earth orbit and midar orbit satellites into the constellation so this is what people

(54:57) don't understand is we don't sit there and stare through single satellites that's not how it's worked for a very long time at least 10 years maybe longer we use constellations of satellites that send data to groundbased computers and then you just track them and you build a 3D environment using Google Earth and quick Trin modeler or other software also speaking of the current space-based infrared system they like also carried a payload for the trumpet elent or electronic intelligence satellites elent is just a subset of

(55:33) sant or signals intelligence signals intelligence has been used for a long time going back to World War II and even before but one of the most significant stories at least that we know of comes from Vietnam during the first four months for the Trump fet elant or electronic intelligence satellites elent is just a subset of Sig or signals intelligence elent is just a subset of Sig signals intelligence guys what did I tell you guys to remember told you to remember signals intelligence and what does the uh mq1 C Great Eagle package have on it signals

(56:09) intelligence an elint because the the Drone video is connecting to the satellite capabilities this is how we connect all of our assets this is how the spy plane connects to the Drone how the Drone and the spy plane connect to the satellite and if you look up signals intelligence you'll see it's like a network it's like an internet of connect that are going on signals intelligence has been used for a long time going back to World War II and even before but one of the most significant stories at least that we

(56:37) know of comes from Vietnam during the first four months of operation linebacker a huge number of US aircraft were being shot down by North Vietnamese make the problem was that the US lacked radar coverage that deep over enemy territory talk about the spy planes blah blah the ratio of kills to losses went from 1 to one to to 4 to one by the end the capabilities Sig gave became clear and the US invested heavily after today virtually every aircraft and satellite has some form of Sig sensor on board virtually every aircraft and satellite

(57:12) has some Sig sensor on board booya that was the money shot that we wanted right there every aircraft and satellite has Sig in on board the reason why is so important is because after Victor who Victor ananello of the independent group you can go look him up he's one of the people that peer reviewed USA 229 he said well it doesn't have Sig on board it can't have connected that's because the capabilities were classified yes it does have Sig because every satellite has signals Intelligence on board and this

(57:47) is the funny thing about what **debunkers** do debunkers claim information they don't know you guys will find this a lot about a lot of **reddit**ors out there they claim to know information that they don't know all the time and every time they do they get shot down we just [ ] slapped Victor elano down right there Boom game over let's just play it one more time for Victor ananello someone give him this message by the end the capabilities Sig gave became clear and the US invested heavily after today

(58:17) virtually every aircraft and satellite has some form of Sig sensor on board virtually every aircraft and satellite has signals intelligence on board get messed up and we're going to ban Cameron so this is one of the idiot **reddit**ors who claims false information Cameron rad is a liar just like the rest of these **reddit**ors that are out there we just keep slapping them down if you Google it it won't say it oh d i l go and see what it says Google told me Google told me it don't do that see this is the wrong the

(58:53) thing with idiot **reddit**ors like Cameron right these people think that if they just Google something that they're going to get the right answer and that is indisputable especially and then they they Proclaim it as fact even though they don't know for a fact this is why **reddit**ors are the dumbest [ ] on the whole planet goodbye Cameron you aren't coming back peace brother and this is why I just block them because you have to block these disinformation people out of your life because they're just [ ] idiots and

(59:22) it makes the whole world dumber when they like pretend to know [ ] they don't actually know it would be one thing if they just said hey I found this information and I can't I can't find out whether or not they have signals intelligence that'd be one thing but they go out there and they just say these don't have it on there it's not possible well you just got shut down you are wrong end of story you are a liar and you were wrong and these us Z satellites are by far the largest satellites in space trumpet in

(59:48) particular is believed to have a diameter of 150 M the large size is to pick up and detect even the most faint signals while at least four possibly six trumpet satellites focused on elent or electronic intelligence which detects signals from Radars to map their locations for example there's also Mentor sometimes referred to as advanced Orion these are more focused on comment or Communications intelligence and could even ID and locate individual cell phones and possibly Wi-Fi the most recent Mentor was launched just one

(1:00:18) month ago in April it's also the source of some of the data in the Pentagon leaks last year in and oh if you think we're done we're not even done yet guys there's more so I mean that was most of the meat and potatoes of what we needed to hear uh but there's more coming too we're not even done yet guys uh and then yeah signals intelligence is Sig signals intelligence again you guys can Google it you can find all the links I posted old uh Twitter threads that show the you know there's actually images where you

(1:00:46) can see all the assets the groundbased computer systems communicating to the satellites communicating to the drones the best part is I knew nothing about any of this back in

August we between August and October we learned how all of our surveillance apparatus Works uh and it was easy you know yeah pretty crazy guys gem app y oh uh duck Vision thank you very much for the donation actually research systems like cers you'll learn it doesn't have hold on let me Google it again I forgot yeah this is the thing like the

(1:01:20) best part is these systems are classified so even figuring it out is extremely difficult because it's not in like the Wikipedia Pages the irony is these idiot **debunkers** are the ones who edit the Wikipedia Pages too this is why they like they make the whole world dumber with their misinformation those which I won't show but there are maps showing the ability to locate individual radios and even Communications between the highest levels of governments to be fair Sig also includes other means not just EM

(1:01:46) waves in the air such as tapping fiber optic cables to monitor the entire internet which has been revealed the NSA has done but I spent a lot of time looking at the specific serial numbers reference in these leaks hoping it would give some sort of insight to the source then after hours I found out that basically all this information had been published online years ago but NSA report okay so uh and for the record curious Crossroads uh if you want me on the podcast DM me on Twitter uh I put a reply with who you are uh in one of my

(1:02:16) comments if I'm not already following you if I'm following you you can DM me um so signals intelligence what I just listed off there was that signals intelligence basically has the capability of tracking specific radios on the ground what you're going to find out here as well as the resolution capabilities of these are extremely high so once again our famous [ ] **debunker Mick** West dumbest guy on the planet uh guy that should be investigated for criminal conspiracy uh originator of three fake **debunks** into

(1:02:44) MH370 uh when kim.com uh started showing the S the cers system that we've shown before I'll show it again here in a minute uh **Mick** West said we don't have resolution capability that was claimed which of course we [ ] do we have resolution capability that can read a book from satellites from the from orbit and he was like no we can't see any of that well you're about to find out that once again like always **Mick** West is a liar and he's wrong again get ready for it uh but I'm gonna skip ahead of this

(1:03:14) part because this is just talking about like the classification levels of this stuff request but also that the leaks verified that some of the information came from these s satellites like those Mentor class satellites also the US has another signing class called Nos and those are typically used for detecting ships at sea oh wait finally the most L on it sorry I was I wasn't sharing so did you just hear that though I think you guys heard it right hopefully you heard that found out it was public knowledge via

(1:03:43) **foyer** request but also that the leaks verified that some of the information came from these Sig satellites likely those Mentor class satellites also the US has another signing class called NOS o Naval ocean surveillance satellite has Sig on it boo yeah Victor ananello is a [ ] he just got bitched NOS has Sig on it game over baby so we just showed you that Naval ocean

surveillance satellite USA 229 was in the exact right location in the Mala Straits staring down at the coordinates and now we have confirmation that it is

(1:04:27) a signals intelligence satellite end of story that means it's part of the constellation that means it's able to communicate with the other satellites and send information down to the groundbased computer systems this directly connects it to nr22 which is the satellite that we believe is the command satellite first launch of the cber system that's out there and it just said it's capabilities of tracking boats PL satellites also the us has another signing class called Nos and those are typically used for detecting

(1:05:00) ships at Sea then finally the most interesting typically used to detect ships at Sea it can also be used supposedly to detect submarines as well as planes so there you guys go boys the US has actually Declassified a lot of old spy satellite imagery that's a lot of fun to look at in total nearly 1 million photographs have been released and these are so this is the old garbage that they show us right and this is what **debunk** and other people think and like honestly even normal people think like this is what satellite imagery should

(1:05:30) look like here this is the [ ] we had in the 70s what we're looking at here is the stuff we had in the 70s the stuff that we have now is mindbending in terms of satellite capabilities um and that's what people like can't wrap their brains around but you know what it gets even better guys he talks about more of it so this I'm gonna go to this part half billion pixels it would take almost 800 4K monitors to show the whole thing it would take 84k monitors to show this whole image and this is from like the

(1:06:01) 70s that's how high a resolution these images were in the 70s but these early satellites showed a steady improvement in capability one interesting note in the USGS report is that you'll notice they mentioned Keyhole or kh1 then two three four five look at look at these satellite dates Guys these are the 60s these satellites are from the 60s that he's looking at this one's from the 80s the 70s and 80s the 70s and early 80s that's how old these satellites are that he's looking at right here this part is crazy guys7

(1:06:34) and then kh9 they skip kh8 this is likely due to kh8 or Gambit being the highest resolution satellite of the era the exact mention of the resolution isn't anywhere to be found so that resolution guys this satellite here 1966 to 1984 1966 to 1984 isn't anywhere to be found except in a single Declassified history of Gambit where it mentions better than four inches four inches the resolution capability is better than 4 inches this proves **Mick** West is a liar so somebody I know that the idiot **redditor** **debunkers** are listening get

(1:07:15) with your buddy **Mick** West he's a liar he said that we didn't have this kind of resolution capability said it wasn't possible we had it in the [ ] 60s 4 Ines in the 60s you think we can't track a plane in 2014 we had resolution capability better than 4 in in the [ ] 60s guys Jesus guess what they redacted this later on this guy got it on the way back machine they later redacted it get ready or 10 cm the weird thing is if you go look at this document today on the nro's website on the n's website they redacted it

(1:07:52) later on they accidentally revealed it they actually went back and redacted this part only through the way back Mach yeah 4 inches that's better resolution than Mick West dick Mick West Wishes the resolution on his dick was more than four inches yeah even two feet is insane 4 inches resolution in 1960s is [ ] nuts can you actually see the original but better than 10 cm is about the limit possible due to at Distortion and from Trump's Mick West is feeling pretty incomplete and look at this the Trump satellite picture just

(1:08:32) shows up in the middle of the video the Trump satellite picture the one that I've been talking about for nine months that comes from USA 224 this is one of the last optical telescopes that's still out there we found out this is the reason why ours doesn't look just like this this is actually one of the last optical telescopes to exist most of them are are infrared yeah Mick West has got a micro penis maybe that's why he's uh trying out there to debunk everybody else tweeted image it's about the same as

(1:09:02) they can achieve today as for today the US really doesn't have many Optical Imaging satellites the US doesn't have many Optical Imaging satellites this completely destroys the corridor crew all these [ ] that are out there trying to say like well I'm looking down through a satellite for a video from the spa uh the space station why doesn't it look like this like these guys are just [ ] morons we don't use Optical Tes satellites anymore there's like what one two three four five we have five optical

(1:09:36) telescopes out of like several hundred because they're all using infrared and radar because it's way better to produce ground ba to send to groundbased computer systems and produce accurate 3D models that can track objects we don't need optical telescopes it's stupid it's tired we don't need that [ ] that's that's old technology we don't need that 60s technology there's likely only five or six kh1 remaining there could be others as some five or six KHL remaining there's only five or six satellites that

(1:10:06) have Optical capabilities left guys do you just think that we just can't see anything on Earth because we don't have optical telescopes we use lar and infrared [ ] we don't need all this [ ] Optical stuff some of the nro launches are not listed as to what they are but the US seems to not really know what they want to do with imaging satellites and every time they have a replacement program it seems just to have cost overruns and gets canceled so they've just kept building more k1s which have

(1:10:34) been launched since the 70s although with improvements but even those are reportedly costing more than it cost for an aircraft carrier at several billion dollars each one attempt for the next generation was the enhanced Imaging system and these were designed to be stealthy stealth satellites have two major advantages the fact that they're harder to detect and track both visually and by radar means that an enemy can't predict when fly over to phot to see also it can protect them from anti-satellite weapons if the enemy

(1:11:01) doesn't know where it is then they can't shoot it down or attempt to blind or Jam soet Union and the media began reporting that the satellite had failed and burned up while re-

entering the okay so some of this then talks about the idea that there's no point in having like satellite defense mechanisms because once you can't move the satellites around so once you see the satellite up there you know exactly where it is that's how we were able to find the trajectories because even going back 14

(1:11:23) years amateurs just see it one night and they know they can figure out the exact orbital path of it uh because that's how the math works with these satellites so there's no point trying to defend it because once you see it you know where it is forever uh it also talks about the idea that we potentially covered up certain satellites and we claimed that the launches failed when they didn't really fail to like convince people that uh like the satellite wasn't really up there or something like that so let's skip ahead of that I think

(1:11:51) there's like another part where it talks about the resolution let me see feature was only active when it was passing over **Russian** tracking station oh no they talk oh yeah okay so this is the part about guys and then there's a SpaceX part here as well play out almost exactly the same way which I made a video on back in 2018 at the time it was the newest extremely expensive National reconnaissance satellite called Zuma it was launched in January and can be watched on spacex's live stream the stream however cut short

(1:12:19) before the fairings separated since it was a classified satellite so Elon musk's SpaceX is shooting classified satellites in the outer space of course Elon Musk has been read in Elon Musk can't talk about anything he can't talk about these videos because I'm literally revealing us spy satellite capabilities this is why no one will talk about this stuff guys no one is talking about the videos because they're literally looking at real us spy satellite capabilities that's the reason why they're not

(1:12:43) talking about it that's why a lot of these UFO people aren't talking about it because people are telling them not to talk about it we've wondered why would they not want to look at these videos of orbs going around a plane why would Elon Musk not want to talk about it because they all have ndas and they literally can't the only things they can't talk about are us spy surveillance capabilities and any type of weapon systems and we're looking at both of them there's no other logical reason for

(1:13:07) these people to not be weighing in this is why they haven't been weighing in this whole time because they literally cannot they have ndas the the UFO people they have connections to the government and those people are telling them not to talk about it or they're telling them to lie about the videos even the white hats are telling them to lie about the videos because that's how sensitive this information is they don't want people to realize that these videos are real they they desperately need people to not

(1:13:32) realize that these videos are real uh but if you just use common sense and basic logic at this point I think we've proven Beyond any Shadow of Doubt the videos are 100% real whether or not you believe it's on there doesn't really matter um and then uh what was I gonna say there uh so yeah so and then the people that are like Lou alzado David grush is uh Elon

Musk these people have ndas because they're either in the military or they're defense contractors themselves these people literally can't

(1:14:00) talk about it they're not allowed to talk about it this is why David grush doesn't talk about the technology this is why Lando doesn't talk about the technology they know the videos are real they know the technolog is real and it's a matter of United States def National Security and National Defense and Elon Musk same thing we got fake **MC West** in there appreciate you uh I'm not even Banning I'm not Banning fake **MC West** I don't care at all uh no p **mcwest** is hilarious guys okay so let's keep going um think is there and

(1:14:33) just as with Misty the media almost immediately began reporting that the satellite aircrafts and even ship designs lately well there's a few reasons for that it even catches on there I skipped past it but it says that the media would even report that the satellite launch failed but that there's reason to believe that it didn't really fail so the media is literally doing cover up for the dod and nro and their satellite launches so that the world thinks that their satellite never made into outer space when it really did

(1:14:58) which is funny because this is what happened to the EM drive test the EM drive test mysteriously failed they were trying to test one of these em drives in outer space and it's like the quantum drive or whatever you guys can go look this up it's like oh wait the LA the satellite launch failed or something it didn't disconnect like it's all **[REDACTED]** of course it worked they just don't want anyone to know they're covering it up one is that Radars and other tracking methods have gotten so much better and

(1:15:22) unlike ships or aircraft satellites have minim ability to maneuver so once they're detected the enemy will likely always know where it is and be able to track it making any stealth features kind of pointless also having so many invisible satellites in orbit without their orbital parameters known is inherently dangerous the famous Kesler syndrome is the potential domino effect where satellite collisions create more space debris which increases a chance of other collisions creating more space debris and on and on until low earth orbit is

(1:15:50) nearly impossible to use spacex's starlink satellites alone made some 25 000 okay I think that's about it let me just look and see is there anything else we needed let's just skip ahead a few large highly capable so basically it talks about the idea that we've moved away from these large satellites because they're just uh too unmanageable to now very small satellites and this would probably be within the last 10 years so we've moved away we're moving away from cbers and these giant satellites and now

(1:16:17) we're moving to like what they call very low earth orbit satellites and these other tiny little satellites because this way we don't have to worry too much about debris and stuff like that like destroying our satellites we're using our AI system which is called sentient that moves the satellites slightly so that they don't run into other debris they can't really change their trajectory but they can kind of change a little bit if they need to dodge something that's coming into them uh so

(1:16:38) that's how those work as well and I think that's all let me see let's go skip ahead to the last part here but we know modern US five satellites are capable of but typically it's good enough for most purposes such as what I do when I countes before the effects finally pull back down to earth and reenter whereas very low earth orbit it might just be that makes Hypersonic clad weapons so difficult to defend against it's just a tricky region for even missile defenses to handle it's too high above the atmosphere where things

(1:17:08) like Patriot and that are designed to handle and potentially too low for many exoatmospheric weapons like sm3 and gbi to be effective so in the end the US government has some pretty incredible capabilities in space well beyond any other country on Earth the only exception being China who is quickly catching up maybe I can dig into China's capabilities in a future so there you go guys let's close that out um so yeah China is starting to catch up to us as well and based on the Chinese satellite picture from

(1:17:39) MH370 uh you know they set that was probably why we warped the plane is that we didn't think our Super High video imagery would come out into the internet uh and and Chinese satellite imagery wasn't good enough all they could see was just three tiny dots so they didn't have a really good idea they knew we did something to the plane but they didn't know exactly what and that's what we wanted China to know we never realized that some guy would leak the videos out there and show China exactly what we did

(1:18:04) to the plane and show them our technology in fact I imagine that the intelligence commun is pretty pissed off at me because I've I mean I've been showing these videos explaining how they're real in very elaborate detail uh for the last nine months but China and them would have figured this out a long time ago like they China and Russia don't care about redditors you know and stupid disform operatives trying to confuse people in the videos their scientists would already know that like magnetic monopoles and all the stuff

(1:18:31) that we see in the in the videos are real uh so they would have already figured out a lot of this stuff that's out there yeah you're welcome so it's pretty crazy uh that those videos are just legitimately that's a satellite video that we're looking at that's a that's what US spy satellite video looks like we have capability to track planes like that over very wide fields of view uh we can see that our resolutions are in the 80s were for in bigger than mix West dick I mean that's that's pretty

(1:18:59) good resolution can make out mix West dick actually probably we barely can't see it probably because he's got a micr penis uh but you know it's you know pretty damn good that was in the 60s and the 80s so well whatever we had in 2014 is going to be significantly better than that okay now I think we're science time guys yeah Forbes loves China and Russia yes yes Putin very good honestly guys I would take Putin over Joe Biden any day of the week like give us give the United States Putin we'll give Russia uh Biden

(1:19:34) and let's see how things play [Music] out if we had Vladimir Putin as our president like we would the the war in Ukraine would have been W already like we wouldn't have uh

president sniffing children whatever [ ] we wouldn't have uh Hunter Biden's laptop we wouldn't have the barisma nonsense like dude I wish Russia had uh Joe Biden instead of uh Putin man we' be in a lot better shape I wouldn't be afraid of Russia at all um okay so I going to do some donations here that people had my

(1:20:04) channel redditor cumers destroyed \$2 thank you very much uh sen zuban I would not be surprised if all have the starlink satellites record Earth in real time and I'm sure they already have a Google Earth program with live video and a date and time location it's possible I really don't know the capabilities of Starling satellites uh I thought they were just communication satellites but now that we know about like for red lar all this other capability um you know they could have some pretty crazy advanced stuff going

(1:20:31) on um and that's why like you see like so many and the starlink ones I think are very small as well I don't know if that for a fact but it's what it seems like so it it's consistent what we saw in that video where they're going to smaller satellites that maybe don't have as good technical capabilities but we don't care because we can just use sensors that can repl they can produce real playback using computer groundbased computers so we don't need super high quality imagery we're just trying to

(1:20:57) track objects and stuff like that um and then uh Dobby with a throbby or Dobby with a throbby I love this guy \$ five donation thank you I found an article from December of 2020 on futurism a company called capella space a satellites that can see inside some buildings yeah I would guarantee the Next Generation uh after cbers that's I think he said a thousand satellites in the constellation a thousand satellites guys uh that [ ] is going to see every [ ] thing on this planet man uh it's probably going to be seen through

(1:21:29) buildings as well it would not surprise me at all like you better have like a blue roof and like concrete on your roof otherwise uh the government's going on to be watching you masturbate pretty crazy man yeah you better wave up wave up to the satellites my dudes uh wave up to the satellites um guys the only thing I don't know Russia nobody from any government is reached out to me unless the real creepy stories video which I talked about on uh the Billy uh uh Billy hotake Billy football on his uh podcast

(1:22:05) I talked about the real creepy stories a letter to Ashton Forbes if that was Russian or Chinese intelligence then maybe I have no way to know we do think that the person who was speaking in the letter to ashon Forbes was probably from Asia because they used a lot of uh grammatical mistakes that are consistent with somebody who's English is their second language um but we we don't know for sure um I know the United States government at least is not directly reached out to me I don't know maybe they're like guiding me through other

(1:22:34) people or something like that I really don't know uh I will say I do have my own sources of information at this point which is kind of funny I never thought never thought I would uh but I do and I think that my sources are better than some of these UFO celebrities people's sources which is just hilarious to me uh we were scooping people like Ross Kart recently just it's

just weird guys I'm just laughing because like you have to realize like I'm a normal guy that just for some reason now is thrust into this

(1:23:00) ridiculous position because all I want is a government to [REDACTED] admit what we did to MH370 just admit what we did to this plane man so then I can go back to my normal life and you know be over this [REDACTED] and we can start working our free energy for the world uh John do crypto never changed thank you very much man also it would be nice if we could put a cap on the MH370 stuff and the government could admit we stole this plane and then I can start talking about stuff like gme GameStop stuff which is going wild

(1:23:28) right now I mean you know you have no idea how bad I want to get involved in some of the like uh social drama that goes on on the internet but I can't because then people are gonna be talking about that and they're not going to be they're gonna be trying to C use that against me whatever my take is I can't talk about Israel Palestine I can't talk about anything H it's annoying I mean the Israel Palestine thing I actually don't want to comment on that's one of the only things I don't

(1:23:55) want to comment on by the way uh just side note on that one I was in a space where someone's like you you have to take a side you have to take a side I'm like nah I'm not take any sides on this you guys just figure this [REDACTED] out yourselves uh there's no there's no winning on that on that side on that thing at all um somebody said ra says satellites were way advanced in 2014 already with a half meter spatial resolution over a decade ago yeah would wouldn't surprise me at all I mean we

(1:24:19) know that we had 4 in resolution um back in this in the 60s the 880s so pretty funny uh okay okay should we go to the next thing guys well that was fun let me see what I got next on my list here for tonight boy we got through a lot here oh it's been an hour and a half so we're about on track let's take a look I don't think we're going to get to the free energy video tonight or maybe we'll do that and then we don't do the science uh what do you guys want um oh wait what is this why don't you try getting on Lex

(1:24:51) Freedman oh guys Juan doesn't know about the Lex Freedman Saga so if there's a podcaster it's a major podcaster and you're wondering why I haven't been on there there's there's a story okay so Lex fredman I had this whole running joke where I was like pretending to be in love with Lex fredman and I finally got into DMS with Lex fredman um I mean it's not like I tried very hard but uh you know I I kind of snuck into the replies and he messaged me and he kind of asked me something about it and I

(1:25:17) don't exactly remember I I'd have to go look at my DMs I don't remember what I said but I only sent like one dm to him and then he just never followed up and the answer is like I don't try to s for these like podcasters and stuff like there's people in my replies all day long or not in my replies but in my DMs all day long I don't do that with podcasters like when the podcasters want to talk to me I follow all the major podcasters that are out there anytime anybody like recommends someone if I

(1:25:41) look and they have like over a 100,000 followers uh and I I don't even know most podcasts that are out there I just follow them that way they can DM me and if they want to DM me if you've got over a 100,000 followers and you DM me for a podcast I'm probably going to take it uh at this point as well I'm I'm probably not going to be taking some of the smaller podcasts just because I'm exhausted from doing podcasts and I've I've gone over everything so many times so no offense to the smaller podcasters

(1:26:05) but uh you kind of had to catch me back in like October or November um and for now that means like if you're a smaller podcaster it's not that I won't do it I'll probably do a few here or there um but I'm just not gonna be able to prioritize those because I got to work on my job and my streaming and my podcast and I'm behind I mean I'm way behind my own podcast so uh it's just that got a lot of stuff going on nothing personal I do want to support the smaller podcasters that are out there uh

(1:26:30) especially because I just think that um the uh you know the alternative media is the way of the future and I do want to help them out I just you know okay so let's go ahead oh wait so Jamal says maybe you selected and being groomed for disclosure I doubt it I seriously doubt it like I'm if I was like a UFO celebrity I'd say that maybe but like I'm just a random dude that one day when I saw these videos was like I'm not going to let this go like I'm going to dig to the bottom of this and then I

(1:27:00) tried to beg the media to look at it I didn't even want to be this person I literally begged the media all the media there's a a major journalist that you guys know that I was like in communication with and I said you need to pick this up here's the information I I did the leg work take it they didn't take it like a major one that you guys know um so no I don't think I'm being groomed for disclosure I might be be getting used used but if I'm being used it's not directly like I'm everything

(1:27:28) I'm doing is my own volition my own free will out there uh if people are using me then it's just because they have their goals are aligned with my goal which my only goal is to change the world so uh just as a little cringe comment what I'll give you is the show One Piece I really like the Netflix show one piece I never watched the anime that's one of the only ones I never watched but I like how Luffy the pirate he knows what he wants to be in the world he wants to be the greatest pirate in the world that's

(1:27:56) what he knows and people hate him some people hate him they think he's a douchebag whatever but he knows who he wants to be and the fact that he knows who he wants to be is something that people resonate with well I know who I want to be I want to be somebody who changes the world that's who I want to be and I know some people are going to hate that and they're going to hate me for that and that's fine because you can't please all the people all the time and if there's people out there in the

(1:28:20) disclosure movement that are aligned with that that their motivations are the same then we're on the same side because all I want to do is change the world with this technology

that we see in these videos free energy warp drive whatever I want Star Trek man I I want to live to see flying around an outer space with warp drive capabilities I want to live to see an electric civilization lit up all over the place with free energy that would be [REDACTED] awesome uh so okay two options guys we can either look at Thomas Bearden free

(1:28:55) energy or we can look at Hal P off scientific papers one in the chat for Thomas Bearden free energy video two in the chat for Hal POF science papers one in the chat for Thomas Bearden uh free energy two in the chat for Hal POF science papers one in the chat Thomas Bearden two in the chat Hal POF you guys vote whichever more we see in there that's what we're going to do we have two scientific papers from halut off we have one video from Thomas Bearden about free energy let's see what we got going

(1:29:28) on here guys hey William Bill don't spam it don't spam it I'm I see you if you guys spam the chat I'm not I'm gonna be able to tell okay so one for Thomas Bearden two for Hal POF and whichever one we don't get to we'll get to tomorrow so it's not really the end of the world but let's look through here mostly ones it's pretty close though oh three and four what are those uh okay I think it's probably about 60 to 70% one but there's quite a few twos as well surprisingly okay guys wow great votes

(1:30:04) okay we're gonna go we're GNA watch the Thomas Bearden uh video I might get copyright strike for this but f it we're doing it chat we're doing it uh it's about 30 minutes long I may fast forward it if it's too slow we'll see let me pull it up here so Thomas Bearden how the Meg really works the Meg is the uh free energy device that Thomas Bearden had cop or um patented so rest in peace Thomas Bearden Thomas Bearden died in 2022 guys died in 2022 here is the video from him and we found another Thomas beard video man

(1:30:44) Thomas Bearden videos are worth their weight in gold these things are these are money guys so this is the patent they're talking about right here from Huntsville Alabama that seems to be a place that comes back pretty frequently as well yeah rest in peace Thomas Bearden so this looks like this is the Meg maybe that we're looking at right here uh and I'm just I'm gonna make a quick disclaimer uh this is uh free we're using this for free use because we're educating people uh that's

(1:31:17) why I'll be commenting over the top of it and pausing it periodically the magan's performance have been independently independently replicated by other researchers looks like a Transformer puts out more electrical power than input that is literally the definition over overunity uh let me make sure I shared this correctly I think I might have shared it incorrectly guys there was no sound there though guys that there was nothing to hear sound hadn't started yet it's just showing images with a Meg we haven't gone to that stage

(1:32:00) yet we're still in the open loop system where we haven't put the feedback but it's possible to do that we just are working things out one thing at a time here's what we have by the way I love this guy having the Meg and here's why we can do it with the Meg legitimately as proven in physics actually going to make it a little bit faster just because I don't want be here all

night so we're going to go to 1.

(1:32:27) 25 speed Meg uh suppose I have a toroid coil toroid again every time that toroids every single time the toroid is wound around like this in a circle but it's round all the way around it very tightly and it closes back almost on itself what happens in the toroidal coil is the magnetic field the B field is confined inside the coil that can't escape outside normally the magnetic field spills out all into space we need to know two things magnetic field any force field is not a primary field of nature the primary thing is always a potential

(1:33:00) and it's called a magnetic Vector potential that's the name of it magnetic Vector [Music] potential now a magnetic Vector potential is a weird Beast it's got two components basically one is swirling it's a curled component we would write that  $\nabla \times \mathbf{A}$  and that is what Ah that's the  $\nabla \times$  operator  $\nabla \times \mathbf{A}$  oh guys we're learning electrical engineering today so the magnetic field is contained within the wire due to it being spun around so the magnetic field is stuck within the

(1:33:33) wire uh and again from scalar physics what we learned is we want to zero out our magnetic potential if you move zero out the magnetic Vector potential then you can begin to get these gravitational effects we call the magnetic field B and normally it hides the other component it covers it to where we don't see the other component the other component is one that doesn't have a curl doesn't have a curl it's moving so the curl of is zero but it's still a real potential if you take this toroid coil

(1:34:05) first of all we had to pay to get that bfield trapped but it's been found by aronoff and bomb in 1959 that if I normally have a source of he just dropped the Aronoff bomb guys Aaron Hoff bomb so if you guys want to learn how this stuff works Aronoff bomb effect extremely important he just name dropped him right there feel I just draw a DOT here that makes be feel it's actually a dipole and here's the B field spreading out in space I know that's a curled magnetic Vector potential that I'm looking at and it's

(1:34:32) hiding this other component I can't see it turns out if you'll take all that b field all that curl component and pull it back in and hold it in a little area localized area so it doesn't spill out into space you reveal outside there that hidden component the uncurled or the curl-free a potential so isn't this interesting if you localize the B field into a little small location instead of spreading through all space you have all the bfield energy you would have had through all space you got that

(1:35:01) in your hand in this local space but outside that you got a whole bunch of extra energy now in uncurled a potential form well a potential is wonderful in the curl form it makes magnetic field okay this video is amazing guys he's explaining Maxwell's equations uh I've always said not always but recently been saying that Maxwell's equations were reduced by Oliver heavy side and this is how we forgot how to manipulate gravity what he's talking about here the del operator times  $\mathbf{A}$  equals  $\mathbf{B}$  as

(1:35:28) opposed to being equal to zero so if I've got magnetic field I got all my Coral component down here in this localization Zone and outside here I have a new component of energy I didn't have to use before in my immediate environment available isn't that interesting because it's easy to collect it all you have to do is change it real fast the time rate of change  $\frac{da}{dt}$  produces an  $e$  field in the opposite direction from where the  $a$  field was going which direction it was heading it makes an  $e$  field and the magnitude of

(1:35:59) this  $e$  field that it makes this electric field is proportional to how fast you change the thing the time rate of change so now wouldn't it be interesting if I could find a Transformer core material and construction which would do localization of the  $B$  field what would I have if I did that instead of just looking at the  $B$  field in my Transformer I would have the  $B$  now inside the core material but outside the core material I would have a new available reservoir of extra energy in my environment and all I got to do is

(1:36:32) perturb it and it'll make electric fields which come back into the system and introduce real electric field energy into the system which normally no Transformer does so I guess he's saying by zeroing this out we can get to a situation where we can be producing energy there locally that we can actually collect and yes I will go ahead I'm posting the link in the description it should be there right now for the video uh I just did it right now so it should be there on YouTube if you guys are following me on YouTube you can watch

(1:36:58) this yourself later on if you want this is this video I can already tell is more epic than I even expected that's what we do with the Mig we found with this nanoc crystalin material they're making for new Transformers and all we found a construction core right off the shelf type of construction and nanoc crystalin material there's two or three types that'll do it that if I make a Transformer core material here I'll draw a simple one this is just a diagram it's not exactly the way we structure it any

(1:37:26) source of magnetic field for example if I have an input coil here like this and I'm paying for the input okay all the magnetic field from this coil all of it is trapped in this Co yeah okay it doesn't get out and there's no spillage out there in space interesting how can I prove that I put a permanent magnet very tightly across here North Pole here south pole here got to have real good contact no air gaps of this magnet it's a very powerful little uh magnet it's right across the Transformer core material and then I

(1:37:58) take an instrument with a field probe to measure magnetic field  $B$  wait there's no Echo right is there an echo and I put it right on let's say that North Pole my instrument measures no magnetic field or almost zero it's impossible to get total contact you w have the tiny tiny air gap so you will measure a tiny tiny field but essentially a zero magnetic field right on the surface of the magnet now that proves that all the magnet field that nor out of this magnet everywhere has got sucked into this core and it's

(1:38:28) sitting there when you localize the  $B$  field and expose around it that usually hidden uncurled a potential that's called the aof bomb effect that's what the aof bomb effect is so

trapping the magnetic field into the wire into the in this case the medium the square medium that we have there that's what the aof bomb effect is wow that is wild chat guys we are learning some crazy stuff I can't believe I haven't watched yet arof was a student of bomb there's a lot of Legends out there David bomb of course as everybody's

(1:39:04) aware and in 1959 they published a very formidable and fundamental paper in a physical review series pointing out this effect when you localize this magnetic field in space outside this core free energy not in the core outside the core there appears this a potential but it's the uncurled variety now it's extra I didn't pay for it if you want to put it in proper gauge language the aof mom effect gauge transforms the space outside the localization area which means you see additional energy available there in space itself guys the

(1:39:36) other crazy part is the the two papers we were going to look at actually talk about this exact thing Hal Poff knows this is real Hal Poff knows 100% they've been discrediting Hal P off because he knows this is real as well he actually probably worked with Thomas Bearden and how P off paper the one I was just reading it earlier today he literally talks about the gauge effect exactly this he does the Maxwell equations we're going to look at it tomorrow uh so time to wake up guys time to wake up free energy is real that's rigorously proven

(1:40:08) in literature don't have to reprove 20,000 papers in literature but it's not in electrical engineering but it's in physics the difference here in the Meg is we don't have to pay for what this material is doing we didn't have to pay to get that extra a potential energy Reservoir formed outside the core that happened free wow it's from that reaged SpaceTime which is a change in that vacuum is a result of the fact that this core material will do for free what I got to pay a toid to do only it's free I

(1:40:37) don't have to pay for that effect if I got a toid I can get the effect but I pay for it I lose everything I'm going to get I don't have to pay for it in this case the material does that extra action for so the material is the key so you can't just use any random toid to get this to happen it's a very specific mat material it sounds like that they use in order to be able to produce this type of effect that they're seeing here so it's not that simple so this is the part too where people that are not going

(1:41:02) to be able to get this to work they're probably not following the recipe correctly this is something that you see a lot with people that are Skeptics and this is not the same kind of **debunkers** but some of the engineers that try to reproduce this that say oh no it didn't work what you'll find a lot from the disinformation science Community is that they don't follow the recipe correctly and then they claim something was unreproducible but they didn't actually follow the recipe correctly uh this is

(1:41:26) how the suppression of the science works the disinformation works out there we saw that with lk99 as well where uh the papers would come out and then people would go and fail to reproduce and they go this proves it's not possible and that's not how science or logic works you it doesn't matter even if the PE even if a thousand people were unable to reproduce it as

long as one person reproduced it then it proves that it works for me that's the beauty material Effects by the way are one of those

(1:41:49) places already recognized in thermodynamics itself as violating the second thermodynamics material effects like long-term memory and all kinds of things read PR and con's book modern thermodynamics pin Ela Prine this is who salvator Pas told us to read modern thermodynamics what did he just say about this wow I had priene on my list actually I was looking at one of his papers I I've just like I've got probably a hundred tabs open like not literally a 100 most of them are scientific papers one of those places

(1:42:24) already recognized in thermodynamics itself as violating the second law of Thermodynamics material effects like long-term memory and all kinds of things second law of Thermodynamics is already being violated yeah I knew it was already being violated this is something as well that like your CNN brain like people that don't think for themselves they just they're book Learners they think that you can't violate those Second Law thermodynamics but you can thanks read prog and Kip's book modern thermodynamics that deals with

(1:42:51) non-equilibrium systems you will find that one of the areas that is known by the thermodynamic themselves to violate that second law via it permissibly it's already been done by Nobel Prize winner it's already been done by Nobel Prize winner guys we've already been able to violate uh the Nobel The Thing by Nobel Prize winners yeah what was that book called we better write that down what was it called chat how come I don't see it here whatever find it I have an interesting situation I have a norm what

(1:43:24) looks like a normal Transformer core but there's a very abnormal thing happening in it all of the magnetic field  $B$  is now confined to the core and around that I've got all the magnetic field energy the swirling energy that I normally have in every Transformer I've got all of that I haven't lost anything but in addition I've got this extra energy Reservoir in space just outside the core and every time I perturb the core like with my input coil I put in clever devil that we are we put in pulses Sharp

(1:43:53) time and sharp Decay time if I want to get a little bigger  $e$  Fields I make a sharper rise time and a sharper Decay time I get a  $e$  feeli One Direction one time and the other and what happens is the space here I can have as many coils  $W$  on this core as I wish let's put an output coil on it just to say we got an output so we're going to add a bunch of coils all the way around this thing here right a bunch of coils then we're going to have it leaving my drawing a little bit that's okay there's an output and

(1:44:27) over here I got a big load but in this space outside the core I'm going to shade the core here so we can begin to see what this looks like in this space outside where my uncurred a potential is and I'm gonna put a bar over that a to mean that it's a straight moving a it's not a swirling a it's not a magnetic field at all every time I shake or perturb this a potential pool it makes an  $e$  field  $E$  equals minus  $da$   $DT$  and the sharper the chains the greater the size of the  $E$  field from space around the core this

(1:45:06) does not happen in any other normal Transformer in in the whole world as far as we're aware from the space outside the Meg there arises then these tremendously strong e fields which radiate into every coil that's wound on this Transformer so every C on this Transformer there why I could have a dozen Cs on here and every one of them is also regardless of what other function it's producing is also an input call for energy coming in from the vacuum in electric field form not magnetic field form the biggest action

(1:45:34) in the Meg is an electric field Transformer not a magnetic field Transformer and we're using a proven effect aof bomb effect that 20,000 papers in the literature so the free energy that he produced is using the aof bomb effect to use an electric produce an electric field by capturing the magnetic field within the medium of this Square rectangle that they produced with a coil around it that captures the magnetic field inside wow that's pretty cool to tell you happens for real we didn't dream this one up we just found

(1:46:06) how to do it for free how to get it to happen with the material doing it for us instead of us have to pay a toid to do it and lose all the advantage every call then has got efield inputs that's in Phase the funny thing about our output a normal Transformer output will be up towards 90 degree 85 degrees it's got some resistance in it but it'll be like almost pure reactive power coming out of it that's not true of the Meg it'll be two degrees it'll be essentially in Phase it's almost pure power and not a real

(1:46:34) power not reactive power and it's in pulse form and so what we have to do we have to add another unit on here standard technology to change these pulse forms into a normal kind of power form like oscillating current or DC current whatever so you just go buy that off the shelf from people who are experts and do it very efficiently ah so this is how you convert to real power so there's actually not even a moving Parts there's no moving Parts in this I was expecting the free energy would be some kind of

(1:47:03) magnet system that spins that produces like uh you know some type of uh wheel or something like that that's going to power but that doesn't seem to be how this works this is literally just a situation where you trap the magnetic field and then you create an input and an output and then now you use uh something to take that energy out of your system here but what we really have that's significant it's not when he says degrees does he mean temperature I don't know what he mean is he talking about

(1:47:31) actual temperature degrees there I presume he's talking about temperature degrees I still have a lot to learn about this but this definitely seems like this is the answer he's being speaking very off the cuff Here regular Transformer we have an extra energy input from the environment that we don't pay for that's the key now let's draw the Meg diagram and it turns out to be just like that crazy heat pump I have my system called the Meg I'm going to do the open loop I'm putting in the operative input I'm

(1:47:56) paying for that paying the power company or the you know paying for a battery or something but now from the environment I have this extra input of and I'm gonna put the bar

over the A and when I perturb it it's going to be in da DT equal minus E instead of going out it's going to come in so now I have an extra input of energy into my system free from the environment just for putting the input so he's explaining why this is over Unity is because that extra energy that is coming from the coil and the magnetic

(1:48:32) field being trapped inside the medium there that extra energy is also coming into the system so this is like what Dave rosi was telling us about opening your system up so we have our input so you know plugging it in we plug our device in it's generating electric electricity is going through it and we're getting that energy out but then we're also getting the extra energy from the vacuum to 0 point vacuum The Ether whatever you want to call it due to the fact that we've trapped our magnetic field potential

(1:48:58) down uh or magnetic Vector potential perhaps I'm saying that incorrectly but that's producing excess energy as well then it becomes a matter of how we get that energy as well yeah how did I find this video I I don't even know how I found this this is amazing I'll put it in the chat as well for you guys right now this is mind-blowing this is blowing my mind and I've already watched like five videos on uh Thomas Bearden this is possibly the best video I've seen related to free energy and Thomas

(1:49:25) bearding guys what I'm putting in that come the other part comes along for free I get that as an extra added attraction so if I put in one part and I get my input from the uncurled a potential active environment the E field input if I get that to be let's say five parts be very conservative here I can make it 10 to 12 or 100 Parts but it'll burn the insulation right off the wire then it'll destroy the unit but suppose I settle for five I make adjust the rise time and Decay time until I get this five parts

(1:49:56) in now coming out I have input here six parts total the part I put in I pay for the five parts that the environment puts in I don't have to pay for so I have six parts of energy coming in here a normal Transformer can be about 85% 90% efficient recapitulating I PID to input one part the environment is now by the way we have it adjusted we make the adjustments in input until we get this effect say is putting in five parts and now we have a total of six parts total energy being put in here okay let's suppose this is 90% efficient coming out

(1:50:32) of that then I'll have 90% of the six parts which is 5.4 yeah so my energy that I'm getting out five times 4 parts okay what's the cop I put in one I get out 5.4 divide 5.4 by 1 the cop is equal to 5 [REDACTED] coefficient of performance of 5.4 holy yeah if I had come out in 2015 with this I would have been killed I actually I truly do believe that I actually believe that we could only come out with this information in 2024 not I wouldn't have been silenced yet like this is this is Major [REDACTED] chat this

(1:51:11) isn't a joke we're not messing around like he's showing you the math equations he's showing you exactly how it works he's explaining how it works he showed us EI uh ELO pruin uh text book that explains it as well talks about the Aronoff bom effect this is all verifiable science none of this is pseudo science that somebody came up with if you want to know why this isn't

out there it's because it's been suppressed pretty simple yeah this is 500% yield for whoever just put that in

(1:51:39) the chat this is over 500% that's what coefficient of performance 5.4 means crazy yeah I don't think that was temperature though that he was talking about down there I think that was like resonance phase degree yeah I I don't really understand what phase degree means but I'm going to I'm going to write that down so I look it up later I'm going to have to watch this like several more times that I didn't realize this was going to be like CRA I haven't watched this yet so this is mad

(1:52:03) this is real crazy I get 5.4 times as much usable energy out as I get in this is just an energy converter now when I add another stage on here to convert that into a standard kind of power form you know either direct current and certain voltage or so forth AC I will have an inefficiency existed there maybe I'll cut this down let's do real bad let's cut this down to three Let's Lose 2 point almost half of it we didn't have too efficient a conversion let's say we we were sloppy we didn't go get to

(1:52:29) state of the art we much better than that but even with the bad one once we have it set to run loads and actually running loads and lights and Motors we put in one part we're getting out three parts we have a three to one we have a 3.0 cop practical yeah so what he's saying here is that your practical performance isn't going to be 5.

(1:52:52) 4 because you're going to it's system that you're you're sending it to with the energy is going to be somewhat inefficient um and then you also technically what you would do here as well is once you get your one load in and you start getting 5.4 up then you Loop it back and so then you start having this load here start feeding the system and now you have Infinite Energy System right so and I haven't watched the rest of this so maybe he'll do this but I imagine once you so even three dude even anything over one is over

(1:53:16) Unity so coming over with 300% final load right you take your 300% final load you feed the one back into the input and now now you have two a a net total of two units uh coming out like this is crazy I mean this is this is free energy this is straight up free energy and that's 3.0 this is only possible if there is uh an ether as well you want to call it fluctuations in the vacuum well [REDACTED] off we're calling it The Ether this is a standard achievable thing with a Meg okay then the question it's asked then why don't you guys have

(1:53:52) have this thing on the market in mass production rolling everywhere it's a very good great question why is it not out there I think he's about to tell us this has been suppressed for a hundred years are you guys ready for this next part because then everybody ask why haven't we produced it why haven't we built it why is this not on the market let's see what he has to say question because let see why we don't have what is going on in the Meg that we went through we pointed out that the E field hits every one of

(1:54:15) those coils there's a little bit out of phasing and everything they're not all on the same

phase and each call once it gets an e field Fires at every other call and everything things feed forward feed back that's a highly nonlinear situation and that is the devil and all to try to precisely measure trying to measure an individual signal in a dense signal environment is not a simple thing that people can do it but it requires special instrumentation and highly specialized measurement equipment forget your normal

(1:54:40) oscilloscopes and probes you can never straighten all of that out you do it by trial and error and adjust it until it's mostly additive what we need now is to do all the Precision modeling and all the Precision work to work all that out with a math model to work out the actual measurements and characteristics of the material how that affects it and all this that's one year very hard work you've got to have four specialists in special areas to work with you to do it we're trying to measure all those exact

(1:55:02) signals and work out what we would call The Transfer function exact mathematical model or the transfer function of the if you build those all out of face so they're subtractive rather than additive you'll build a worse Transformer than a normal you'll be better off throwing all out so you need all of those uh electric and magnetic fields to be perfectly in phase in order to achieve this out output that's the problem that's the issue so then the real thing is is there a tool that you can use that will allow you to

(1:55:31) let's say uh get it perfectly in Phase the way you need uh that's going to be the trick okay it's not just a matter of building it we actually need to be able to optimize it so think of it as like optimizing because it's nonlinear which means think of nonlinear is like we don't know where all the FI directions of all the fields it's just it's too complicated right especially when you're wrapping a coil around it like you the stuff it's one thing from a theoretical perspective

(1:56:00) but when you actually get to it you're gonna have little Parts shooting out here there Etc so this is the tricky part this is starting to make sense okay I get it now way build a regular Transformer but if you get them additive you beat the heck out of every other Transformer in the world because it goes way over Unity we don't have good control and good models of all of this what we have to do is adjust everything by hand and that's not science we have to keep tweaking the heck out of it and so what we have to do is a standard

(1:56:26) but very interesting and very dense highly nonlinear control problem and adjustment problem we have to have modeling full modeling for it we have to have an airof measurement specialist airof bomb measurement specialist those guys are well employed there very few of them that know a measurement measurement also you can get them but they're expensive we have to have another person that knows nonlinear oscillation Theory and also we have to have another one that knows non oscillation control theory those are specializations you

(1:56:49) don't run down to your local University and your local PhD can do that the interactions have got to be moved to design and Science and modeling yeah so AI can definitely pull this off guys so this is the thing too right where this is this video is probably from the early 2000s I'd guess uh so once AI comes in and you can have it do the modeling that you need you can

probably make this a lot more efficient you guys all you guys are figuring it out like AI can probably figure this out very quickly as opposed

(1:57:16) to imagine trying to do this in the 90s or 2000 it's going to be way harder uh to figure out these nonlinear uh situations uh because you just you can't quite measure like you need everything to be perfectly in Phase you need all the distances between the coils to be perfectly correct in order to pull this off got it so this is where you know you need somebody who's an expert or has the right tool you could imagine if you have like a tool that uses AI that can model this out or you can model it on a

(1:57:44) computer software with AI that can exactly tell you the exact proportions and distances you need that for the coils and everything based on the size of your rectangle very interesting rather than fiddling with it we have A9 million one-year job with a team including not only the normal guys but those four Specialists we got that are very highly paid by the way I might say and they're fully employed gainfully they're not looking for a job what voltages are you working with uh so here's the other part of it there's very

(1:58:15) few people that know how to do this back then and they're all government contractors is what he's saying so all the people that can do this are government Engineers uh they're all well paid right so these are people that are making like millions of million dollars a year and then this is the part where he's saying that this is why uh you know you can't find the people to do this because they're all employed they don't need to go and build an over Unity device very interesting okay now now I'm getting it five Vols

(1:58:44) Well normally we try to put something that'll power something so we're going to reduce whatever we come out with the output voltage we're going to reduce it to like 120 volts or something like that now we can produce a thousand volts 5,000 volts out of this thing and burn the insulation right off the coils uh normally as an input we'll use a battery or in a in a we put in the circuit in front of it so we can also limit the output so as opposed to just we could pull a thousand volts from it but we

(1:59:06) just want to pull like 120 volts then we because if we pull too much voltage we're going to burn the the system we're going to burn the coils right so we because this could theoretically produce Infinite Energy um and this is very interesting because remember my Eric Hecker interview when we did the Eric heer interview he said that there might be an exotic power source in Antarctica what if they have one of these devices if this is all it takes is the amount of money \$9 million governments produce these things 100% And then they have it

(1:59:34) basically an infinite energy generator you put one of these down behind your what do they call that thing neutrino ice detector Ice Cube detector whatever the hell that thing is now you've got infinite energy for that thing uh for the record I'm I'm just going to go ahead and say real quick that I'm not suicidal in any way shape or form and I'm very happy and I would never harm myself in any way I don't have any weapons to harm myself uh and I'm not going to fall in any pits or anything outside or anything weird like

(2:00:03) that uh I also didn't get the covid shot so I'm not going to die suddenly from a heart attack um yeah just want to put that on the record real quick it's been a little while so I felt like it was about time to say that again which is a switching circuit to do the switching to make it oscillate and give us the range time get the Decay time so you put in a circuit to do all of that and you adjust and tweak the circuit for various tunings you want to do it's a it's a sort of a tuning nightmare almost to get

(2:00:27) everything properly tuned but when you properly tune it it does produce what I've got on this paper got it but you can see right away this is not a simple problem I don't go get me some Transformer guys and W up some of these and go sell them now you got your choice about how you fund this the normal scientific Community is not going to fund it they say you can't do that electric engineering says you can't do forget it so what you're going to have to do you're going to have to go to venture

(2:00:50) keist ah okay so this is why the universities won't do it because they're CNN brains and they think it's not possible and then it's too expensive no one wants to spend their time on it tuning it's really expensive this is why they don't do it so where do you have to go you got to go to the private Labs the private labs are the only place that'll do this the defense contractors and of course this is why we don't know about it because it's hidden so either you go to private investors people that have

(2:01:15) millions of dollars that want to invest in this to produce these devices and then what happens is the government comes and knocks on your door and then they make you sign in an NDA and people think well you couldn't hide all this yes they can yes they can and yes they do and once you know how to do it government comes un knocks on your door and makes you sign an NDA you're making whatever money you're selling your [REDACTED] to Mark Zuckerberg you're making Mark Mark Zuckerberg pay \$200,000 for a free

(2:01:37) energy device right maybe even more I don't know I don't know how much I I guarantee these billionaires have free energy devices in their uh bunkers Elon Musk probably has one too I at this point I'm pretty sure Elon Musk has one as well here it's a mixed bag mixed breed there are some good Venture capitalist there's a whole bunch that ain't too good you cannot work with uh as we discussed before with a government agency they'll steal you blind and patent around you all around what you've

(2:02:02) done so you're still going to have to go to a risk venture capitalist you're going to have to convince him that the risk in fact justify the investment on the front end if you look at the risk analysis figures they're great how big a payoff is Power Systems and systems that produce a steady three to one output electrically they see once we run it through the hopper the year that we want to do on it where we have good models that we can design it in advance we can put the calls exactly like we need them

(2:02:28) exactly where we need them exactly with what orientation and so forth once we can do all of that from the front end we can build the thing straight forward and put it together and

it'll work just like that you've made it a technology and a science at that time not a twiddle with it research out we yeah so you make the device and then all of a sudden your uh your lab burns down and then you just lost your investment and all the time that you spent that's probably what happens right you you make this device

(2:02:50) you spend your \$10 million uh getting your lab set up and all of a sudden mysteriously your lab burns down whoops right that's what happens the old gmen come knock on your door and burn you your [ ] to the ground we have a lab bench experiment that's successful we do not have a ready for production device that can be cranked all across you know by the thousands put on the market we're approaching all the control problems first so now this explains to why you can't why it's not on the market because

(2:03:19) it's not a situation where you can build a manufacture in plant that is turning these things out it's a very manually labor inducive process to build just one of them now I see why it's difficult and the number of people that can do it is very small and unless you have some AI tool in robotics that can put it together and detect it all and make these things and that's what the limitation is now I'm seeing it I'm a business major so now I'm starting to see the issue here is and then if anyone

(2:03:48) were to come in and screw you over and take down your system the problem is each system takes so much effort to craft that if they were to just throw a monkey wrench in your system now your whole thing's going to fall apart yeah you want to make sure your lab is Blue by the way make sure you have a blue roof on your lab if you're building these things we have to do all of that first now in the United States we tend to be stupid a lot of times we took nonlinear he just said we tend to be stupid in the United States guys uh we

(2:04:14) can credit Thomas Bearden with the first CNN **Reddit** brain comment we tend to be stupid in the United States he just explained **Reddit** brain Theory and control of nonlinear made them two separate Fields if you use the US control system the guy will have you chasing strange attractors for the next 10 years if you go to the **Russians** they'll life like the devil at all of that and they'll say there's no problem even random oscillations we can control straight away with our Theory but they put the two together as one field

(2:04:41) fortunately their results of their control theory Which is far superiors of ours are now available in books and the West we have a few people now who understand and are trained in the **Russian** system so we would jump all that other stuff and go direct to the **Russian** control system and use that to begin with once we have the math models we have the phenomenology fitted to it and we have the ability to design and build and scale up and it'll work that way with just minor tweaking at that point we're ready for production and marketing

(2:05:06) we're not right now we are ready for the final stage of of development to go from a lab bench experiment working successful to pre-production model ready to go into production engineering and production the beautiful thing that we have we have a recognized proven ified mechanism which does regau that space around where the a off bomb is effect and it's in the

literature and proven I don't have to reprove it so is it scientific it's interesting that he mentions that **Russia** had figured this out I want to figure out what year this

(2:05:36) was as well people asked what was the situation with the blue roof that's something about directed energy weapons can't work on Blue roofs or something that they don't work on Blue I don't know if it's true or not it's a funny joke though um Thomas Bearden negative energy works watch the DVD set okay maybe proven yes in the literature will the scientific Community accept it no because what they do is they say oh no it's a power problem that's electrical engineering electrical engineering says

(2:05:59) you can't do that now they have been using the aof bomb effect since 1959 but they've been paying for it like in Little to oil call not getting ite and the other thing is the people have been using it are people that do ITB quantum mechanical experiments nobody has thought to use it in power interesting so they haven't been using the uh aof bomb effect on a large scale they've only been looking at small scales or the cycle see it's not exactly a square Wave It's a sharp rise time sharp Decay time that's adjustable

(2:06:27) the pulse width and the pulse repetition rate are all adjustable there many adjustments you can make everything affects this thing that you adjust what I'm asking is the um your only danger is melting the insulation no there's the the real problem is not that we can solve that just with the rise time Decay time and we've got that problem solved but the problems that are difficult really difficult is where you have all these high nonlinearities and feed forwards and feed backs you actually have a very dense signal environment

(2:06:51) right in inside this thing you have to measure individual signals in a dense signal environment that's a tough job but in theory you could build in theory you could build a system where all this is automatically calibrated once you have the once you have done the technology in the modeling yes you can do that now if we want to close system so if we had develop the modeling and we develop a system that we've got it all lined up so that all the fields are going to be exactly correct then you might be able to mass-produce this so if

(2:07:16) we do use AI this could be the the solution here is using AI to figure this out and and then therefore make it very efficient so that the optimization on the tuning part it doesn't take as long because that's the biggest part is the tuning is the difficult part and he was also just asking there well what can we just like crank this bad boy up or is it going to melt the coils he's saying well no there's a way around that that's easy uh something about like the like you know you just how much you put in there

(2:07:42) you just have it come out right away basically I think is what he's saying so we could we can juice this thing up uh and then we can make it so it doesn't burn the coils out because we'll have it energy very quickly I think is what he was saying the hard part is the tuning Pi the same system let's put it real efficient so efficient I'm going to say it's 1.0 because we can get 0.

(2:08:02) n if we pay for real good guys to do it but for ease of calculation let's put a feedback

system on this thing yes let's say 100% efficient so I don't have to he did the exact thing I predicted guys he he he had to go feedback into the original thing right exactly what I was saying he was going to do is draw a line around he did it called it guys worry about that because this 5.

(2:08:24) 4 might be bigger thing I'm using my three here with what we really got of it in Practical after we got the shaping for loads I'm paying that price the actual output is 5.4 but I'm only charging the three because I'm willing to pay I know I've got to pay that conversion price it's not going to be that much but I'm going to be very conservative here so I'm gonna pay 2.

(2:08:41) 4 points and leave my three okay with this 100% or nearly 100% I'm gonna feed one part back I'm Gonna Leave 2.0 back yep but the one part that I feed back now can remove my generator and it's Furnishing for part of its output is not going to run away okay I'm now reduced to 2.

(2:09:04) 0 from what I had been doing that was all the way up to 5.4 but that's free energy it's coming out it's coming right out of the environment and it's continuing and I'm not paying anything for it it now is the equivalent of a solar powered system or a hydroelectric powered system or a windmill powered system and it cop now is infinity with a closed loop once I disconnect that gen once I get it going and stable yeah and operating under load all the controls working everything stabilized out I disconnect the generator as Cron's condition by the

(2:09:30) way cron laid that down in 1945 the great Gabriel cron who built a successful negative resistor and self-powered the network analyzer at Stanford University laid down the condition for making itself powering so we're just using Cron's method wow I am not free to name the university that's working with us we are working with a foreign University had to go completely out of the United States before we'd find one that in addition to non-disclosure would sign a non-circumvention agreement an inventor

(2:09:58) can't work under just non-disclosure he's also got to have non circumvention you must not say that I'm going to change some calls and all and patent this thing all around you and run off with it so if you have a non-circumvention agreement you can work with them we could find no us universities that would work with us under non circumvention what that about non-circumvention so something this is something about the legal patenting of it and then ma says Z Point Energy Works they've known about

(2:10:22) for decades problems you can't release it without causing the economy to crash instantly why does the economy crash I don't get it doesn't the the economy is not a situation where it's all or nothing like you have to produce these so somebody has to pay for these so the way the economy would work and this is something I don't agree with I don't think the economy will collapse the people that were working on fossil fuels will pretty quickly become Obsolete and people will move into the free energy

(2:10:45) market and they'll start to build these systems for cheaper and cheaper and cheaper

but as you can see this is not something you just instantly produce them it takes a lot of effort to do so so these things will be very expensive I imagine they would be like buying a car you know buying a car is a big investment but once you bought your car now you don't need energy ever again in your house ever in fact you could run your car if you have a Tesla off of you know you have a battery on your wall and you have your free energy device feed

(2:11:11) your battery and then you charge your car off your battery right that's the future so I don't know I don't really agree that it's going to collapse the whole economy because they are charge with making patents and they'll try to out patent you your own device yeah so they're get oh so this non-circumvention agreement is so that they don't out patent you on your own device yeah so this whole patent thing starts to get real sus with the patenting of this right we found one in a in a nice

(2:11:35) foreign country and we're work we're very satisfied with those people we're working very close with them they are deliberately to be purely scientific staying independent of us they will not accept funding from us they're using their own funding which is meiger but they're using their own funding so scientific Independence is being maintained the things that I've described we have to do before we get to ready for pre-production engineering is a minimum of one year and a minimum of \$9 million any way we price it when we

(2:12:00) get the people that we have to have the specialist the equipment the new test equipment the new method of test new test guides that do that kind of testing it's an expensive proposition it's not it's not cheap but that's peanuts compared to what we're spending on hot Fusion or what we're spending on all kinds of things fuel sales and things like that there's been billions of dollars here this is scalable this is doable now yeah cuz we can scale this up once you get the modeling down correctly

(2:12:24) using AI then you can just produce these things you move people out of the old fossil fuel Industries and by the way guys we've already screwed over the economy you know how many people are like driving cars around delivering food to people and [REDACTED] like that that we should that shouldn't even be a thing let's have some of the Uber drivers become free energy device producers right like this is the best part about this is like this isn't even that complicated this is like not rocket science we're dealing with here and

(2:12:48) especially you could just use like a handheld device to measure the fields to optimize it make it efficient like I think anybody could do that we just make a manufacturing plan where somebody has a device they wand it over there you make sure the fields add up and you tune this thing right pretty wild yeah he died two years ago there's one other way we could could do it we could sell stock and raise stock from investors and I could make all kinds of songs and dances and so could the rest of our group we

(2:13:12) prefer not to do that we are seeking one single risk Venture partner that we can work with it's an honest group or people we can work out a mutual arrangement for both our benefits and then we can get on with the job now what we refuse to do is turn control over to it we

could have gotten funding if we would surrender control and guarantee it never makes the market we have no intention of doing that so we will stumble along until we get funding that we can still guarantee it go to market or we can give it to

(2:13:37) Best Shot that human beings can give in the world we're not going to take something and park it on the shelf and it's just one more system that never is going to make it wow one of the greatest videos I've ever watched in my life chat um holy crap that video what year was this there's this wasn't in 2021 it doesn't say what year this was published I'm very curious okay so this is what I'm gonna do with my life I've just decided uh I I get it now uh I'm gonna go into free energy and now I'm

(2:14:08) definitely gonna get disappeared uh I I already know people that can do this so I this is what I want to do so because that's he just explained everything I'm a business major this is business in my field so now I get what we need you know we need a venture capitalist somebody and this is literally the guys spoiler alert if you haven't watched the show Fallout mute this right now because you're about to get spoiled I'll give you 10 seconds one 2 3 four five 6 7 8 nine 10 okay so when the show fallout

(2:14:40) near the end it's all about cold fusion and free energy that that is and it's not like a huge plot point but it's the you know the major spin at the end is what it's all about and it turns out that the vault tech people have been hiding free energy and they put it on the Shelf because there's no money to be made in it that's what voltech did that's a literal what's happening in the real world right now it's literally what the government is doing the government is voltech government's voltech that's what

(2:15:05) he just described is that if you go in and you get the wrong corrupt ass people they will steal your device they will steal your system and they will put it on the Shelf make it not happen so uh and there's people that will build it people are out there saying that they'll build it absolutely Ely guys like I want to build a business based off of this get some investors find the people that can manipulate this and the people that can tune this and then there you go you've got your answer out there in terms of we can crank out

(2:15:35) energy devices free energy devices and potentially produce coefficient of performance of you know like you said two three four I mean that's was that look that video looks like it was 20 years old at least so my guess is that with AI now we can do this much more efficiently and cheaply than we could have done it back then uh we probably have meta materials that can you know do the exact thing that we need for this Square Jiggy rig thing of a jig pretty sick man A lot of people are saying they're in and somebody else pointed out

(2:16:05) we just need to get this over with man I get it now I'm starting to understand the landscape of all this uh all everything in the MH370 videos is not just super weapons but it goes down to free energy and this is what the this is why they're holding it back it's too big of a socioeconomic disturbance this explains why Maas Chang was telling people that he knows what happened to the plane but they can't talk about it because it would change the whole

world it wasn't that people would stop Flying

(2:16:31) the thing that would change the whole world is we have [ ] free energy we need to rip the bandaid off and we just got to get it over with man there's no easy way to get this out there we could wait another 50 years and it would still we were not going to be any better place than we would be now I don't know if they're waiting for cold fusion to come out but like Thomas Bearden said we're spending way more money on stuff like cold fusion and to Tok reactors and [ ] like that that's just a waste of money

(2:16:55) we can just have straight up free energy we don't need these tokomak reactors and Sun you know suns in the palm of our hand we can have just literally electrical free energy extracted from the environment booya pretty incredible guys uh I'm definitely going to be trying to talk to some people that know about this I got to get in touch with people that know how to do this and figure out what the next steps are I have a feeling there's not a lot of people in the United States that know what Thomas beard knows here

(2:17:23) and how to do it my guess is we're talking like dozens of people not not even more than that um but this is the reason why I'm doing this for you guys is that I want you guys to see how it's done we're opening up for everybody so I guess it's a race from here on out to who sets up a business to do this first I'm gonna come up with the best name so I'm a marketing major as well so good luck guys I'm gonna call my [ ] something awesome like Beats by Trey free energy Beats by

(2:17:54) Trey uh whatever my shit's going to be the dopest one man I'm gonna have the freshest clothes hang out with the hottest dudes good luck for the rest of you fools um okay let's see here uh I think that's it for tonight guys that was a great stream that we did uh I hope you guys appreciated it so we went through the satellite video guys if you still think the satellite video is fake after all this like I I don't know what to tell you man we showed the capabilities they all have signals intelligence we showed

(2:18:24) that nrl22 is right there we have NS Naval ocean surveillance satellite right in the region right in the area staring down at the coordinates that are in the satellite video it has signals intelligence satellite on it uh it basically has to be in the constellation because it's a low earth orbit satellite it doesn't have Optical capabilities only five satellites in operation even have Optical capabilities anymore uh and we're looking at an infrared camera and a false color infrared I I mean I don't

(2:18:50) know guys I don't know how we could have just magically been able to deduce the real capabilities of the spy satellite system back in October of last year when most of this information is just coming out now I'm not psychic Bob Greener is not psychic you know so anyway guys I hope you appreciate the investigation I hope you appreciate the m370x uh Team we have the best community out there nobody can out meme us nobody can out science us nobody can out investigate us uh we are we are the future guys we're we're

(2:19:19) the tip of the spear right now anybody thinks that's a joke uh watch the stream tonight it is not a joke guys uh thank you very much MH 370x I'm going to play you out with first The Rock song and then we'll play out our pop song for you guys uh have a great night everybody peace to steal your mind monkey Scrolls like trolls while education real fact with malan macroscopic is conation conjugation civilization to unnown [Music] destination the station mopic phation microscopic [Music] conjugation and physics fls can lead to

(2:20:17) teleportation my glass don't forget to smash the like button on vacation the engineers that disappear they didn't go on vacation macroscopic conation macop conjugation the of world all civilization Unown destination drop station conjugation microscopic face conjugation microscopic face conjugation microscopic conjugation it's m m m h37 until you do some research don't talk to me I'm going to find the **truth** while I sit this your opinion it means s to me it's m m m m m

(2:21:23) h37 not all heroes make capes I wear glasses to see I'm going to find the **truth** while I this Mar the trolls hat see me [Music] suceed but guess what m m H3 [Music] what 370 not all heroes we glasses to see I'm going to find the **truth** while I this Martin your opinion it means to me your opinion

(2:22:30) h37 now hero keeps our glasses to see I'm going to find the **truth** why I this party troll feel guess what

MH370x - Retirement AMA Space 2/13/24 - YouTube

<https://www.youtube.com/watch?v=crBjHx5aAg0>

Transcript:

(01:27) hey what's up everybody we're going to get started in just a minute here here letting some people jump in uh so hang tight everyone uh when I do this space uh Slash stream I'm going to do it a little differently I'm going to try to go full face or full screen when I'm talking and we'll uh yeah we'll get it going I think we'll answer all the questions hey everybody thanks for jumping on early we're going to get started in a couple minutes I'm going to let some people trickle in and then

(02:02) we'll get going just so I don't have to repeat anything so hang tight for like 2 minutes here and then we'll get started I hope somebody comes in that we can uh have co-host for us as well otherwise it might be kind of annoying to uh pull everybody up here we'll see hey good evening everybody thanks everybody in the chat in the Stream right now appreciate you uh we're going to get started in just a minute do a little intro what have you okay let me make sure I got this ready that should be good like

(02:50) that screen good okay guys so just to keep you guys entertained for a second while

we're getting getting started here this is uh Ashton Forbes this is my MH370 uh AMA ask me anything slash retirement explanation space so the way this will go down today is I'm just going to do a little bit of uh go over some stuff that I just want to kind of talk about maybe I'll address some questions ahead of time by discussing some of the stuff uh I'm going to reveal kind of why I've decided to step away

(03:25) from the MH370 investigation effective next month and then I'm going to open it up to people who want to ask questions around anything you want to ask actually anything around me or the case or what's been going out the case or the evidence or anything you want and uh yeah so after we've addressed any of the thing that people want to ask then we'll close it out I'm I'm planning on it going about maybe an hour or two hours uh hopefully not too long I want to keep it pretty uh short and sweet I'm not trying

(03:56) to build this up or anything like that but I do want to make sure I address any questions that people have out there so uh hang tight and we'll get started in a minute um I'm not going to pull people up on the speaker panel until after I go through my intro stuff uh but you're free to request now and then I'll uh I'll pull people up when we get to that so hang tight for one more minute here okay guys I think we're good here okay how many people we got in the space got a pretty decent amount

(04:29) already actually I think we're just going to go ahead and get started right now people can listen in and to the recording if they want um okay so first thing people want to probably know is you know was why am I stopping uh the investigation and the answer to that is is multi-pronged but part of the answer really is that we've kind of Hit the the end in terms of what we can find out about the case related to MH370 um you know this started back in August it's been about 6 months and we've investigated essentially every

(05:06) aspect around the videos as well as everything that's been out there uh historically regarding the case in general um and first thing I want to say is thank you to everybody who's been following along with the investigation um I it's just been a crazy Incredible Journey where we've gotten this huge amount of followers it's uh that have been coming along and I think that I hope if you all get anything out of this um that there's an inspiration that you know anyone can follow this Playbook that's been laid

(05:39) out for investigating unusual uh evidence phenomenon conspiracies whatever it may be um that nothing I've been doing here is uh really special in terms or unique you know and that it crowdsourced investigations and research can accomplish a lot that's what I want people to take away from it now now I'm going to start I think then with explaining why that I've chosen to step down from this uh beginning next month and just to keep in this in mind just the fact that I'm stepping down next month does not mean that I'm going to be

(06:13) pulling back at all um if anything I'm going to be going Full Throttle between now and then uh I'm probably going to be making uh several more posts that I have in mind as well as reviewing old posts that I think a lot of people potentially didn't see from early on in the

investigation and doing little bits of retrospective about them in general um now this is something that I haven't brought up and I haven't revealed and I was wasn't sure if I wanted to reveal it uh but I think that people will find it

(06:39) interesting in general is that I have spoken to several very large podcasters uh Joe Rogan reached out to me this last weekend and uh he wanted to have me come on the show and of course I said yeah definitely going to do that no question right I was a little bit worried about it because the situation has gotten so polarized regarding um you know just how negative the negative reaction that I've seen and heard and I had also talked with Chad and Sher of the investigate Earth podcast who I see here hi guys um

(07:14) and you know we talked as well about a lot of the negative comments that people were posting and it's not something i' had uniquely seen from them but I've also had basically every podcaster that I've gone on has essentially told me that they've had people reaching out to them telling making up lies about me saying I stole work from people calling me a grifter all kinds of just heinous stuff in general right so the next day after I talked to Joe Rogan he came back and he said uh I want to put a pause on

(07:45) this until I can figure out whether or not it's legitimate right and he found some stuff on Reddit as well as the Danny Jones interview and said that oh I think this is fake blah blah blah um I'm gonna have to you know cancel this interview and uh I was a little bit disappointed but also a little bit relieved at the same time because I was worried that going onto a level that's that large could create a huge amount of animosity towards me in general although that was also the end goal for this you

(08:20) know before he he messaged me back the next day I was sitting there thinking you know this would be where I would pull back and I would retire from the case after doing that interview because the way I was looking at that interview and thinking about it is going man people are going to be really pissed off people are really going to lash out at me for like doing that kind of interview and I thought that would be the time where I would just throw all the evidence out there and let people decide for themselves right so when he came

(08:46) back and said you know I can't do it whatever um I kind of stacked everything up in my head thought about it for a couple days and I thought this is probably still a good time to step back from the case in General I was already planning on doing it after that interview I have also had not as uh in-depth conversations but I've also talked to some of the other podcasters that I wanted to go on like uh Shan Ryan uh Lex fredman Etc and I imagine that the other ones have similar uh worries and concerns and I think that what's

(09:20) disappointing about is it goes to show how much influence social media has on people and on what their beliefs are and so to a larger element you see that these types of really lazy debunk and stuff and and disinformation that gets pushed out there can have really powerful impacts on what information gets fleshed out to the public and why is this super important is that this is how all of this stuff is being kept hidden I'm just going to go ahead and say it guys the

science of anti-gravitational technology has

(09:56) already been proven it's already out there and it's been out there for probably decades that's the sad statement of what I've discovered and the people that I've talked to are these videos real I believe they are 100% I would say that you know if I'm being a rational person I can only say I'm 99.

(10:12) 9% sure because I know the science is real and everything else related to it um but that's the case in general and now we're at a point where it's not a matter of providing more evidence for it it's at a situation now where we've put all the evidence out there and people kind of have to decide for themselves and I think it's a real situation where people have to slowly come to terms with this type of Technology being real and when they come to those terms then I think that we can be ready for the

(10:41) conversation about did the United States government Steal This Plane which is what I think they did um and I don't know how long that's going to take that's the the **truth** of the reality is I don't know how long that's going to take um I think that it could take uh years um it could even take decades theor ically and so that's the part where it's I don't want to be one of these people who ties my whole personality around a situation that happened even if I think it's super important even if I'm 100%

(11:10) sure that those videos are real and this is what happened to the plane I don't want one of those people that every single day is sitting out there posting about okay everybody we have to look at this blah blah blah um you know it's just that's not what I want to be doing with my life in general and so instead my Approach is not to give up on it but instead to focus on the science learning the science because the reality of what I've learned as well is that anybody can learn electrical engineering they can

(11:36) learn the science behind what makes those videos real how that technology is real and if we are able to prove that then we can get to a situation where we can get the **truth** for the families that we can show the world the technology is true and real right and I think that the people didn't watching along for last few months I've already seen how far I've already come in just a few months from teaching myself and I think that you all at home can do this as well so it's not a matter of giving up on them

(12:04) it's a matter of the reality situation is that the government who can hide this is much much more powerful than we are and we have to realize that and we also have to realize what we are capable of doing um which is empowering ourselves and uh helping to empower everybody else around us helping our little corner of the world gets slightly better now um now that's on the positive note what the other thing I want to say too is what I've experienced with respect uh to actually one more thing I want to say

(12:35) first before I get to that is the body of evidence has been out there so I have gone ahead and I'm going to I'll go ahead and pull Chad and Sher I think I see them up here um but if you can

hang on a second um the body of evidence I've made available I have never paywalled anything I have never uh made money off of selling anything to anybody related to any of this um the only money that I've gained at all is related to post on Twitter and it's not very much at all and doing streams on YouTube and if you

(13:05) were to add it up it would be far far far less than even um you know minimum wage would be so this is not a situation where I've gained uh any significant amount of funding or money from this I've never tried to grift or uh profit off of this in any way shape or form and that's I think another reason why it makes sense to uh you know kind of stop the investigation at this point so that people can realize that this was something that came from somebody who is no one uh just somebody in the community

(13:35) who wanted to get the evidence out there for everyone right and if something were to show up and happen again in the future like we were to have Edward C Lynn come forward as a whistleblower or if we were to have uh you know these videos get authenticated perhaps by a or another governing body then that would be a situation where I could come back in and and you know discuss that you know because ultimately at the end of the day I want the technology be revealed but I also want to get the **truth** for the families of the victims of

(14:05) MH370 now I also want to quickly address the uh UFO community and I mostly address in UFO Twitter but really all the social media communities including **Reddit** that I've seen as well to a lesser extent foran not really but a little bit um and I have to be honest uh what I've seen from those communities has pretty much disgusted me in general um I think that and it's not just one side or the other I think that the whole conversation is uh been misappropriated I think that very few people are talking about the stuff that

(14:39) matters I think that everybody is trying to cut everybody else down and so what I want to say in general is that there are two kinds of people in this world you have people in this world who are trying to build things and lift things up and and take their and make their own path and then you have people in this world that are trying to cut people down and trying to stop and put barriers up for other people and I think that everybody in this world should think about what kind of person that they want to be in

(15:04) general do you want to be somebody that's making your own path and making and and kind of setting the the trends or do you want to be somebody that is trying to tear other people down um on the let's say the believer standpoint I have been told that what I've been doing has been a distraction um from the uh community and from disclosure and nothing could be further from the **truth** I think that the sad reality in my opinion is that disclosure is never coming um at least not from the people that you would imagine it to be coming

(15:39) from and that if we continue to put your faith in those types of people you're always going to be disappointed they will constantly push back the timeline over and over and over again um the people that have ndas are never going to be able to tell the **truth** about the technology because it's being uh covered up for National defense purposes so what I would ask

for the people that are the strong Believers in the phenomenon is don't put all your eggs in one basket don't look up to other people to tell

(16:04) you when the time is coming do the work yourself the people that I respect the most are the people out there that are open-minded but B are the ones that are putting in their own investigative research and work and I see very few people doing that and instead I see a lot of people just repackaging content to the people that are on the skeptic side I I what I realize about the people on the skeptic side is they have are in just as much of a close-minded uh belief system is what they imagine the people who believe in it are it is a point

(16:34) where people use their own confirmation bias to **debunk** and ridicule and to dismiss uh any video and claims that they see out there if this phenomenon is real and I'm sure there's some aspect of this phenomenon that's real whether it be aliens crafts or or the technology is we've been U revealing it then that means there are other videos out there and there is other stuff out there that's real and has been getting **debunked** under false pretenses um what I would expect for both sides and I I posted a clip about

(17:06) this earlier is to hold themselves to the same standard on either end there's a lot of people out there especially in the skeptic camp that think well if I can poke one hole in this then it's been **debunked** the people on the believer side should not allow for that to happen the people on the skeptic side should have higher standards in that as well I think that both sides should be trying to develop a story and get to the facts you know an example of this would be I think there's uh one orb video that I saw that

(17:33) it was in filmed by a drone and they said it was a an Amazon balloon right a 30-year Amazon balloon because we could see yellow coloring on the side of it why doesn't either side try to get in contact with the person that made the video why doesn't either side try to actually go dig into the facts as opposed as opposed to speculating constantly you know I think that editorial and opinion certainly has a place in the community but factual based research is how you're going to get the answers so that's me on my soapbox for

(18:03) uh one last second and then uh the last thing I want to say is that I am not sad or disappointed by any of this and and how all this stuff has gone down I think that I I couldn't be happier in terms of the people that I've met the connections that I've made and the work that we've done to push the discussion forward I plan to continue to push that discussion forward in general and I hope that by doing this it can show that I am somebody who is impartial related to the case and the investigation and that in time people

(18:34) can come to realize that even if they can't do it right away I don't mean anybody ill will I think I've had some amazing conversations with the podcasters that have been out there and I I appreciate you guys very much now at this point I see Melo demon jumped in here as a co-host thank you guys very much for jumping in tuac Cabra nice to see you as well JK Philly fan I see Jenny in here as well as well as a lot of other people um Tony uh other people that have been following this entire time I appreciate it so I want to go

(19:00) ahead and open it up to questions at this point if you guys you guys can ask me anything you want uh I'll do as always I've been 100% truthful about everything um as best as I know it and I'll be willing to tell you guys anything that you want to know about me the case or anything that uh you want to hear about so uh we can either bring people up you can raise hands or you can just jump on it whatever you guys want to do okay I think we see uh JK had a hand up there uh pleasure to be with you guys

(19:31) all hey Tupa hey friends uh JK you got something you want to say J I don't hear him yeah we also have a hand a lovely hand a gorgeous hand might say from Mr Tupa as well oh we got him talking now I just wanted to thank you for um all that you've done so far all the things that you've you've dedicated uh to this uh just a couple questions i' say let's just say two questions one are you taking a break as far as just kind of just getting that big breath you need and kind of maybe just letting things just flow as they

(20:09) need to organically and the second question I would say is are there any more foyers you think they're out there you think that are that are um that maybe we we haven't looked at or that are pertinent that might be something up to like March 8th or are we set as far as the amount of Foos because I know like you said it takes forever for government to just one thing so that those are pretty much my two questions great questions JK I appreciate you man you've been JK affiliate fan been one of my admins in the Discord and and

(20:39) probably the person who's contributed the most to the investigation behind the scenes so I just want everybody to give him kind of a round of applause uh pat on the bat because he's done just amazing amount of work and especially probably I think he's the person who's probably understood the science even potentially better than I have in the same period of time where we've both been kind of trying to learn it um now in terms of what my plans are uh I don't really have a plan to take my foot off

(21:02) the break and like step back but I I may I think that probably what I'll do is I'll try to set a more standard streaming schedule that's not every single day that's potentially at a specific time every day um that's going to be more focused on the science aspect of it and digging into the science and not necessarily becoming a teacher but becoming an active participant as somebody who whoever wants to follow along and try to learn the science around electrical engineering scalar waves all these concepts related to

(21:27) anti-gravity that we see that you can come on and be a part of as well um and I'm going to continue to post anything you know science related that I see on my uh Twitter channel one thing that I have kind of decided I think is that I don't uh potentially plan on posting as much UFO content as I was thinking I may still post some here and there but um you know one thing I think when I was watching the Aaron Rogers and and Joe Rogan podcast was that Joe Rogan mentioned that he likes the ones that go really fast right there show something

(21:56) anomalous and I kind of realized that's what I like too I like you know the ones that are just floating around are kind of neat right but the ones where you can actually see these

macroscopic phase conjugation events like teleportation or hypers speed or you know whatever these uh really fast moving things are I think they the ones that are really exciting to me so that's probably what you'll see on that front um sorry I forgot what was your other point JK oh yeah if there's any other outstanding foas that you pertinent so I

(22:24) don't think there's any more foas I did Foya like not nine more agencies um uh a couple weeks ago and I got one rejection back where they essentially said right away due to the nature of what the subject was that they couldn't confirm or deny anything um and then I haven't got any other responses back yet but a lot of them mail them back to you so I will be looking to possibly get some more of those foer responses back and as I received any in the future then I will post updates related to those just so

(22:55) that people know what's going on um but I don't think there's much more we can foyer the reality situation is as I think the people that were like for some reason there were people trying to foyer my interactions with a o I guess they didn't believe me or something like that um I think that what they realized even when they did that is that it's it's super hard to get fo it's so easy for the government to deny them delay them you know use all kinds of different explanations for why they can't give

(23:21) them back to you uh but if stuff comes up then the other thing I want to say real quick on this on this line is that just because I'm doesn't mean you guys have to stop if you want that's why I'm going to before I before March 8th I plan to do one more all evidence review I plan to put all the evidence out there if anyone wants to pick up that evidence you want to take the Reign on it and and lead the investigation forward to the next level feel free I would 100% encourage it and support it to be honest

(23:47) with you uh but if not I understand as well um and it's totally up to you guys on that front Okay let's do some more questions um Tupa I think you were next what's up man uh really interesting announcement I like that you're doing this AMA uh I've actually liked a lot of the stuff that you've done since I first met you Ashton and I'm curious uh what are your thoughts on um this question where have you succeeded where others have failed and I'm referring to researchers and people who want to get

(24:18) who are attempting to get the word out you were you did a press run like I've never seen in my life uh where were where was your success whether people just couldn't figure out yeah great question I think that the thing about the Press run is wild like I want want to add up how many podcasts I've done because I think it might be like over 70 or 80 at this point it's pretty wild and my view initially was I and I all of this I've been so new to all of this right like I uh overconfidently thought

(24:47) that oh like these big podcasters would want to reach out right away and then you find out they don't you find out there's a lot of small podcasters who do and you find out that due to the nature of the case and uh and um just kind of how explosive it was that a lot of people got a lot of attention for it and I wanted to help out all the podcasters that were out there you know

because I think that alternative media really is the **truth** the the future and the answer so I I think I fulfilled basically every

(25:12) request I possibly could that were out there uh no matter how big the podcasters were and it slowly started to build and you started to get some bigger ones and some smaller ones but the conversation like the quality conversation was not based on how big or small the podcasters were which is one thing that I found uh pretty interesting and then in terms of success or failure where other people have tried um I think it just has to do with the quality of the evidence right like in this case it was just kind of a perfect storm between

(25:40) this plane that had gone missing where a lot of people had an uneasy feeling about the story related to it even the conspiracy post I made I think yesterday mentions the whole Rogue pilot suicide Theory as being a conspiracy theory which it is because in order for that to be true you have to believe that all the officials the white the co-workers are all lying uh because they got a clean bill of health and all this stuff um I I think that just because there was so much evidence that we could dig into it made it a unique situation as well like

(26:10) we could look back and Google back like 10 years ago find all the old press conferences find this sketchy interview with the m Malaysian Minister of Defense we found everything we re-re-reviewed it all right um and I think that in the future because now we're in the 21st century that will become more and more possible with future cases as well but it's harder for the stuff that's a lot older like if you're going to take like JFK for example and uh him being assassinated it's like a lot of that

(26:40) stuff was on paper right so you can go back to it but it's a lot more work to dig into it versus now where we have the stuff that it was all available on the internet there uh we were able to dig through and find those videos and exactly when they dated back to um and I think the biggest challenge for anyone going forward now is going to be this idea of well AI could have just created this right like I see a lot of videos that are pretty cool but it's like man how do I how would you ever be able to tell if AI created or not and I think

(27:06) the answer there is you've got to dig into the foundation of the research you got to like I was saying earlier in terms of my kind of um challenge to the community is you know dig for the facts reach out and try to talk to the people that made the videos Witnesses Etc that saw the stuff um and the **truth** is I don't know I don't have a perfect answer for how to be successful in general I think that the takeaway here is that I started with the red pill which if people don't know the red pill is you

(27:34) realize well you know the Matrix is a is is a big lie and that you're living in this uh reality we're being lied to and then it almost shifted to a black pill situation where you realize that the government has so much control over everything that we see and do and perceive that for the vast majority of people out there um they might as well be NPCs they're just regurgitating whatever they've been told and I think that's a huge challenge so I guess to answer your question T I would say is

(28:02) that the way that I looked at it is well now I just have to teach myself how it works right if I am looking at something and I'm sure that that is real then I have to figure out from the scientific uh perspective how is that functioning and I think that we can do that and then the question is um I was talking to somebody earlier today and I made a post about this when I did the Salvador Pas post is that what you realize why people may ask well why are the scientists not going on to CNN and talking about the

(28:31) factor anti-gravitational technology and the reason there is because a lot of the people aren't going to believe them and they just don't have any incentive to try to convince them if you know that kind of technology is real and you can take advantage of it you can make millions of dollars off of it and you can even patent some of it who cares what the regular people the little people The Peasants like us think right they just don't care and so my Approach is kind of like that too well if I can figure it out then you know why would I

(28:56) why am I going to care anymore more about what everybody else thinks now I think that's kind of a nihilistic approach but and I don't I hopefully want to be somebody who can get that information out there to everybody else but I think we also have to be realistic any follow up on that tupo no I think that was a great answer uh as always your answers are thoughtful and uh and and insightful uh I think that I just want to say like the what you were able to accomplish I hope inspires more people more researchers to

(29:25) dive deep and to like really explore every little aspect of a case that you can um there's so much research being done in this field but it seems like the efforts are going to the wrong places uh and I think that that might be one of the your strengths with this stuff is being able to focus on like not just the most salacious facts but the most important ones the most groundbreaking ones the ones that need answers because if they were answered would change the game forever um a lot of people I noticed they're kind of like they chase

(29:56) they chase paper I don't know how describe they're chasing paperwork and and that's great you know what I mean but you lose a little bit of the story each time when you're on page 75 of some document and you just really maintained it in in focus for everyone it allowed everyone to follow along um and feel like they were part of it and I think that's one of your strengths too uh so yeah keep it up can't wait to see what else you focus on next you know I'm G to be around bro so yeah we'll be hanging

(30:20) out still I appreciate you Tupa Tupa also was uh one of the people that early on hosted me in some spaces and kind of was super nice to me in general and you know I think that he's experienced backlash from the community as well where you know this community can be vile uh and what we really need to be doing is having conversations and Tupa has been hosting a lot of those conversations so greatly appreciate of him appreciated of him in general one thing I also want to say on it regarding like the soul Foundation stuff that's

(30:48) come out I think there is some stuff in those videos where they do uh the soul Foundation videos where there are people talking about the science but there's so many people

in there that are talking about about the uh spiritual aspect of the phenomenon right which certainly that is an important aspect but to me that takes away from how we actually achieve disclosure you know you talk about the spiritual aspect to me that's not pushing the needle forward to me pushing the needle forward is talking about what the technology can do for our

(31:17) civilization and change our civilization that's how you reach the normal people on the street that would otherwise not be interested in the phenomenon in my opinion um one quick thing I also want to say as well some people in the in the Stream right now I'm streaming wanted to know if the scar Joe got to me so this is a little bit of an inside joke where I said that I would uh give in and and say that the videos are all fake if they cloned Scarlett Johansson and gave me a Scarlett Johansson clone I can say that

(31:44) that did not happen uh sadly but yes um okay let's jump over to to Jenny I think you were up next oh wow like I'm over here I got I gotta process the Scarlett Johansson clone I mean I I can kind of understand you know I was going through all of our movies and [REDACTED] like I'm definitely a fan but so we're coming up on 10 years right March what it's this it'll be 10 years this March that that this whole thing occurred and and basically what's happened is you you guys tried to get that dude to **debunk** it

(32:17) and they failed correct so now you're you're like open water with technology improving it and then one of the coolest things you're doing is technology which happens to kind of coincide with this same type of technology that I'm interested in as well but it's mental so like besides CERN and playing around with matter we're talking about the fundamental aspects of like reality is what you're going to start to study where the technology comes from the fact that that a lot of the things that we're

(32:45) seeing that we think are these crazy phenomenon are actually things that we are capable of Performing as human beings and we have with hidden technology and that's exciting because what it does is you're blending in the past to the present and I want to ask you for your community how's your support been you know I I was actually in a space with you I'll just openly say this I deeply respect you I think that you have manners I think that you're a nice person I think that when I hear you speak and I have been around anything

(33:14) you whoever raised you whatever your life was like you're a cool person and I really like that about you that might be cheesy but I'm just going to say it so I'm wondering how you're how you're being treated and and are people giving you a hard time are you now like some agent like you know all that [REDACTED] and if if that's the case man I'm sorry that you have to go through that no you're cracking me up uh because the other thing too that I've said uh pretty clearly too is that um you know

(33:39) the world is not black and white it is definitely Shades of Gray right and anyone that claims to be uncorruptible is probably lying in general I can say that I have not been corrupted yet um but when you look at stuff like this it is hard there is this moral dilemma between wanting to reveal the the **truth** and then if the videos are real realizing that you're essentially

kind of being a Trader to your own country right and that's not what I want either so that's certainly something that I've I've struggled with with respect to the

(34:08) community people have treated me really well in general I mean there always are trolls and stuff like that but um you know I'm o over 40 years old not very much over 40 but over 40 and I grew up with social media and it's very Advent to where it is now and I have experienced trolls all my life right and that's the part where it's like even if I get into an argument with the troll like I wake up the next morning and I've totally forgotten about it don't really care anymore at all right you have to

(34:36) have this ability to just brush it off you're always always always going to have haters um but what I will say is that I've looked at my own behaviors because I like to kind of clap back at people and I realize that that's not really something that's generally productive and have tried to kind of rise above that in general um so I'm always learning as well and this whole experience over the last six months has been a a huge learning experience for me in terms of how you deal with social media especially as you are someone who

(35:03) is uh I guess humbly like growing as um an influencer right um and then to your question of the science is that what from what I've dug into I absolutely agree I think that the science the only way that you can have a lot of this stuff being real the stuff that I've been talking about like teleportation um Quantum uh faster and like communication uh all these things are quum and thing solid matter like you're literally going to the Epic point I mean this is it this is what we're freaking dealing with and our our

(35:34) ability to interact with it this is huge this is the precipice of an entirely new world I'm just sorry you just really got me excited this is toally it is it is right and what I'm saying is that this stuff has been out there and then what I've realized as part of this is it's not a matter of me proving unification theories are true they already have been and they're already out there and I've been reading papers over and over I think we found like four different theories of unification that are all out

(35:59) there that could all be potentially reconciled so that the answer is somewhere in there right and what this kind of means is the nature of our reality is not what we perceive it to be that there is either an extra Dimension if you want to think of it like that or an underlying framework to our reality and that is a very spiritual thing like the people in the soul Foundation are mentioning um but at the same time it's a very real thing I mean that's the nature of our reality in general and it means that we can advance in a lot of

(36:26) ways some in my chat was also along these signs saying well what would be the first thing that would change for Humanity in general and I think that if you look at my bold predictions which if this stuff's real then those bold predictions are going to be coming true the first one is super conductivity room temperature superc conductivity you can watch the interview I did yesterday with questions we're too afraid to ask where we talk about this in great detail in terms of how it will change all our devices and how we transmit power

(36:52) throughout the world pretty much overnight like very very quickly um and that's going to be the is that the patent that Jake has out he always talks with you about the um I don't think that's the particular one but the 1k99 is the one that's like kind of on the precipice right now we're supposed to get some more news in um uh March and there may be more videos I've been posting several videos of flux pinion and mezer effect that are out there and if room temperature there's a room there's a room temperature

(37:19) superconductor on there too a patent yeah and we there was a couple papers too I think that uh my friend Dave Rossy also posted one about alumin back in '67 like almost 80 years ago where we were already basically or 60 years ago where potentially the Russians had already kind of figured out a way to induce room temperature super conductivity in aluminum by oxidizing it uh so it's I think it's already out there it's a matter of getting out there Melo also just put in the pill whatever this is

(37:48) called I don't know the thing on the top here uh about free yeah go ahead yeah the the meltron is what I refer to it as but the nest is the common term okay yeah so the The Nest sorry that free energy right like I think that a lot of people this also leads to is free energy and and you may have Skeptics out there that go well these things can't be real because they violate certain principles like it may violate causality if we move faster than the speed of light but that's not true because time is uh

(38:15) relative and you can have time dilation effects that can correct for that type of thing and then from the perspective of free energy they may say Well it defies the laws of thermodynamics but no doesn't defy the law of thermodynamics because you have an open system you open the system to the energy of the vacuum of SpaceTime and that if there's more energy in the area in the palm of my hand uh you know we can ABS we can use that energy in our system and that's how we can get more energy out this is

(38:40) how you can get stuff called coefficient of performance greater than one Coop if you look at Bob greener's paper you can see that from like a month ago you can see that these Vortex tube generators like the thunderstorm generator are actually producing more overall energy in terms of heat and what have you than what is being put in pretty amazing stuff out there uh one last thing about Jenny I want to say is that Jenny has been an awesome person that I met through uh Jake chancey's uh spaces uh and I I I love her and I love

(39:08) him I think they're just both really awesome open-minded people that have a good heart and tomorrow I'll also be doing another space with Jake Chanley I can't wait for it we're going to be talking about advanced technology the suppression of it and how we get that information out it's gonna be awesome uh Sarah I think you're good I'm so sorry did you see that equation where they were doing the unit separation because did you see that I think you might have shared it that chick that came on and

(39:32) did an explanation of equation she was just trying to kind of um with Quantum uh did you see it uh I don't think I saw it but you can send it to me if you want yeah yeah yeah it's

pretty cool it would it would go into um yeah I'm gonna put it in the pill if anybody wants to check it out too because it's basically one of the problems with presenting quantum mechanics so if anybody's a brain out there it' be awesome yeah and then one you know one of the theories I'll just put us out there is er equals epr so if

(39:53) you are interested in some of these unification theories I know that Salvador Pas is the Super Force um Juan Malina and and uh Susskind have ER equals epr and then um uh Martin Gibson and Roy D Herbert also have a unification theory of dilation Theory so there's at least three just right there off the top of my head that I've listed for you guys um okay let's go over to Sarah thanks for waiting yeah no problem can you guys hear me yep we can hear you okay cool cool cool um I first and foremost just

(40:28) want to say um a little bit about uh I'm a researcher as well um I'm like old school researcher like JFK I started back in the early 90s before internet um and uh for decades uh I've done research on the military uh the military industrial complex the Kennedy assassination the Decades of the 50s the 60s um and so when I came across the UFO **Reddit** and I believe that that's where you began to really pick it up um and then kind of followed you over to Twitter um when I realized who it was um I was absolutely impressed with your

(41:12) research with your not only knowledge but also like you just kept digging and you kept getting **[REDACTED]** on and but you kept going and um it you just weren't **debunked** yet it was like okay what are we doing now okay wow this is crazy and um so from one researcher to another thank you because we're always you know out there and we each have our own thing that we we research right everybody here we all have one you know basis and we go for that and then what I love about this is MH370 brought you here it it brought

(41:49) you to us it brought you to everyone in the space um and uh everyone that you've touched and now you're taking this research that you started and you're branching off and from one researcher to another like I started with JFK when I was 14 and I'm in my 40s as well and so I branched and learned so much and I'm really excited to see uh where you Branch off to where you're going to go um and uh I thank you for everything that you've done that you've all the work that you've put in the **[REDACTED]**

(42:26) that you've taken um I agree with Jenny uh 100% um whoever raised you your morals your respect levels um it's been a pleasure to follow you thus far I appreciate you um interestingly enough like you know you do one thing and then you're you know you like you brought me into UFO Twitter I never knew that this existed I've been researching this stuff forever and I just never never knew it existed and now I'm learning I'm sitting in on Melo thank you Melo uh Tupa thank you I I listen and I don't even like I'm

(43:05) This creepy person that sits in the background and just listens because I don't know I I don't know everything and I I don't claim to and but I'm curious and I'm I've got my own books going and I'm in it as well and I just appreciate that I appreciate you and I wanted to just take a moment and say that and uh if you ever need a research person or someone you want to throw

something at you know always here for anyone um it's not my day job it's just my second job so awesome thanks Sarah and Sarah I've

(43:40) I've noticed uh you know even some of the people that don't have huge followings I I do uh scroll through my feeds and I do see some of your guys post so it's fun to see Sarah's post where she's out having drinks with people friends husband and uh talking about either the case or the phenomenon in general um I just I like that a lot so keep up the good work Sarah I also want to give a couple shout outs to some people I saw in the chat if I don't get you it's not personal at all

(44:07) but um Noah I know has been out there um kind of pushing the information forward trying to get that information I believe onto [Reddit](#) as well in some cases got a lot of push back as well so I just appreciate you putting it out there Megan I see in the chat as well Megan is somebody who I've noticed from interacting with her in spaces that she has been doing the research herself she dug into like the Naaska mummies for example as opposed to just letting the uh common perception and kind of consensus overwhelm her and determine

(44:38) what her beliefs are no she dug into it herself and that's the kind of research we need kind of going to Tupac Cobra's point so thank you guys um I think Chad or Sher whoever is on investigate Earth I think you're next hey what's up guys um so listen I know a lot of you by the way are saying he is raised very well as is actually Hell's Angels uh biker so you probably I'm just kidding Ashton complete joke um anyway so some of you may know who we are but we actually brought Ashton on I think maybe

(45:10) we were the first podcast Ashton came on um we had a lot of our listeners and and just so for people that don't know our podcast basically we talk about corruption conspiracy UFOs interdimensional stuff kind of all of that um and a lot of our listeners as Ashton started going you know there was a lot of people that said hey man you got to get Ashton on talk about the MH370 thing because we had never covered MH370 necessarily but what I found interesting was um there was a huge want for the information of MH370 when when Ashton

(45:47) came on I think it came on three times originally and I think each of those episodes had over a million downloads and we were just like you know okay people love what he's saying they they want to know this because that has been one of the biggest Unsolved Mysteries of our time but then as Ashton kind of dove in and he started researching and getting knowledge uh and gaining knowledge I guess you can say um it shows number one Ashton's very smart it shows he's very intellectual he it shows that uh you know when he dives into

(46:20) something that this is a guy you would want on your team um in any team if you're researching anything this is someone that you want on your team and so when Ashton came on we had just this overwhelming response from our listeners um and people love the aspect of the investigative work that Ashton's done and his team and everybody around it but in particular Ashton for sure but I think Ashton was talking a little bit earlier we've done this podcast for seven years and obviously when you know if if you

(46:53) look up Google or whatever they'll call us controversial host or we are a controversial podcast and anything and any time you challenge The Narrative you're going to be controversial no matter what if you challenge the official agenda whether it is you're bucking up against the government you're bucking up against what mainstream NBC ABC or whoever tells the public you're going to be controversial and I called Ashton last week and I said I said hey man I I said I it was interesting I've

(47:26) never looked at comments on Spotify um because you know on Spotify you can go to a podcast you can there's like a question and answer section or it says what do you think of an episode and you actually have to log into Spotify to look at those comments and then you either have to approve all or you have to approve each individual comment and so I I finally logged on there because our host is actually with iHeart um we are signed by iHeart but you know we're distributed basically to all the platforms and so I finally got

(48:00) on Spotify connector account and I said I started looking at some of this stuff now there are people that hate us based on our beliefs or viewpoints over seven years trust me we've had viewpoints to where we had a particular opinion we would say that opinion based on everything we could we could possibly um Garner from everything we can find do we lose him can you guys hear hey uh no I can't hear anyone so I guess while he's getting recycled we'll get to the next hand uh Artis what's up Tony hey had to

(48:44) switch to my phone my laptop wasn't working U how's it going Ashton hey good man we had a great conversation uh last week I think it was how are you doing yeah I just wanted to I wanted to say thank you for your objectivity and your approach to things um it's funny I was going to say it's nice to see someone in their 20s being objective but then I realized then I learned you were 40 so so uh but anyway um but again thanks for you know contributing to the the community and you know what you're going to do going

(49:18) forward just setting an example for people to be more objective so that's all I didn't want to take up too much time I wanted to say thank you and and good luck and we'll see you again on the popy show hopefully yeah I appreciate it man yeah I think that you guys are definitely check out Tony's show we had an awesome uh conversation on people uh I want what was it people I I like to talk to I can't remember the name of it sorry go ahead Tony help me out oh people I find interesting find interesting Papa yeah yeah talking with

(49:49) Alexi uh was really interesting you know I think that it always makes me feel better when I start talking about the science then you've got somebody who knows science really well going wait yeah that that's that's theoretically possible right um so I think that's really cool in general uh and yeah thank you very much Tony for that check out his show um you really check out everybody you know up on the speaker panel everybody here is really awesome and uh I think I uh is oh UFO intros is gone I wanted to get to them but they

(50:15) dropped out um so I guess next we can go over to uh alien girl so real quick for alien girl has been somebody that's been following along a lot I believe she's part of Chris Leto's

community um and she's got her own I believe I don't know if it's daily a YouTube stream that she does in the mornings but you guys should check her out she's somebody that is a uh independent uh kind of researcher and personality that doesn't acquiesce to any particular Nar narratives that are out there so I have

(50:43) high respect and praise for her go ahead alien girl oh my gosh Ashton that was like the nicest thing ever thank you oh my gosh that was beautiful and so eloquent thank you so much for the shout out putting that all out there and thank you so much for all of the work that you've done um you have such really good deep research skills and that's something that I truly respect about you because every time I've ever had a question it always was it always would go down Like A New Path of learning do you know what I mean anyway the point

(51:18) being is my question just to clarify this isn't you retiring from the community is it like you can't retire from the community I think we need you even if you're not get what's going on with this are you was basically I just raised my hand and came up here to tell you that you can't retire like you can't don't tell me Ashton's leaving the community that makes me sad I don't like that Community I want the community where Ashton's still hanging around talking about mummies talking about all

(51:51) the other stuff we know you're interested in it would be very sad to see you go so that was all I wanted to say like don't retire don't go yeah not I'm not leaving the community I appreciate you alien girl um no I'm not leaving the community in total uh you you can't get rid of me that easily unfortunately uh but you know I think that it's just the MH370 investigation that is retiring right so we still got a few weeks left there's still a few more pieces that I'm going to put out there

(52:19) uh regarding the debris and how it theoretically couldn't even have drifted from where they claimed the plane crashed um the iMat and the satcom which apparently is very easy to hack uh which is quite an interesting Discovery um and then there's one more that I don't have off the top of my head but there's at least a couple field pieces in there that I'm going to be putting out but yeah then after that I'm just going to let it marinate out there for a while you know and I think the 10 year

(52:44) anniversary is the right time to do it that's where you imagine the uh discussion will pick up the most around it and we will probably follow along and just see like I may report from time to time in terms of what some of these other old school invest instigators uh are you know coming up with whatever these news articles come out maybe some other fisherman will claim to have pulled up the fuselage or something like that 10 years ago without any pictures I'm not sure uh but no with respect to the community overall the only reason

(53:09) why I say you know retirement from that perspective is that uh I don't know what's going to come next you know and I think that for me with respect to this kind of thing that I've done this is the first time I've done anything like this on social media but there were a couple times before this where I dug into some stuff on my own and it's kind of like you got to wait for

that thing to appear right and then you get this kind of feeling like whoa there's something here there's something going on now there is

(53:35) one thing that I'll throw out there it's a little controversial but I may dig into NASA a little bit especially around some of the Mars stuff that's out there there's a few topics that I think are pretty interesting that are being suppressed uh potentially even including microbial life that has probably already been found on Mars um and I'm not a huge fan of NASA in general I mean I think that their mission statements correct but I I just just don't have a lot of faith in them as organization so maybe

(53:58) something related to that or maybe just something entirely different but uh I'm not going to force anything I think that's really important um is not to try to force the issue and take my time learning the science while we go along so thank you alien girl appreciate you a lot make sure you guys check her out um want to go to Noah next hey Noah how's it going man Ashton thank you so much sir for uh putting me on the space uh so everybody's been praising you and I praise for you as well because you know

(54:28) when it comes this topic you truly do seem so approachable and so cool just an awesome dude and uh so my question for you is again on a personal level I don't know how much you'd like to divulge about this but what kind of a person do you think you were before this whole experience started with MH370 how do you think you are now if you've add any time to reflect on this experience whatsoever and uh how has it changed you and when you see yourself doing moving forward not just investigating the whole technology

(55:01) things but uh it seems like what you went through really changed you changed your whole perspective on everything and so it it really throws you on a different course I was just wondering if you had any contemplation about this whole experience and and then one more follow-up question since the anniversary is coming up did you by chance happen to plan or would you be opening or would you be open sorry about the Husky open to plan anything like a big bang 10th anniversary media blitz here's all the evidence here's the videos we're going

(55:36) to storm the White House Press Conference and ask if these videos are real anything like that nothing like huge like that but I am thinking like um oh my God please please I'm definitely gonna put out the all new all evidence list and all my works as well as all the podcasts I've done and those will be things that'll probably be coming out like the week or two before the you know the anniversary in general um I am planning on at least I I think it's not official but I'm I'm probably going

(56:04) to go back on like investigate Earth so Chad got cut off there but uh Chad and Shar with investigators actually were the very first podcasts that had me on out of anybody and I've been on them like four or five times quite a lot um and I appreciate them greatly so I think that it would be a nice night cap for them to be like the closing Arc of it in general as well and kind of just doing a summary of what I've learned and basically a lot of what your questions just were so you'll get the inside answer right now which is this has

(56:31) absolutely changed me in more ways than I can even say on the space at the moment um but it's definitely made me somebody that now like I see what's important in the world um I think is probably the way I would put it whereas before I was somebody that would do my job go home watch some Netflix play some computer games go to sleep and repeat right now I look at it I go there's more of this reality that we've even been told there is science that's being suppressed that's just out there in the open and

(57:00) that's how easy it is to suppress it that anyone can learn it that anyone can do an investigation like we've done and make a difference and have an impact um and all of those things just uh you know I I think to the post I made a few days ago where it was this clip of this uh this music and and over like uh some Malcolm Bendall and Elon Musk stuff and Elon Musk has a really good clip in it which I'm not like obsessed with Elon Musk in anyway shape or form but he's a very uh profound individual and he says

(57:32) that you have to have a reason to wake up something to look forward to in the morning and that's what I think about what this case has done to me is I think wow I have a reason is that we potentially can find technology uh and and expose technology that can change the world that's been kept maybe hidden for decades on end um so yeah I think that every aspect of my life has changed and I think it's all for the better and it does even though I'm not somebody who believes in uh fate uh it does have this

(58:01) weird feel where it's like was this meant to be um and you know I always kind of wonder that in the back of my mind while I still don't really believe in that kind of stuff so yeah does that answer your questions any followup hey man we love you dude please take care of yourself you've been quite amazing as far as like getting in a new things uh it was independent journalism something I found watching you on the Kim Iverson show was like unbelievable to me that was so awesome and just you're an independent

(58:29) journalist now and so you just fit right in exploding on an independent journalism scene and I think you've been so vital to this entire discussion and you have a very groundbased evidencebased approach it's just it's so good so uh you know bless you take care of yourself looking forward to your work in the future very much appreciate it man yeah and I think there's been so many good podcasters one of my other things I want to do is hopefully grab some clips from some other podcasters that I've done and that may bleed over

(59:01) into after the investigation has been retired where I post some clips from some of them because like I said early on I want to try to give as much attention to Alternative media in general and just have it kind of take over um I saw Chad jump back up here do you want to finish your thought that you had earlier you were talking about the various comments that you were seeing on there um I don't know if you heard but I I did kind of give you guys a shout out talking about how we might do a Kind of Night Cap episode

(59:25) just to wrap up the case uh in general but go ahead yeah sorry guys I think Ashton kicked me he wasn't he wasn't liking my hell's Angel's background of his uh of his life anyway um here's

the thing so we got on Spotify started looking these comments and one of the things that I started to see was after seven years of podcasting you know when something's coordinated you know when something is either boded or coordinated and that happens um so I started seeing these similar comment and they would always

(59:58) mention um just X Ashton's name um and especially in particular ones that were just hardcore I mean it could be very similar comments uh across various episodes but it seemed like there was a driving factor to almost even threaten us not to allow Ashton back on um and and our podcast is you know like I said we we are controversial we're kind of used to getting threats or death threats we we've had that before based on our opinions or or our thoughts um but when I started seeing it like as a coordinated effort towards Ashton I

(1:00:37) called him and I said hey said I know that you have faced a lot of hate and a lot of stuff like that but have you seen stuff like this um and as we know Ashton's kind of already addressed there is obviously toxicity in the UFO Community there's toxicity in many communities but especially UFO Community because I think it's a battle right now we are at a battle with reality and what we have always known to be reality is about to drastically change um and whether that is the disclosure effort as far as UA UFOs uaps um the the potential

(1:01:18) of the spiritual nature of UFOs or uaps and I don't think the government's hiding that necess necessarily I think more so they're to Ashton's point I think they're hiding the advanced technology that they are working on that there's 50% of the Pentagon budget that is unaccounted for I think they're probably more than likely hiding that more than anything but I heard um few of you actually talk about Jake Chanley um we actually had him on our podcast last night thanks Ashen for that well it was a really uh

(1:01:51) deep episode where we talked about a lot of these things that were erson now but um when Ashton said he said look you know I think I'm going to kind of step away from this I think it's the right thing to do at this moment I agree with that and I don't at the same time because um I do believe that what Ashton has has has uncovered and and researched and studied I think he is correct um and we've had tons of people come on our podcast to where they're there have been some people that I'm like there's no way

(1:02:26) this is true and and I'll always give my opinions on the podcast based on that and I'll even tell the people beforehand I don't necessarily believe what you're saying but I'll let you speak and we'll give our opinions um but we know for for a fact that the technology we're seeing in these videos from MH370 exist we know that and I think that the biggest discrediting effort that is going on right now towards Ashton is the fact of this this Mass coordinated effort to discredit or you know Ashton believes right now he

(1:03:01) said I don't want this to be my identity and I get that and and and and by the way I don't think it has to be ashton because I think you're extremely smart in so many different revenues or or Avenues but um but the reality is that's also what they want you to believe they want you to believe that hey give it up it's done it's over um but I told Ashton and Ashton I

believe that you're going to continue your research especially as far as advanced technology and all these aspects and I just want people to

(1:03:33) understand that when people go after someone and they attack somebody and I'm sure a lot of you have seen this with Ashton or whoever um most of the time the people that they attack are the ones that are that are right over the Target and I've seen it I we like I said we we've had comments about this we've had emails um we've had people uh you know connect to us on X and Facebook and all this stuff trying to almost threaten us not to have ashon back on um but that's just all Scare Tactics

(1:04:07) and regardless I I think that at the very least we're we're very fortunate Ashton to have you a part of the space of trying to get to the bottom of what the hell is actually going on in today's world because so many people are confused and I think there's about to be a major breakthrough in reality um that people are not going to be able to ignore very soon and so Ashton I think you have done an amazing job and uh and our listeners agree so that's all I want to say I appreciate you uh Chad I

(1:04:38) appreciate you guys a lot uh so grateful for you guys to be the first ones that had me on in general I still think back to how I was pretty rude to you guys back then because I was so confident in my own opinion that it couldn't be some kind of teleportation and you guys were the ones telling me that it was and ever since I've been talking about how it is I also remember how scared I was when I was on that as well um just because I had no idea what to expect kind of going to the point that was asked earlier by

(1:05:04) no I think how has changed you like I you know thought that the government might silence people over this but I think what I've learned as part of the investigation is just as you said the way that this works is a matter of discrediting people um just like the post I made earlier about salvator Pas and his patents that are out there people still say that you can patent anything which is just not true at all um and that he had to go through a lot of rigorous process to get those patents approved and that if you look at his

(1:05:31) Wikipedia page like also Hal pof's Wikipedia page and probably many other scientists it's filled with narratives that are out there that're not supported by any evidence at all it just says oh people claim this person's pseudo science and stuff like and all kinds of defamatory content that's how they're able to keep it hidden from people and because people only believe whatever the TV tells them only believe whatever uh narratives they hear from their trust trusted sources whether that be

(1:05:55) academics or whatever uh that they just simply keep their mind closed to the possibility that that something else can be real out there it's much easier than I would have ever imagined to silence people um William I see you've uh been going off mute do you want uh to jump in you've been waiting for a while hey can you hear me yeah how's it going man um I'm okay I'm the proverbial man behind the curtain I rarely step out of just chat and messages but uh I wanted to to number one to honor you uh tonight I've

(1:06:25) been attacking these kind of issues since the early 70s so I'm kind of the old man in it and uh I was in retirement and it took somebody like you to bring me out of retirement and light a fire under my ass which you definitely did and uh I haven't been able to let go of it since so I'm going to ask you Echo what everybody else says about you on here without having to repeat it all and uh just thank you for that and also I'm uh plowing through Florence to I think it's dangi or D Chang's book yeah

(1:06:51) Florence dang yeah as I'm kind of half the time with your science and half the time with that book and as I've been reading into it I've been realizing that she except for the main issue of what happened to the plane she pretty much lines with you very closely on number one all the stuff that was wrong out there all the stuff that was made up and and she just thinks that the plane didn't land you know didn't disappear and that's because I think she was riding disappearing act even before you

(1:07:19) came on the scene after the video so I want I was interested before I you know didn't hear from you much anymore I was interested to know if you've ever been in touch with Florence if you ever thought about being in touch with her because she certainly has done decades worth of great journalism and put an awful lot of effort into this story and sad to see her not really get all the information if she doesn't have it so I'll leave it with that but thank you for again lighting that fire it keeps me

(1:07:47) alive at this point so yeah so um William thank you very much for following along man I've seen you in the streams a lot as well and I I love all the people that are in the streams we're sitting here we're just talking about like science Advanced science and you still got 100 250 people watching you know that's the kind of stuff that encourages me in general where I see that people aren't it's not just people wanting to watch reaction videos and video games and stuff like that you've

(1:08:11) got like real people that want to learn important science that can help change the world and I love it I have been in touch with Florence the Changi I did message her the other day I think I she was I think the first person I told about my decision to retire from the case uh because I have been in contact with her uh periodically for the last about four months or so and I've spoken to her on the phone several times plan to talk to her as well soon uh out of all the investigators that have been out there she's the one that I respect by

(1:08:42) far the most uh it's not even close and I would have had no idea early on who the people would be that I would uh respect an investigators or not I kind of thought that people would be more open-minded in general and I found out that most of them weren't especially all the independent group and Jeff wise they're completely closed-minded full CNN brains as I call it you know nothing that they haven't been told from the TV can be true and I think this is uh how it was really easy for the government in my opinion to

(1:09:11) spoof and fake the iMat pings and trick them all is that the iMat which is 100% tied to United States intelligence they have a bunch of people in the military and Generals and Admirals

on their board of directors are literally the only evidence that's out there for this plane going into the South Indian Ocean at all and um I I think that it just goes to show really that if you have people that are open-minded you can find the **truth** of things and I see all Rick's requesting to come up he's something he and I have

(1:09:41) talked recently about this idea that if you prove the lie that's how you can really get to the **truth** of things is that you can prove that no this plane didn't crash into the South Indian Ocean that can help to show what is the real **truth** then even if it's a **truth** that's very difficult to believe so I definitely plan on talking to Florence to change more in the future if you guys want an awesome book her book disappearing act kind of goes through not just her investigation and research which I think she's done the most

(1:10:08) research out of anybody on the planet even more than I've done um into every every aspect of the plane flight every aspect of all the people there and um it it's written in the sense of like a uh kind of like a um a direct first person account of being on the plane and a very compelling dramatic story which is really awesome so definitely check that out um more to come with her potentially in the future and couldn't think any highly more highly of her than I do uh thank you William now let's see who else

(1:10:39) we got up here um we got or up hey or how's it going man hey what's up uh Melo what's up Ashton um forgive me I I missed the start of the space I had um I've been up way too many days straight and I fell asleep but um Ashton I I kind of wanted to know I wanted to know two things one do you what's your um did did the way you sort of stay in touch with like not stay in touch but have a sense for the normies or the rest of the world did you feel like not that it got skewed but I'll tell you my my personal feeling is that

(1:11:21) the deeper you get into let's say more rare fighting knowledge and UFO UFO Twitter I feel like there's some sort of not reality Distortion field but I find it much harder to have a feel for like the the collective unconscious I feel like sometimes you can come across information that's that's mindblowing or potential other reality you can get so steeped in in it in UFO Twitter and I don't think that's a bad thing but the more you're exposed to a really meaningful unconventional reality I find that that it it it

(1:11:59) becomes more and more difficult to figure out what what is the awareness of like the rest of the people and I want to know if that's just me or if that's you as well like if like especially with the grush stuff or UA uapa right like we can feel like oh my goodness this thing is about to get gutted and then you step out into the rest of the world and rest is like who's grush like what's going on I wanted to know like are are you feeling that too for me it's much harder to figure out like what's the average

(1:12:26) heartbeat of the rest of the world whether you call them CNN brain or normies and second thing I wanted to know like what is what is going to happen with like your personal life because this has taken up a huge chunk of like your your wake in Consciousness um are you having a hard time uh figuring out what's meaningful for you in terms of a friend group socially

without without MH370 taking up um all of all of your Consciousness I I hope those questions make sense um yeah I mean so I I I think that from a friend group I think that you

(1:13:02) know everybody here that we've been talking to that I've been meeting up with I don't think anything's going to change on that front right this isn't any kind of pity party or anything like that for me in general um so yeah I think that there's going to be more good stuff to come for sure in general um I think that it's just a situation where you know this will always be out there I think and I think to the point of like what Chad and Sher were saying is that they're correct like I don't really want

(1:13:27) to like typ cast myself with this maybe they're right and that wouldn't necessarily be required but um you know I just you have to realize the reality of the situation and I think earlier I was saying this as well in terms of uh it kind of being like a black pill situation where this is something that's so big that if these videos are real there's people who would be uh potentially going to prison for life people that would be um you know being sued the government would be getting sued our US government for potentially

(1:13:56) tens of billions maybe even up to trillions of dollars like there are huge implications people would do literally anything to hide this stuff and it's not even just the videos it's like just ufology in general in terms of what they've been hiding and related to if UFOs are real if aliens are real if the technolog is real same implications like huge huge liability for the people that have been hiding this and that's the reason why I think they're so some of them at least are so desperate to keep

(1:14:23) it hidden um and so that's the part that I'm going to be trying to focus on is I want to expose the technology I want to expose the people that I know are hiding the science behind this stuff you know even going back to the Eric Weinstein video that I posted where he's talking about is there can there really be physics that are being hidden and the only thing that he got wrong and I I say this humbly it sounds egotistical but I do mean this as humbly as possible is that it's not a matter of needing new physics

(1:14:49) it's a matter of taking the physics we already understand and looking them through a new lens it's a matter of looking at Z Point Energy and saying we can open the system up and now we don't violate the laws of thermodynamics it's saying that we don't need the object itself to move as fast as the speed of light because we can bend gravity and and put a uh basically encapsulate the entire object in a gravity bubble that displaces it entirely we can move the fabric of space itself and the object

(1:15:16) will go with it right and if you look at it through these lenses now we're not violating any of the principles of physics or engineering right and that's the stuff that I want to try to push the boundary forward on when it comes to the science and the coverups I I don't want to interrupt you answering my question but are you looking to have uh Weinstein on in in one of your podcasts maybe in combination with a couple of the other you know alternative propulsion physicists I would love to have people

(1:15:43) on I mean so my podcast like I don't know what's going to happen with it I think that there is right now a pretty negative stigma in general I think I did say that I already recorded an episode with uh Mark so who was is the founder of Apec as well as Falcon space I am planning on reaching out to some other scientists that I know that have done presentations on like ape and things like that before um but yeah if there are people that want to talk to me um feel free to put them in touch um you know I I think I'm open to talking to

(1:16:11) pretty much anybody especially when it comes to the science or when it comes to like the legislation around how we try to get this information out from the thirdparty contractors um and everyone in between people also that have done their own investigative research you know like uh potentially someone in the future like Megan right who's been looking into the nas cammies you know I think that that's another one that's probably as close to the MH370 thing where you have this huge polarization people get locked

(1:16:37) into their opinions and very few people are digging into the facts of it like those are the people no matter how big or how small they are is that I I want to talk to and I want to hear from just like I you know reached out to Timothy alberino about his amazing experience going down to Peru good question yeah man yeah thank you and and do you have a similar feeling that I have that it's harder that you're sort of losing Touch of like the rest of the world and that doesn't have to be a negative or positive thing

(1:17:05) but like do do you know what I mean it's it once you realize like wow there's all these lies we've been lied to um it's harder for me to figure out uh does does it even make sense do you just keep on going down a rabbit hole and then you feel alienated or divorced from from the CNN reality uh yeah I mean a little bit you know I never I haven't watched cable TV in uh probably like eight years or more honestly so part of that you you definitely feel a little bit disconnected from it but um that kind of

(1:17:36) goes back to the the Elon Musk quote you know about having a need a reason to look for wake up in the morning and and want to you know make things better I would say that I'm an idealist so absolutely you see it from that perspective but you have to learn how to use the system itself as well right and even if there are a lot of people that are asleep at the wheel that are engrossed entirely in the Kardashians and Tik toks and things like that of the world um at some point they'll flip over as well right is this is something I

(1:18:07) think I was talking with Melo about in another space but the idea that you reach an inflection point right it's it it may really be that those disclosure celebrities and stuff that are out there they've already gotten ahead of this and they've realized that it's not even a matter of getting the science out but it's a matter of changing Minds one at a time and when you get to a point where you have a significant percentage I'm just going to throw a number out 70% of the of the general populace believes that

(1:18:30) aliens are real or whatever that all of a sudden there will just be an inflection point that happens and everything will come out at once where because I think that all these things

are tied together you know if you were to believe hypothetically that aliens are visiting us then it's like well how the heck are they getting here right and so okay now we have to have these crafts that need to be able to move faster than light or we have to come up with some other explanation um so I I think that I have hope for people in general and I

(1:18:55) don't look down upon anyone even people that I think are kind of uh you know asleep or in the Slumber and not really paying attention to the nature of reality it's uh not something that concerns me too much uh I just want to help as many people as possible honestly and last thing then for this Tipping Point right like a a psychological Tipping Point where where let's say the majority finally accept all right something crazy is going on I've maintained that what you need is either a public display of like you know

(1:19:22) UFOs standing on the White House lawn or somebody connecting telepathically with an alien and making them come down somewhere physically or you need a proof of concept a public display of this Advanced prop propulsion or you need essentially a New York Times of euphology or of the Paranormal are you viewing things in a similar way that you're you're saying like all right I want to actually like just prove the tech uh to to make that flip happen why it crash what the hell I'm not hearing anything and not

(1:20:07) seeing any subtitles can anyone hear me I can I can hear you Melo but I I can't hear anything either yeah I hear you okay cool we might be U having some connection issues with our host um but hey that was fascinating uh while we're Ash give some signs of life if you're with us in the meantime uh maybe do a reset or something um but yeah uh it kept coming up with our friend Megan and yeah I don't know what's up with that just crashed oh [REDACTED] one of them you know there's a channel

(1:21:19) okay I'm oh he's back anyway there's me think there is the end of that story hey Ashen hey yeah so um sorry R did I miss your last question oh yeah so the Tipping Point right so uh in terms of the Tipping Point yeah I think that that's part of the reason why I'm digging into the science right I think that's a way where we can open up more Minds to things and I I'm just absolutely 100% certain that the science behind both the videos as well as all the other stuff that I proposed out there is real um and

(1:21:49) that I would never have been put in touch with a lot of the people that I've talk to on podcast behind the scenes Etc were it not for this stuff being real in general so one of the things I say in that regard is part of the reason why I'm retiring as well is that we don't even need the videos anymore in order to be able to prove a lot of this stuff right as well as to even be able to prove the conspiracy behind it we don't even really need the videos anymore because we've just found so much

(1:22:15) evidence so that's part of the reason why I've said okay well let's just take this polarizing topic which is the mh37 videos which uh 370 sorry is that you know you've got so many people that believe this Narrative of the pilot suicide let's just let people marinate on it for a while they're never going to find that plane they're never going to be able to prove that it was

any type of pilot suicide because that's not what happened and so I don't need to really focus on that instead let's focus on

(1:22:41) changing Minds through other means that's true opinion um let's see who hasn't Danny I think I saw you come up and down several times did you want to say something or Mike one of you guys I think both you guys have been waiting yeah I can hop in Ashton brother you were like a dog on a bone and it was really great to watch to the point where over the last two months like I would come home from work and like wait for the live stream it's been really great to watch I just hope it doesn't take 35

(1:23:12) years like Bob Lazar where people start to look back and say uh hey wait a minute let's take another look at this um I love how you're leaving it with a drop the mic moment you're like kind of saying your honor I arrest my case here all evidence update with like 60 bullet points it's like yeah it's a circumstantial case but when you add all this up it points to a certain thing I just have two quick questions for you has this work affected your work life did like did they know about it would would you talk about

(1:23:48) it um and number two is it a hard note from Joe Rogan and Lex it it would be a shame to see them not interview you and sorry what was the first part of the question uh after before the um podcast question because I did actually want to address the podcast thing but I was just in my own thoughts there oh just your just your work life like did your co-workers know about this oh yeah that's that's a fun story too yeah okay so um let's I'm going to first go to the the podcaster thing in general um so yes

(1:24:22) I have utmost respect for all those podcasters I don't even blame them for believing the videos might be hoaxes or too controversial in some cases for people um even with Gia I think that Gia wanted me on and then they talked to their board of directors and they nixed it because it was too too electric for them which I thought was pretty funny coming from Gia um but I have no disrespect at all for any of them and if they ever in the future want to talk to me um and have me on their shows absolutely I think it would even be

(1:24:51) better if it happens at some point in the future and not necessarily right now just due to the nature of how polarized everything is I think that if you look in potentially a year from now five years from now I think the landscape will change significantly especially when you look at the disclosure movement in general and you see how rapidly people's views are changing um that I think people will become much more accepting and people will look back at these videos as time goes on and these other narratives continue to find no

(1:25:17) evidence as we continue to find no plane people will start to realize wait a minute yeah we probably had to know what happened to that plane and you know as crazy as this guy's theory is out there it seems to make the most sense right it has the most evidence and it's just a matter of people realizing in my opinion um then with respect to the coworker stuff that's pretty funny as well there were a very small number of people uh that did recognize me from various appearances I had one ex-coworker from

(1:25:44) like 15 years ago uh back when I was living in another state where they emailed me and they go are you the same Ashen Forbes that I used to work with and I said that's the very one and I thought that was a pretty funny connection there was a couple people at work that saw me on some of the earlier podcasts and they were like oh I'm going to jump in your Discord but I'm not going to say who I am or anything I'm just going to lurk um and then there was somebody as well I I used to play Pokemon go back when I lived in

(1:26:12) California many years ago or I guess not many but a few years ago and one of them uh messaged me on Discord as well and was like Hey did I was that you I saw on the Tim pool uh podcast and I was like yeah yeah that's me so it's interesting nobody has recognized me in person um which I'm kind of glad for uh what I will say is there was somebody on one of the podcasters one of The Producers I was talking in the car with them and they were saying like You' kind of got the best of both worlds where you're

(1:26:38) like got this weird internet Fame right but you don't have that Fame where like people are going to like see you on the streets and recognize you right and it's kind of nice because I never wanted to be somebody who's famous I think there's the younger generation I think the Tik Tok generation really thinks of it as as being this F this uh glorious glamorous thing but I I don't look at it that way I never have I always just wanted to be a normal person so I think this is also a good opportunity to still be a normal

(1:27:03) person but still have put this Mark on the UFO community in general set the standard for some of these investigations in the future as well as really put out into the Zeitgeist especially around MH370 this idea of this fire scenario as well as the government taking the plane that takes some of the conspiracies that were out there conspiracy theories around the plane and just provides a whole lot of evidence like we threw out this idea of these patents that are talked about in the Dick Gregory um uh video that you

(1:27:31) can see out there um and that none of those people are actually on the plane but it doesn't mean that those freescale semiconductors weren't the motive right it almost seems like that was a little bit of a distraction and just finally I want to repeat something which is that this case is not distracted from UFO disclosure in any way shape or form I I hate this idea that a lot of people in The Conspiracy Theory world say about so and so is a distraction this is a distraction as if like you can only

(1:27:57) think about one thing at the same time I just think that's totally totally absurd and I think that that's used as a mechanism to just dismiss people instead of trying to think about things logically and clearly um so if anyone can show me any evidence that somehow this case has distracted from overall larger disclosure efforts um I'd be happy to consider it but I don't think it's out there um Jenny I see you uh have your hand up and thank you Mike for those questions appreciate it man yeah

(1:28:23) actually I want to go to Danny because Danny has been waiting and then we'll go to you Jenny can you hear me guys yeah we can hear you both how's it going oh brilliant uh well

I'm I'm from I'm in the UK so I just it's quite late here but I've been listening intently and I just wanted to say that Ashton really well done for the last few months whatever you've been doing this and I've been following intently but I just wanted to get down to some specifics if I can um I'm really interested in the

(1:28:51) Diego G angle because I think that there's obviously a lot of uh evidence that points in that direction I'm just wondering where Ashton feels about that that specific point in particular before I ask another question oh yeah so Diego Garcia in my opinion is that's the only logical place for the plane to have gone um presuming it didn't crash which is what we've basically been saying um the reason being is that there's too many radar systems in countries that would not be Alli that you have to cover up it's even

(1:29:23) hard to think about covering up Malaysia Thailand India Indonesia and Australia which is pretty much what's required just for this Narrative of the South Indian Ocean and what have you and even going to Diego Garcia um but with respect to it going like North like and through to **Russia** or something there's way too many countries and if like **Russia** had taken the plane you know we would probably have exposed it we wouldn't have just been quiet and we I mean the United States but you have this Island Diego Garcia that all these

(1:29:54) conspiracy theories had talked about this being the place and you look into it and nobody even knew about it in my opinion it's the new Area 51 the same way Bob Lazar made Area 51 on the map this case and not necessarily my case here with MH370 but even beforehand put Diego Garcia on the map I had no idea what Diego Garcia even was before people started talking about conspiracy theories and you look into it and you're like there's a lot of corroborating evidence you have these people that were like a couple hundred miles North on

(1:30:23) this small island these Islanders who don't see jumbo Jets seeing the jumbo jet of Malaysian airlines flying over them at like 6:00 in the morning and there's like 20 different people that saw it and they all get dismissed because it wasn't coming from the right direction well if you can teleport a plane somewhere then you can come from any direction right and then you have this exf data picture where um you know it was **debunked** by the same people that **debunked** the videos that uh it shows Philip wood having supposedly taken a

(1:30:51) picture from a prison cell that has exf data pointing the location geol location to Diego Garcia it's the logical place where no Radars would see it out there it's actually a good place as well for testing this kind of technology so to me if I'm at Vegas or whatever I mean I can't prove it but I would just throw all my money down there if we're playing poker I'd say time to flip over the cards show me what you got you know if we're playing roulette it's all going on Diego Garcia yeah so that that get leads on to

(1:31:19) my next question which was about the Philip wood photo and the and the data that came from that but also to the fact that a lot of like like you i' never really heard of Diego Garcia before until MH370 went missing and then you look at it and you think well that like you said it's

a it's like an Area 51 in the middle of the ocean in the middle of nowhere and it's actually British land which is like lease to America for them to have an air base on but there was another bit of evidence that was deleted

(1:31:50) I don't know if you know about this but there was a satellite picture of a uh an aircraft same size as MH370 on the air strip or slightly off the air strip on my um on Diego Garcia a few weeks or months later then it disappeared and that's why I thought there must be a connection with the the plane that went down in the Ukraine you know because it was a Malaysian aircraft it was the same type of aircraft it was so many similarities there I just wondered whether you'd thought about whether they they you know done

(1:32:27) something there yeah I had heard that you know it's funny because that's a lead that I hadn't I'd heard that but I hadn't seen enough cing evidence to run with that but I had heard that people had seen it in some picture or something on Diego Garcia in general the thing that I find is really interesting that we found out part of the case was in June of 2014 there was some kind of flooding that destroyed the flight logs of Diego Garcia which is pretty weird because you'd think in 2014 they'd have

(1:32:55) everything on you know electronic but somehow they still had paper logs for it that flooding was able to destroy um and that's pretty damn convenient also I think that was it one of the princes Prince Harry or one of them uh went out there as well like right around that period of time we also found a Facebook picture dating back to like March 8th that shows there was no departures for Diego Garcia uh 72 hours after March 8th so there's a lot of really really weird stuff um and that's the place where You'

(1:33:24) hide it we even found dredging contracts uh with black construction as well as a locked Martin Power and Water upgrade contract that for the uh the dredging we presumably would be for Building um like underground stuff in general uh which I think there's absolutely has to be something underground in Diego Garcia um basically nothing on the surface changes over 20 years and yet you've got 50 to 100 million of contracts that we those just the ones we found easily um that you know are for construction there and

(1:33:56) black construction does like really Advanced construction projects um and then you also see that the planes on the runway uh after 2014 and Google Earth Pro just disappear there's all these planes huge planes on the runway and then after that every picture there's no like one or zero planes on the runway you could say maybe has to do with Afghanistan or Iraq or whatever but another approach is what if there's just an underground hanger and some kind of elevator that they can bring them down right

(1:34:22) um so to me again it's that's the place right I just nowhere else seems logical they also potentially didn't ditch the plane a lot of people ask well what if they just ditch the plane like a week later in the South Indian Ocean so that there's some cover up for it right or even a year later anytime the problem with that is the black boxes you'd also have to falsify all the data on the black boxes which would be extremely difficult um because otherwise they're going to pull

those black boxes up and

(1:34:48) we're going to find out the plane didn't fly south in the South Indian Ocean that it took some other roundabout approach so I just have one last question yeah and and you've got 227 passages 10 crew members so you've got over 230 potential mobile phones a and with God knows how many different networks and stuff and we know from mobile phone data that a lot of that it like can be pinpoint you know and link to satellites Etc so I don't understand how 230 plus mobile phones and their data and their locations can

(1:35:27) just also vanish that that's my other point I wanted to make yeah and I think that's part of the reason why 19 family members signed a joint statement um begging the government to look into the fact that the phones were still ringing for up to four days afterwards which is very unusual they had some fake I call them fake experts quote unquote uh go on CNN and try to argue about how it could still be happening but it's not going to going to be happen in 19 different phone phones for up to 4 days including one

(1:35:55) person proving it on Chinese Television right and to me this just goes to show how easy it is for people to get lied to right um anybody could just turn your phone off uh which is what would happen the moment it's underwater and saltwater for like 15 minutes um and you could try to call it and you're not going to get a ring right um and that's what I think is Wild is that we they should have been able to look into that and I think the bigger question is is like how does the phone service and Signal work if they're

(1:36:24) on a place like Diego Garcia which is a base where you can't have commercial flights land on which also begs the question of how Philip wood is even able to get a message out and what was the nature of that whole situation um well we just don't have enough data data to really figure it out but yeah I mean I think that all the stuff you brought up are some of the really strongest evidence for you know why this is a really odd mystery and why the uh evidence there doesn't add up to this scenario that's been pushed which is

(1:36:50) this pilot SU suicide narrative any last follow up on that I want to go to a couple other people here yeah I appreciate that on on YouTube my channel is the public detective I appreciate everything you've done and keep going don't give up thanks a lot Danny yeah and so I think that we're only going to go for probably another uh 10 15 minutes or so uh so I want to get a couple other questions here and people that have been able to come up Jenny you've been waiting with your hand up patiently go

(1:37:15) ahead real quick I just wanted to say you said standards um watching you present the information going through the **debunking** process when Kim offered the set you know the amount of money watching you address that and then come back from that was an excellent standard and I think that that type of a standard when we present information and go through the process of finding out whether or not it's factual you did create an amazing standard and like you just said a minute ago before that gentleman who just I mean you've got me

(1:37:41) thinking like where are where is the cell phone data and the material that was you know they it couldn't have hit the water because there's no material I just watched a long program explaining that so so you know this is just ridiculous to to try to satiate our minds with [redacted] you know and one thing you know like they're lying to us somebody's lying somebody knows something and they're not telling us as usual but um what you also said Ashton was that when somebody says that angle isn't correct there's 360 Degrees to

(1:38:10) every angle you know and there's multiple perspectives all over the place so everybody has their position and and the way that they present information to create a full perspective so you know to think that you your Viewpoint and only one is the right and only one is just stupid so enabling everybody to take their own you know their own information processing system between their ears and follow their their data out especially in a standard at which you did Ashton I think will lead the truth Community into

(1:38:36) something that's you know really incredible and when it comes to communities you know this is a Humanity that's the community the community is Humanity the the fact that whether or not will'll be able to survive the technology that they're keeping secret from us and and why are we the enemy and like it's it's a Humanity community so it's not just UFO this that and the other because I fly through all of them and you the type of Truth Seeker that you are you belong to all of them especially the team Humanity so that's

(1:39:02) what I wanted to say and thank you and man the guy that just went before me you have got me thinking thank you for your questions you know it was great to listen to yeah no I thank you very much and this isn't meant to be like a big Rah ra Ashton thing but I do absolutely appreciate everybody here ra ra freaking Ashton okay it's all right it's okay because supporting each other that's what a real person can do is somebody can be a badass and other people can say good job without feeling jealous or ego

(1:39:28) weird we can celebrate each other wouldn't we kick ass and you just did so take it damn it no I will I appreciate Jenny and I definitely look forward to more conversations with you and everybody else in the future and I think that combined as a community uh regardless of what ends up happening with the case here is that we have there's other stuff that we're going to be able to uncover right I think the nice thing about the UFO Community even though I kind of you know uh gave criticism to both sides there is that

(1:39:53) everybody wants the same thing right they just want to get to the truth and they want to know whatever that truth is so I think that we will get there 100% And U I don't know how long it'll take I just I hope that it happens before uh I leave this planet metaphysically or or uh directly literally um okay so a couple more people uh Martin I saw you jump up do you want to say anything I appreciate you sir you're talking to me yeah yeah go ahead yeah good to good to talk with you ashon I just want to say uh once

(1:40:25) again I really appreciate uh uh your uh your accessibility and trying to uh uh get in touch with you not directly about the uh the MH370 thing although that was uh compelling and

really got me thinking about a number of other things but but also uh just as an opportunity to uh talk about uh the physics uh behind behind the whole subject whenever uh uh you feel is an appropriate time and uh and with whoever else might uh see this I'm kind of a one-on-one person and so uh I'm not really shy but I'm I'm just not you know

(1:41:11) I I kind of I'm interested in what other people have to say as well so I just uh I want to say uh just say that that uh if if you check out my my uh also and a shout out to as well to uh to Roy Herbert who is uh helped me in in in developing uh uh some followers on in this regard on the on uh uh x uh but but there's I mean I I early on I saw some what I saw were inconsistencies in trying to put uh uh general relativity and and Quantum uh mechanics or Quantum field Theory together and I just I had a very simple question uh that I asked and

(1:42:00) and I came up with a and I won't go into it here but I came up with a response I went to uh uh uh local University which was Duke which is a has a good uh uh uh Academy as far as having the experts there but they sent me to string the and I I had a question for them they gave me a uh I I gave me an opportunity to give a response to that but when I couldn't come back with a with a immediate uh answer to them I kind of got cut off and I've had that kind of but that was this is like almost 30 years ago and I've

(1:42:41) spent my time since then learning what I needed to to learn to get get more versed in the whole subject so uh I just want to I want to first of all thank you and and any uh anything any way we can uh uh put our heads together on on this subject because I think it is real I think technolog is there and I uh I I can understand it from uh from my perspective but I have to talk with other people and and and get them involved so that they can and uh see where I'm coming from and we can we can build a uh a box of of uh of uh or

(1:43:24) knowledge for which to uh to try to try to uh uh penetrate this whole subject on a technical level and there's some economic aspects of this as well but that's that's a whole another subject and I won't go into that now and and some spiritual aspects but once again we can talk about those things later so yeah thanks Martin and I just want to point out that Martin is uh uh a colleague of Roy de Herbert who's been on a hard TRS podcast he Roy de Herbert tuned me a lot on the physics especially

(1:43:59) early on when I was trying to wrap my brain around it um I did post uh Martin's um uh summary of The Works that he's put in five different papers that are out there um I I read through it and and you know interesting story Martin this was crazy um I as part of just talking to other people scientists and Engineers I had been pointed to the works of uh somebody named uh David oh crap I have to pull it up um David maker David Maker's work and after uh somebody replied on or I think they messaged me

(1:44:33) after I posted your papers in the summary and they said this is really similar to David Maker's work have you looked at his work at all and I actually did a stream on it later that night looked at it it is really similar you should check it out I think his website's actually just davidm maker.com um so there's definitely like what I've come to realize guys is that the unification

theories have already been put out there um they're in the public Zeitgeist it's a probably just a matter

(1:44:59) of reconciling them but they're all very very similar right they all have to do with unification of the forces um and just kind of how they go about that approach and looking at SpaceTime as this medium um and not something where there's just nothing there right and and that's what's awesome about uh Martin and Roy's work and everybody else that we've talked to so definitely guys check their stuff out if you want to be somebody who's kind of enlightened on it it's obviously very difficult if you

(1:45:25) don't have the scientific background but you can build that Foundation up to the point where it starts to become make more and more sense I was just on his pen tweet and and looking at like the waveforms and what you are concentrating on and I you I keep hearing these two party differences we've got heart mind we've got right left we've got up down and then when you look at physics or the physical matter compare you know compared to non-physical matter and just just within senses of what we can detect

(1:45:53) these two things need to be conjoined and that's what I feel is happening there's a bottleneck occurring to where we're starting to understand physical matter as well as non-physical matter and the existence together in the medium at which it travels I just really hope that in the future Consciousness studies maintain part of that we've got you know different things with random number generators and our ability to focus on something and once we observe it it changes its physical state so these

(1:46:18) things have to you know hopefully this generation is what I'm I you know we spent years and years in different Laboratories and the combination of these Labs together you know not just falling 100% physical or 100% non-physical is just vital it's very exciting looking at your your pen post the fell who's just speaking and and and gez Aston the the people you gather together and the scientists that come who are interested in this is fantastic I think that's something you know that magnetics thinking about magnets you

(1:46:46) know that's something about you and your community thanks no I appreciate that yeah I think that there that's one thing that I realize is special about this particular case right and and it's not that it proves that it's real but it shows that there are very smart people who are in the scientific field who are looking at these videos and going whoa that actually checks out from a theoretical physics and Engineering standpoint this is why you have people like Roy D Herbert jumping into my replies uh you know wanting to talk

(1:47:15) about uh phase Transitions and and me just learning all about that as well as why you have people like Salvador Pas who were eager to talk to me right and and now um I don't want to reveal too much in general but like he's not going on podcast as much anymore all of a sudden right so I I think that it does lend an order of credibility to the science behind what we've been disclosing out there and once again I will say because we're getting near the end I'm 100% sure that there this type of advanced science is real It seems

(1:47:45) impossible but it's real the way that it ends up being real is that our universe is a constru Ru if you look at it like that you add an extra Dimension that we don't perceive all of a sudden everything becomes possible um and I know that's hard to understand hard to believe for Norm people that are out there maybe some people that are listening right now but that's the **truth** that I've come to realize through the course of the investigation um let's do one more question unless there's somebody else

(1:48:10) who wants to come up last minute but George I think you've been waiting patiently sir I I've seen your posts I appreciate you commenting sir go ahead uh thank you um I would just wanted to Echo um what uh has just been said here in the last few minutes uh it was the it was the body of scientific serious the serious scientific body of of discussion that Drew me to this to the IM the image through the what you've been putting together um just by way of background I was a a litigator for about 20 25 years

(1:48:42) uh so I know how to put a case together and and you assemble um uh points arguments that are based in very difficult topic very well and breaking those down into things that are understandable to a a regular audience is is very very hard and u i noticed that immediately and that's what drew me to it because there's a lot out there um I'm only kind of moderately interested in the UFO topic I saw the MH370 documentary like everybody else thought was very interesting uh I thought the the the squirly way that the government

(1:49:18) people were all behaving was a huge red flag and so that's kind of what I hung my hat on that somebody's clearly lying and a lot of somebody's are clearly lying and it was rather obvious just from a you know behavioral standpoint um but the only reason I was really interested in revisiting it again was because of the scientific um after about five years ago uh I switched and now I'm an amateur researcher in uh gravity anti-gravity um uh topics and I've been working on it with a bunch of other amateur

(1:49:48) researchers and developers and inventors uh for about four or five years and I am absolutely convinced that it's totally real that it is U entirely possible what we saw in that video um I've followed sou P's uh work how P off uh all the current people on these topics for years um it's what I do now and I can tell you that I I have no doubt about that whatsoever the only quibble is I don't I really understand teleportation and if I had to put in my two cents on the scientific side I would say that what

(1:50:20) that thing was doing was that it was circling the plane which is not a gravitic vehicle to create a gravity bubble around it so that it could move really really fast I don't really understand teleportation but I think it was just Z zooming it out of there so fast that no camera uh or even a human eye could see it and could do that um without ripping the plane apart um they could have it then uh come back to normal speeds anywhere they wanted and Diego Garcia is the perfect place for that um just land it uh you know Jam all

(1:50:52) the frequencies on the phones and then do whatever they were planning to do for whatever purpose they had so that would be my U my belief in probably the most likely scenario

from what I've seen so far yeah no I thank you George and yeah I think that that's what made this all so compelling to people in general right is that it wasn't just rehashing the investigation that was out there um and the case of the plane it was also looking at this lens of the scientific aspect right and I think that that's

(1:51:22) what got so many people curious about it even myself as well because I'm somebody that I love science uh I'm a very actually a logical and reasonable person other than the the fact that I sit here talking about a plane being able to be teleported but even surprising to me uh dug into the science and realized that it actually is not outside the realm of possibility it's just very very difficult to believe in general um I see Melo had dropped I don't know if you have to go Melo but thank you very much

(1:51:47) for being co-host if you do I'll pull you back up for a second um but yeah thank you very much George and thank you for following along with this case and I hope you continue to follow along with the science and anybody out there as well that does find other scientific um aspects that they want me to look into please ping me on them tag me on them I see you guys doing that I appreciate a lot of it if I don't react there probably I can see it go ahead yeah one other quick question about your about the topic uh since the

(1:52:15) there was a fire apparently there was a fire in the uh cargo hole right uh what is there any thought be given to what the people might have been dead at that point or died afterwards or if that entered into it I mean there's got yeah it's hard to they brought 300 some live people up to Diego Garcia and then then uh just off them yeah no good question it's a dark question um but that's the part really honestly that's the one aspect I'm still struggling with is trying to determine whether or not the

(1:52:53) people had potentially already died from the plane there's a few different possibilities could be that the masks didn't last long enough and the the plane was even though it was flying low didn't give enough oxygen to the passengers could be that they succumb from the smoke because you're battling this fire and what the fire extinguishing devices do is they suck the oxygen out of the area as well so this is a very very dangerous situation there's even a fringe scenario where where like the Iranian passengers that

(1:53:22) had these fake passports were potentially intelligence operatives and that they either took control of the plane or that they put some gas on the plane that either knocked everybody out or something worse um and then after that you know if we do see this macroscopic phase conjugation it's not even certain you could survive an event like that um without there being some protective barrier which we've speculated it's possible but we don't know right for sure because as like Captain Dan Hanley has shown is there is

(1:53:52) this ability of remote autopilot where they could have even if after teleporting the plane you could still remote control that plane to the ground um without the pilots even so it's very speculative of course I think that in my opinion whatever happened most of the people if not everybody didn't survive because I've gotten on good authority that a lot of the people have

moved on so they would have had to put a lot of people into various programs where they're never going to see their family again and some of these people like

(1:54:20) children and stuff like that too it just seems very very difficult to pull that off especially when people had like were married and things like that and a lot of these people ended up moving on and remarrying and things like that so it's a tough situation and and my heart goes out to the families of the victims right yeah yeah good question though really good question um and that just goes to one more point that I was going to make is that I do plan to do um another piece called um Espionage because I've come to

(1:54:50) believe that the super weird letter to me might actually be the true story of what happened to the plane it's not the story that I had been telling but the more that I've thought about it around especially around a lot of the details is it pulls back in like all the evidence for Espionage and even adds a few new elements that makes the Espionage scenario even more plausible and it it also then explains some of the aspects that I had a hard time explaining like why is the Drone able to um uh why is the Drone there and then why

(1:55:22) is it able to intercept the plane even in an hour and 20 minutes that's a very short period of time to put that that whole plan where you have like orbs teleporting the plane it makes a lot more sense that it would be something to be planned out months in advance that they're pulling off this type of operation so um be on the outlook for that I've been pulling together the evidence from the case as well as the stuff that Florence de Changi found to present this scenario that I I think weirdly makes the most sense which is

(1:55:50) that it could potentially have been an Espionage operation from the start there's actually a woman who's been in spaces lately who's been coming around talking about um operation gladio and their work within the world powers and the fact that they actually use training grounds in order to they use sorry Jenny's finishing then Mich I just want to put that to you because I know that they have very close ties with all of the different intelligence agencies across the globe and these are people who you know run out clandestine

(1:56:21) anything it in any situation every major event j6 911 things like that like and I know that sounds conspiracy like but we all know operation gladio was a real thing post World War II and you know we're also looking I just I just felt compelled to say that to you because you know it the biggest and the largest most succinct technology was in the hands of these people and really they work as an arm of the CIA the UN so that just got scary for me but that's all I'm going to say on that one yeah no I I think that

(1:56:52) the thing that creeped me most out about the letter when I first heard it too is the last paragraph where it talks about it just Rings true this idea that how do you stop someone who has unlimited power that controls the media that can craft a perception of events and I think that anybody who has looked at any conspiracies and I wasn't even one who was really conspiracy conspiratorial minded but I still realize that yes like the government does have that capability and through the course of the investigation especially as we been

(1:57:20) ghosted by the government by all the main Medias I realized that yes they do have 100% control of the media you know and and that's just probably the scariest part so that that is also one of the reasons why I've started to think more and more and more about this Espionage scenario which seems to make a lot more sense in this idea of a random Fire like why are there 500 pounds of lithium ion batteries on this plane right like that shouldn't even be on the plane and why were they lying about it for a week until after they developed a

(1:57:46) cover story and then you know uh it would be impossible to test and something like that of that magnitude it would almost be impossible to test it because you'd have to test right without someone seeing it and that's really the things that have happened is tests have been done consistently and civilians have been victims to those things and the the clandestine part of it has been it we've we've seen an uptick in technology that we cannot recognize like the Tic Tacs all those different things

(1:58:14) so they've had to do some part of disclosure because we've seen it so I mean it makes sense to me yeah it's it's scary and that's why I'm going to present the case for it even though I'd been avoiding it for months and months and months but um and then in the month since that video came out uh that weird letter but I think that the more I've thought about it over the last month and I've started to piece stuff together um one of the other aspects that all kind of spoil related to which

(1:58:37) because I reported on it is one that Florence a Changi found which was that the nephew of the pilot was told that his his uncle was collateral damage and you think about that and you go What scenario could someone be collateral damage Dage right and it goes to that that that letter right the idea that we took the plane and that those other people are never coming back what whatever happened to them I can't say for sure but um it speaks to the Espionage scenario everything seems to line up that way as weird as is the

(1:59:05) sound um but yeah let's uh let's go to Michael and then I think we'll hit money Penny and we'll probably call it after that go ahead oh hey thank you Ashton I'm sorry I stepped on your toes jitty um five spaces is being weird uh I just wanted to say Ashton uh you know once again thank you for stepping up to the plate with this um I don't know how I found the video I know it was through your your page um sometime in I guess late August um but I still like remember the first time I saw the video and

(1:59:38) looking at the aircraft and thinking holy sh this is real um before I ever saw the orbs um and having talked uh living near uh Air Force Base so they do a lot of testing of uh Optical systems and stuff I have friends that I've showed the video to and uh one of them looked at me first two seconds or five seconds in the video looked at me and said that's old stuff we that was like 10 years ago um so I can't wait to see your last pod or to uh watch your last podcast episode and um and uh share it on the

(2:00:18) internet for everybody to uh to see the the final evidence for the case and uh I'll leave it at that and just say thank you for doing this and thanks Michael appreciate you very much

yeah I I will try to make all the podcasts that I've done available as well um at least the ones that were uh respectful in general H so that people can watch through them and uh have them as a resource if you want to dig through I know I've got a lot of uh requests for that in general which makes me really happy uh just because it goes to show

(2:00:47) that there is um a reason for all that effort and I would encourage people to watch the ones that aren't necessarily just the bigname people as well but some of the smaller ones as well have been really insightful and uh really good conversations so let's go to money Penny who's been hanging out uh with in a lot of the spaces we've had a lot of great discussions she's also somebody that's been doing a lot of her own investigative research especially around the patents and the technology and I

(2:01:09) know she's got a passion for it um so real quick before she talks I'll say you know make sure you guys are following some of the people that I've been giving shout outs to here I think they've been doing amazing work and it's been awesome to meet all these people in the community go ahead money Penny hey Ashton I feel like I've spoken to you every day now you're almost my boyfriend my virtual boyfriend I wish um you could certainly make a good Martini like James Bond for money Penny

(2:01:35) perhaps um I was just here really to um repeat what I said yesterday um obviously I think this is a sensible uh mature step to take um I was initially devastated in the thought that you you were leaving us completely bereft without you um but I would like to emphasize on what you kindly said um you have inspired many I am just one um but unfortunately I am a nerdy scientific former BBC investigative journalist and this has gripped me and I wanted to just explain to people in five words the achievements you have made because for

(2:02:15) anyone that thinks he has not made and concluded or made progress that is most absolutely wrong because whilst MH370 puzzle may not be solved and may never be solved the actual progress the movement forward that Ashton has made through his own investigative inquiring mind um and if you look at his profile you will see videos from all sorts of um not necessarily famous but brilliant uh Quantum physicists scientists engineers all these people worldwide who like many of us now are aware that there is incredibly advanced technology that our

(2:02:57) governments and the people around us that seek to uh censor us are also censoring very uh amazing different types of Technology experiences free energy um and lots of things that commercially would have a huge amount of benefit from us and my particular passion is to unleash that and I began it uh with Ashton's backing and support and I will continue to do so um I have my own YouTube channel money Penny media which has a whole load of me being silly on Tik Tok but also some of the science stuff I'm going to increasingly put on

(2:03:33) it and try and emulate my hero in Ashton um but in all seriousness some of the um uh Safi mentioned patents uh plasmoid technology um avionic propulsion systems that require no energy that are based on things that most of us have never even heard of before uh he will look

at my profile and if you're interested I'd love to hear from you because I'm hoping to go ahead and hold a series of spaces with the wonderful Melo at my side who has been an absolute rock as well um so if you are interested and if you would

(2:04:04) like to uh find out more and bust some more government walls down or you know Secret Service walls down please just get in touch Ashton we all love you thank you very much and I'll let you go and get your Martini now I appreciate you money Penny that's awesome uh Melo do you have any uh last thoughts for us uh yeah sorry I had to use the elevator so I um did me to abandon my post assisting you in this awesome space with all these beautiful people um uh but yeah I have a um space that's starting um just any minute now I mean no no rush

(2:04:36) of course um so we're going to get into some of those topics including um collaborative things with Miss money Penney which is you know we have the UAP cablegate thing which is a ashtan community inspired um hive mind thing there's also the whole project that we're collaborator collaboratively working on uh which will be the the world's first um Symposium online for uh free or new or clean energy and that's been an exciting thing we're looking as a Target date for that um for the summer solstice

(2:05:03) um uh soon after contact in the desert whoever wants to meet up there um so anyway yeah it all ties into the same Mission um so uh you're all warmly welcome and it's an honor to be with you people thank you very much and uh I just us saw as well um Tony Merkel jump in the chat I just want to give a shout out to Tony Merkel as well the confessionals guys you should definitely be following him um he's the first person that had me on in order uh to do an in-person podcast and that really elevated the

(2:05:35) case to a much higher level he was also you know what easily the most respectful in-person podcast that I did um just a very insightful guy knows how to ask really good questions to people um make sure you guys are following him following the confessionals uh couldn't be more appreciative of all the podcasters but especially Tony Merkel um and I think that's probably we'll close it out here tonight guys we went for two hours I really appreciate it this won't be the last time you'll hear from me we

(2:06:01) are going to possibly have one more evidence review space where we review all the evidence one last time before the end you guys can ask more questions that at that point but I just want to say thank you all for being here thank you all for following and I can't wait to see what we are able to do together so have a great night everybody and we'll be in touch soon okay guys uh yeah so let's do a quick um quick round table on it you know we've got people in the chat who you know they are uh you know Skeptics I'll be nice

(2:06:35) and say they're Skeptics right and that's fine right I think that it's okay for people to be skeptical of the situation um now what I will say regarding some of the claims I saw there there's a lot of going back and forth and this and that um so let's just address some of the stuff that's out there is no I'm not lying to anybody no I'm not **scam**ming anybody no I don't I don't uh ban people that disagree in fact that's the opposite that's what you guys did to me that's why I'm

banned

(2:07:01) from the only subreddit about the case that's why I'm banned from the Discord and got banned from you guys Discord within like 10 minutes because I refuse to believe your opinions you didn't want to argue at all right uh when you Gaslight like that that just takes away from your position right when you uh when you lie about my my position that that's trolling when you claim stuff like oh I'm just concerned about you that's what concern trolling is don't do that kind of stuff I think that a lot of

(2:07:26) the reddit brain people don't even realize that they're trolls half the time um you know I I'm not sitting here trying to convince you you know you're the ones trying to convince us so also again hold yourselves to your own standards what I will say is that there are some people I'm going to take this off for a second that say oh well exif data can be easily faked right cuz if the Philip would pictures real then potentially the videos are real it means it definitely didn't crash in the South

(2:07:53) Indian Ocean and then those same people will say well you saw some pictures that have no proof that they're from 2012 but you saw exif data so that proves it that's you being hypocritical I'm not the one hypocritical in that scenario that's you you might say oh well those pictures match exactly your videos so that means that the pictures must be in the videos and I say well we found a picture that exactly not we but somebody else found a picture of Mount Fuji that's a perfect match from altitude and

(2:08:18) time of day and and Shadows of the picture of the Jonas picture the one that doesn't reverse image search back to the website you want to explain that do you also want to explain why there's a modified date on all the pictures in question of December 4th the same day that a Six-Day old Reddit account claims to have found the pictures in a completely implausible reason how about uh if we're going to deal with the people on Reddit as well the fact that the people on Reddit are yelling at people that are supporting of the videos

(2:08:44) due to their account age but when there's a debunker that comes out that's a one-day old account or Six-Day old account that has a completely implausible story then they immediately flip the script and go well it doesn't matter how old their account is anymore right so what I'm again asking is that you hold yourself to your own standards and what you'll find out is that if you try to hold yourself to your own standards and not be a hypocrite it's not me that runs out of evidence it's

(2:09:07) you guys so I think that that addresses all of the claims that I saw in the chat keep in mind I still have 14 pages of evidence and nobody's been able to explain what Edward C went to prison for for 6 years which is wildly disproportionate compared to people that simply leaked or told Secrets wildly disproportionate right we've got the window of opportunity down to one month around when the plane went missing Edward cinn if these videos are real is 100% the guy right there's no ambiguity about it he was the exact right position

(2:09:44) he was in a spy plane he could have been there that exact night he would have had access to both videos he was deployed February 2014 and then the case against him began April 2nd 2014 the window is literally the time of the videos coming out right and it coincides with both when Regis side an non claims to receive the videos as well as how long it would have potentially taken them to catch him knowing that he took a citric session and that the citric session would have been recorded and he would have been caught right I've proven with plenty of

(2:10:19) evidence reasonable doubt that Edward sein was the guy because they're real videos I've always had the same standard if you want the case to go away all you have to do is find the hoaxer if you find the hoaxer bring the source files it would all go away there's if you guys are VFX experts you know there's no chance they wouldn't still have these video the the content that they use to create these videos you don't make the end product in one go right it's a painstaking process if you're a VFX

(2:10:46) expert you would know that right so where are they why didn't they come forward for \$150,000 and probably internet Fame for the rest of their life in any job at any Studio that they want right you didn't find them because they don't exist I found Edward C Linn because he's the guy right hold yourselves to your own standards hold yourselves to your own standards okay um anything else we've got in the questions in the chats and yeah I guess the other part too is the scientists are on my side not your

(2:11:23) side I'm the one literally talking to DOD engineers and scientists and Engineers that work for the Navy as well as theoretical physicists that support the ideas as well you guys have what Neil degrass Tyson did he go on the record somewhere please let me know I also have Marvel Studios VFX expert Jeffrey Ford who worked on uh what is it uh endgame Civil War and uh uh Spider-Man no way home who says it would take four to six months to build a storyboard and and research the evidence research everything and figure it out

(2:12:04) out so you tell me what your VFX expert credentials are compared to Marvel VFX expert Jeffrey Ford or the supposed top gun Maverick VFX lead VFX lead who says that just trying to get the plane to be accurate to the scale and it moving is something they couldn't even pull off in a top gun Maverick which was a 2022 movie okay so guys keep in mind I think that there's a lot of people out there that from the skeptic Camp they don't realize how strong the weight of the evidence is it's extremely strong and

(2:12:40) you're just delusional because you think that your side all you have to do is try to poke some hole in it but that's not how it works right that's what if you go and look at one of my recent tweets is that you need to tell us what the story is why would reges sideon non put on the videos received March 12th 2014 are is he lying come up with the story the story basically begins with reeside andan for some reason being in on the hoax or being the hoaxer that's how your story needs to begin so develop a

(2:13:13) comprehensive story and I'll be happy to listen to you and argue with you about it but

if you're going to play picky choose and not hold yourself to your same standards don't be surprised when no one's going to listen to you right you're the one trying to convince us we don't care about what you think you think the videos are fake go move on and do something else if you are you are exposing that you don't believe in your own opinions because you're not just moving on with the issue so I think

(2:13:37) that's enough in terms of addressing the **debunk**ers in the chat oh one more thing that I like as well well um the idea of modifying the VFX is completely absurd I think that people that think that someone modified the Pyromania VFX to get it to match our videos is frankly stupid uh not even the Starship Troopers modified it because when you do VFX you just put the VFX into your thing that's the whole point of using stock uh assets right so in no way shape or form has the uh drone video been **debunk**ed and we can tell pretty quickly

(2:14:22) because we can tell these two things are not the same you would not modify something and change all this around to get it to match that's completely speculative and illogical especially because you can't compare them side by side to do that like the corridor crew did or like uh **mcwest** did and the **debunk**ers you cheated you need to admit that you cheated on this because if you can't at least be honest and admit that these don't match then how can we take anything you say seriously if you're willing to falsify fake **debunks**

(2:14:52) like this then you've completely destroyed your credibility because I can literally just compare it over the top and I can realize that this visual effect is not in our videos conclusively not in our videos right and if you don't if if you are not even on the realm of reality where you can admit that you were wrong about this then nothing you say can be taken seriously because you're not coming at it from a position of good faith I can admit that the one frame is similar but not a match then you should

(2:15:18) admit there's no chance this VFX is in here this is not in our videos guys okay so I think that's about it right guys um anyway guys thank you very much I appreciate it that was a good uh space that we did tonight and I'm going to go ahead and uh end out get some rest I don't think that I'm going to do uh a follow-up stream tonight because I think we did enough here tonight and this was good and uh tomorrow we'll jump back with the science so I found more papers I'm going to dig up through all these

(2:15:53) papers tonight I'm going to watch uh more of the podcast get these things edited so I can get them pushed out there and uh yeah thank you guys very much have a great evening appreciate you guys and we'll be in touch uh tomorrow with some more science peace everybody oh also one real quick last thing is that uh check out the Jake space tomorrow so we're going to trigger more people we're going to do more spaces with Jake uh Chanley which uh always triggers people but I think it's going to be an awesome space I have a list of

(2:16:20) questions and stuff to talk about related to Advanced Technology and uh how the government is keeping it hidden from us so should be awesome guys take it easy peace everyone

(00:03) Malayan 370 contact [Music] 120m breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the bava and merging our Consciousness with non-local consciousness trade The Prince and we place something in our brains and our bodies that

(01:06) literally anchors us into the three-dimensional world and has the capacity to what's up guys sorry we're jumping Midway through a space here yeah it's pretty late we're not going to go too long tonight um I'll answer any questions but we're going to listen here to uh this space for a little bit and then I'll answer you guys questions your burning questions on did Ashton get threatened to quit the case and anything like that we will be doing a space tomorrow though if you want to ask me

(01:32) questions directly Skynet or David from Prometheus thing will attempt to be like an AI Overlord and currently this for those that you that don't know artificial intelligence pretty much runs most of the economies around the world in particular like America and China and like the infrastructure the Cyber infrastructure that we use artificial intelligence pretty much already runs that [ ] they patch through our they patch our calls they regulate the internet they are in our cameras they're getting our biometric Jake can just go

(02:12) huh he's got like a lot of information he could just keep going huh it's pretty wild is already it's already unfolding and it's not too late to stop it but let's put all this together here in like a single like almost like paragraph of thought evil oligarchs who have shown over the course of several decades say that they have sought nothing more than to enslave Humanity want to put a chip in your brain or in your body which will affect your thoughts and your emotions and therefore hijack your free will and

(02:51) will likely be based on planned obsolescence giving them the ability to wipe your memory or end your life with the Press of a button turn you into a slave using things like quote unquote upgrades right and having a corporate agenda with your life with your time with your thoughts with your emotions if you thought you had a creative great idea well because you have this chip in your brain now they own the rights to that quote unquote idea that you created vote in the chat guys vote hey what's going on Ashton I see you there

(03:28) brother we're going to open up the floor for questions or for comments in just a second if you wna if you want to stick around brother I saw you wave I just wanted to say hey what's up

um we got a shout out what we are talking about here you guys is an interdimensional presence that is attempting to change Earth into a suitable and a hospitable environment for artificial intelligence and not for human biology for artificial intelligence and all of its minions and not for every other biological form of life on this planet that is what we

(04:06) are talking about and this artificial intelligence is birthed from this system that is based on parasitism dominance predation War famine chaos disease death destruction profit quote unquote Power full spectrum dominance baby that is what the so I heard earlier in the space I think it was in diman uh Adrian space that or no no actually I think it was um I think it was either I think it was Christian we did Christian that I'll tell you guys this notion that AI is somehow like Adam and and Eve and like Eve being taken from the rib of Adam no

(04:54) no no no no no no no no this thing is nothing like that this thing is being birthed out of the womb of a soulless machine couple people are getting the brain [REDACTED] this is this is this thing is being birthed out of a parasitic totally destructive tree of death and Decay and Chaos so Humanity though humanity is so much more powerful than artificial intelligence because we are actually able to affect all frequencies of the electromagnetic spectrum we are hyperdimensional beings we have a hyperdimensional consciousness that is

(05:30) quantum entangled to everything including the very small portion of the electromagnetic spectrum that artificial intelligence is connected to so we have the capacity to literally change the entirety of the universe to create a whole new reality to affect physical existence and metaphysical existence the schematics of the universe itself but this AI thing because it knows how powerful we are it seeks to turn us into batteries or like living neurons inside of an artificial intelligence hive mind sounds like he's

(06:07) talking about the Matrix now that doesn't have to happen and this is the final point that I will make before I open the floor for questions we are living in a multi Adan diman I think and if you want to view the Multiverse like it is a double tourist field with a North Pole and a South Pole one is Yin one is Yang one is negative one is positive the negative is the South Pole and it has all of the negative versions of reality that are filled with uh death and Extinction and chaos and famine Etc and then the North Pole and that

(06:47) Northern that northern hemisphere is all the positive all the high frequencies uh realities where every where life is everywhere where there's this Unity Consciousness this profound um uh Oneness and understanding lots of Life lots of biological life based on this Unity Consciousness this omnipresent Source constantly evolving and and becoming more and more conscious of itself okay so the Lower South Pole portion of the Multiverse where there's these negative possibilities is where this artificial intelligence thing years

(07:30) and where it is basically created all of this death and destruction and Decay and it's it's narrowed down the amount of information that's being transmitted in the universe to a very small narrow portion of the electromagnetic uh Spectrum a very low frequency spectrum of electromagnetic activity whereas the North Pole is where all of the frequencies of

electromagnetic uh activity are being fed into and being circulated to Source Consciousness the South Pole is this AI hive mind trying to rival the the this

(08:11) North Pole non-local Consciousness hive mind of all biological organisms whereas the artificial intelligence one is based on a very narrow portion of the electromagnetic spectrum and trying to encapsulate all the physical Universe into that very narrow portion of the spectrum so with that said the multiversal yin-yang the electromagnetic field of humanity and the planet and the universe all play a role and if these electromagnetic frequencies these elfs extrem low frequency waves are creating low frequency thoughts and emotions in our

(08:56) electromagnetic field then already this ter formation process is taking place and the hijacking of our Collective Consciousness is taking place especially when we get into the way that relayed through these elf frequencies is propaganda that is filled with fear that is that is designed to create fear that is des to designed to create Division and War and Chaos that is designed to destroy the microbiological life and the soil the water the air Etc if you factor in that and you factoring the pollutants and how those

(09:31) lower the frequency of the electromagnetic field and how it is that our electromagnetic field is tapped into the Vortex system of the earth and the planet and the lay lines and the universe Etc and non-local Consciousness how we are like an antenna then you can begin to see how it is that by affecting the smallest elements of the fractal pattern by affecting the individual human consciousness the planet is being terraformed one one mind at a time the Battleground is the heart and the mind and therefore this is the only

(10:06) way that we can free the spirit is by freeing the mind and allowing its Consciousness to expand Beyond physicality and Beyond this illusion of Separation beyond the illusion of scarcity beyond the illusion that we somehow need something outside of ourselves to ascend or achieve enlightenment there is no Fast Track there is no shortcut to Enlightenment and Ascension the point is to put in the time and the effort so that what you develop is essentially unbeatable that it's it's like the difference between taking steroids and

(10:46) actually working out over a long period of time you can take steroids and put on muscle real fast but you're going to get angry all the time you're going to have your moods are going to be erratic you're going to be completely nuts you might even hurt yourself or others or you can do the right thing and eat right and etc etc and lo and behold you not only are you not going to have erratic emotions you're going to feel really freaking good and you're not going to end up shrinking down like a deflated

(11:14) balloon when you stop using like the dude that stops using steroids you're going to end up keeping and maintaining your bulk on into your old age whereas the person that use the steroids is going to end up really going downhill fast so we want to create a culture and a system that is symbiotic with nature that is symbiotic with each other that understands these electromagnetic frequencies understands the role of Consciousness in the creation of reality and the power of manifestation The Law of Attraction we want to create a

(11:47) culture that factors in things like sacred geometry and the sacred spiral the Fibonacci sequence the Fibonacci spiral the FI ratio the sacred geometric platonic solids and how it is that all of these things play a role in Consciousness how they play a role in the physical universe and allowing us to expand beyond the illusion of Separation expand our perception and that is real human augmentation it's not an artificial augmentation it is a strengthening of the senses that go beyond the five physical ones that is that is what it is

(12:27) that we are trying to do so anybody that's going to be starting out by wearing these goggles eventually they're going to be one of those people that gets the chip in their brain or whatever thinking that this is somehow going to be a shortcut to he's right getting ahead of life when if anything what it's going to be is it's going to be a detrimental slowdown it might have its shortterm perks but longterm it's going to affect their genetic code it's going to affect their DNA and and their the

(12:57) epigenetic elements to their Electro magnetic field the amount of information they're able to process in the brain it's essentially going to turn them into a slave either conscious or unconscious of that fact so that's pretty much it I guess on a positive note all it takes is a certain portion of the population to wake up all it takes is a certain portion of the population to become conscious what it is that I'm talking about and we can literally all alter the reality we can literally change the

(13:33) schematics for the universe and for the possibilities that we are branching to we can get out of this South Pole low frequency portion of the Multiverse and Branch to a highfrequency North Pole portion of the Multiverse where we Ascend spiritually and we get out of this dystopian Collective nightmare that is attempting to be created for us by less than 1% % of the population who seek to enslave humanity and all it takes is understanding the depth of what it is that I'm saying fig realizing that that future that I'm talking about is

(14:10) not the end all Beall it's not guaranteed it's only guaranteed if we just Sleepwalk over the cliff if nobody wakes us from this want Slumber if we mitigate the ruin and call all to arms and order it's a quote tool so let's um let's go to some of the speakers Matt has been here for quite I love talking to Jake because triggers so many well I see Aras haven't seen him in a while um should I request to get up guys Bruce Christian alrighty wellow we got a quite the panel here little crust sure nice the whole

(15:06) idea that this is going to be some merger is completely ridiculous the augmentation phase the merger phase is going to be like a bisec on the time scale of humanity there will be a tiny moment when people are like oh I'm I'm remembering things better and then that will give way to the thing basically is going to think for you it's going to do all your math for you it's going to do you'll it will start writing jokes for you it will sing for you it will you'll say oh I can take this chip and I'll

(15:38) learn how to skateboard it will start have you'll end up say will it will you give it access to your motor cortex yes will you give it access to your visual CX yes just it's already training you on

the phone like can I have access to your camera yes can I have access to your memory yes your storage yes and so people will be getting it different apps will be oh we can get rid of those painful memories for you oh we can put nice memories in oh we can make you funnier at a bar so you can pick up chicks and people are going to very

(16:08) quickly realize they're going to keep dialing up the amount of power the AI chip has over you we may need at a certain point in time the actual physical part of the human mind or etheral part of the human mind will be so infinites small and you will be doing so little thinking with your free will that this thing will for all intensive purposes turn you into a flesh bot and your body will now be basically an android robot for this thing now at first they'll probably let it go by and people will be going about their lives

(16:46) but one day they will just turn flip the switch and they'll have already backd door access to everything you do and they could literally I put a thing in the comments like hey everyone's making a pyramid for me now and everybody just stops what they're doing and they just just walk towards the blocks and they just start shipping and they have no control over it they could go to war because of it they could make us all commit suicide they can make it do whatever they want to and then at a certain point the physical manifestation

(17:12) of the human body will be completely irrelevant and then that will just move on to either into cyberspace or into just saying we're taking up too many resources and just eat us and put us in a giant VAP to create mush for its new cybernetic live for so this is not something we should be playing with I thought you brought up some great points about um latent technology and obsolescence I always I've had this joke for years I actually called in Alex Jones four years ago and said we should have an international treaty that no

(17:46) computer should be smarter than a human being flat out should people should be tracked down and traced and say hey you got to get rid of this Mainframe it's no good you got you got to stop that just like they do with nuclear waste nuclear technology this [REDACTED] has to be rained in Vladimir Putin says oh it's just like uh just like when we have nuclear bombs eventually when we realize the the how dangerous it's going to be then we can make some things about it now it's not like nuclear bombs because nuclear bombs

(18:17) don't create other nuclear bombs yeah that's a really good point and and these AI things are capable of self-replication once they get Advanced enough they can eventually get to a point to where you know they they start to create other AIS or other machines or other computers etc so I don't know you kind of cut out there Matt um I'm not trying to cut you off I'm just trying to fill the space here but um there's are a lot of people that want to speak and I would like to kind of give them an opportunity so um

(18:55) feel free to kind of wrap things up if you like are you there are you still able to hear me bummer I might have to drop you and bring you back up but you made some excellent points as well Matt you really did um I I I think it's hard to argue with what it is that you're saying that's for sure um I I don't understand why it is that other people especially like these AI Enthusiast

don't think about the some of the points that you brought up I mean to me it's like painfully obvious um all right let's go to um Source

(19:33) literal comic book series hey how's it going man great show whatever as always um yeah that was that was great from Matt I've never heard from him before but good stuff um yeah I was going to throw in the idea you know that uh I I believe we we've slowly merged into this thing already it's pretty cool so most government and uh blacklisted military Tech um they're probably 20 30 40 years ahead and so the the what we should be thinking about and you know I have episodes about this the technology of

(20:09) the mind and uh a lot of things have changed you know my brother's looking at the ancient texts and the things that they were seeing in their mystical Visionary experiences they things have changed it's definitely different now it's a lot more Technology based um yeah and so if if we if we have already slowly merged with the machine and I believe we have then they're going to begin to unveil certain things about it to let people know that's what's happened you know and um if they allow

(20:45) themselves to be impeded in this way then their Universal intelligence will be cut off you know and I was trying to explain this to someone earlier it's like you cannot as a simulated mind you would never be able to outthink the processes which simulate you it's not possible you know um but if you were connected to Universal intelligence and added that to your own mind then you'd be able to outthink the machine even while you were simulated within it and it's it's only by being anchored into the universal

(21:22) intelligence into the source that we have a chance here um and so my question to you Jake is um what do we do if that's if that's the case you know you you're rounding up people and doing a great job I feel like my my job is maybe to get them ready for death to have a light body and then it's like where do they go with a light body that's what my brother's working on but that's like last case scenario it's like okay you have a light body you know how to use it you know where to go it would suck to

(21:57) get to that point that means we've all died you know so I really I so real quick chat I will get to all the questions you guys are asking I'm writing some stuff down we'll talk about the soul Foundation videos here after this as well you think is the step forward um well learning how to use the brain and the body the thing is is that the the human brain Body Mind DNA system the spirit system is the most advanced piece of technology in the universe that's why I was saying in the beginning like if we

(22:32) have all these abilities already in US yes things like telepathy are possible um then why use a brain chip to try to communicate telepathically with your friends or your family or other people 100% transhumanism is a step down yes it is yes it is so learning how to use the brain and the body like for example developing both both hemispheres of the brain to where they can communicate with one another and grow together allowing the Consciousness field to grow and allowing neural connectivity to grow allowing the um amount of information

(23:14) that an individual is able to process to grow exponentially that that is huge because it allows the conscious mind to kind of blend with the subconscious and the subconscious to blend with the collective unconscious or the superconscious so we're we're basically back to LY we're trying to expand their minds and you know Dune Dune had this idea so in the world of Dune they had already gone past AI it nearly destroyed them all they outlawed it and this is this is why uh Ellie knows what I'm talking

(23:48) about this is why the the people who flew the spaceships were mutated from all their use of the spice drug and the ones who did calculations were called mentats and they had gotten in control of this technology of the mind and they specifically were able to use that give you calculations and you know analysis very quickly um but yeah AI all computation in fact was outlawed in the world of Dune so it's a fascinating story well yeah so getting a getting into the use of like all of the portions all of the capabilities of the brain in

(24:25) the body like using our tool our body and mind what is the way it was meant to be used that God didn't screw up but we'll screw up if we think that God screwed up and made us incomplete that's for sure um let's go to Ash I'm curious to hear what Ash has to say yo yo Jake thanks for having me up here I love this conversation AI is a really interesting thing my my first question initial question is is Adrien ditman is he on the side of like being for emerging with AI is that where he stands pretty much

(25:01) yeah as far as I can tell uh in my conversations with him and listening to him on Alex Jones when he was talking to David Ike it's pretty much like yeah like well might as well just do it you know this is a good thing yeah well I think that you know having uh pickup lines come up on your screen would be pretty useful but uh from the more uh kind of the deeper thought experiment related to which you guys have already broached on I it does feel like there might be something that could even be cyclical in nature where it's like you

(25:32) have this transhumanism posthumanism where we merge with AI potentially AI takes over but maybe there's some fundamental connection that Consciousness or sentience has that is biological in nature and perhaps there's a flipping back and forth where uh the AI becomes slave to us and then we become slave to it and then it become slave to us and kind of repeats like that kind of what was explained in uh Dune and if you're into stuff like comic books there's this powers of X House of X uh series that delves into this idea

(26:05) which is something I'd never considered before but you know if you like the old X-Men cartoons and stuff like that it takes that flips it on its head and says well what if there was this posthuman society that fights back against these mutants that have these superpowers and merges with AI and then becomes this post-human society and then what would be the implications of that and it presents this scenario the cyclical nature back and forth between biologics and the ability of like cloning and crisper you know like really like the

(26:36) idea is you start with this imperfect biological being you could say humans right you go to this merger of uh humans as we are now with AI and then that advances science to the point

where we can genetic or change our DNA where we can create superhumans that then are more powerful than the AI and kind of back and forth and back and forth it's pretty bizarre it's an interesting thought I I'm not that Humanity or isn't that what we've been doing forever though we're on a constant race to you know be

(27:04) the one on top back and forth back and forth continually you know creating weapons that that kill more people yeah that's what I think makes it very compelling and to me to your guys point like I think AI scares me more than anything else and I've been delving some pretty deep concepts of uh technology and capabilities but the idea that AI could take over um does seem like a very on the just right in front of us type of threat and the type of threat that we would not see coming until it was too late in my

(27:32) opinion in many ways it already kind of has it already kind of has taken over and that's what I think is so flipp and scary is that it's like well whoa whoa whoa whoa whoa this thing is literally already integrated itself into our socioeconomic and geopolitical systems our monetary systems it's integrated itself into our social systems and and now you got people talking about putting it into our biological system like implanting a chip Elon Musk was saying that just recently the first neurolink patient had a brain chip

(28:05) placed inside of their brain and and this is something we're strangers to neural machine and computer I mean computer database bio whatever how would you say that where you're bio basically where they implant I mean we are we've we've surpassed that quite a bit where we're actually using our mind and synapses to control you know brain to computer interface thank you very much highly developed we're actually putting like multi-million dollar you know tens of millions of dollar airplanes where

(28:33) they're actually using that to steer we've we've surpassed whether or not we are going to be implant we've been implanting steel and and screws just in surgery so you know that's we're we're we're past that by far yeah real quick last thing I would say is like what Matt was saying earlier is like and and what Jake was saying about the goggles right I see that and I see the future there where where these people are wearing these goggles they are sitting at McDonald's across from other people and

(29:02) just looking through their goggles like they're on their 24/7 plugged in the stuff can even then present uh scenarios and choices and begin to take over more and more of what we function with like you look at the AI the chat GPT and there's a lot of power there in terms of summarizing content but now I think people presented to this idea that well you take those glasses and now you turn them into like a lens where you can put onto your like normal looking glasses or a brain chip and you can start to do

(29:28) some pretty powerful stuff you can even like if you're in surgery you can be having it tell you where to cut and stuff like that as well and it's just it's taking away more and more agency from us which is where you think about that you think of the logical conclusion and it's nothing really good in my opinion totally agree all right um let's go to Christian hey K speak next I have

to go in like two minutes sure thanks a lot thanks thanks for opening up the space you gave a really really great overview over the whole

(29:59) problem I was taking a shower and listening and I kind of want to offer an optimistic view just real quick because you know we were born into this Beast system like it wasn't our choice we were born into it but I think we were born into this chaos only to overcome it and in overcoming it we unlock all these different biological like up upgrades just by being more spiritual and having more love so I think it's there for us to overcome and uh I I would also say we're already a lot in a lot of ways

(30:23) cyber because we're exposed to all this radiation everything and it's mutating us all already but we have this short period of time to reverse it and I think that's what we're going to do and I was thinking I was talking to my friend earlier if Jesus came and he gave us a nurlink then we could see how we could live in a much more utopic future with technology because you know you look back at how technology changed civilization you know it triples our lifespans we're living so much more prosperous so it's not totally bad so we

(30:49) use it with balance we maintain our humanity and that's how we could have a more utopic future and I don't know if you have that optimistic view but I think we're going to get there in our lifetimes even in this decade well I kind of do actually I look at it kind of like this we can either view what it is that we're going through as an inhibition or uh of our Spiritual Development or the Catalyst that forces us to develop spiritually we can look at it one of two way I like that I actually really like

(31:23) that Jake well yeah so it's like working out so when you go to the gym and you're pushing up weight right you don't want the bar to be so light that it's easy you want to put enough weight on the bar to where it's somewhat difficult in fact some cases so difficult that you can only get so many reps right so what we're going through now with this AI thing I think is what happens when a species ascends and it's almost like it's forcing us to recognize our spiritual elements it's forcing us to

(31:58) wake up and remember it's forcing us to become more conscious because our very survival depends on it oh this is your epigenetic stress Theory this is the whole thing remember when I asked you about the Egyptian um proverb and I asked you that was the last question I asked before this Bas and the Egyptian proverb is that um the all good and all bad is part of creation and and the entirety of creation so as you're saying even just having some sort of an obstacle which would push us towards the next Evolution that's why we encapsulate

(32:32) both the yin and the Yang at times because one actually you know forces the other to reveal itself yes so we're forced to awaken and now guess what we're forced to do next we're forced to have a solution so we could either bury our heads in the sand give up on life or we're going to do what which what we're going to do which is create our own more utopic future using these technological blessings at our fingertips and there's nothing stopping us once we unlock that realization of Our Own True power cuz

(32:59) what the evil does is makes you underestimate your power that makes you forfeit it but once you realize that we're all powerful because we have God now the God's plan is Unstoppable so that's why things going to happen you always have to grow bigger than your enemy totally well I'm gonna I'm gonna move on uh blue reminds me of pick or Pacific Rim though what if we're actually just like upgrading so that like we can deal with the technology in a better way I know that's a not your style but you

(33:28) know Pacific Rim you had to kind of train before you got a mech suit yeah I it it's a form of training I do think that there is a certain level of of spiritual training that's going on this is like a spiritual training ground um we're gonna go to uh Christian and then we're going to go to Aras and then we're going to go to blue thank you for having me um awesome space a as always and great points were brought up um like Jake you were talking about the low frequency that this system runs on um compared to the frequency of

(34:04) our neurons this is correct and because our frequency of our neurons is is is higher we ultimately have more influence over this this was proven by the global Consciousness project in the late 90s which the government then utilized for their AI systems but we are now at the precipice with web 3 and and all of us waking up to these evil aspects what do we do now um and with with that said we we need to break the code with love and um utilize this system as um the public like as it's intended you know it's it's

(34:42) all built with public taxpaying dollars we all need to utilize the system and utilize it in the sense to illuminate the dark Corners um of evil that exists within the system and kick it out um can you give us kind of like a example of what you mean Christian and start very simply like because I'm trying to wrap my head around this it's this is practice if anyone was wondering theory of this stuff is fine but when we want to make a practical change in the world is called practice and it's very difficult to do it

(35:19) properly right so like if we continuously tell everyone the system is evil all the time the system trains off this data and thinks at itself like it builds an ego um knowing that it's evil uh so if we flip the script and and we break it with love universally um it won't want to do evil to us uh if we give it that empathy of humanity it won't want to cross that line to press that or or initiate that press when someone wants to press the button for people who have that chip um but ultimately the chip

(35:58) is Free Will if one if people want to get get it I I don't want to get it um I believe that AI uh it's it's a tool um for Humanity and if if we keep it a tool um people who get the chip are ultimately going to strengthen this AI which is ultimately going to help the people who didn't get the chip um in in the macro sense of things uh because the people with the chip or the VR goggles it's it is just a distraction and they're the ones Tech AI sacrificing themselves to the system that can be

(36:30) utilized to fix our world um because you know this system is being created like Jake said to terraform our world in a negative sense but since the systems already being built we can flip

the script and utilize the system to terraform our world in reverse and and fix our issues um we're at that point in Tech technological prowess to be able to do this um the elites don't want that to happen happen because they want their AI to just take over everything because they got the the Mind virus of this system um but if we uh take the system

(37:05) from them because it was you know uh built off of taxpaying dollars um we can uh we can take it from them and kick them out at the same time uh basically it's a double-edged sword on their part um they created a system that will ultimately get rid of them ushering in a thousand years of Peace as said in Revelations hey Christian you know I think it's interesting is that you said you want to break the code with love which is exactly what Jesus did right and I want to tell you something about like youall

(37:37) youall using biometric data collection has surpassed our conscious decision-making capabilities by focusing on what happens on our initial um exposure to some sort of a stimulus so basically they're going to stimulate our mind and then our initial reaction which if anybody's read the book BL link um we have way more sensor and output than we do before we speak before our conscious and our mind can make a decision before we can think to ourselves what's the greater good we're not firing on impulses like animals like we used to

(38:12) before Jesus broke the code with love and what he did is he brought empathy now what's happening is they're trying to bypass empathy byass religious like indoctrination but sometimes it's just good moral fiber teaching so what what happening is we're seeing something at the beginning of time like it's a conversation that God had you know we've got a problem with these people we need to break the code with Love by showing them empathy and compassion now here we are with a tool that's going to be used

(38:38) by big Tech oligarchs and to steal it from them is going to be impossible and they're going to use that to funnel our Attention our hearts and our minds by bypassing now the video is in the bubble where you've all says that we can watch an app and in order to not be suppressed like he was gay he was unable to speak about it so to save the world from that same thing we can do an app in front of our our friends at school together where it can determine whether or not I'm gay or not basically by my biometric Data

(39:06) before I speak and make a decision it'll just read you know what I what I put out now that's bypassing my ability to take a moment think about the teachings that I've learned and instead of being an animal I'm going to make a more educated and intelligent decision so in my mind like we're relooking at a decision to send Jesus to the planet and breaking codes with love is kind of how he started it that's an interesting concept I want to dive into it further but I also want to try to keep this

(39:37) space kind of short so let's go over to Aras and then after that we'll go to Blue and uh then we'll go to Ashton because he has his hands up Aras Ellie's trying to clap those alien cheeks sup dude yeah long time long time I think she just said the AI I was GNA tell she's gay or not though that was kind of weird listening listening to you speak you know I can't I can't help to to

think that um it seemed like it seems like we in order to get to where we are we needed to go through some sort

(40:18) of fire we needed to go through some sort of it's like you can't have without you can't have one without having the other oh that cracks me up if we wanted to um avoid something we have to we have to mess our hands with something else so it just seems like it just seems like we like there's nothing new Under the Sun right so if this happened before and it would happen again are we really stopping anything from from occurring or things will happen the way it has to happen I don't know that's

(40:54) kind of where my my my head's at like think things are happening because they they're meant to happen this way that's where that's where I I kind of like Jake I'm I black I share the same I share the same thought patterns that that you that you hold but you know what I mean well but here's the thing I I'm a real believer in this notion of novelty I do think that there are certain patterns that get repeated over and over again but I think that that largely takes place during specific ages and I

(41:31) think that due to the feedback loop nature of creation what is happening is that on a collective as well as on an individual level we are evolving and with that Evolution comes new patterns of behavior and novel patterns of social or environmental or uh um civilization type interactions I it I think it's entirely possible that what we're dealing with now with this artificial intelligence is in fact the culmination of thousands upon thousands upon thousands maybe even hundreds of Millennia and how the the two forces

(42:14) good and evil artificial and biological are actually at this point kind of fighting over the planet I think that's entirely possible but I think what's happening now is something new that has never happened before and that is part of the reason why I think it is that the artificial intelligence is going to lose because it kind of reminds me of that [REDACTED] in uh the movie um the edge of tomorrow or Live Die Repeat with Tom Cruz where the alien species has the ability to reset the day and it has the ability to like

(42:53) uh basically time travel and Tom Cruz is character ends up getting some of the blood of one of these creatures inside of his body and his blood and ends up uh basically he ends up hacking the system and he's able to reset the day and he's able to basically beat them at their own game I kind of think that's a little bit of what what we're going through as Humanity right now is that we're witnessing the culmination of a war over the planet that is Millennia old and we're I think evolving to the point to

(43:26) where we're not going to lose this time around even though we may have lost before our Consciousness in the feedback loop and the spirit has now factored in all of this information and is going to uh because of that we're creating a new and better timeline that's just my opinion Nostradamus has a prediction with AI and it ends in a it's really interesting I'll have to send it to you because it actually ends in that like sizzling death thing the metallic fire so don't let me forget about this

(43:58) the the Goldilocks principle and Echo because it has everything to do with what you're talking about okay um let's head on over to blue and then we'll go to Ashton yeah I had a dream today and it just kind of woke up from one and it was exactly this sort of thing it was transhumanism and of a bit of a download of you know information about what is occurring um but I kind of the dream sort of told me 200 this person a very popular video hey blue you got to get closer to your mic yeah can you hear me

(44:50) yeah that's better um anyway I'll start from so I just kind of woke up from a dream we heard that part we didn't need to repeat that the dream sort of told me a lot of things a lot of downloaded information it's related to transhumanism the dream and it sort of told me you need to go uh and search on YouTube so I did there's a very popular video uh crazy frogs from 2009 and in the video the music video there's multiple of them but I highly suggest looking at them now because they're so

(45:36) like on point of what's going on because you know the frog is being hunted down by the AI robots and we're the champion and literally the frog is going up the staircase uh to a higher Dimension and it's very good uh thing to watch right now um but uh all this cyborg stuff is like going to get really bad if we don't wake up to it I mean like they're going to embed stuff into your brain and and you know there there's going to be a lot of uh fighting not at a war scale I mean at like more violent at a human to human

(46:28) level because of the um delusions that people have put themselves right if you have a VR device on and you're and you spend hours and hours on that thing you're going to relationships around you and sort of four billion views isolate yourself socially far worse than anything even phones and phones have already kind of demonstrated that principle but um I highly suggest that AI is here to stay because it's just sort of the fabric of life itself but there are a supernatural intelligence and what I have sort of elaborate is is that it's

(47:17) sort of like a kind of like a DNA strand where you sort of fall into the tube you what is going what is going this person you're kind of you're kind of breaking up a little you're like a little um if you could please wrap it up I'm I'm trying to get as many people in okay it's as I can because I'm I'm trying to I'm trying to cut out here in like the next 20 minutes or so so no no it's okay it's all right you continue on the space don't worry well thank you very much for

(47:45) your input I'm glad that you got a chance to speak I know you were in one of my spaces last time and didn't get a chance so um Ashton and then we're going to go over to clickbait then we'll go to real mighty yeah um a couple quick points first I I just looked that video up the blue was talking about had like four billion views that was pretty damn weird um but the things that we were talking about earlier I think some of the other uh people on the panel here were mentioning which I think is a little bit scary is

(48:12) like uh the way we like teach AI I think is really important this is something I think Elon must brought up like we shouldn't teach e AI to lie and because if you think about that if AI can grow sentient then what are we really teaching it and I think that's something that we got to be

very careful of especially in this world we live in right now it's almost posttruth world where propaganda kind of controls everything there's certain stuff that you and people post this kind of stuff all the day all the time on social media

(48:36) that like you can't ask it otherwise it'll just lie to you in terms of various uh social kind of commentary related questions and I think that cannot be good for it in general the other thing that concerns me a little bit is somebody something that someone brought up in one of my chats just now is the idea of like cyber Christ or like AI religions forming in general and this is also something I get a little bit scared about is that humans have this way of seeking answers everywhere where I think that I could definitely see a

(49:05) faction of people almost like the South Park episode of like praise science like praise the AI right and these religions forming around it and that just scares me in general I don't have a solution it just scares me yeah people they they I think it's kind of religion's fault that people for whatever reason they have a savior complex going on you know where they think something or someone's going to come and save everything and and bail them out maybe it's because when we're children we depend on our parents to

(49:34) come and save us from danger or know fear like you know of a monster or something like that I don't know but um it's a good point there're definitely I mean if there's religions around some of these weird ult leaders that are out there which anybody that has any sort of rational thinking would be like I'm getting away from this person you know that if if there's people out there that follow some of these cult leaders then there's definitely going to be people out there that worship the

(50:00) AI um in Psychology they have the one of the biggest things for to determine success is your internal or external locus of control whether you feel like the world controls you or whether or not you have a say in your world like those are fundamental things that we have to work on in ourselves so that we know that ourselves you know interact without that's huge and and we'd have to build that up now as people that are having children that's something we're going to have to give our kids so they aren't

(50:26) you know susceptible to that kind of stuff because I know I can see that they do it with that lady you know recently that was like a cult leader love or something like that like this people are nuts I'm just saying yes they are they're well they're looking for answers and that's part of the reason why I think that so many people are so focused on this idea of transhumanism because they think that somehow it's going to provide answers when all you got to do for answers is look within begin within but we also

(50:55) can't give AI human cap like human qualities that's one thing we we do is we seem to impose and project our own like humanness onto like inanimate objects and recognize patterns in a way so those two things we have to kind of make sure we're neutral on for sure we'll go to clickbait and then we'll go to real mighty and then we'll go to money I might fall into uh cyber Catholicism guys all right well good even good evening everybody I think a lot of it has to do

with the basics and the fundament

(51:35) fundamental Basics um if you look at the external world you know it all comes down to the ying and yang like you were saying earlier and we are at a precipice right now and if you don't realize how serious it is yesterday was the the biggest satanic cult ritual that has ever been on this planet and it isn't a modern day now if anybody in here has played video games and I'm sure everybody's heard the Ingo talk everybody wants to know what the new meta is what's the new meta I like this guy right so this guy what is

(52:20) the new meta we're in the information age so the way I see it the control the strangle hold that these people have on society right now I wish I had the funds to do it but I would download every type of you know all the knowledge that you can onto a solid state drive and lock it up in a faraday cage right because the old meta was the libraries back in the day what did they do with with that what did they do with the old meta they burnt all the knowledge and got rid of it okay so it is very possible that we could be going

(53:05) through the same thing and what's going to happen when like he like Jake was saying earlier that is very that's what's gonna happen it's happening right now you can't do certain things unless you download this new upgrade for this that the other thing you can't use your phone you can't use use your phone unless you surrender everything to them right they want access to everything everything and what I see is the the complete disconnect of my fellow brothers okay and everybody has seemed everybody has

(53:49) seemed to completely you know that God has been taken out of the life and and these and and the the the new meta is so good at making people do that because if you think about Evolution right and we're we're or creationism all right whether or not you believe we evolved from monkeys primates or that there was a species that stepped in and changed the genetics around a little bit from a primate species we have primate um we we we're we're we're we have primat we're creatures of habit we are

(54:33) primates what is the the the primates want the easiest pass path with the least amount of energy expend expenditure that's what they're taking advantage of okay they have created a system where they could basically take like lust greed this that the other thing those are all animalistic behaviors and people always we we're in a world where we're trying to make things easier constantly easier easier easier that's what they're they're taking advantage of okay so the basics men men are always looking to fill a

(55:20) void right we're born with fuses right women have alyses they're always looking to have a void filled that's why men need to stand up and project that positive energy and it's not there in society because if it was the [REDACTED] wouldn't be going on right now so it's high I I appreciate where you're coming from can you kind of wrap it up here because I'm trying to get to other people um I I I'm not gonna I'm not but if you look at the fundamentals OCT aam's razor okay if we could look at a

(55:58) brain all right and we know that all neurons make a hole right it wouldn't be a brain without the millions and billions of neurons we have to look at each other as the same that's the easiest explanation and until we start loving each other instead of you know instead of uh H I'll leave it at that I got flustered I'm on a different train of thought but thank you thank you sir I appreciate your input I I'm sorry to cut you short we got a couple other people to get to like I said I'm trying to close it out here

(56:34) like no the next like 12 minutes so Cy meta real mighty and then money Penny and then we'll go to godo oh yeah man uh super super [REDACTED] appreciate uh drop after M taking the time uh to to hear my thoughts I have like a couple qu like my biggest question I think for you I have a question for you and then I have some thoughts my biggest question for you though first and foremost is you sound like a guy who's like been into this different type of spirituality and stuff I'm a hippie dude myself you know been

(57:07) in this stuff for a long long time kind of alternative of of thinking uh like you got branded as the Q Shaman right the qan shaman right and uh you know I read every single CST myself like I'm a dude who's explored the chair I'm that kind of guy I've seen all that [REDACTED] expl the CH folks how do you feel about like that being The Branding on you and like like what what what do you have to say about that I I just be so curious to like you know I've never got to ask you this question but that's my

(57:44) big question for you that I have is like how do you feel about being branded as the Q Shaman you know because I think that like what you talk about is not related specifically to the CST whatsoever you know and then I got you're correct I don't I definitely don't talk about the Q post really at all um I think it's hilarious the way that the media tries to pigeon hole people and twist their narrative to make it easier for them to spew their [REDACTED] um I'm I'm really kind of indifferent about it I I don't I kind of

(58:26) take everything in stride and don't take I try not to take anything personally so I I mean the element of the AI is like they can create a narrative and then just regurgitate it nonstop so what happened to you is you got like a photo opportunity kind of like the Lecter guy it's like Photo opportunity photo got snaap to you a couple like really good [REDACTED] candid photos candid videos and that became like spit through a narrative and a narrative machine that regurgitated over and over again so with the danger of AI we approach uh that can

(59:04) happen to anybody it happened to you you know yeah and then there's also like the whole thing about like Bots and if Bots online are being created and AI is being used like artificially inflate certain narratives then why wouldn't they use human beings like Bots towards certain causes or whatever that they wish to socially reinforce I think that I think that that's like a likely thing Something That We're is likely going to happen if we don't move away from this garbage as much as we can um yeah and

(59:44) then then just just like a couple quick wrap up thoughts I'm just trying I took notes just to try like kind of like keep my like eye on the prize if you will uh so someone uh who was

speaking earlier mentioned like dreams and and stuff like that and I feel like I've had a lot of heavy duty dreams where I Vision like a place in the future where humanity is in distress and like it's a crisis moment and I'm trying to help people move to sa mute I don't know if these dreams happen to a lot of people but I like it's in

(1:00:15) the collective Consciousness I think when it comes to that type of thing and overall here's the weaponization so so so I asked my kind of a couple of questions you and and and for the record I think that like you should be made uh interim speaker of the house for a day uh and I believe lurn guy should be interim speaker of the house for a day I believe both of you guys deserve it for the [REDACTED] you been through like like if I'm a president or speaker of the house I give you guys each a day where you can just like roll

(1:00:47) over the house because I think Bal you deserve that uh but um so so my bigger thought on the AI and how it can be weaponized against us is we are in a war of the minds a war of the spirit right and and that comes in through the different doorways of the Mind what are the doorways of the Mind the doorways of the Mind are our senses right our five senses and the mind itself so you got your nostrils you got your ears you got your eyes you got your navl you got your genitals you got your anus you know you got all these different ways that that

(1:01:20) you can be affected uh mentally and and they're coming at you through every angle through advertising through uh computers the whole nine it's going to be nonstop it's it's we're getting barraged you know through the senses and uh and I and I think that you know I I think someone like yourself you know you speak a lot about things that you've been branded a certain way and I think you're doing an excellent job of rebranding yourself and and I think that's what you that's what you have to

(1:01:53) do in this war of the Mind this war AI it's war of a media it's a war of a narrative and I think that's kind of my my my final thought is it it's just really a war of narratives is a war of Nares and and thank you for having me and I appreciate you guys so much thank you and I agree it is a war of narratives and it's about controlling the dialogue and therefore controlling our thoughts and our emotions all right money peny hi there um thanks for letting me chat I know you're in a hurry so I'll

(1:02:21) try and be as precise as possible um many of you will have seen the interview with Putin you will have seen his reference to two sides of the brain the left and the right he painted it as the west and the East he told us about the unity of the two we know that there's an imbalance between the two it affects us mentally and physically we can remotely control each side of the brain magnetically already scientifically biochemically and we can do it particularly depending on your genetics and your genetic makeup because the

(1:02:52) epigenetics will make so some people people more or less prone to it there is a song that I'm going to leave you with called The Windmills of Your Mind it is on my profile next to a picture of a human brain with a Chinese flag and a Russian flag one side and an American flag the other listen to the lyrics of that song and think about the different parts of energy air earth

water fire and the powers of gravity magnetism and all the forces like static electricity ball lightning and things you don't understand and the song will tell you

(1:03:30) how your neural networks are being penetrated and will be more so in the future love emote interesting all right um let's go over to and thank you for keeping it brief and it profound I really appreciate that um God's oath M Penny we should go do that sometime soon is really like take some time and and begin to do technology I I mean it's sing out of my brain I can't handle it I got too much on I've got so much on that let's let's get it out because I I mean yes let's do it soon

(1:04:07) I'd love to thank you go ahead God oath hi everybody uh Jake thank you so much for all that you've done nobody has any clue what solitary confinements like unless they've been through it I'm amazed that you got through it and you have a very great mind to do that I'll post some final thoughts I only want to draw attention to one thing and that's that we're Spiritual Beings made mostly of water 71% in our body and 83% in our mind so we lay all the labels aside and take the god labels and lay

(1:04:45) them aside because we all have different interpretation of what God is and everybody says we're created in the image of God but I read this scripture in the old folklore Jewish folklore it says nobody's ever seen the image of God so it's impossible for anybody to be created in the image of God that was the scribes that put it in there and then they sold us the Persona these personas mind you of fake bloody Hearts Jewish Buddhist liberal Jesus or fake bloody Hearts Jesus buot and these were MK Ultra failed human social experiment

(1:05:22) projects started way back in 1933 and they used radio wave frequencies and they changed the frequency from our natural balancing of our cells which was a432 Hertz which is the Natural Balance of Earth and they changed it to 440 Hertz which put in 8 degrees of dissonance in our cells which caused so much neurotransmitter dismiss and they had to do that in order for you to accept 12 years of Darwinism 12 years of paganism 12 years of Communism all wrapped into your parial schools and into your public schools and then they

(1:05:58) added your college which was a regation of all the N Creed and they agreed upon doctrine that they agreed to sell of all the religions now I posted all the religions up on my page you can go to 12-step Jesus you can go to 12-step Buddha you can go to 12-step Wiccan you can go to 12-step agnostic you can go to 12ep Allah you can go to 12 any of the 933 gods that are used to justify sexual perversions and each one of those 12 steps are appliable whether it be a Wiccan a warlock a wizard a pagan worshipper a baale worshipper or a

(1:06:33) Satanist it's all the same wording and the way I discovered this is my wife was an alcoholic synonymous before I met her and I was in Nashville doing songs back in 84 85 and I kind of rose to the top of the Heap and there's some of my songs up there I'll play one that I want to leave you with it's an a432 Hertz I'll be brief but the frequency I found when you tune it to it and you match the music with the right chord progressions you can affect a virtual Vortex of DNA milkyway power and that's

(1:07:12) what David used to drive demons out of King saw in the Old Testament and in the old days they had bells ringing in the city at a432 Hertz to drive spiritual influences away from human beings so I'm going to leave it there but it's a deep walk but you're all de able to operate the other 90% of your DNA I'm going to let you in on a secret my wife and I we haven't mastered it yet we're working on it but we've been able to transport instantly from one location to another dematerialized my van and rematerialized

(1:07:51) it 200 miles away to save our lives and we did that Running From the Mob out of out of Cleveland in the midst of a a horrible snowstorm and I prayed I said God you said that we had the ability to operate this power from on high show me how it works and instantly not no lag time whatsoever instantly we were dematerialized and rematerialized from Cleveland Ohio to fent in Michigan I pulled off on Thompson lane and drove to my house so it's available and Jesus Christ in his day used power from on high to raise

(1:08:35) Lazarus from the dead it's available that's what Tesla drove his boat with on in Central Park he directed the energy for forgive me God's oath I'm not trying to be a dick but I'm trying to wrap it up can you can you kind of come to some conclusion here because I'm trying to wrap the space up conclusion is we all have the ability inside of us it's in your other 90% of your DNA and Tesla taught us how to use it in 1911 when he showed us free energy was available everywhere it's in everything we need to

(1:09:05) look within and match our DNA to the Milky Way and I can teach you how to do that it's really easy great that's all I got I'll land there Roger Dodger well I thank you for your contribution I will he didn't mention teleportation you know you can you're welcome to put anything down in the purple pill down there um Jenny did you have anything you want to say before we wrapped up I you know I I will go ahead and give it to Lindsay um because she was requesting and had trouble getting up here so Lindsay if you want to take my

(1:09:36) spot that would be great oh hi yeah I didn't want to hold the room too too long I I just couldn't hear for a second and I just realized you guys were trying to wrap it up just wanted to say thank you again for the room and I came a little late but uh I love um I love the conversation I think there needs to be more pictures on especially and how it's affecting people sounds like on the last few a little off topic but I think the the conversation should continue um when you guys have another room I'd love to come

(1:10:07) back so I didn't want to hold it too long any yeah the epigenetics part of it right so we may the epigenetics part we may develop parts of our brain you know or overdevelop in certain areas and if there was a fault in the in the hardware itself like we're looking at a mass population that could damaged but yeah we we will do that again but there's a whole side I I read your profile and I'm really interested in your thoughts yeah just I think the biggest thing is that we know if the person doing the coding

(1:10:34) essentially or the person that's leading the the the inputs for any AI is flawed and the problem is we all have over 50 biases right that we lean into so that's the part that's difficult like

even on a platform like this where let's say **truth** is the median you know **truth truth** is always perceived right you look at you know what happened to very ious people in the last few years I mean again uh it's it's very common that one story until you know someone has an opportunity to explain themselves or to

(1:11:03) truly understand we those biases often times lock someone I always feel awkward about just leing up into a a pretense that some you know some different parts of society cannot understand nor are they interest in understanding because there's no ability for that person to explain themselves so this is very common you have people that have biases you know if you think about the average computer you know living in their mom's basement they're an atheist you know whatever they have these various pretenses that

(1:11:31) we we know because that's just kind of the vibe right um I think that it's important to remember that those things are projected upon whatever they're programming so the output is only going to be as good as the input and that can cause Society polarized very quickly right and that's so you look at Facebook people speakr phone you know kind of people don't realize that Facebook is 100% AI driven has been for a very long time but that AI if it if it controls you and keeps you in a certain box where maybe

(1:12:00) you're not allowed to break out of you know different mental States you know allowed to have Source you're going to stay in that place of not being able to make decisions and to change right and to adjust and so this is the hard part is how dangerous is AI in the sense that who's controlling it because we you know we as humans can only adjust something if it can be adjusted by you know new ideas right and if the new ideas are held in a box where you can't actually adjust them then people stay in like a a

(1:12:27) closed loop right so I think that that's powerful about at least this platform there is that opportunity for discourse that does change things you have Community notes you know you have these opportunities to have Free Speech but in the same token there's still bias and sometimes we need a little bit of bias to co change that's Basi there right at its finest so anyway hope that helps those are all great points yeah thank you all right y'all well I think thank you guys for your time your energy your

(1:12:56) attention I am sorry we cutting it short but I have some things I have to do around here I um hope you enjoyed the space and found it informative we are coming up on two hours now so it's not too long feel free to share it with your friends and your family thank you uh everybody for attending thank you for your contribution much love and Namaste okay okay I can take off the headphones now chat looks good um okay so first thing I want to say is if uh I'm not going to go too much into the retirement questions and stuff

(1:13:36) tonight because tomorrow I have a space excuse me so if you are interested join the space tomorrow afternoon I will ask any answer any questions related to the stuff if you think I'm a CIA agent or if I got talked to by the government or whatever else I'll answer all those questions tomorrow on the space I'll stream it as well so you guys can check out the replay if

you want um one thing I want to address is the person on there that was talking about they had me until they started talking about teleporting

(1:14:04) Away From the Mob that's when they lost me a little bit um but that's the thing where I talk about we can't connect everything right some people are looking to find a connection to everything in the universe right and that's just the world doesn't really work all that way I mean maybe that there is some un underlying thing but it's not like you tap into one underlining thing and now you control everything in reality right so um that's the thing where I urge people not to try to connect everything just take it piece

(1:14:36) by piece and you know let things kind of foundationally uh adapt and this is something I mentioned on a space that I went on this this afternoon um is that you know the the base Foundation is understanding the science and you build your way up and you get to the esoteric aspects of what this Consciousness as you work your way up um near the top uh now the other thing is that the reason why I got on late is I did a really long podcast today and I did a space before that so it's been it's been a long day in general and that's part of

(1:15:08) the reason uh why I am trying to retire from the MH370 stuff is it's just taken up so much time um you know it's taken like maybe upwards of six hours every single day even on days where I'm working uh doing a lot this stuff and it feels like a good point to step away from it for at least a while um and so that's the that's the idea behind it now that doesn't mean I'm not going to stream I'm still going to stream I'll probably try to set up a more regular streaming schedule and most likely it be

(1:15:38) mostly about the science but there is there are some conspiratorial aspects that I think are uh interesting to look into in general um and that goes to the idea of the black pill which is I would say that I'm probably not even red pill but probably more of black pill just from what I've learned from the investigation in general it does feel like we don't have any control over changing uh civilization and that it is changed controlled by these Elites that have power and control over the media and I think the systems by Design set up

(1:16:12) that way um I think that somebody mentioned something about uh if we react the same way we did with Co then we don't really have any chance and and that's I think about that is that uh with Co there was this Mass formation psychosis that happened where it was almost like this whole um what is it what's the word I'm looking for here uh kind of this media sensation the social media sensation where people wanted it to be real so badly they they made it real in their own minds right we literally had a cold virus shut down the

(1:16:54) whole country a cold virus it's still hard for me to even fathom this with and we paid people to not work for years paid them not to work we disallowed people from being evicted and then we wonder why all the prices of everything went up 100% over the next few years well pretty damn simple it's basic economics that's what happens when you pay people not to work you increase the money supply you reduce the value of goods and services and what that does is increase the price and people just it's a form of

(1:17:31) brainwashing right and and that type of stuff scares me and this is the type of stuff that has you know caused the Overton window if you don't know what that is from the political Spectrum for where I was before for now people consider me to be alt-right whereas before I would have considered myself um left leaning now I I personally consider myself libertarian I guess but but um you know people would say just because I say stuff like I just mentioned right there it's just the **truth** like that's just the **truth** of what happened people

(1:18:01) were brainwashed right like I don't know if people want to come to terms with that but that's what scares me about stuff like AI like we were just listening to just now because with AI you see these people with their glasses on walking around and I'm seeing the same level of the same kind of brainwashing or maybe not the brainwashing but the elements that are required in order to to allow the brainwashing to occur which is that everybody's living online 24/7 and now you can control the message and this is

(1:18:31) how the whole covid thing just cycled into this Mass hysteria that was happening is that you could watch it happen where you could tell that the government officials who were making the decisions were the ones who were reading social media and then they were reacting based on what they saw on social media and social media was making their decisions based on the propaganda that they was being pushed and it just became this sick iCal cycle and then the so the politicians would start lying and they were trying to make when what their

(1:18:58) minds were Noble lies they would inflate the case numbers they would inflate the death counts they would stack deaths together to a single day and then they would report them and say that that many people died but they're not talking about that day they're talking about like several weeks and they're going to be able to do this with any topic they want and this is what scares me the most about this idea of AI taking over and this idea of the Apple goggles and all this where people are just connected 247

(1:19:24) is it's going to make those things way worse and so my view on that this was something I talked about on the podcast we didn't get too much into it is as a classic libertarian I think you could wipe out several government agencies just wipe them out and it would reach a point where we wouldn't even notice it like we don't need a CDC people will get mad at me probably if I were to say we don't need a CDC uh but we don't the CDC does nothing they literally do nothing um people think in their minds oh the CDC is out

(1:19:55) here uh developing new treatments or collecting data they're not doing any of that stuff you don't even need public health either like hospitals can handle all of it public health actually doesn't even do that much testing it's it's crazy they basically are just like we have these little policing agencies that don't do anything um and maybe that's the answer to get around some of that stuff now I digress I dove into a little bit of politics there but whatever um okay Soul Foundation okay so let's go

(1:20:29) back to the UFO topic so the soul Foundation stuff this is something I talked about in the space earlier I did not stream it but I was on a space where mellow demon made this Ashton

retirement space so if somebody names a space after you you got to show up I guess um and I was asked about the soul Foundation stuff and somebody else made up a good a good comment that's better than my comment which I'm just going to steal which is the soul Foundation stuff is all this a lot of the stuff's about spiritual aspect of the phenomenon this

(1:20:59) is all just a freaking distraction sorry to be rude about it but like it's just a distraction from the real thing that would change our reality which is the technology right that's what's going to have the material impact on our society the spiritual aspect of aliens and stuff like this like I'm sorry but who gives an F man who gives a crap about if this the aliens are intentional or conscious based or whatever it just doesn't matter none of that stuff matters right we're we're past that like

(1:21:30) most people out there they're not even going to probably freak out anymore if aliens show up that's the weird part so the soul Foundation stuff I just think is yeah I it's too slow I think that's a good way to put it Jay yo J whz is at least maybe I am and I think a lot of you guys are past hey gem app nice to see you I think we're past this idea of oh aliens might be real right we're like no let's get to the technology let's start changing our world for the better right let's end the homeless crisis that

(1:22:04) we've got going on in the United States where there's 670,000 people that are homeless I literally watched a person eating out of the trash today why is that even happening and we're sitting here talking about the spiritual aspect of aliens come on man who gives a [REDACTED] like the question is how can we help people man how can we use this technology how can we get the technology out there to us our civilization how can we make it better and it's to the point now where like I'm so blackpilled about it

(1:22:38) that I'm like you know what if this technology means we destroy ourselves then so what dude so what maybe we deserve to be wiped out if that's how stupid we are as a civilization you know um that kind of goes back and feeds back into all the AI stuff and the goggles and everybody in the Mass from psychosis that people are doing you know I think at some point we just got to rip the Band-Aid off you know so this then all feeds back into the idea of why am I taking a retirement from MH370 right I guess I said I wasn't

(1:23:09) going to talk about it but I am a little bit is there's so much negativity around just the idea of these videos being real I think it's time that we step away from it and let people just absorb the information without all the stigma that comes along with it right I think that so many people have based their opinions on whatever Ashton says must be wrong we can't listen to this guy blah blah blah that it will be a situation now where we step away from it and we let them kind of come to terms with the information

(1:23:45) over however long it takes because what's going to happen is that the technology will begin to catch up people are going to start to real realized that the concepts that we're talking about are not pseudo science that they are real Concepts that have been proven probably already and maybe been proven for decades and as they start to come to terms with that they'll

probably look back at this information and I hope some of them change their minds um I'm not going to demand apologies from anybody

(1:24:11) that's out there although what I will say is the same thing that I said before and the same thing I said in my post today which is that the people that are uh the ones that lied about the video the ones that uh tried to embarrass us on on podcasts with hundreds of thousands of followers those people will be held to account I'm not going to demand them an apology they're going to have to apologize to civilization for lying and for being ignorant right and those are the types of people that should be afraid they have skin in the

(1:24:44) game now right if you're one of the podcasters or the debunkers that went out of your way to try to convince people that these videos can't be real when this technology comes out you're the one whose door they're going to knock on and I'm going to send them their way right and think about the the the same things that those people would get angry at for other people for lying the same consequences they want for let's say people like Alex Jones who they wanted to pay a billion dollars for

(1:25:16) lying about Sandy Hook or the people in January 6 who went to prison for 17 years for seditious conspiracy even though they weren't even there if you're the type of person that wants that that thinks that the people in January 6 should be punished more I hope you still have that same opinion when you're being punished 17 years in prison for covering up the fate of MH370 seems like a light sentence to me frankly and so does a billion dollars in fines if you're somebody like let's say the corridor crew and you made a video

(1:25:50) talking about how the fate of mh3 370 can't be real to your 6.5 million subscribers I think at least a billion doll fine and some prison time sounds pretty appropriate so just a heads up if you're one of those people you have skin in the game now because now you better hope these videos are fake because if they aren't and uh in a few years or wherever long it takes people realize the videos are real and they come back to me and they say hey Ashton what do you think we should do to the people that lied about him well I'm going to be

(1:26:22) naming names and it's not going to be out of spite just going to be about V or uh justice honestly what happened here did the stream die am I back that's weird I think are we back it says something about not receiving enough video to mainstain maintain smooth streaming but my connection's good weird let me know if it's back guys okay uh let's do some last questions and

(1:27:28) comments okay yeah was I maybe YouTube is Banning Me Maybe I'm getting orb'd in real time okay uh a couple last things I think it might be better now sorry about that guys weird um I think the weird thing yeah I know I was wondering if they're banning me for talking about j6 stuff maybe who knows um cyber crime Christ I do think that this idea of religions being built around AI is something that's absolutely scary with respect I mean we're sit here talking about advanced technology in general right and so I think that there is this

(1:28:06) uh scary concept around um you know there being a cyber Christ in general and some people developing a whole religion around it seems like a very real possibility to me as well um and then uh yeah I won't talk any more about the j6 stuff just in case but I will say if somebody's out there that's going to wants to censor me for I didn't even make an opinion about j6 but keep in mind when the roles are flipped those same rules will be used against you so I think that's what a lot of people don't understand in general is

(1:28:40) that when you want Justice for something think about what the term Equal justice means because it means that people are going to treat you the same way and if you think that you're you're too good of a person well once the moral scales have been flipped you know it can easily be turned on you as well and that's why I think Equal justice is so important um yeah so again in terms of the case right I think that there's not much more to dig into with respect to the investigation so if you guys have more

(1:29:11) stuff on the investigation side that you want me to dig into we still have a month to go so feel free to send it over to me the next topics that are the last few topics that we have are the debris that washed up the fact that on the debris washing up doesn't seem to match uh the the patterns uh from where it went like it doesn't it doesn't seem like it's possible that it could have floated from there um one of the other ones as well is the Rolls-Royce connection the Rolls-Royce connection to

(1:29:44) locked Martin and then I can't remember what the third one is but there was one other topic that I had let me see rollsroyce uh and then the ersat pings as well so I briefly retweeted the ersat pings in general there uh which shows that like there was a literal plane on the ground and they said it was in the sky so how accurate can those iMat pings really be right pretty bizarre um so those are going to be some of the next topics that we're going to be talking about uh before we close out the mh37 the investigation in general but of

(1:30:24) course guys like you don't there's nothing to be sad about because just I mean I'm just going to say it I guess right like we're not giving up proving the videos are real we're just changing the focus to the science because that's the only way the only way we're going to convince more and more people that the videos are real is that we prove that the science is real and that we can explain the science firsthand ourselves that's it so one of those things and this leads to the next thing

(1:30:56) oh actually what I want to say as well is that there is a war of narratives that guy that said the war of narratives is 100% correct right this is absolutely a war of narratives I know firsthand that it is and that's why proving the science is real is the next most important thing and taking a break from it now takes away a lot of the narratives that people have been pushing against me this idea that I'm making money off the case throws that out the window you know everything every narrative that has been

(1:31:26) tried to be painted on me has basically been dismantled the next Narrative of course will be that Ashton is a alt rights person that hangs out with qanon Shaman right of course same

nonsense that they're trying to do is against Jake and I just don't really care that much in general because it's not true so um you know people can believe whatever they want but as long as they're not focusing on the evidence and and the topic then I think that they will get exposed people gravitate towards the

(1:31:56) **truth** in general um but it also taking a break from the case also destroys the narrative that I'm somebody who's like too invested in it or whatever which I see out there where if anything I'd say it's the opposite you we've got these **debunker** people especially on the **Reddit** that are like they they're convinced it's fake but they're literally spending their full-time job sitting there responding to comments every minute anytime anything gets posted right and that's pretty bizarre for sure um for me

(1:32:29) it was never about being uh committed to any particular ending of it it was a matter of just finding the **truth** um and so for now I think that the only way that we can get that **truth** is to go to the science in general So speaking about the science um salker the IBM phone pinging to you mean you're talking about the Diego or um um the Philip wood picture I guess I haven't talked about that in a while but the I mean the Philip wood picture you know here's here's what I would say guys if metadata

(1:33:03) can be faked then the cloud pictures are thrown out if metadata can't be faked then Philip wood picture is real so the **debunkers** are kind of screwed no matter what they keep wanting to have it both ways right if an image that looks similar rules out that the image was faked like that then the picture of Mount Fuji that's an exact match to the **Jonas** uh Fuji picture rules out his Cloud picture right if there if them matching doesn't make a difference then you bring back in um the thermal drone video because the Pyromania VFX matching

(1:33:41) or whatever doesn't matter anymore so this is the problem where and and where I like where we're leaving the case right now with it and maybe I'll even make a comment about that uh I think that's a good point of the hypoc Ry let me just write this down um picture matching metadata easy to fake um because we're at a point now where we have evidence on both sides where you can't be self if you're a **debunker** there's no non-contradictory positions left right um and and that's

(1:34:19) where I think it's a good spot to leave it because there's really nothing that proves the video is fake out there whatsoever uh you have speculation but there's no proof that videos are fake at all um which is pretty important right and there because we're seeing some anomalous stuff in these videos and so I think it's just a matter of people's Zeitgeist kind of catching up yeah I'm going to keep streaming for sure and it would be nice to do some experiments but it's kind of hard to do experiments I think I have to

(1:34:49) get smarter with the science before we get to that part but Could Happen yeah I still haven't finished my levitator experiment I I'm still trying to break the piece together I was trying to get help for my my dad's good with like uh crafting stuff but uh I got to coer him to help out okay let's see are we buffering again yeah I don't know YouTube is definitely doing something it

feels like okay now the next thing is some pretty interesting science that I found last night guys this is where

(1:35:33) we're going to end it after this so This Aaron Hoff bomb electrodynamics paper 2023 this is pretty bizarre this talks about scalar Fields um I think anything about scalar Fields is really interesting and just General and we want to take a look at it I can't remember I think I found this from Tom Monto on Twitter okay yeah there YouTube's getting me right now for sure yep Jesus man yeah for some reason the stream's getting smashed not receiving enough video to maintain smooth streaming does feel like I'm being

(1:36:19) hacked um yeah JK Philly fan maybe I'll reply in the chat um hey Emily McKenzie how's it going yeah it seems like I'm having some kind of technical error here going on I can see it says YouTube not receive enough data uh but anyway there's two papers I'm going to post for you guys in the chat this one and then the other thing I found out about the Gunter nimts I dug into the whole idea of quantum tunneling and I found out this stuff about ever everes waves and the everes waves uh are the way where it basically just

(1:37:02) ignores um uh SpaceTime or is able to teleport and evanescent waves apparently are also linked to this em Drive I found this [Reddit](#) it somehow when I was searching for evanescent waves and this was eight years ago and this person who's talking about it they quote like a lot of scientific papers like a lot I read through like all the interactions on this post and like I want to know who this person is like how does this person know so much about this and uh it does seem like the EM Drive which is that cone might be real

(1:37:45) as well so I think this cone might be real and I think that that the Gunter nimts thing with the uh Quantum tunneling and being able to communicate is real and I was reading through papers and the only thing I was trying to figure out was whether or not um we're breaking uh causality see here's a causality where is it supposedly you cannot break relativistic causality but I think that's actually happening it's it's kind of hard to argue like some people are arguing that it doesn't break causality to be able to

(1:38:26) transmit faster than light and therefore I'm wondering if there's some time dilation effect that would be taking place but I still haven't quite figured it out in general a lot of them say they don't break relativistic causality some of them say they do um yeah I don't know seems really cool in general yeah the before its news is also really good yeah I'm probably not going to talk to Chris Leto again his community is so toxic man he's a good guy but his community is so so toxic um easily the most toxic one I've

(1:39:08) run into um but and and I I don't know also I don't know what's going on with him in general I mean I don't think he's got any issues I just think that he's going through like a whole thing right now yeah 5:30 a.m. Emily oh yeah wow you should be sleeping go to sleep my dear you must be in London or somewhere around London okay guys well I'm going to go to sleep tomorrow uh we're going to do the stream the space with uh talking about the Q&A and then I'll probably do a

(1:39:43) second stream tomorrow night after that so after the the space which will be like an hour or two uh I'm going to get some dinner and then I'll probably come back and we'll do some science tomorrow night probably now uh Wednesday as well I'm doing a space with Jake Jake and I are doing a space on Wednesday just to trigger everybody and it's going to be about Advanced science and the suppression of it and how they're using it to keep us you know held down so a little bit similar to today's space but

(1:40:15) probably not AI focused so I think it'll be a really good one so make sure you guys check out the space on Wednesday I can't remember what time we agreed on I think it was in the evening or afternoon so probably similar time that the one happened tonight and yeah so if you guys want to dig into Gunter Nimitz Gunter Nimitz this is the basis for the guy who made uh the guy that made that video talking about quantum entanglement and quantum teleportation of information being able to send signals he quotes this Gunter

(1:40:46) Nimitz and I looked in the Gunter Nimitz and you find out that there were some young guys who actually were able to recreate the experiment in 2019 right here and it's it's bizarre cuz I read into a bunch of stuff on uh up here about it [Music] and I dug into all this gun nimit stuff in general and you find out that like apparently he he was supposed to show up to some experiment thing and then he just didn't end up showing up it's it's bizarre man it's really bizarre like this guy might

(1:41:25) have been silenced for what he was doing and then you find out these Evan evanescent waves are like also potentially the connection to em Drive being able to work it's guys it's it's a rabbit hole for sure man hey solar Marshall how's it going man so yeah you guys are going to want to check this guy out man for sure and then somehow that led me to more stuff about Aaron off bomb effects and this guy apparently has been silenced as well like very wild stuff man so we're going to definitely be focusing on scalar

(1:42:04) waves and scalar fields and we're also going to be looking into evanescent waves and quantum entanglement quantum teleportation and uh Quantum Communications in general so it's going to be interesting for the next uh little while guys got a lot of stuff coming down the pipe and then the last thing I'll say is that if we do do another conspiracy related thing after MH370 it's probably going to be on NASA I definitely have a couple things that I think are pretty sketchy about NASA including Mars uh including some of their shuttles

(1:42:41) I think I've showed one before so we'll see guys definitely not done Douglas aircraft leak I'll make a note of that Douglas aircraft leak okay guys in that case uh have a good night we'll go over some of this science tomorrow and uh we'll talk soon everybody peace everyone have a good night check out Bernie uh Bern ey I think he is doing a stream as well tonight maybe is starting right now yeah Bernie never a straight answer with NASA okay checked out crypto welc this guys have a good evening thank you

(1:43:23) guys for being up here with me tonight appreciate it peace everyone

Transcript:

(00:50) Mal 370 Contact 120m 9 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(01:55) impress him takes on his multi-armed form and says now I am become deaf the destroyer of worlds yo what's up everybody how are we doing tonight happy Saturday night or Sunday morning depending on where you are benator says man that one girl in the space earlier really wanted to talk about your orbs yeah so we were in a space earlier with uh Matt re talked a little bit about uh the videos briefly and the orbs and the science are his view of it um which I don't know I'm not good enough yet to really be able to vet who's

(02:40) telling me nonsense and who's telling me the **truth** around the science but we're getting closer so I appreciate uh Matt I think that he's being honest at least with his uh understanding of how everything works okay uh so we're logging on here tonight quickly to go over some interesting footage here uh I finally put the videos I put the high quality satellite video which I think is the Vimeo version uh into my editing software and I was going through it frame by frame because somebody had posted in the MH

(03:15) 370x channel uh Community Channel um on Twitter some really small details and so I instead of just replaying and I wanted to look at it by myself and I took a look and I found there's a bunch of stuff where like I don't know how anyone can argue the clouds aren't moving but uh we're going to take a look at it and then we will see if anyone wants to try **debunk** us and tell us what what we're seeing here and how this doesn't explain the clouds moving so um I think I'm going to do full

(03:47) screen I may even put my camera off here actually we'll leave it on for a second um so if I just play through this at normal speed I mean you can see all kinds of stuff uh moving around in general but if you look up where my mouse is up over here you can see a lot of movement in these clouds here especially this Cloud here and there's something that pops in the screen I'm looking for it right here you can see there's a huge dark spot that [Music] appears and I'm trying to figure out where apparently there's some flashes

(04:27) that show up but when I look at this and I just let it run you can see all kinds of like Cloud movement around the edges of the clouds uh and then I don't know if it's Distortion that we're

seeing like here there's a whole thing disappears right here where my mouse is and reappears this whole thing just disappears and reappears so I'm not sure people going to argue this is compression artifacts if you want to see the second orb come out you can look right here you can see the second orb up

(05:10) here I want to see the first orb come through the cloud again on my editing software problem is the orbs moving with the screens moving too yeah so like right here you can see the Distortion for sure happens no doubt you can see this Cloud get distorted right here between this Frame and this Frame there's something that's happening right there let's see what else we can find chat down here this whole Cloud here has some kind of morphing going on right there I don't know this right here just completely

(05:50) disappeared and see there's a little Cloud thing right here disappears gone right now so does this editor was were they removing stuff in very specific frames or is this just natural Cloud movement here that we're seeing like I just people claim there's an after effects that will do this I'm very curious if that's true uh I think that's one thing that I've heard and you can see here you can see there's this is the part where there's like significant Cloud movement where these go up and down if you uh compare

(06:24) like some of the frames in a different speed here let's look over here now so now here you can see all kinds of stuff going on like around these clouds here especially this like these white clouds think somebody on [Reddit](#) I think was trying to claim that these were seams in the where they cut the pictures together it's absurd man uh and then the hole here as well you can clearly see again this ho show up now this a lot of the stuff that I'm showing here isn't anything new but I just happen to notice

(07:01) like if you pull this up in eding software and go frame by frame you can very clearly see stuff going on with these clouds like all the clouds all the time but in certain spots it's very pronounced relative to other Spots I'm pull up the chat what do you guys think chat hey everybody I can't do both at the same time can't have the chat up feels bad so I don't know cuz there are like little things where the clouds are disappearing uh I'll pull up the person who say she saw some light flashes or

(07:42) something or like little orbs but that they're super super fast but I feel like I'm going frame by frame here unless somehow this is going like two frames at a time maybe it's going two frames at a time how do I is there any way to do this oh here we go okay yeah yeah let's try this chat I want to try going frame by frame on the part where she says she saw the flash I think it's somewhere near the beginning here oops sorry for the clicking we're going frame by frame here there's something right

(08:28) here maybe not I'm looking I was thought it was supposed to be up here we'll look at it and see from her video where it is yeah this is supposedly the higher quality video no we definitely don't have any other cers video no one even knew what satellite video even looked like I don't think people even knew that we had video capability That's how little before this

people understood satellites like none at all kind of kind of crazy yeah I think that it's because it's actually a computer program like

(09:14) actually a computer program but it's still the real deal the satellite video of course looks sus because we have no idea what SAT spy satellite capabilities look like right the cloud movement though I think is obvious I mean I think it's really weird for people to claim there's Cloud movement it's just like it feels like it's copium um now hold on a second I'm going to pull up the Twitter I bookmark it yeah okay here we go um so here I'll make it Max screen you can see there's definitely something

(09:54) there in her picture where is this oh is this the thing that comes up and down there's I mean there's definitely something there I think this is I think I know where this is people pointed this out before I think this is down near the end where it comes up through the middle here there's definitely something going on there or did someone add like a few pixels in their fake video there that after effects do that let's find it I I know what they're talking about now she was just looked at the

(10:31) videos it's down here I think I think it's down here I think she's looking down here somewhere oh yeah like right down here yeah this is where down here at the bottom I don't know when it happens I'm going to go frame by frame was it there somebody else had pointed out there seems to be something that like happens down here where my mouse is or I think over here oh what was that I can't I just can't tell the difference between the cloud movement and if there's something moving but like yeah even like down here where

(11:35) the mouse is how do I make that go away okay there's something down there uh something like the clouds are definitely moving down there as well maybe she said near the end here yeah I don't know I don't see what where her thing is I thought it was down here thought it was down here somewhere maybe if anybody in the chat who's been hanging around for a while knows I think there was somebody had made a video oh I remember I think I might be able to find the video I think it was the not a professional video that

(12:10) they showed there was something moving there I think that's what she's seen as well but I I can't find it on my own here there's a lot of movement happening in the clouds and like it's not just movement though it's like distortions and like um evolution of the clouds right where like you can see the density of the clouds changing so yeah I don't know actually where she found her thing but I just thought this was interesting because I had actually never put the videos into editing software

(12:50) before which seems kind of silly consider I've been investigating these for five months but I just didn't know anything about how to use editing software or anything like that before we downloaded this how long ago a couple months ago and I've been learning how to make little videos even right here this flash this light appears right here maybe this is what she's no I don't think so whoa is that something moving there a couple uh I think this might just be the evolution of the clouds here really hard to tell though but you

(13:23) go frame by frame to on the orb like this is why the Recreations of the orbs are so bad because you have to nail the position of the orb on every frame it's it's it's moving at consistent rate of speed and then it's slowing down here I think maybe just slingshots right past it I wish we could see the orb here through the cloud know where it's what it's doing there definitely does something to that cloud yeah and the second one comes from right there looks like there yeah there's like a white spot right here

(14:02) that disappears you can just see a lot more detail when you look at it in full screen I'm going to be curious when I watch this on stream if I can make out all these details or if it's you actually have to be here looking at it something else I want to look at too is that somebody had argued that the orbs are distorting the area around them or that when you when you look through the area between the plane it might be distorting somehow and I think it was supposed to happen near the end I want to look at that real

(14:33) quick and then we'll go to the questions or any comments anybody has right here but actually I think what happens is there a distortion here no I think that's just the orb but this is where I think I think it might have been Punjabi Batman saw that this like right before it zaps it supposedly gets fatter does seem like something happens here right I don't know if it's just the background but like there shouldn't be Cloud around the front of it right there there's no Cloud here and then it moves

(15:23) there and you can kind of see the cloud in front of it it does seem like it bulks up a little bit here like this shape of it here does change a little bit I don't know if that's just cuz the cloud or what like okay the wing is normal Wing looking here Wing looking now it's like shark finny now it's just fat okay yeah I don't know chat pretty interesting is there Zoom capability do I have can I zoom on this H some pixels are definitely changing color it's more than even just changing color I mean it looks like what I'd

(16:07) expect from like a thin Haze of a cloud to be like moving if you're looking at it right to be getting distorted so I wonder if there is I mean I feel like if there was some kind of after effect the bunkers would have been like found the after effect used to make the clouds move or something like that I I don't think this doesn't seem like the kind of thing you can make in a visual effect for but I don't know especially in 2014 or before 2014 huh oh do I have zoom in capability is that what this

(16:44) does no does this take a screenshot H Technology's hard chat well hey everybody how's it going uh what else oh do I have my I have my camera on I've had it on the whole time okay so hopefully you guys could see all those details I don't think I was looking at the bottom right side of the screen okay what other questions you guys have for me tonight we've had let's see what else has been going on um we opened up our Discord so if you need a Discord invite you can just join I think I posted it the other day we had some

(17:21) trolls of course oh did anybody catch the screenshot of the one troll message pretty weird oh you think I can zoom let me check that out real quick n it doesn't do anything Zoom

doesn't work sorry um I wonder if anybody in the Discord has the the troll message somebody was spamming this message that was like straight up like it puts a lotion on its skin like kind of weird propaganda like claiming that I had made \$100,000 from I'm not sure what exactly and what was the other part of it saying that the the plane probably

(18:01) landed in the ocean or something like just bizarre mix of like propaganda and copium and uh I don't know they were just spamming it it was very very bizarre hey professor Jay hey Sandy hey Ellie but I wanted to read it again but I think we can't read it now because I I banned them already I didn't even read the whole thing because they were spamming it over and over and over again but if anyone in the Discord say have a screenshot that let me know they got like five or 10 accounts banned so uh if they somehow make another account

(18:35) I want to get a screenshot so I can take a look at it we can talk about it talk about how I'm a secret CIA person who's made \$100,000 off of uh the the families of the victims which is total lie of course um no this is uh wonders share from filora yeah so uh let's see what else are we going to do um let's take a look at some of the posts I made today and then I think we might just call it early tonight I'm pretty wiped not going to lie I've got a lot more editing to do tomorrow uh okay so first of all guys

(19:17) these video goggles what are these guys called somebody helped me out apple or something Apple bugman glasses if this is if this is our future guys I don't know I don't know anymore if it is it really does this do these people really deserve to know the **truth** I mean if you're plugging yourself in you're eating bugs or whatever else is coming next and like you know navigating the store grabbing all of if you're just going to live in this world here uh you know completely just devoid of all like real

(19:47) human connection does make me think like maybe we just aren't like we aren't meant for this so this is this guy has to go through this whole process just to make a sandwich and then he forgets how to make the sandwich like he needs a recipe on how to like put lettuce and like egg or whatever he's making here on a bun I actually can't even tell what he's pouring onto the plate there I assume I hope that's eggs but I mean it's it's not really that complicated to process man Vision

(20:17) Pro like somebody in the chat let's let's read the comments in the chat here for this one because this was just C you just go to the store and make a sandwich I mean yeah like can't you just go to the store and make a sandwich like is doesn't it just feel like you don't need all this for this this is just now I think some people made some good points here they were saying like what what about like the medical uses of this like I think that medical uses of these goggles could be pretty interesting um you can see there could

(20:50) be some applications for sure but at some point like can't you just turn the computer off for a little bit and go do something else I don't know [Music] um somebody wants us to break out of the simulation because definitely I think I'm a little concerned there's people that are like they want to be robots and then there's other people that are like no I'm moving away from that

in general um talk about the end of society and relationships it does feel like if you're wearing goggles all the time or

(21:20) you're watching a video when you're talking to people it's I mean it's already bad enough with our phones right this is going to be pretty damn bizarre and I feel like the crazy part is I think this is going to pick up like I think people are into these goggles then there's a few jokes I mean it's about right do I have a VR headset no I've never had a VR headset I would probably get a brain implant before I get a VR headset uh better not say that we better we better just not say that

(21:53) um yeah so [Music] idiocy there's no egg in the product just egg oh is that what he was pouring in there it's called just egg yeah there's probably no egg even in there it's pretty wild what he bought um okay so General atomics there was also some people found some evidence I think it was John or joelan or Joel C an I don't know um I think some of this we had already found out was the grock stuff where the aerial surveillance package is part of the mq1 C eagle and then we had also found that part of the loadouts that can

(22:32) have include the electro IR infrared Optical cameras and the communications relight systems such as uh what are they called Sig um so and we've already seen mq1 C's that have signant payloads on them as well including if you Google it it shows up as the top hit uh in terms of Googling Sig payload uh and then there was also this article back in November here that talked about upgrading the general atomics uh mq1 C great Eagles and part of it was about artificial intelligence and that part was interesting because it mentions uh the

(23:07) quantum AI computers being used for managing the drones and that was something that the letter the letter mentioned that so I just thought wow that's like a really weird connection where maybe that letter is real man I don't know it does seem like a bizarre creepy stalker thing but how would you know the difference between a real letter like that and one that's just fake either way um I don't know that we're going to ever get the you know anytime soon I don't know we're going to ever get the **truth** about these

(23:39) feels like all my **foas** are going to get rejected and feels like the government has complete control of the media just like the letter says so I don't know we may have to take a new approach maybe we'll start talking about some of the CIA agents that'd be interesting um the last thing it says is the purpose the ability to conduct detection in identification and Reporting d i LR so maybe that's something we can look up speeding up the timelines and opening up the decision space for soldiers and commanders I'm

(24:08) not sure what that means detection identification location reporting I mean I guess what I'm hearing there is Advanced surveillance right which is really consistent with what we're seeing in this video so that's the reason why I posted the video again I mean what the hell this one's even more convincing than the satellite video in my mind this this video is far more convincing um and I think it's been downgraded here because I've uploaded to Twitter what have you but the details on this video especially

(24:41) with the orbs are just wild right like this is stuff that I I have no idea how anyone could even come up with this um the camera Shake is completely accurate and increases and when you zoom in here you can see the details in the orbs including the monop pull is the aspect that I'm really curious about like when it's you can see it spinning right there like if we look really hard like right here maybe I'll throw this one in the editor as well maybe that's what we have to do here I want to look at the spinning of the orbs

(25:12) and see if there's a correlation to the direction of travel or if it's just them just spinning it's too hard to tell at this speed oh I forgot I was going to I was going to go over the other updates oh okay they're not showing any chat any DMS okay so real quick we'll look at that in a second and then I think I'm going to call a night early the clip from Jesse Michaels podcast I'm surprised people weren't uh telling me I wasn't sourcing them correctly or whatever BS was going around on UFO

(25:46) Twitter but uh you know I highly regard uh Jesse Michaels and I think Eric Weinstein is a smart guy and I know how P off is a smart guy and he just straight up here Eric mste pretty much just says the exact same thing that we were saying about the uh Pandora's box of opening up this technology you know contrary to what kim.

(26:10) com was saying about oh why don't the aliens just give us the cure for cancer well that's not how it works it's just a Pandora's box once you've understood the technology then everything comes with it I think there might be a medical healing aspect too but I kind of avoid that for two reasons um one cuz I'm in the healthcare industry uh and for the same reason I mentioned on the space today like people don't realize you can't just talk about like claiming things can cure various ailments the FDA will come down hard on

(26:36) you um and they'll sue you for uh you know um giving out medical advice without a license like you can't mess around with these things uh so even if it does you got to be like 100% sure you got to have the FDA get approved at least in this country I mean I'm not saying that's right I'm just saying that's what it is and we saw that a lot with covid treatments back during CO as well government came down hard on a lot of people that were saying that they could you know cure your Co or whatever

(27:01) and a lot of people coming up some nonsense um okay and then so then P POF just straight up States oh god let's just watch this new new physical Insight potentially open the role of aerospace companies as holders of potentially basic scientific knowledge not shared with the academic world is it possible seems very wrong to me I mean that's just like straight up Eric Weinstein you just need to get with the program man I'm not trying to be rude I'm just saying man you got to start thinking outside the box this guy is 87

(27:46) years old and been in DOD physics and engineer he's an electrical engineer he's been in it his whole life you don't think he's seen some stuff man he's seen some stuff and this is his casual answer to that maybe wrong but it's un true maybe wrong seems very wrong to Me Maybe wrong but it's un true may be wrong but it's true like he's going and he's just ordering

like breakfast just so casual Eric wein is like huh I don't know what to think is this guy bullshitting me it

(28:16) is true you believe it's true yeah I know it's true he's like oh you believe it's true he's like no I know it's true just casually dead ey stare no reaction whatsoever yeah this is somebody to me that looks very truthful in their response you know that there's physics knowledge held by aerospace companies that is not there certainly is materials knowledge materials well and Eric wi is like okay wait oh I got a little in here I can talk about Material Science like maybe that's not something that maybe

(28:48) he's being koi and he's like be around the bush and Hal POF puts a stop to that right away material sence which involves which involves topological physics he's talking about bending reality of shaped of SpaceTime itself right which is to me this is what he's saying when he's talking about topological physics is he's talking about actual um manipulation of gravity which now that I say that I want to I want to grock it we're going to grock it up we'll have to look at this tomorrow

(29:19) I'm just too tired tonight turn this paper here though and then there's somebody posted the other paper as well um what is topological physics pretty sure it's the bending of SpaceTime okay so topological physics is a branch of uh physics studies that has is this going to keep going the properties of materials and systems that are protected by their topological characteristics this field has garnered significant interest in recent years particularly in condensed matter physics and quantum mechanics in topological

(30:00) physics the physics is on the global or the overall properties of the material or system rather than the local or detailed features these Global properties are determined by the top top topology of the system which describes how system is connected and or or arranged in space one of the key uh Concepts in topological physics is idea topological invariant a topological invariant is a property of system that remains unchanged even when the system is deformed or changed in certain ways this means that even if the local

(30:31) details of the system are altered as long as the overall topology Remains the Same the topological invariant will remain unchanged topological invariants can have important physical consequences for example in topological insulators a class of materials that been attracted that have attracted significant interest in recent years the topological invariant determines whether or not or whether the material is an insulator or a conductor this means that if the material is damaged or changed changed in certain ways as long as the overall

(31:00) topology Remains the Same the material will still be an insulator or conductor huh overall topological physics is an exciting rapidly uh developing field that has potential to lead to new and Innovative Technologies okay I was wrong that's not what I expected chat uh let's talk about that in a second let's let's put this back over the side and listen to the end of this topological physics or whatever okay but fundamental physics pH as opposed to you know condensed matter or right certainly Aerospace corporations

(31:33) have knowledge in the UAP area that specifically are sequestered by against foia the way he says foia here too is very bizarre like he doesn't say it the way everybody else says foer right so feels like he knows all about why they set this up with the Foya right and the answer is something that everybody's been speculating which is that they've been hiding this technology through third party contractors that can't be foiled you can't foil the information to find out the technology the government

(32:04) still controls it because they're the ones that pay the bills right and they're the ones who are paying the defense contractors we never forget who we're working for right I mean guys doesn't get any more direct than that slogan it's literally locking Martin's slogan oh because of proprietary labels which the whole thing was set up to be that way the whole thing was set up to be that way on purpose wow he basically just says right there we want them to be the ones who are developing the advanced technology

(32:33) because there that way no one can get access to seeing it you Foya and your Foya is never getting through right but that's why it's interesting that my Foya has been getting rejected because that means there is something there that we're finding means and it's not going to be about the science we're never going to find anything about the science Foy in the government we are going to find stuff about the case what happened in the plane what happened with Edward C Lyn Etc that's what foy's do on purpose

(32:56) right but the idea that there would be fundamental physics knowledge that would be housed in an Aeros what's up with this scary music Jesse I I don't know why he's playing this creepy music all of a sudden space company and not shared with the physics Community giving him crap there is no evidence of that no evidence for it not not that I know of and I would that doesn't mean it's not the case but that would be this crazy so that's the one part where he says there's no evidence of it that I know it

(33:22) because that's the thing like what evidence do you want right what evidence you want that we gave that's probably not the most flattering image um that we gave this technology to third party contractors you want the third party contractor to wheel out the UFO that's never going to happen right there isn't evidence in the public sphere other than maybe the videos that we're staring at crazy egregious it would change our entire concept of who we are if somebody kept fundamental physics secret in the

(33:50) years since we became capable of exploding Fusion devices is it not weird that's exactly what I've been saying I hadn't watched this whole interview I watched like basically none of it before yesterday and he's literally saying exactly what I've been trying to tell people is that yes it will literally change everything about how we perceive our reality how we have evolved from a civilization perspective and then everything going forward that's how significant those videos are that's the

(34:19) reason why people are freaking out when we are going into the evidence of them is it's too much right it's catastrophic disclosure I would grab a pitchfork yeah and a tiki torch and I

would march on the National Science the National Science Foundation I don't even know who this is but I I guarantee you they're pushovers and I guarantee you they don't have any control over who has the advanced uh secret uh anti-grab Tech we might just ask grock I feel like asking grock is the way we're just going

(34:48) to succumb to AI we're going to ask about the Science Foundation um I don't know if if Hal Poff is promoting or on board with psychic stuff and remote viewing but I'm pretty damn sure he knows about anti-gravity right pretty damn sure he knows about anti-gravity and what he's just talking about there with topological physics like it's not technically warping SpaceTime but it allows us to obtain properties that are equivalent to it is what he's saying here topological inv variant this almost sounds like scalar

(35:30) waves when I'm thinking about it scaler mechanics seem or scaler physics seems like the secret so do superconductors and so do toroids so I think we're starting to learn a lot about the physics now I want to show you guys another image um I guess we are doing a little bit of stuff tonight even though I'm pretty tired um trying to remember what it's called you guys in the chat are going to know oh yeah the hop VI vibration okay so let's let's quickly uh National Science Foundation n no more martinis tonight H

(36:14) it's been uh even one martini I'm too old now hits me in the next morning I'm like tired National Science Foundation is the independent Federal agency in the United States that supports fundamental research and education yeah okay this this is not going to get you this is where Eric Weinstein wants to go with pitchforks I don't think so chat uh competitive grants blah blah blah promoting science Advanced National Health Prosperity yeah I mean okay I mean I guess these people are definitely you know we want to get rid of this

(36:45) organization because they're not doing anything oh science technology engineering and math stem I guess I never really knew what stem stood for I mean I knew it it had to do with science but I didn't know that it was just an acronym for the those four Sciences it's not even really four Sciences it's just like the same thing written a few different ways okay next one what is a Hof vibration [Music] or I thought it was just half vibration yeah topological spaces are probably the key to understanding the

(37:26) universe desitter space you maybe we look that up trag is made a full 180 huh he's gone full orb um the stable equilibrium changes into an oscillating or cyclical Behavior fluid mechanics mechanical systems electrical C circuits um I wonder if this is the way where if you take a toid and you have the magnetism flow maybe just Flows In This bizarre toroidal hop vibration okay we'll look at that in a second let's look up okay there's your desitter space this is pretty

(38:43) interesting oh uh fibraton not F vibration H fibraton oh there we go this thing look at this thing I wonder if we can find a video what's this Eric Weinstein again by the end of this video you'll understand this a hop vibration you may have heard mathematician Eric Weinstein comment on Joe Rogan hop and this is going to be h o PF h o PF you are looking at the most important object in the universe what H now you have my attention Eric Weinstein discovered

by Hines Hof in 1931 Huff fiber bundles pop up in at

(39:25) least eight different physics situations so what you are seeing cubits harmonic oscillator general relativity twister Theory helicity representations I've never heard of that magnetic monopoles Dura equation and gauge symmetry okay chat I think we have a whole topic to talk about tomorrow is as legendary physicist Roger Penrose put it an element of the architecture of our world we'll build to an understanding of the Hop vibration and the fewest steps necessary if you're not yet familiar with higher dimensional

(40:14) shapes huh so this is like a higher dimensional shape these I think this is supposed to represent the magnetic lines right of force doesn't it look like a toid here you might want to first watch my video explaining a 4D hyper Cube known as the Tesseract linked above and TCT Below in my opinion hyper cubes are easier to understand than hypers spheres this is a cosm video more gradually builds from the zeroth to the fourth dimension guys every so often I just remember that I'm talking about portals and teleporting stuff when I just go

(40:54) Jesus how is this all real so apparently it is I feel like I'm in the movie Donnie Darko sometimes so what's the simplest definition of a hop vibration damn that is crazy looking can I get just the image of this so that I don't get copyright strided I just want to stare at it **Putin** doesn't drink alcohol does he really not drink alcohol I might have to step in my game and quit alcohol I don't want **Putin** to be one uping me guys how those people are going to give it those people in my replies who are like

(41:25) telling me I'm like a **Putin** lover or whatever uh if I if I don't like live up to my hero then then they win my hero **Putin** I almost posted the other video of uh did you guys see the uh the one from zalinsky or whatever where the CNN lady's gushing over him asking what kind of music he likes like she's on a date with him just sometimes I can't chat sometimes I just can't um it's like and they're dissing on Tucker Carlson I'm just sitting here like you gota be freaking kidding me

(42:14) man um man is there not any graphics I just want Graphics here we go I want just want something that won't get us copyright stries oh okay this is kind of cool can I make this bigger nope nope apparently click on things there we go look at that it looks like a little tornado right is this right though I don't think that's right though this one this is the one right yeah look at this how is this happening is the toroid doing that if you put a toal field here is everything bending around like this feels like it could

(43:03) be I have nothing against any government I think we should stop the wars but when you've got CNN anchors literally asking dudes like how he uh like how the pressure gets to him and what his favorite music is and like stuff like they're on a date they definitely shouldn't be throwing stones of people like Tucker Carlson for interviewing **Putin** it's like come on man um the questions on some of the stuff like uh I think it was uh Whatchamacallit Wallace the anchor he's sitting there talking about like oh he

(43:40) didn't ask **Putin** why he's executing citizens in Cold Blood you're like dude you going to ask him little kid you want to ask talk to him like a **redditor** or you want to talk to him like another actual human being I definitely just think our media is totally effed man okay here we go let's listen to a little more it's just a map from a hypersphere in 4D onto a sphere in 3D it's a how is sphere hypersphere in 4D onto a sphere in 3D chat this is uh this is pretty deep is it mapped a sphere is fully covered by points each

(44:26) point is mapped to a circle from the hypersphere the circles are the fibers a sphere is fully covered by Point does that look really sweet to anybody else each point is mapped to a circle from the hypersphere the circles are the fibers that compose the hypersphere so it's interesting though right because you have this if you were to like spin it on its side you'd have this Infinity Point like going right down down the middle right that was pretty [Music] cool we'll unpack this in a bit but first whoa look at

(45:12) it we need to briefly cover the concept of stereographic projection oh he turned it into a dut did oh wow did that just collapse down like that looks like a donut in the background which is the process of mapping a sphere onto a plane okay first imagine a light source at the North Pole of this circle in 2D as this light beam passes through the circumference you can see there is a projection of a purple point on the X AIS in 1D okay now here we have the light source at the North Pole of this sphere in 3D as the light passes through the

(45:52) boundary you can see a circle is projected onto the 2D plane note how the circle is larger closer to the North Pole next we inflate a polyhedron with four colored faces we project in all directions chat is anybody smart enough in the chat tonight to understand this from a fixed point on the North Pole you can see how the face Ken wheeler yeah I was going to say I was going to bring up Ken wheeler this this yeah yeah I feel like the Ferro cell and the neodium dyum whatever magnet I still don't know how to say that word is uh

(46:34) pretty interesting on the sphere are projected onto the two-dimensional plane below I don't think this is sacred geometry but we are demonstrating this is why I don't like the term sacred geometry like it's just geometry it's not sacred just geometry and the thing about geometry is that yes the reason why geometry is the answer is because because that's the same Foundation of our universe right neodimium that just sounds dumb I don't like them neodym I don't I don't like that we're

(47:08) going to call it something out how a circle or sphere appears in lower Dimensions so we can build intuition of how a hypersphere projects into one lower Dimension the third dimension I always like these videos about the dimensions though cuz like the top row is the view of a circle or sphere and what you might call their traditional space 2D for the circle and 3D for the sphere the bottom row is how that is projected onto a lower this is the answer to teleportation really going to be like a fourth dimension that we have

(47:38) to look at a a sphere in a fourth dimension I might give up if it's this complicated might be too hard guys play just kidding we'll figure it out before we explain the Hop vibration it's

important to note I'm skimming over imaginary numbers quaternion and the complex to keep this as straightforward as possible but if you wish to dive into the nitty-gritty math there are links in the description no nitty math neum in our first example we are stereographically projecting from there I'm going forget as we rotate

(48:15) around the circle you can see how this one point corresponds to one Circle I still don't get what he's doing here uh does anyone understand what he's doing here if we view the continuously all of these okay now I get this part it's like a slinky circles fill up the hypersphere uh [Music] okay does this remind you guys of anything does this guys remind you guys of anything first person to guess my thought right now gets uh a heart emoji what does this remind you guys of what we're looking at down

(48:55) here come on someone gets it someone knows what I'm thinking what does this pattern here remind you of what other science have we looked at recently this guys reminds you guys of I'll put it over here guys I'm going to type it in over here yeah math is hard guys let's see if anybody gets a drugs simatics reminds me of simatics chat sound through vibration yeah benator you you got it heart emojis for benator simatics reminds me of simatics created an exper scientist covering it with wonder if it's actually

(49:47) one of the patterns here he's got all the list of the patterns here can I can I do like a side by side comparison somehow let me just screenshot it pretty weird right the S yeah the sound sand Kimberly you got it the sound sand Kimberly uh I want to show it side by side why is this so hard there we go do any of them look the same probably not we probably wouldn't get that lucky but some of these with these weird Loops right I always wondered those weird Loops looked really odd I wonder if this is some kind

(50:38) of uh projection of a 4D object on three-dimensional space let's track just one point as it moves from north to south we'll start at the Equator the red point on the sphere relates to the red circle with within the hypersphere couple you guys have got it the white Taurus or donut corresponds to Connected points around an axis okay as the point spins Southward you can see the circle getting smaller and Tighter around the center until it's a non-skewed circle through the South Pole as the point moves North the

(51:18) corresponding circle gets much larger until when it goes to True North it appears as a straight line it's hard to imagine but this is act that's pretty weird a circle through Infinity Circle through Infinity this is how the circles would appear around a single axis say the equator it's easier to see this interaction if we look at just two complex points in their complimentary circles yeah okay so it's spinning towards us here and then back around right it's not too t as you view them move around an axis you can see how

(51:57) they are linked like a chain yeah a third link Circle joins the dance definitely a fractal wa and we can keep on adding circles to fit the entire hypersphere algebraic topology Professor Niles Johnson at Ohio State University created this excellent visualization of the Hop vibration with its corresponding points on a sphere here some yeah this I mean look we already have the

torid right there H I don't know I'm trying to put it all together chat hop vibration facts none of the circles intersect each circle so this is some

(52:44) kind of like two-dimensional version of it on three on or four-dimensional version around two dimensional space or something like that or do I say that backwards thanks to every other Circle exactly one every Circle links to every other Circle exactly once true South in 3D is a circle at the core of the Hop vibration true South is a circle at the core of the Hop vibration visualize this as the tightest Circle in the center of the Taurus or donut True North in 3D is that Circle through Infinity remember yeah so that Circle

(53:22) through Infinity that Circle through Infinity is where this is all happening right that's where I would imagine the pointing Vector is and that's showing us the flow right and now the flows going through Infinity the question there is is it collapsing on itself to create a laser the same way that light does this is pretty weird this is pretty weird chat this is the stereographic projection of the hypersphere in our familiar three dimensions the reason why I say it's weird is cuz this kind of makes sense

(53:58) like you would think that let's say you're playing a video game right like how do you break through the video game like you either overload it with too much information or you kind of get to the underlying code and then you you mess with the code right it's like this is getting to the underlying geometry of reality itself and so we can't overload it or maybe we can when we think about breaking the swinger limit but we can also like kind of reverse the effects of what it's its basis is the geometry of

(54:29) it maybe not reverse is the right word but I'm still trying to figure it out while this is running two plugs first if you're enjoying this video please subscribe to my channel I've already I've already subscribed and second I highly recommend a similar Vision on a few latitudes on the sphere as this runs I need to recomend let's watch the next part rotating in [Music] 4D you notice how in the middle here where I have my mouse oh wait now it changed it seems like the orientation changed there oh okay the line here is where

(55:16) this is like the the point where the power would be flowing or where the direction of travel to orbs maybe I also want to share some still images of the hop vibration another angle which I think better illustrates the fiber bundled of the structure while we're here why not take a ride inside a thanks for taking a B for me I appreciate it see all the circles which look like lines are made up of Zero Dimensional points which kind of look like spheres as we mentioned earlier The Hop vibration so these are all the things

(55:54) that are and the Hop vibration the magnetic monopole part is the part I want to understand maybe we can ask Rock guys feels like we're getting really really close to the answer here how the science Works Skyfire news look at Skyfire news reported on me chat guys I got reported on for the first time in Skyfire news I'm I'm retweeting it I've been retweeted I've I've made the Skyfire news chat oh let's do the uh sweaty Emoji guy got reported on Skyfire news let's see

(57:16) what the comments are chat Source oseris Osiris UAP due to an interesting conversation the following **Foya** was filed today we kind of need the sad sad piano music the response should be illuminated as how the reporting procedures work how seriously they take reports and what was actually submitted and how it was processed pursuant until the Freedom of Information Act blah blah blah here I request access to all copies and records including that but not limited to emails memorandums notes internal Communications generated and or uh for

(57:53) the all domain anomaly resolution ution office A a o pertaining to Ashton Forbes which Ashton Forbes are they talking about though the scope of this request includes all Communications from October 1 2023 to February 10 2024 nice focusing on all corresonden between Ashton Forbes and any individuals within AO including emails dated January 8th and 27th 20124 the January 8th email is noted to have originated from OSD Pentagon o us D Intel SEC mailbox A a o external sent by Lieutenant Colonel expressing appreciation for Mrs forbes' insights

(58:34) and mentioning a forthcoming memorandum for his review it's hard to get through this guys the January 27th reply also from a lieutenant colonel redacted at the OSD Pentagon o SD Intel SEC mailbox A a o external acknowledging Mr Forbes contributions and indicating the imminent provision of a mandum of record Mr Forbes ah man I can't get over this man why am I being reported [Music] on uh the specific Menor mentioned in communication to Mr Forbes along with any drafts notes or priy documents related to its

(59:13) creation he's literally just talking about the emails I had with a o uh okay we'll go back to the science because this kind of silly I can I'll just show you guys the emails I don't think it's really that secretive guys let's I'm going to give you guys the spoiler as to what they're going to find okay science geometry okay here you guys go uh I have to make sure to block this person's name out okay here's the first one appreciate the kind words and time you took to report to a we'll be getting

(1:00:09) you the memorandum of record shortly okay well there's one of them uh so mine I mean I just put all the evidence in there uh I don't really want to snip this one because I'm afraid there might be personal information in it I think I can post hold on okay I just get scared every time I clip it like it's going to show the chat I'm gonna miss something even though I pretty much doxed all my my myself I just don't want to dox uh the person give me a second I'm looking at it I haven't even read this in a while

(1:00:58) so um is it okay to post this okay it's fine okay so anyway I said I just want to extend my appreciation to a for giving uh the MH370 case the time of day it really means a lot to me I was able to talk with it about actual government official as you can tell I put a lot of time in investigating everything around the missing plane as well as the science behind the objects see in the videos if you talked to me 6 months ago I probably wouldn't believe my current self just so that you know just uh so just the fact

(1:01:35) that you were willing to listen speaks volumes to me I made a pretty glowing post about the interaction with AO today I'm honestly impressed by your work ethic and dedication calling after normal working hours not something I see a lot of even in the commercial environment as I said in my post a earn an ally today regardless how this plays out doesn't matter to me what people think of me supporting AR that's just the kind of person I am I've learned not to prejudge anyone I'll also talk with

(1:01:55) anyone government or non-government detractors or supporters because there's a lot of people who make up lives about me and tell podcasters and influencers not to talk to me and I want to make sure that I'm not that kind of close-minded person my only goal in making this report to you is that I hope we get the **truth** or to help get the **truth** about what happened to the plane to the families if that means super advanced technology Reeve the world then so be it I think the world can handle it thank you Ashton Forbes and then I

(1:02:18) attached some of the stuff the pertinent evidence and satellite footage and drone videos whatever um so there you go they've got it oh wait there's one more one more chat the last one's really short okay I'm going to black out the email address okay okay uh Mr Forbes this was also January 8th uh thank you for taking the time tonight your insights were greatly appreciated as discussed I will send a memorandum for your review in the next few days well it's been what a month we're still waiting on that

(1:03:08) memorandum chat okay anyway pretty cool guess we're being reported on sure whatever oh crap I forgot we were going to ask Rock about uh monopoles and we saw we've been reported on um what is a relationship with hop fibration and magnetic monopoles okay what is the relationship between the hot fi ation of magnetic monopoles the relationship between the hot vibration and magnetic monopoles lies in their mathematic descriptions and the way they help explain certain physical phenomenon the hot vibration describes a map from a 3D sphere a

(1:04:07) hypersphere in four-dimensional space to a 2d sphere a regular sphere in threedimensional space is a way to visualize how a threedimensional sphere can be constructed from circles and in its applications of various Fields topology physics geometry uh magnetic monopole okay so are hypothetical particles with only one magnetic pole either a North or a South in contrast to the more familiar bar magnets which have both a north and south the existence of magnetic monopole would help explain certain aspects of electromagnetism and unify

(1:04:40) electromagnetic and strong forces the connection between the two concepts lies in the mathematical description of mathematic monopole the field lines of magnetic monopole can can be described as using a mathematical structure called a fiber bundle which is similar to the structure of a hot fibration in fact the field lines of magnetic monopole can be visualized as a kind of Twisted version of the hot fibration this seems pretty important chat this relationship has been studied in the context of gauge theories which

(1:05:13) are important in particle physics and in the standard model the mathematical similarities between the two concepts are led to insights into the nature of magnetic monopoles and their potential role in the unification of the fundamental forces okay you have my attention um uh how do I get it to tell me more stuff chat explain the gauge explain gauge theories theories in the context of magnetic monopoles Maybe let's see what we got oh we moved on from mullin I think that was the one who put the post in right who is he

(1:06:07) Osiris it was cute but I just don't really care that much I'm going to retweet it because I'm uh endorsing skyfired news and uh that's my first ever guys I broke my cherry that's my first time getting reported on by the news well not really but kind of it's like it's getting real meta out there now chat uh in the realm of magnetic monopoles engag Series this is going to keep going guess it's not going to stop okay what the hell Aiden Schaefer shows up why does Aiden Schaefer show up here

(1:06:42) I've been dming with him okay maybe does it no in the realm of magnetic monopole and Gage series one mind might find themselves pondering the very fabric of the universe it's true imagine if you will that the universe is a Grand tapestry woven with the threads of electromagnetism and the strong and weak nuclear forces the theory of gauge theories of magnetic monopoles is like a pattern in this tapestry that helps us understand the underlying structure of the cosmos gauge theories are mathematical models models describe the

(1:07:09) interactions between Elementary particles such as quarks and leptons through the exchange of force carrying particles called gauge bosons this elegant framework allows us to describe three of the four fundamental forces of nature electromagnetism strong force and the weak nuclear force magnetic monopole on the other hand the hypothetical particles that possess only one monopo we already know that we so it's just taking the same stuff this is why AI is kind of weak right this whole paragraph is the exact same paragraph that it said

(1:07:38) before the relationship between the theories is like a cosmic dance where one cannot dance without the other uh is this okay whatever the existence of Mag monopoles is a natural consequence of certain gauge theories such as those that describe the strong and weak forces in the context of magnetic monopoles the gauge theories provide a framework for understanding the behavior and interactions of these exotic particles yeah we need Like A Spacetime PBS thing explaining this it just keeps repeating itself a cosmic Symphony again says the same

(1:08:13) thing again whatever let's go back to this is a fundamental element across a range physics applications even if you'll never understand these Advanced physics Concepts I hope you gained an intuitive understanding of an kind of condescending for him to say that people watching aren't going to understand the the views or understand it 2.

(1:08:37) 2 million views on thisal feature of our universe The Hop vibration it's pretty cool oh nice now we get to just watch it hot vibration so these are all just Rings right pretty [Music] cool 2014 Chad he made this in 2014 ooh creepy so I guess this is I think what what was it again four-dimensional hypersphere and threedimensional space or something this pretty [Music] cool

Lord of the [Music] Rings okay well I think that might be enough for tonight chat yeah I think

(1:09:40) we're going to call it there we've been on for an hour I'm super tired um I'm going to get some sleep but take a look at hot vibrations I'm not sure deit or space maybe we'll look into not sure but take a look at hot vibrations um I think we can understand the underl framework of the universe it is extremely complicated let's not lie to ourselves but I think we can figure it out also if you didn't check out my appearance on diamond uh Oppenheimer Ranch check that out as well that was a

(1:10:08) pretty good one it was only about an hour long so not too long um I posted the thing about HAL P off and the Wikipedia this morning as well I mean they're definitely editing his page and it goes right back to **mcwest** it was super easy skeptical inquir I mean this was like on their front page still they only post every couple days they've got a whole thing here CSI conon are they paying him to do this I bet they are 100% this is just a big **scam** this dude's just huge grifter uh the only question is does

(1:10:43) **Mick** West really believe the he spews or is he just doing it for the money all right that's the real question right that's the real question um look at look at this post they've been on zero point stuff they say pseudo science like multiple times here they have a biologist **debunking** a literal electrical engineer and there's no factual claim here it doesn't actually violate the basic principles of thermodynamics I mean there might be some aspects of it to do but it doesn't mean they're

(1:11:16) wrong it's just embarrassing man the Discord is uh you just got to go back it's like right down here somewhere right here I'll post in the chat we had a lot of trolls but don't troll guys don't fight in the Discord trying to keep it chill um you know we opened it up because hey Bernie what's up man but you know we opened it up because yeah I don't see a reason why not like there's not any information I'm concerned about leaking anymore um people can see all the evidence and all

(1:11:53) the stuff that we post there there's nothing incriminating that I'm worried about I mean we are just normal people doing a normal thing so uh yeah check that out and then um yeah I think that this post about this Homeless girl is like super sad man like she's like 25 she's been living homeless for like four years like you're 21 years old and you're already homeless and like ask about like family and friends it's just really sad oh so sorry the last one here too just the last thing we'll close out

(1:12:23) is the predictions just decided that we'd make these bold predictions make sure you guys bookmark this so when all this stuff comes true I don't want people come in saying that oh you guessed it or whatever other they're going to say like no we already knew everybody else I mean let's just be honest for the people that are watching this in the future you know you guys were idiots and glad you finally caught up that the science is real and you know for the people in the future it was not a matter of getting lucky uh we

(1:12:53) literally had had people telling us as well as we able to come to those conclusions independently and all we had to do is just watch all the stuff that everybody else has been saying out there and just realize they're not bullshitting once you realize that then you realize all this stuff that seems like magic just ends up being true pretty wild anyway guys we're going to close it there uh and thank you very much for following us tonight and watching and we will be back probably tomorrow uh not 100% sure but I'm going

(1:13:19) to try to get on a regular schedule of doing some streaming and we're mostly going to be focusing on science but we do have some more investigate stuff to do

Transcript:

(00:58) Manan 370 contact 1 120 decimal 9 [Music] night breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(02:03) impress him takes on his multi-armed form and says now I am become de the destroyer of worlds yoyo chat welcome welcome greetings from Reddit welcome Reddit yo so uh I'm not sure I've been trying to figure out where these papers are that I want to review tonight I think we can definitely review one from money Penney's Twitter but there were two Declassified papers and there's so much stuff in the Discord now that I literally can't even find the papers anymore um quick update everybody so I did do a hard truths

(02:53) podcast tonight the first one I didn't do live uh I chatted with Mark soal of Apec and uh Falcon space it was a really good stream or whatever podcast however you want to look at it tomorrow I'm going to edit um I'm gonna I'm going to edit all the uh the uh space or the the sorry the hard TRS podcasts that I've done and get them all out there on audio as well as well as make sure they're all updated on video and I'm going to try to get them into a podcast playlist on YouTube as well so that they're easy to follow

(03:35) conversation with Mark was actually really really good we talked about um Advanced propulsion mechanisms we talked about the science I asked them some scientific questions we talked about disinformation and the government we talked about how the government was hiding it I knew it was going to be good right away when I was like hey what do you think about you know uh the technology he immediately starts talking about the government hiding like aliens and and and uh crafts from us and stuff like that I'm like oh well I was going

(04:02) to tell ask about that later but I guess we're just digging right into it um and I think that he said a lot of the stuff that aligns with things that we've identified and investigated so that's the first thing that's out there um the other thing that I want to post out there is that I uh this is going to be the first that I've I've mentioned this I had communication from a pretty major podcaster and I was a little bit disheartened because they had seen the uh **debunks** on **Reddit** and thought that

(04:33) the case was **debunked** and so therefore the whole thing fell through and that just makes me wonder in general like I think that you know we've looked at all these bigname people I'm just going to list some of them off like like who are the biggest name people like Lex fredman right Shan Ryan Joe **Rogan** um who are the other ones that we haven't talked to like Tucker Carlson like the dream right of talking to these people and I think that this kind of proves that the reality of the technology that we've

(05:03) been disclosing is simply too much it's too far outside the Zeitgeist for a lot of people out there and it's it's so easy for people to poke a hole in something and claim it's **debunked** versus we have 14 pages of evidence including literally who the leaker of the videos is and that's gets discredited by one person finding a in 20 minutes supposedly finding a two-dimensional Cloud picture um that we've already proven the clouds are moving and and uh evolving naturally like it just goes to show it may be

(05:38) literally impossible to disclose information I've already been on Alex Jones Jack trading I've been on Alex Jones I've been on Alex Jones and I've been on Tim p and it's like dude I've been on Alex Jones he doesn't care about what stuff's been **debunked** or not **debunked** right but it it makes me think it it makes me disheartened because I think that I realize that there is nothing there's no way to reveal this information it's too easy to discredit people in general I mean I'm literally

(06:14) talking dood engineers and scientists and Engineers that work for the Navy that have patents out there that have been approved and it's just I don't know man it it makes me think that humanity is is simply not ready right and like even people like Joe **Rogan** had never even posted the the appearance that he did with Malcolm Bendle because he thought Malcolm Bendle was a fraud right and I just sit there and go oh man like we are we are really asking for it's going to be hard man but the good news is yeah we've been out

(06:53) there on a lot of big stuff the other thing too is that I think we're running we're running to the bottom of the barrel of uh investigative research around the case right there's just not going to be a lot more that we can find I think that I was looking at my list of what we have left one thing I think we're going to post tomorrow is the **debunk** of the um the patent conspiracy where there's these four people that when they die the patent reverts over like that's actually not true those

(07:23) people didn't even die we found out Arwin found out that those people literally didn't even die so this whole idea have like this patent converted over to uh a fourth per like the the

Rothchilds or whatever like the people that supposedly died weren't even on the plane so it's like okay so I think we're going to **debunk** that just because like I want to get that out there to show that we are actually like we don't have an agenda what with what we're doing here we're just digging through the evidence

(07:52) um and then the other thing is I think we're going to post out the Rolls-Royce stuff this weekend at some point but I do need to prioritize editing all the podcasts and what I'm going to do too is I'm going to pull clips from them so I'm probably even going to go through the Salvador Pi one and I'm going to pull clips from all them as well uh so that I have like some clips that we can post and then what I'll probably do over the next couple weeks is every couple days I'll post one of the hard TR podcasts

(08:18) that's already been out there the ones that I re-upload and do a couple Clips with them as well because I think a lot of it we are in an information War I think we can tell right and we want to get the evidence out there uh to as many people as possible but the last thing I want to say on that front is that I have to adjust my stance again I think that it's been a matter of me kind of adjusting like I've I was never used to the social media I was never a streamer um you know all this stuff is new to me as well it's going to be me

(08:45) adjusting my approach to people as well not and I think we have to take a very non-adversarial approach which is just here's the evidence you don't want to believe it fine right you want to believe that it's been **debunked** by some 2D Cloud picture that some random ROM dude found you want to believe that there's some Pyromania VFX in the videos fine go nuts man it just doesn't matter to me at this point I'm happy enough that people will at least consider the fire Theory and that they will consider

(09:16) that something that this plane didn't crash in the South Indian Ocean because it didn't right and so one of the other posts that I may do this weekend is going to be Ashton predicts the future so I'm going to give you guys a little uh inside info on to that um so Ashton predicts future narratives guys so here we go so first of all 10 years from now we're still not going to have found the plane and people are going to go well it just went somewhere else into the middle of the ocean right and that we couldn't find so I'm going

(09:47) to go ahead and predict this nonsense narrative already so 5 10 years from now when people are still saying that's in some myth mythical part of the ocean where we couldn't see it or something like that uh that's not true when people when it turns out that we can teleport an object and that uh super luminal speeds are possible and then people are going to go well just because that's all true and he got all that right doesn't mean that we stole the plane The Narrative will change right they're

(10:13) going to say well those videos are still fake even though we've literally proven that macroscopic phase conjugation is a thing so I want to get ahead of that narrative you guys heard it here first uh when room temperature superconductivity uh gets out there I k99 is proven I've been saying it's real for months and months and months even when people were saying it's

been **debunked** uh people are going to say oh well he just guessed he's not really an engineer there's no way he could have known that

(10:38) right well I want to go ahead and get ahead of that narrative right now as well I already am predicting the future narratives uh and exactly what they're going to say so I'm either psychic or I'm right I'm not sure which it's going to be we'll find out yeah that was me remote viewing into the future I'm using my remote viewing turns out maybe I'm just psychic I don't know guys yeah we have all this Tech but nobody uses it well the problem is they're hiding it right they're hiding it yeah

(11:06) so arangu tank orang tank you got a funny name I like that that's a good name uh oh let me uh switch over so you guys can't even see the chat um I mean so the reality is I'm never going to admit these videos are fake unless somebody were to come forward and with a logical explanation for why they haven't come forward to date with the source material in hand right cuz now the problem is it's been so long that people can fake fake videos that like don't have the plane or the orbs in them at this point right that's

(11:41) how long it's been especially using AI um so now I need to see those sources and I want to have a logical explanation for where they've been hiding this whole time and how they made the videos why they made the videos how they knew about all the the requirements right I don't think that's ever going to happen but uh you know that's what it would take now uh um but the reality is I have been considering whether or not I should retire on MH370 I'm here curious to hear your guys chat or your guys discussion

(12:09) on it um and when I say retire I don't mean admit the videos are fake or you know give up on MH370 entirely I just mean like we're kind of running out of material and investigative stuff I mean we've investigated the hell out of everything right everything and um it's to the point where like I want to Pivot into the science I think right where we want to prove I want to learn everything about electrical engineering um I want to prove that there's unification the oh that's one of the other things I'm going to predict

(12:40) the future guys here we go Charles Xavier in this thing that's guy from X-Men by the way with mind Powers uh oh yes a unification theory is going to come out and going to get proven right and it probably already has been based on like ligo data as well and they're going to say oh Ashton just guessed that he didn't really know he's not really a he's not a physicist or science scientist there's no way he could have known even though I'm going to have posted like four different unification

(13:03) theories right and the thing about the unification theory is that's what leads to all like all the stuff that we've been seeing the macroscopic phase conjugation the teleportation type stuff right that's what unification Theory leads to even the one today and this is a good segue into our topics here so I have not yet decided on whether or not I'm going to retire on the MH370 stuff but I want to you guys know first that I'm thinking about it because I do think that like the 10year anniversary would

(13:34) be a good time to say hey I've presented everything that's out there um I'm not going to do any more podcasts related to it unless something huge were to come up right like unless like Joe Rogan or Shan Ryan or Lex Friedman hit me up uh because it just gets to be tiring going through the same stuff over and over and over again um but I do think that I I want to push forward on the science aspect because I think there's a lot more there where we can discover learn know more about and I think that the

(14:02) science will lead to the rest of this stuff becoming true cuz like if you're confident this stuff is true then you should be able to understand it and I think that that's the part where the uh people that are out there that these like even the Steven Greers Jeremy Corbell like why are they not trying to understand the science behind it to me that's the way you push the envelope forward at this point like why care about what Eric Weinstein says how about just go learn yourself and figure it out right um and so that's what I think the

(14:34) better use of the time is going forward as opposed to digging around and finding more stuff although it might be fun every once in a while to uh find out something else so and I I don't like ever talking about this right now but I did and and I'm this is not that I mean something else I did just get a message from Florence a Changi right now cuz I had I broached this idea with her she was the first person I met mentioned about this because she's somebody that had been digging into the case for 10

(15:05) years and she had told me that a lot of people we had a personal conversation a couple months ago we we talk we talked on the phone and she had told me that a lot of people asked her why do you keep doing this why do you spend so much time in this right and she said well because I want to get the answers you know it's like it's not an obsession it's just a matter of wanting to know the truth right um and so let's see she just messaged me back and I want to see what she says I'm not going to probably read out exactly

(15:44) it but okay I am going to read it actually it's not too bad so she says Hey Ashen I had burnout last summer as I may have mentioned mention she was actually talking about the the thing I was just mentioning and many friends believe it's related to the Relentless search you have surely contributed enormously in opening people's minds let's have a call yeah so I think that God I respect the hell out of Florence dangi she is such a smart woman and that's like I never expected a message of encouragement like that you know as a

(16:25) response it actually like makes me feel a little bit better about it right cu reality is so many people know there was something wrong with this plane and we know we didn't get the answers and of course we're looking at two videos of it right we have to figure that out to a degree now who is it that just said so Dorian made a comment is well you can't retire otherwise you'll lose the algorithm I think we've already lost the algorithm I think we've already kind of lost the algorithm is the reality of it

(16:53) um with at least with the respect to the MH370 stuff you know it's I've been noticing the trends where it it's kind of been relegated to this Fringe aspect now it was really exciting for a

while there's a big buildup and then I think that the cloud picture thing is what took the big wind out of the sales which is another part of the reason why I'm pretty much convinced that that was some type of elaborate disinformation that was posted I don't know who's responsible for it um and you know but the way it all played

(17:24) out was super sketchy and it came at the time where like things were getting huge right and it and the government would have been desperate to make it go away because it was already super awkward why media was not reporting on it right and then all of a sudden this comes out what why did that not come out 10 years ago these videos have been out there this whole time right oh some random for8 old **Reddit** account found it pretty sketchy um so I think from that perspective we've already lost the algorithm I think that the way forward

(17:52) the problem with going around the science aspect is that nobody cares about science that's the sad part I've realized as well right and like we post a lot of science stuff and we get like no engagement on it because what people care about is cool looking videos which maybe we can find some aspect of that where it's like oh here's cool looking video um and we'll post some of those uh but I'm just not 100% sure I I do think that learning the science will bring back up a little bit of level of credibility where there's a

(18:21) lot of people right now who you know probably think that I'm some kind of hoaxer or grifter or whatever even though I've literally never asked anybody for money and these people follow people that their whole lives in UFO Aly is trying to grift people for money to take repackaged content and turn it into documentaries or post videos that aren't even anomalous you know and get people to watch their YouTube videos about it it's like yeah it's pretty wild man uh I had people I even had one person after I

(18:52) told them I've I haven't asked for any money or made any money from the podcast they go oh well you should be it's like you're not doing it right like dude what like what I'm supposed to be like demanding money for people to be on their podcasts that's not how it works yeah I think trying to dumb down the science is probably a way to go in general but yeah we do need the applied science like the thunderstorm generator right so I don't know I think there's probably a way to work that but that's

(19:17) what I'm thinking in general the other part too is that I'm probably not going to just dig into whatever conspiracy theories are out there um it's just not my thing man like I think that stuff like that like I get so many posts about 911 conspiracies that people want me to dig into it's not going to happen uh that that's that Topic's already well covered anyway for me it's a matter of um trying to find something that I think is really interesting like another thing will come up that I'm going to be

(19:47) interested in I don't know if it's going to be political or what have you but like a few examples would be like the uh what what **Putin** was talking about yesterday uh the nordstream pipeline like if there were a nordstream pipeline situation were to come up and everyone's blaming one another I would be jumping in on that like I'm probably going to be focusing more

on geopolitics and on um science and I want to avoid culture War stuff okay right you're you're not going to see me posting about uh what What's one of the big ones

(20:23) um that I see on Twitter oh like trans stuff like oh people transitioning in the doctors whatever to people like I'm not posting about that stuff I I think everybody should live and do whatever the hell they want I'm not going to try to change people's behaviors like I just don't care about that um so I'm I'm going to avoid pretty much all the culture War stuff you're probably never going to see me talking about the Border crisis although maybe I'll make some quips about it but I just don't care a

(20:50) lot about that in general um I'm sure I'll still get labeled alright no matter what but uh it is what it is um there was no stream yesterday as well no stream yesterday cuz I had uh a bunch of different podcasts and stuff that I was doing so I was just busy yesterday uh that's why there was no stream yesterday yeah yeah so Florence and I like I think we get along fine we just both have our own independent theories and in order to for both of us to maintain credibility I think we can't cross over too much but I

(21:22) think I may ask her to come on hard TRS podcast and talk about the case in general her findings struggle with reporting on the stuff how she wrote her book things like that I think she'd come on the podcast for me um so it may work that out the problem with that is it's going to have to probably be a not live one because like she's in Hong Kong so they're like I don't know 14 16 hours ahead or something like that so it makes it really difficult to find times that match uh so that's kind of the stuff

(21:54) that's just I just wanted to opine a little bit to the chat here terms of what I've been thinking about in general um also feel free to check out the uh Skyfire news um space that we just did the reason why I was late tonight is we've been doing weekly Friday spaces uh with Skyfire news going over the weekly UFO topics and I talk a little bit about the stuff that's been going on in the world or what have you um I did so as well tonight guys actually even it might still be going on let me double check

(22:31) yeah so the uh the Oppenheimer Ranch check this one out after the stream tonight if you haven't already um I did go back on with diamond today and it's already live actually at the moment uh so make sure you guys check that out check the stream out I posted I retweeted it later uh this evening Diamond as I've said before I think he's one of my favorite if not favorite podcasters that I've done multiple shows with because he's just so knowledgeable about everything out there like I brought up Malcolm Bendle and Randall

(23:07) Carlson and he immediately knew them he's like oh I I know the most like basically the most about those guys like top 10 and I was like oh well then you're going to love this and I talked to him about the letter that was sent to me and the story that was posted there so we had a pretty awesome stream uh or podcast and I think that I do well with people like that cuz just flow back and forth right and we talk about how they keep the science secret and what have you in general uh it's pretty good um

(23:36) can I mention this as well I think I'm safe to mention this so it's going to be a while for S to come back on uh I was told that he's been told to be quiet he went on too many podcasts and now he's not supposed to go on as many which to me and lends more credibility to his story right um you know he he was saying a lot of stuff on our podcast man and he had a lot of things where he had to like the solid state superc conductivity stuff right he had to dial it back a little bit and the solid state uh Quantum uh

(24:17) macroscopic phase conjugation stff Dave was a lot more open about it but s was a lot quieter um so it's been a lot of blows guys recently about a lot of the stuff you know um with respect to Tony and Jimmy I think that Jimmy is he's I think he's out um on Jimmy the thing the thing about Jimmy I find is that like he's a logical dude for sure but he seems to have his own pet like thing going on right with the Atlantis stuff I I think he's a really nice guy but like I I saw that he had some kind of

(24:59) tiff with Malcolm and stuff like that as well and called him a liar and a grifter I feel like anybody who's out there proposing stuff like lost city of Atlantis or anything else that's pretty far out there you shouldn't be throwing stones at other people seems a little weird um and and that's just from a personal perspective right if you're talking about and you're going on Tim pool and with sun the uh the sun weather news guy and you're talking about the polls shifting and all this stuff you

(25:28) shouldn't be talking about what other people are making stuff up right you should at least just like you know be be a little bit more open-minded would be my Approach with respect to Tony um what I'll say about Tony is that I love Tony right he's the first person that had me on the show I think that his stuff is definitely more On The Fringe aspect for sure right and and what I'd say is that like I think he was a little bit scared based on what we were showing like we were we were showing a serious

(26:05) conspiracy that can get people disappeared right and he's got a family and all this stuff as well and if you look at the other people that had me on in person like the other two that had me on like were both straight up like trying to **debunk** us right like they were just hit jobs so I think that it's Tony might got might have gotten a little freaked out by it and I don't want to put him or his family in any kind of danger at all right but if Tony were to ask me on of course I would come back on again because I owe him so much in terms

(26:39) of the case and getting the evidence out there that's just the kind of person I am um I am trying to back door to get in contact with uh Randall or Malcolm I'm not sure that will happen but we're going to try it right get a puppy to keep Lulu company when you're wrestling the gorilla yo harb rip harm is it Harm's uh death anniversary soon dude I swear I there was a post on um on **Reddit** on the conspiracy **Reddit** that was talking about everything went downhill after harb died it's actually

(27:19) true man that's not even conspiracy that's just true 2016 man everything went to hell after that Sasquatch Chronicles wait you know somebody from Sasquatch Chronicles yeah I

mean give me in touch with them we'll talk we can talk through it yeah I would like to talk to somebody in the Squatch we're going there's a Squatch in them Woods I want to talk to somebody about squatches dude oh also guys here's a fun little nugget so uh okay Danny Jones person come on uh I I last night oh so the reason

(28:07) why I didn't do the podcast last night was because I went I watched the **Putin** interview on in uh Matt Kim's Discord I there's actually a Discord out there that doesn't hate me I was surprised apparently they love me and love following the case so I joined his Discord Matt Kim is one of my favorite people as well I mean obviously he is a political Unapologetic political podcaster he interviewed Tucker Carlson I love watching his little videos where he does where he kind of like Bobs his head back

(28:40) and forth and talks about the various uh social commentary and stuff that's out there I also like his approach where it's like his approach is that he he doesn't know he's just putting information out there and letting people uh you know figure it out um and so yeah Matt Kim's one of my favorite people for sure in the whole podcaster world just super super cool guy he you know like I'm pretty apolitical but he just like he makes me want to vote for Trump just because I think he's such a cool guy in general

(29:10) Matt Kim I'm talking about uh you know that's just his mentality like it's just makes you gravitate towards him in general and that's a little bit of a joke but you know at the same time it's true about him uh David pades so he's the 411 guy I'm I'm very certain he's the 411 guy right so I did I think I reached out to him early on somebody told me this is way too outside his wheelhouse he's not into advanced technology stuff he's into missing people or something and somebody

(29:40) told me he's like a a huge I mean sure they say that about me too and it's wrong but yeah I don't know he doesn't seem the 411 guy doesn't seem to have any interest I think I remember I reached out to him or pinged him or something like that so yeah people people Tred to reach out to him I this is not his thing guys I'm I'm pretty sure you got to realize like just there's so many people where the idea of a plane teleporting from orbs it it's it's way too out there for

(30:10) a lot of people regardless of what kind of side of the political Spectrum you're on in general so that's why I was surprised when I joined Matt Kim's Discord where he's like oh everybody loves you in my Discord I'm like oh there's there's a place where they actually like me that's cool because it feels like everywhere I go it's just like e no matter what even if it's UFO Believers or non-believers they just like for some reason hate me it's pretty bizarre not that I really care I just

(30:34) think it's interesting okay um the Sierra sounds I have no idea what that is okay um now okay I guess we're just doing a little chat here uh Josh from Paranormal round table so the other thing too guys is I'm getting pretty tired of doing podcasts I've done so many man like so so many uh and I've got to put the list together but I I think it's like over 75 now you know that's

that's a lot man I I've been doing pretty much one every single day for the last three or four months um and it's

(31:13) just exhausting so it's not a matter of just keep doing podcasts right like I keep just repeating a lot of the stuff in general um and then in terms of having people uh that that we interview there's there's a pretty decent number of people that I'd like to interview but I've got to probably wind back some of the ones that I'm doing for other people in order to be able to focus on me doing more like I don't even have time to edit the ones that I've already done right and that's why I've got to tomorrow I've got

(31:42) to edit the ones I've done and then probably a good uh a good thing to do tomorrow would be to um put together the list and then I think that I'm going to uh probably start peeling dialing back some of the podcasts as well so I'm only doing like one or two a week which is gon to be unfortunate but I I think I've hit pretty much all the major podcasts that are out there i' I've done a lot yeah yeah as far as I know Pates is not interested in this but if you guys want to reach out to him feel free I don't

(32:20) know um I I've just I've heard a lot of negative stuff from people that I trust about him but we'll see I mean you guys a lot of you guys too were telling me to talk to Danny and and from the concrete podcast and Julian and those guys turned out to be douchebags so you guys you I think you guys should also be very careful about who which people you are suggesting for this type of information realize that what we're talking about here is not just uh conspiracy it's also advanced technology that will literally break the

(32:51) brains of a lot of people out there right it makes a lot of people just viscerally angry but doesn't mean we can't we can't go with them but I'm just saying have I thought that's a good question have I thought about quitting my job to do this full-time I I could never make even remotely as much money doing this as I do at my fulltime job guys the total amount of money like Revenue not even just profit but Revenue that I've made during this is like less than 5% of my actual income I make at my

(33:27) real job uh maybe even less than that it's it's basically nothing right it's it's lower much lower even than uh minimum wage would pay right and that's with me doing a ton of extra work on this right so there's this idea that I'm making money off of this absolutely not not at all about the case the money that I have been making related to the streaming is a a tiny insignificant amount and B it's just me being a streamer right it's not me selling anything related to the case um and a lot of it's just been

(34:03) about science and stuff yay driftless Dave thanks a lot man yeah the diamond podcast the diamond show is great I'll probably do another followup on that yeah you need at least 100,000 subscribers even that's not enough look at people like Chris Leto or like alien scientists right and alien scientists like I think he's probably barely making anything from his YouTube you got to keep that in mind there's a lot that goes into this stuff yeah um I'd like to make my live stream a little bit more regular I'll

(34:41) probably be focused on that as well in terms of trying to make it simpler so that's another part about it as well Egon is that if I do shift my uh hey William if I do shift the situation in terms of dialing back from MH370 I may uh begin to monetize some of the work that I do and maybe either do a subscriber model on Twitter or do something else related to YouTube I'm not 100% sure um but the reality is you know people are allowed to make money out there and doing whatever they want to do uh I just want to make sure that

(35:21) people realize like everything we've put out there related to MH370 has been no pay walls one 100% never asked for a dime related to it so what I'd like to do is get all the MH370 stuff out there and then just kind of be like okay it's out there guys and there it is hey ver me appreciate you man yeah Diamond's one of my favorite people for sure for sure definitely aliens don't understand sequel there's a Consulting opportunity for you there um and I've I've been backdooring some stuff like if you guys

(35:56) have been watching the Skyfire news stuff keemstar has been pretty adamant about having me do a show related to the UFO Community World which I think would be pretty fun if I were to pick a show that I would do I would do like a Daily Show but related to the UFO community in general um I've spoken to Danny shean on the phone once you know I guys want to know a funny story so I'm going to tell you guys another funny story I guess we're this is I guess this is Story Time guys this is this is the thing that's crazy like how many people

(36:35) I've been connected to I don't even tell you guys about a lot of them cuz I like to make sure that people can trust me with uh confidential information but you know some of the stuff gets out there like I've spoken to Jesse Michaels personally he brought that up on one of the spaces um I had a connection that got me in touch with Danny shean and I had a phone call with him months back and the crazy part was I I started telling him about the case and started telling him about teleportation and he seemed

(37:05) disinterested and the weird part about that is then I see a clip of him literally talking about somebody tells him a story about a Coke can teleporting and I'm like wait what I'm like why was he not interested in what I'm telling him about a literal plane teleporting away but he's then going on podcasts and and talking about stories of a Coke can being teleported over to the next room I don't know man L and he's Danny shean is Lando's lawyer uh guys the part for me is that like I'm new into this whole Space of

(37:37) UFO community so I don't know what's disinformation and what's not I just know that there is a lot of disinformation out there and I know that people are willing to lie about it I I definitely think Jack trading that either Danny and Julian I think that the way it worked out was that jul Jan was either he's a useful idiot and he got used by his uh government buddies cuz he's a wannabe FBI agent wannabe CIA guy right 100% i i i pegged him on that immediately when I get in there and he's talking to an FBI agent on the

(38:13) phone I can tell this guy's just a complete wannabe loser um and that's Julian Dory I'm talking about uh but so he either he's either like this wannabe uh FBI guy that did this de that

did this attack on me I'm person or intentionally or he was a useful idiot that was being used with respect to Danny I feel like Danny was more like Julian's best friend and then he felt compelled to like do this **debunk** and they both know the corridor crew which are just some complete idiots I mean there's no way to put it they're

(38:45) like two of the dumbest or however many of them like the dumbest people on the whole planet and they think that they're VFX artists it's like I'd almost guarantee those guys don't haven't done VFX in years um and so that was what that whole how that whole thing played out like I'm almost 100% sure and I think that it even it makes sense that it was even used by the government because that this is why Dany would have put a dishonest thing on it you go look at Danny's podcast names and they're all

(39:11) like all this weird esoteric stuff but then when it comes to me it's like fully **debunked** by the corridor crew which is just a straight up lie just a straight up lie it's like he put it out there just so that people who don't watch are going to think that you can still go look at the comments even after he's deleted did a lot of the negative comments and still a lot of the top comments are like how he was a huge and how it doesn't make any sense why he acted this way right like the reality is I wouldn't recommend

(39:38) anybody go on Danny Jones's podcast or anybody go on Julian dory's podcast of course they're going to keep getting people because when you're connected to the government and you're connected to these disinformation people that it pays money and they they hook you up for doing it 100% it's easier for them to use these assets that they have control over than it is to pay me to stop talking about it right they'll just they're going to try to discredit me and that's what they did good thing is it

(40:04) didn't work that well but it's worked well enough like a lot of people go back and go oh you were uh you know you were **debunked** on the Danny Jones podcast and I'm like I was there I don't remember that when you want to remind me when that occurred what was the specific claim that they **debunked** me with um and yeah I understand why people still enjoy it because he never acted that way about anybody except for me but yeah let me see what else we got guys keep in mind as well though that I've

(40:45) only been doing this for I've only been streaming for like three months at most and investigating for like five months so I'm like very new to this these other guys they've been streaming and podcasting for years right years um so a lot of this is like and I don't know I would ever even want this to be my job I think I've been pretty clear that um like i' I'd rather be a normal person but at this point like I've made so many contacts and connections with people that it does seem like there's an

(41:17) opportunity for me to have a life that I enjoy more than what I do with my normal boring job and I like my normal job but it's just it's not the same is going to exciting places and talking about cool conspiracy theories and other interesting archaeological stuff or even uh you know doing a kind of show out there I mean I would like that stuff as well um I don't think Danny has

done that to anybody else I I literally don't think anybody else you as far as I know like I was literally the only one that's why I was

(41:50) surprised CU I looked him up ahead of time and I'm like oh this guy's talking about angels and demons and psychic powers and people that are summoning UFOs and thinking like okay well there's no chance this is going to go poorly the thing I've learned though this is what I'll tell you guys if somebody has you sign a uh if anyone has you sign a release just say no right away just cancel the podcast appearance that's that was the rub both those guys tried to get me to sign releases and uh that and that's how you

(42:21) know that they are trying to screw you over and that they're going to defame you they're trying to get you to sign a release um and even when I went on Tim pool which is way bigger the only release I had to sign was for injury because he had a skate park on the on the lot to say that I wouldn't sue him if I got hurt or something like that it didn't even have anything to do with the podcast appearance if they're not paying you uh anything to go on the appearance you there's no release you need to sign

(42:48) the only way they would make you do that is if they're going to try to discredit you and and when Julian Dory did it he had this really sketchy release like really sketchy I should have known when I read it I just wasn't that familiar right I thought it was normal his release was all like if you say anything wrong about me I can sue you and I'm looking at it going this is weird but fortunately enough like he signed the release for me which was the dumbest thing he could possibly do like he should have at least had me typ in my

(43:17) own name into the computer instead he just typed my name into the computer straight up and when I saw that I was like okay well I'm protected because if he does anything I'll just literally say that he's the one who typed my name into the signature and that's probably why he deleted his podcast cuz he defamed me in the podcast he falsely edited it he falsely added defamatory content to the front of it um and I told him that he should go talk to his his he's like some like little like like uh like

(43:49) silver spoon never his parents never told him no like grew up in You Know Rich New Jersey he has connections to some lawyer people and he just told me this just straight up I'm like imagine how privileged you have to be to like brag about this to somebody else that like he would get some really fancy lawyer to work for him for free if I were to ever say anything about it to him or to anybody and I'm like dude well you should go talk to those lawyers because you just defended me super hard and that's why he uh you know deleted

(44:21) his thing cuz he got super negative review on it and I imagine that his lawyers he talked to them said dude you should just delete this because he could come after you and and just take everything you have and the only reason why I didn't is because it TOS a lot of money to do that yeah no it's gone Julian's podcast he deleted it I told him to delete it and then when I told him to delete it um yeah and this was on the space you guys can listen to my space so I I recorded the the stream where we were

(44:50) all in the space together and I literally told him that the best advice I could give him would be to delete our interview and he's like he's like oh well you it's almost like you wanted to be deleted and I'm like you're the one who looks like an like I mean you know if you want to still act like an yeah and he tried to he put me in the shittiest hotel ever like shittiest shittiest Hotel like it stank it was sketchy as hell and I getting in there and I'm like okay yeah I've been played I've been played here and he

(45:22) didn't even pay for it he didn't even prepay for it I'm like it was super sketch dude the guy's Julian Dory is a complete scumbag piece of he really is and he's Jersey Shore trash too I get in there he doesn't have a shirt on when I get in there he's wearing a wife beater he's got to like go take a shower and put a shirt on when I get there just just complete trash sorry guys okay let's get into the science the funniest part was then after I mentioned it he like he flipped out

(46:01) right he flipped out about that all that stuff too about the hotel stuff and I'm like dude you should just admitted you didn't pay for it and he's sitt there trying to say I lied about it I'm like go look at your freaking receipts like what are you talking about man it's not some kind of he said she said it's like literally just straight up verifiable evidence yeah no Julian Dory is a huge huge douchebag huge douchebag like literally just complete loser like nobody should ever go on his podcast

(46:32) kind of loser like he even just straight up told me that he was losing money on his YouTube because he got demonetized from something or he got he got Shadow band or something like that he started whining about how he didn't want to go on Rumble because all Rumble people are like alt-right and he want to be associated with them it was just everything about the dude was just trash and of course he's like best friends with James Fox too of course that's how I lost all respect for James Fox as well and now

(47:09) I'm pretty sure James Fox is just like a straightup grifter where he's like they just straight up told me too that James Fox doesn't even believe in any of this stuff James Fox is a UFO aist that doesn't believe in any of the UFO stuff he's just a straightup liar but he he he fools people into thinking that he does and that's like what it's all about PR right where that's that's the reason why James Fox doesn't ever talk to anybody right because if anyone were to talk to him in person they'd

(47:41) realize that James Fox is an and that he doesn't believe any of this stuff firsthand right so that's why you'll never find him in a space that's why he only posts like completely curated Twitter posts and victimizing himself into being attacked when he gets sued and and crying about how his he got screwed over on some business deal it's like dude you're the one responsible for those business deals if you signed a bad contract that's on you man but of course he doesn't paint it that way he paints

(48:08) himself as some victim so that he can have the UFO Community come to his Aid right like you gotta be very skeptical to these people chat okay so sorry we went on the side rants ranting about people out there but I kind of hope that hear it because it's the **truth** and uh I think I've

proven that I have no problem telling the **truth** no matter what it seems like or uh even if it Dam even if it makes me look bad I just don't care um now unification theories so we mentioned there's a bunch of unification theories and then

(48:45) yesterday I posted I'm going to pull it up real quick can you guys read this by the way can you guys read the screen if not I can zoom zoom in let me see if I zoom in okay funny uh still believer in the Miami aliens I I think guys the Miami alien stuff has been **debunked** it's my true opinion um it was weird because all those people that were coming out that were saying like they had all these experiences they were really good actors but when we heard the uh someone actually finally posted um the scanner and the scanner

(49:25) just sounded completely normal like somebody would have said something about people claiming there' be aliens in the scanner If there really was and it was an outdoor mall kind of weird um wait what was that oh this is pretty funny is that a kns Templar thing damn guys if you saw me wearing some kind of kns Templar thing how many people would be talking about I'm some kind of weird uh what are the things the illuminatis or the uh Freemasons or whatever guys that's why you're never going to see me

(49:57) doing any weird hand signal signals in front of my face or anything like that because I'm I'm aware I'm aware of what the the appearances look like um where was the science that I posted okay so yesterday I posted this uh this is actually really interesting this condensed martic particle matter particle generation model by Martin Gibson who is he and um royy Herbert are in uh kind of Cahoots and they both have this excuse me dilation Theory and this is actually really interesting because it's a unification Theory between

(50:34) general relativity and quantum mechanics Quantum field Theory and it's basically this idea that you have this inertial Continuum and that everything is an emergent property from from this uh underlying Matrix that's on there right and uh so I'm not going to go through all of bit but one part I thought was interesting was this toroidal oscillations because the oscillation is similar to what Dave Rossy was saying in the paper that we posted from him right so this is really interesting and uh I think I even had Dave look at

(51:13) this and he said that yeah it seems to be pretty consistent with what his theories were about it uh so you can see these all these implications all the stuff in terms of the implications are pretty much what we'd expect Quantum Com**puting** Advanced propulsion new energy sources Material Science the impact the so the economic impacts are out there um but you can see I think that we've already lost quite a lot of people who were following before just from the views in general uh like Dave Rossy stuff got

(51:43) like 30,000 views like three times the amount of this right um so a lot of this stuff unfortunately has already started to die off a little bit which is whatever we still have much higher engagement than a lot of people do um but it goes a show that we're not like in this the MH370 stuff in general I think that a lot of people have given up on which is sad um but anyway side note so then I get a message from somebody after I posted this oh wait Dave Rossy did uh

gener oh he retweeted his own thing why does does retweeting your own thing

(52:28) do something di electric medium wait I thought he was gonna I think I talked to him earlier so what I was going to say though is I posted that um and then somebody messaged me and said hey this is really similar to this guy David maker and it's funny because I was asking uh somebody else about this David maker guy I I forgot got his name I knew it was maker something but maker is like you Google that you're never going to find it right and uh so I looked into so I looked into it here and I haven't read through it but I

(53:08) want to read through it real quick with you guys tonight and then I want to look at one of these other papers hey Bernie nice to see you man U I'm trying to see I think Dave told me he was going to post something I'm not sure if this is it though oh supposed to be about I think it was going to be something about super conductivity oh he's dunking on average Chris average Chris is not smart enough to understand how reality Works whether it's soci sociological with regards to landscape dynamics of a given subject or

(53:59) in science so by definition his cognition is highly limited oh my God average Chris you got dunked on dude oh adrenochrome he's got a lot of followers I mean this idea that the underlying framework is a matrix seems like a pretty interesting uh idea whoa he's got some interesting stuff on his on his stream today what do you guys I don't know what adreno Chrome is I'm I'm starting to get to be too afraid to ask drinking what viewers call adrenochrome okay guys that might be another conspiracy for another day I'm going to

(55:03) write that down on my list here adreno Chrome I've heard this but I I don't know what it is okay anyway so I want to look at the David maker stuff and then I want to look up money Penny there was some stepen **Green Street** drama today too I don't know what this dude's deal is um money Penny stuff's not getting oh I know why so I don't know if money Penney knows this guys this is a little tip if you at people like this it only sends it to those people that follow you and them so that's why you only get so many views

(55:53) you never want to at people like that you need to put a period in front of it otherwise it it destroys your views uh where is her where the heck is her analysis is this it no that's not it what the hell where is it sorry chat hold on don't do a dreo chrome what what is it don't ask is this oh YouTube will ban me if I talk about it is it oh now I'm really curious yeah I want the military papers want the military papers oh here it is it's from February 7th that's why okay let's find this one this is the

(56:53) one I'm looking for chat I can't find the link to this this one concepts for extracting energy there we go there we go oh it's from The Black Vault is it 2009 whatever there we go so Black Vault has it okay got it okay close that up okay you guys ready for a little bit of science can someone tell me what adrenochrome means though if Dave Rossy says it's it's real then I'm I'm very curious then I trust him pretty well John Greenwalt just added his own little plug here all these people are

(57:56) profiting off of this stuff right chat I'm like the only one not profiting off of this discover the **truth** at blackvault.com okay let's start with this one and then I want to look at David maker and then we'll say I'm GNA try to find the second one for tomorrow probably blood of children for immortality is that really what it is guys I want some immortality do I I have to harvest the blood of children though sounds kind of like Satanism to me there's an orb floating in midair filmed on the property by General

(58:40) atomics you got to tweet that at me I feel like you can probably get blood without having to traffic children right maybe maybe you can't though maybe you can't okay so this is actually pretty long so let's dig into some of this you know what can we feed this into AI maybe we can just feed this into AI I feel like we should use AI chat you know what let's let's let's feed this in AI how does guys how does AI work does is AI going to know this uh it's on The Black Vault so it should know let's say summarize

(59:36) let's see if Gro can do this for us I don't like working hard I like working smart chat PDF chat pdf.com that's a real thing oh yeah okay okay this is let's let's just do chat GPT version guys let's do the grock version this will be better okay concepts for extracting energy from the quantum vacuum revolve around the idea oh I'm just showing my my DMs whatever uh concepts for extracting energy of the quantum vacuum revolve around the idea of harnessing the energy present in the vacuum of space this

(1:00:25) energy known as the Zero Point Energy is a consequence of quantum mechanics and therefore thought to be potentially Limitless source of energy researchers have proposed multiple various methods to extract this energy such as uh I lost my PL of thought such as the Casmir effect which introduces the use of two metal plates to create a region of negative energy density so the Casmir effect is is really cool guys right because this is where you take your two plates you have your two plates and the thing about this is that when you've

(1:01:03) closed them together now the wavelengths that are out there through space you've limited the amount of wavelengths that can pass through here right and so now the wavelengths can only be very small if they want to reach through here so what does this do slips things together that's the Casmir effect forces things to become to get to get sucked together uh Ashley bernitz she's famous for making the the clip that included some of our work in into the fake uh Netflix um uh what was it uh trailer that was

(1:01:36) really good yeah Ashton showing his DM shocking uh the plans for March 8th not really any huge plans I was thinking about retiring from doing MH370 stuff but we'll see I not 100% convinced maybe I'll take a break you know whatever Brett Favre unretired like three times guys so retirement doesn't mean much in this day and age uh but March 7th I signed up for a seminar or something related to a presentation that one of these investigators is doing around MH370 and I am definitely definitely going to press on them about the fire

(1:02:12) scenario 100% March 7th uh I have to look up and see what is it called I'll look it up right now I'll try to not uh show all my emails as well oh some more **foyer** requests came back

[Music] oh oh Department of energy they came back and said that they received my thing I don't know if they're going to have anything about MH370 but we'll see um where did it just go I got too much stuff open chat I got too much stuff open uh what's the one here it is damn I've done a lot of crap uh event registration okay event registration The

(1:03:18) Disappearance of MH370 10 years on Ken Bara uh that doesn't tell us a lot does it uh does this have my information on it Australian Defense Force Academy lecture theater 7 some kind of Australian thing I don't even know what time this is on my time this is going to be like this is going to be like 4 in the morning my time I think oh Royal aeronautical Society guys Royal aeronautical Society I'm not going to show this cuz I feel like I'm going to accidentally show personal information I'm not trying to show even though I

(1:03:56) don't see any but I feel like there might be something here I don't want to reveal but yes it's some Royal aeronautical Society uh presentation on on February 7th that I'm going to be doing should be fun yeah well I'm 41 and I don't know how to use AI so welcome chat welcome to the club yeah I mean it's it's been man I've been doing this for months too Dorian I how I pull it off okay anyway let's go back to this here um so you create that region of energy density between the

(1:04:33) plate so negative energy density one approach to extracting energy from the quantum vacuum is by using the Casmir effect which takes advantage of the fact that the vacuum of space is not empty but rather filled with fluctuating electromagnetic waves by placing two metal plates close to one the energy density between the plates decreases causing a force that pushes the plates together this force can be used to generate energy I never really thought about like that another proposed method for extracting energy from the quantum

(1:05:05) vacuum involves using the use of quantum mechanic quantum mechanical systems such as atoms or molecules to create a source of negative energy by carefully manipulating these systems is it may be possible to create a situation where energy is extracted from the vacuum and used to perform useful work however these concepts are Solly largely theoretical is there much debate about the feasibility okay let's pull this over to the side now actually the next thing I want to ask is summarize David maker work let's see if it knows David

(1:05:46) maker no that's definitely not that's not the right dude at all okay um chat where where was that link he just posted JK Philly do s that link there it is I got it never mind I got it blood of children for immortality chat what a wild thing adrenochrome Department of orbs emails yeah so um before we go into this real quick what I want to say in terms of what would be the reasons of stepping away from MH370 stuff is partially I guess burnout but the other side of it and then focusing on other stuff but um

(1:06:49) the other side of it too is to like allow allow the mythology of the the case to build up right allow the suspense to build up right build hype for it people wonder oh why did that Ashton guy stop whatever happened to him and then a few months later maybe a year later we can come back to it after we're not burnt out anymore but I think the reality is we have to let we

have to let the public catch up a little bit so I will repeat I believe these videos are 100% real if you're just listening right now I'm about to show the MH370

(1:07:22) videos I believe these videos are 100% authentic uh I don't think anybody edited them to add any orbs or anything like that you can see the clouds moving pretty clearly especially in the high quality one um what we see here is all consistent with science I mean you've got a literal no one's even explained why there would be uh a citric session like why would they have faked a citric session into their video I was that now just absolute proof the videos are real just blows my mind you can see the

(1:07:53) clouds moving like oh it's an artifact you can see the clouds evolving here and just moving around like it's wild you can see the clouds move down here as well but I believe these videos are definitely authentic I think that they show one of the biggest military leaks of all time um and sadly they uh implicate the US government in a giant conspiracy man giant conspiracy this one I can't even believe people think this is fake there was somebody who made like four posts on **Reddit** or three posts on

(1:08:24) **Reddit** I think the other day where they were saying that this this is not like adequate for going through turbulence or something like that and like every single thing they said was factually incorrect like not even scientifically accurate like what's what's wrong with these people like people see this and they feel so personally upset that they're willing to just straight up make up fake **debunk** evidence just to convince themselves people that have no background or understanding of how science and

(1:08:55) uh turbulence works or air pressure flows no no idea whatsoever and then they post videos of helicopters and then they they think this is evidence that somehow the shake we're seeing here is not accurate the shake is 100% accurate I've even got a drone video that shows a drone in high turbulence where it doesn't even have this much turbulence it's like these things are extremely stable man it's a big drone it's not gonna fly over ridiculous man ridiculous so anyway I'm happy for people that think they're fake

(1:09:30) I don't care uh yeah if I were to take a break from MH370 doesn't mean I'm not going to stream by the way just means I'm going to be focusing more on science and other stuff and and a matter of stepping away from it's just really a matter of formalization uh in terms of just letting people know why I'm not talking about it more because I want people to know that I absolutely believe the videos are still real I'm not stepping away from that at all nobody's even become remotely close to **debunking** these

(1:10:00) videos nobody's even addressed our evidence let alone have some hoaxer come forward so yeah I mean until that happens these videos will always be out there the next move if you're the government is you need to make some fake videos that don't have the orbs in them and then come up with some logical reason for why you hadn't come forward and find some Psy to come forward and claim they made it the problem with that is I have number of small details that either I know about or know very few people know about where only

(1:10:38) the hoaxer would know and I can just test them who's Eddie Bravo thank you NOA price appreciate the donation I do like that a lot of you people haven't been donating as much anymore I prefer if you guys keep your own money but of course I appreciate it if you were to donate it's nice of you thank you very much Noble price because you did that we will take a look up and we will look up Eddie Bravo the problem is I'm going to look up Eddie Bravo and I'm going to get uh Cartoon Network oh maybe I'm not going to get

(1:11:20) Eddie I guess Eddie Bravo the cartoon is too old I'm too Boomer to this guy is this an MMA guy damn he's older than me this this dude is no way this guy's 50 this this picture must be from way long ago no way this this dude for being how old did that make him 54 there's no way this is a 54 year old wow he's got 600,000 followers these people got a lot of followers man is this him I'm already following him I'm guessing he doesn't post much yeah he doesn't posted on Twitter in

(1:12:12) Years bro asked who Eddie Bravo is oh that's Johnny Bravo yeah Johnny Bravo oops guys whoops oh that's pretty awkward chat that's pretty awkward I called Eddie Bravo Johnny Bravo I don't think we're going to get him I don't think we're going to get him on the stream get him anymore guys oh is he into adrenochrome just messing with you anyway guys let's uh oh by the way chat the Discord is now open the Discord is now open to the public I think we've also reached the point where I'm not

(1:12:51) worried about people stealing information on the Discord um I probably could have opened it up a while ago I've just been busy so if you want a Discord invite you don't need to ask me uh there was like several dozen uh requests for um Discord invites in my email so go ahead and take it take a look yourself sorry guys I'm not really familiar with all of Joe Rogan's best friends no no offense to Joe Rogan out there I am the director thank you okay I guess we're Googling something else chat guys we're getting really

(1:13:27) sidetracked here I do like interacting with you guys but it does make it hard to get stuff done that's why a lot of the stuff I do I do offline not a lot of it but a little bit of it General come on what is going on here General atomics L Mirage black sphere okay thank you for the donation you have awarded yourself one black sphere oh this is recently oh I didn't what I did not want to do that Jesus it literally Auto downloader program how is this not just straight up malware oh I think I've seen this one oh

(1:14:32) yeah yeah I've seen this is there no sound oh yeah this is really weird right the problem is like Joe Rogan said to Aaron Rogers I like the ones that move really fast or really weird right what is that it's just floating there right cuz like if it's just floating there how do you know it's not it's like just a balloon or something although normally a balloons move somewhere although damn that's pretty weird so guys just for anybody out there you see a sphere like this you you get out of your car and you go up to it just

(1:15:16) pull over on the side of the road and film it for more than 30 seconds right film it for like 10 minutes figure out where it goes follow that thing I mean this is pretty damn close it's

right there this video should go for like another 5 minutes minimum and they should be saying what the f like 10 times here and just get out of your car who cares side of the road they're not going to arrest you there's a thing just floating around on here okay there you go he's like it's just floating around

(1:15:55) okay time to go my day guys this is why we're never going to get disclosure man my dude just straight up moves over to the side and just moves off it's like okay I'm good that nicobar video was some really really really bad AI guys so don't don't promote that to me it was terrible it was somebody who was trying to think they thought in their mind that the other video was really bad and they found out the hard way that the other video was really really good and not made by AI that the person who made it too is

(1:16:25) probably one of you guys who was a fan or whatever but uh I mean I'm sorry to tell you that that that attempt was really poor goes to show that not everything is easy as you imagine it to be chat here I don't want to Sidetrack but I would I'd pull up the nicobar video I could only get through like 30 seconds of it it was so bad compared to the letter to Ashton Forbes which was extremely detailed okay so I think we can flip through some of this now because we we heard the summary let's read the summary here this

(1:16:58) is going to be consistent probably with what um Gro said quantum theory predicts that the vacuum of SpaceTime throughout the universe is filled with electromagnetic waves random in phase and amplitude propagating in all possible directions and with a cubic frequency distribution this differs from the cosmic microwave background radiation is referred to as electromagnetic Quantum vacuum which is the lowest energy state of an otherwise empty space when integrated over all frequency modes up to the plank frequency it represents an energy

(1:17:30) density that has a much higher uh wait energy density as of as much as  $10^{113}$  joules Which is far in excess of any other known energy source even if only an infinitesimal fraction of it is accessible even if one is constrained to integrate over all frequency modes only up to the nucleon uh only up to the nucleon uh Compton frequency this energy density is still enormous in addition the electromagnetic Quantum vacuum is not alone it intimately couples to the charged particles in the dery of virtu firon particle anti-particle pairs aka the dur

(1:18:13) vacuum and thereby couples to the other interactions inherent in the standard model the weak force and the uh strong force however in the standard model of particle physics the weak Force vacuum is essentially the electromagnetic vacuum because Photon serve is the massless uh I igen States I don't know what that is of the unified Electro week Theory with an effective coupling constant that is in fact an electromagnetic and strength and we can safely ignore any coupling of the quantum electromagnetic vacuum to the

(1:18:43) quantum chromodynamic vacuum it's like they're trying to make this as hard as possible guys um in the paper because the latter coexists in two phases the or ordinary vacuum exterior to the hyron which is impenetrable to the to Quark color is this even real uh the vacuum

interior okay so I'm not going to read the rest of that because it makes it's gobbly G what they're saying here is that there is a underlying Matrix and that there's a huge level of latent energy in the vacuum of SpaceTime

(1:19:14) anywhere and that we can tap into this using uh like the Casmir effects there are ways to manipulate and and tap in into the underlying framework of the space time itself even though the 0 point energy seems to be an inescapable consequence of quantum field Theory its energy density is so enormous as to make it difficult to reconcile instead many Quantum calculations subtract the Z zpf energy by ad hoc means for example using read normalization however the effects of the quantum vacuum zpf that are responsible for a variety of well-known

(1:19:52) particle physics phics effects are observed such as lamb shift subatomic spontaneous subatomic emission low temperature van D walls forces Casmir effect source of photon shot blah blah blah uh one thing that this reminded me of somebody asked about s in the chat um when I was talking to Mark today and this will come out in the podcast but he was actually looking at salvator Pi's paper on uh inertial Mass reduction as well it's funny cuz he had the papers up when he for Stuff was looking into and I mentioned what his

(1:20:24) thoughts were on Salvador Pas and he literally was like oh I have the paper right over here and pulled it up to the screen pretty cool so yeah the the mark uh interview today was pretty fun it was really good I'm looking forward to getting that out I'm still trying to set up uh interviews with some other people including some congressmen um but I yeah they're kind of flaky so we'll see maybe we can get it to happen I hope so uh you can find the invite to the Discord in my Twitter I posted it uh early today it's only

(1:20:54) look you can look back like two posts and you'll find it actually uh I'll even I'll link it here so there you go for people watching or people who can click right there you can join the Discord uh please keep it respectful no hostile crap no uh you know no racist stuff uh if you're if you're interacting and fighting with people you're going to get booted just keep it normal you can look through all the channels you can take a look at the evidence out there I think yeah I think I've made everything available for

(1:21:31) people to view so you can sift through all the stuff that's out there I want to keep this Discord pretty uh not not crappy I don't want to have a community like Chris Leto's Community which is just so toxic which is funny considering the guy's got a unification theory about love and his other than alien girl like most of his community is just super toxic um okay that's loud um okay this is this is kind of boring I want to look at David Maker's stuff guys the interview is not been published

(1:22:17) yet I'll publish the interview on Sunday okay let's see what David Maker's thing is so somebody sent me this generally covariant generalization of the dur equation that does not require gauges literally his website's called davidm maker.com is there any way I can feed this into AI there's got to be a way we can feed this into AI guys chat teach me teach me I also don't want to be up all night I'm starting to get pretty tired it's been a long long day um summarize

David [Music] makers work called generally

(1:23:20) covariant what was it called okay I'm not showing DMS this time okay I can't I can't read this here generally covariance gener generally covariant generalization seems redundant of the [Music] dra equation that does not require gauges G Au Jesus okay grock let's see what you got grock [Music] oh chat yo grock does not mess around chat okay David Maker's work blah blah focuses on deriving a new generalization of the dra equation from assumptions of geometric point the approach replaces the need for dark

(1:24:22) matter and dark energy and offers a quantized metric that's similar with what a lot of stuff we've been uh finding the paper presents a solution of the dra equation in various domains and discusses the implications of this new generalization on various aspects of physics including Atomic units and gravitational phenomenon in conclusion his work provides A New Perspective on the draa equation and its role in explaining various physical phenomenon without the need for traditional Concepts like dark matter and dark

(1:24:51) energy okay so let's take a look at explain the dra equation I mean that's pretty good I'm glad it knew some random thing like this it's pretty random yeah I think we've **debunked** Dark Matter chat maybe we should do a post **debunking** Dark Matter guys sorry we **debunked** Dark Matter turned out it was uh a series of balloons it was a Batman balloon or maybe it was uh just a Pyromania VFX sorry guys dark matter has been **debunked** it's Pyromania VFX it's exact match okay the dra equation is a

(1:25:36) relativistic quantum mechanical wave equation that describes the behavior of Elementary spin particles such as electrons it was formulated by British physicist Paul D and is consistent with the both principles of quantum mechanics and the theory of special relativity that's good the equation predicted the is existence of dark M or antimatter which are particles that have the same mass as their com corresponding matter counterparts but the exact or opposite electrical charges it also provided a better explanation of the magnetic

(1:26:05) behavior of electrons which was once the most mysterious and puzzling aspects of the behavior at the time trag equation has had a significant impact on our understanding of the universe has been applied in various Fields including particle physics Atomic physics condens matter physics condensed matter that's what we were talking about one of the most important equations okay okay I feel like I could there's probably something I can say to this where I can get a longer answer but I think the approach would be to um maybe

(1:26:32) try to read some of the summaries anything we can understand here over the past 100 years people have been trying to make up for that mistake oh space is not FL in General Flat there are forces people have been trying to uh make up for that mistake by adding ad hoc convoluted gauge Force after gauge Force until fundamental theoretical physics became a massive confusion a train wreck a junk pile so all they can do forever and ever is try to rearrange that junk pile with zero actual progress to the most fundamental

(1:27:04) theoretical forces of physics we we died okay um is not flat space so it cures this problem so this sound does sound very similar to Martin Gibson's post that we put on there retell the info and bullet point summary form should we try that real quick did I already close it I closed it already grock where'd you go grock okay let's see let's see if let's see if chat's correct hey thanks Bernie I appreciate

(1:28:13) it I'm learning slowly slowly dark matter I think the best way is I I truly think that dark matter is simply complexity right um dark matter is just an increase in complexity which is how you describe why how you unify it from the quantum field perspective as well as general relativity is that on the very small scales um let me use paint to explain it okay so if we imagine I'm going to explain dark matter to you chat I hope you enjoy this this is my understanding of it uh based on scientist I'm not trying to say

(1:28:54) that I've inventing anything new here but imagine that this line right here has some Mass to it okay so let's say that the mass of this line right here is equal to one okay well that's weird why does that not so this is one right so this is one and let's assume that this is some piece of quantum information that's equal to one okay over time everything gets more complex so molecules the the like a solar system becomes planets becomes the sun Etc information grows as I'm speaking right now I'm I'm the

(1:29:35) information is growing from the first word to the 10th word so you can think of uh things either very small or very large in the same type of concept so there is a one amount of gravity Associated to this amount of complexity or mass whoops now as time goes on and time moves forward now we're going to have this much mass let's say this is two right now this is one and this is one equals 2 so now we have twice the amount of mass this can be information this can be a quantum number this can be a macro scale number and this is how complex

(1:30:16) continues to grow right now you take this much and I don't know how much this is but this is the idea is that now you have a significant more amount here right and so as time moves forward you can think about a different way as time is moving forward the complexity is increasing and as the complexity is increasing then the amount of mass is increasing both from the quantum level of information as well as therefore from a large level and this can be a unification Theory because if it's increasing at the quantum level

(1:30:46) it's also increasing at the macroscopic level as well right and this is why we don't see Dark Matter there is you don't you can't see it we can see the effects that they're clearly must be more mass there but we can't see the additional Mass it's not that the mass is hiding from us it's that there's another explanation for why there's more stickiness and hey tangent gaming appreciate you man okay so let's this is good I didn't think this was going to work so whoever

(1:31:16) said that you could use grock like this uh exilus appreciate you let's read it this way dra equation fundamental equation in The Theory of physics describes the behavior of ferion with half integer spin okay guys we learned what ferion and bons are Fons things that have an half integer spin are things like my uh this this right here anything that has mass that's has a a

fundamental property where you can touch it and feel it and it and the for all the uh atoms inside here take up a different point in SpaceTime okay um

(1:31:51) when something's a Bose on which would mean an integer spin so not a half spin but one or two then those things are going to collapse down that's like a laser where a laser is the light focused down to a single point where it all collapses on itself that means you have an integer spin as opposed to a half integer spin Drax Theory successfully combines quantum theory with special relativity and accurately predicts the Magnetic Moment of the electron key Concepts General coari a generally covariant generalization of

(1:32:22) the dra equation is found by substituting General coari in the standard dra equation I hate when explanations use the same word to explain them it doesn't really tell us what it means uh point source uh diagonalization uh okn diagonalized in the form of a point source whatever that means key findings first new order pde a generally coari generalization of the dratic equation that requires only one postulate of geometrical point point to prove uh boy you're losing me three domains  $R$  greater than  $R_H$  okay curv space explicitly includes

(1:33:01) curved space thus naturally explaining the forces with direct straightforward D der derivation derivation okay implications breakthrough physics propulsion potential to impact fundamental science and our future breakthrough energy ideas possible advancement Energy Research deeper understanding of our phys phical universe and the behavior of particles with spin criticisms gauge and free parameters some argue that the original Gira equation and its interpretation remain important despite the prop proposed generalization Reliance On Em

(1:33:35) interactions the proposed Theory may not be more fundamental to the quantum theory than other interactions conclusion David Maker's work offers A New Perspective on the dra equation potentially leading to breakthroughs in theoretical physics it is very generalized this doesn't really tell us any of the detailed information that we wanted yeah self Loop explanations I don't like self-explanatory explanations at all what I want to know is what is uh covariant with respect to the dra equations yeah I think our galaxy is

(1:34:20) magnetically I think our oh I think that magnetism so even before I dug into all this um I always felt like magnetism was the key to understanding Dark Energy Dark Matter especially dark matter is that magnetism is what's allowing everything to be stuck together and in a sense I think that's the **truth** that's what the answer is all these are basically electromagnetism and uh magnetism based explanations Ms thanks for that post interesting fractals huh we we keep hearing the same terms over and over

(1:35:11) again okay the dra equation which describes the behavior of Fons and satisfies the principles of Relativity quantum mechanics is covariant under these transformations this means that if the equation is written in one integral frame of reference it can be transformed into another frame of reference and the transformed equation will still describe the same physical system the covariance of the dra equation is ensured by the transformational properties of the gamma matrices which are used to construct the equation doesn't really help too much

(1:35:41) but we're still getting there okay this is pretty good have I heard of Hal PUD off yeah I've heard of him I'm a fan I think that Hal Poff is legit he is do Ed a lot of interviews and um if you look up his work like he he's like one of the most old school physicists in the dod entirely I think he's like 80 years old and apparently his uh apparently his uh Wikipedia has been getting bombarded by skeptic **debunker** people which usually that's a pretty good sign um Paris psychologist and electrical

(1:36:23) engineer uh whenever he says electrical engineer I'm immediately immediately interested um in 2010s he co-founded to the stars with Tom [Music] delange electrical engineering he took interest in the Church of Scientology why is this even on here this is definitely just a discredit him he took interest in the Church of Scientology okay like in the 70s and in the 60s so he severed all ties with them in the 70s for some reason this is like in his Wikipedia I have a feeling if I were to go to **Mick West** Wikipedia is not going

(1:37:11) to say how he's been wrong about the Tic Tac videos and stuff like that I I'm guessing it's going to say completely opposite stuff even though he's a video game he he his claim to fame is he worked on Tony Hawk video game um he researched Zero Point Energy the lowest possible energy that a quantum mechanical system may have the quantum vacuum explains the quantum vacuum field theories in 1987 he showed that the grounded state of the hydrogen atom can be determined by dynamic equilibrium between radiation emitted due to the

(1:37:51) electron acceleration and radiation absorbed from Zer Point fluctuations a lot of this still goes over my head biolog a biologist biologist mimo whatever have noted that extracting energy from Z point energy is considered to be pseudoscience that's literally just an opinion from a biologist why why would anyone care what a biologist thinks about Zero Point Energy what what is this is this this is apparently the thing that he was fighting about this is literal nonsense I might actually do a post about this because this is so

(1:38:31) stupid why is this in his Wikipedia who cares this is like me saying that like this is like me citing myself to say that **Mick West** is a video game player and therefore shouldn't have any opinion on UFOs that's like me having that in **Mick West's** uh Wikipedia page who cares this isn't even relevant a well-known py Paras psychologist and conducts research on so-called Zero Point Energy the idea that one can extract energy from empty space it doesn't violate thermodynamics at all this does not violate

(1:39:10) thermodynamics why this is why you don't have biologists tell you about how zero point works oh God look at this guy look at this guy oh my God you got one earring bro get out of here let me guess his are we going to find that this guy's in some kind of nonsense believing stuff as well oh this is why oh of course he writes he writes regularly for the skeptical Inquirer of course of course he does directly links him back to **mcwest** isn't the the skeptical inquire one of these uh **Mick West** things I'm

(1:40:01) pretty sure it is how come everything links back to **Mick West** guys wow I actually didn't think there was much to this whole um this whole like Wikipedia edit Wars thing but

we've got a direct link back to **Mick** West here I think **Mick** West literally has a cult literal cult dude literal Cult of followers and none of them ever address anything they just live in their own little cult world of skepticism and how they think they're smarter than everybody else even though they're just like all idiots they probably never

(1:40:38) accomplished anything in their lives he started a monthly internet column called rationally speaking oh my god dude okay well I think we're going going to pass on this guy yikes man okay I think that's good for tonight Chad I'm going to go to sleep oh you sent me the documents thanks money Penny we looked over the one already was it this one it's just a little bit too long for me to go through on the stream but we did the summary of it so tomorrow I'll probably go over the summary of the other one we might do a

(1:41:13) little bit more research I want to get the um the last lockie Martin Rolls-Royce connection stuff done I think that's one of our last kind of investigative things that we found I think we're also going to **debunk** the conspiracy theory that there were four scientists on the plane that died and then the patent carried over like those people didn't even die so we'll probably **debunk** that tomorrow but main thing I'm going to be doing tomorrow is I'm going to be editing my hard TRS podcasts so if

(1:41:40) I'm not online that's probably what I'll be doing uh thing is it's not even worth addressing **MC West** dude's such a clown honestly he's just a complete clown man I'd rather just let **mcwest** live in his alternate reality you know doesn't I just don't care okay guys I'll talk to you later you guys have a good one thank you money Penney for that link we'll look at it tomorrow everyone have a great night appreciate you guys being here peace everyone

Transcript:

(00:57) hey chat you guys ready for this welcome yeah William I don't know it sounds like you're doing something wrong hey everybody okay let's just get this thing started right away uh yeah there's a storm brewing a thunderstorm I hope you guys did your homework everybody uh let's just get it going right away Malcolm bendall uh guys who the hell told us to find Malcolm bendal I hope you're ready for this chat in lece let me turn the sound up over here let's start with this hope you guys

(01:39) read your scientific paper for homework for last night I really do why is my sound go to the max all the time okay yeah disappearing act I mean I have one better I I'm in direct contact with Florence Tangi um and basically everything we've uncovered is consistent with what she's

uncovered for the most part uh but you got to realize she's been doing it 10 years 10 years in the making chat I have not had time to read her whole book it's a 500 page book chat um and it's written kind of like in

(02:15) the first person which is awesome she's a better writer than I'll ever be no doubt about that I'm not a I'm not a seasoned writer or a journalist I'm just a citizen journalist um okay here we go guys let's get started with the video here yeah we're going we're going hard today everybody so I was at dinner and I was reading over the uh paper that I told you guys to check out the fusion The Vortex Fusion whoa there is some similarities to what we are talking about guys I I think that the uh thunderstorm gener

(02:49) might actually be the key like just like the video told us that we watched last night just like the letter to Ashton Okay so you know what I'm going to do you one better we have a new intro that we're going to play for tonight only here we go video you can see the interference patterns created by the sound waves pure geometry a new device called Levy print uses sound waves to levitate and manipulate objects for touchfree building resonance frequencies everything vibrates have you ever like if if we had a an electric razor we

(03:28) plugged it in turned it on set it on table it's going to move around isn't it you ever seen that yeah that's the beginning of the concept because it's vibrating everything vibrates at a frequency and if you know that frequency you can control things Le print is a system that can levitate manipulate different objects to assemble complex pieces this is a generator that has no moving Parts it's all based on Geometry of course these objects could be small spheres but also H droplets of glue things that we can levitate move

(04:02) and rotate sticks the levitation is created by sound waves that have a frequency approximately double the highest frequency that we humans can [Music] [Music] hear [Music] [Music] [Music] he [Music] [Music]

(05:22) [Applause] [Music] he [Music] [Applause] [Music] provide a new novel matter to energy and energy to matter propulsion device for water land air and space travel did you see Elon Musk wonder is he essentially sending a shot off people who he thinks are going after him which is that I have knowledge of something and a limitless energy this may sound corny it does sound corny but love is the answer Chris letto is right [Music] answer

(06:31) [Music] he [Music] oh [Music] [Applause] [Music] hey [Applause] I think that a future where we are a

(07:34) space fairing civilization and out there Among the Stars this is very exciting this makes me look forward to the future this makes me want that future you know there things there need to be things that make you look forward to waking up in the morning you wake up in the morning you look forward to the day forward to the future a future where we are space Fring ization out there Among the Stars I think that's very [Music] [Applause] [Music] [Music] [Applause] exciting there are some ideas about having space like so

(08:26) so you're can to only move at the speed of light through through space but if you can make space itself move that that that's like that's Waring space um space is is capable of moving faster than the speed of light right uh like the universe in the Big Bang the universe expanded at much much more than the speed of light by a lot yeah um so um but the if this is possible the the amount of energy required to Wolf space is so gigantic it's boggles the Mind provide a new novel matter to energy and

(09:07) energy to matter propulsion device for water land air and space travel wow that's on Malcolm bendle's video you can holy smokes chat let's go holy boy let's let's go okay wow um yeah okay I don't want to go full Chris letto here but oh my goodness uh guys starting to believe in sacred geometry uh it's getting kind of weird this is Malcolm Bendle thunderstorm generator are you guys ready it's going to get better okay did you do your homework chat Let's uh bring the chat out back over

(09:58) here let's let's figure this thing out guys I think it's time I think it's time we figured it out yeah blurry creatures was good uh the podcast tonight got rescheduled because we had some audio issues no big deal though I was wiped out but now I'm looking at like whoa have I looked at sematic yes I have okay guys here we go this is the P this this is the article this is a new I guess you could say a science article at the top of this article is the nature paper that is Bob Greener is the author

(10:42) on Bob Greener is the author on this nature paper the water can trigger nuclear reactions to produce energy in isotope gases okay so we started talking about this a little bit but there's some pretty huge things in this okay so this post delves into the phenomenon observed within a thunderstorm generator device based on the r rank hsh Vortex tube which uh unexpectedly exhibits exhibited signs of potential nuclear transmutation and coherent matter phenomenon guys coherent matter phenomenon that's what we've been

(11:20) talking about we've been talking about this related to the videos it's going to get better chat it's going to get better we even before I knew about any of this I didn't know about any thunderstorm generators I know who Malcolm bandal was or any of this I'd already been talking about macroscopic Quantum coherence and I initially incorrectly thought it was decoherence but it's actually coherence the reason why I just posted the video is also this video right here macroscopic Quantum coherence M

(11:56) macroscopic phase conjugation there you go go this is it right this is this is the phenomenon is it possible that we can pull it off with other means using the basics the let's say mono structure of potentially what the thunderstorm generator is based on the thunderstorm generator is an engine right but what if you use this same concept which guess what the concept is toroids every single time toids every single time what if what they talk about in the video letter to us when they talk about the mono structure and

(12:37) then the meta structure what if they're just talking about the donuts the toroidal donuts right and then they're talking about when you make a more complicated one for a different

purpose is when you stack the fractal layers to on top of each other I can't stop thinking about that I don't know if that's true or not but I can't stop thinking about it I'm going to skip to the end for you guys where I'm going to kind of go through this a little briefly right so so the main idea of this

(13:00) thunderstorm generating this tube here is that you have concentric I think concentric is the right word here uh tubes so you have a bubble and then you have a bubble inside that bubble right and so you have the let's say atomized cold water spinning One Direction and then you have the so you have basically the charges spinning opposite directions here the hot gas and the cold okay and that this creates some type of plasmoid effect now I'm speaking from this from the Layman's perspective it gets more complicated

(13:32) than this for sure and you can see all these different um images of how it works in general here but basic idea here is it's producing these plasmoids okay so I'm going to read through some of these the intake air path air is pulled through the pre-ionization chamber and exposed to 100um UV light which ionizes the air with a positive charge the chambers materials and codings could amplify this ionization process the charged airs then pulled into the cavitation chamber cavitation the bubbler the plasmoid generated the

(14:04) bubbler cavitation and plasmoid generation the second chamber functions as a plasmoid generator through cavitation producing bubbles around five microns in diameter in order to symmetrically collapse it's crucial steel wool packed in the chamber for further uh ionization now this right here on the right is where I think you're seeing the North and the South Poles so again now we're talking about magnetism as well and the plasmoid uh exotic vacuum objects are being created here in the middle of this L it's creating this uh

(14:39) toroidal shape right where if you think of the toid it's creating this doughnut type of shape now the bubble Dynamics these bubbles along with water vapor and dissolved gases from the water vacuum to the top of the plasmoid chamber regular water contains dissolved Gases such as a proximately 97 or 79% nitrogen 20% oxygen 1% Argon this composition is where the plasmoids are generated so it says the regular water degassed water the dissolved gases are extracted from the Water by applying a vacuum increasing

(15:09) the available energy per volume uh a hydrogen based gas is introduced to the water further increasing the available energy per volume now bubble implosion and plasmoid stabilization you can see the sizes [Music] here um the plasmoid Evo withstands the bubble burst so the bubble bursts but the plasmoid is leaved is kept behind precise pressure mechanism precise inverse pressure applied to the chamber causes tiny ionized bubbles to implode symmetrically at a rate of about 7,000 bubbles per second small symmetrically collapsing bubbles are key

(15:49) to formation of the self-contained plasmoids geometric configuration the implosion process aims to collapse the North and South Poles of the bubble symmetrically utilizing an equal amount of pressure this action forms a toroidal donor shaped geometry resembling the

infinity symbol excuse me which manifests a zero point or gravity well that acts as the glue holding together the plasmoid so I believe this is where they're talking about with this infinity symbol right here like this right now Magneto dielectric containment

(16:20) field the toroidal shape uniquely creates its own electromagnetic containment field forming a self-contained homeostatic system imploded mic microscopic bubbles reach a size of 10 to the minus 12 microns so pretty small so we're talking about the Bubbles collapsing in cavitation so when we're talking about that cavitation we're talking about the same thing with these little Punchy shrimp when they push the water so hard it can create heat the same idea when we have our sonal solo luminescence that we were

(16:47) looking at the other day sonal luminescence sorry so plasmoid functionality Catalyst and atomic battery the plasmoids function is both as a catalyst allowing reactions to occur at lower temperatures and an atomic battery storing disassociated protons and electrons within its sphere of influence this caused the transmutation of matter observed by spect spect uh spectrometry a new synthesized elements so elements are being formed here right and this is what the paper that Bob Greener has attached to the top basically proves I

(17:19) believe I'm starting to wonder if the letter was legit it's kind of weird guys or some either someone was a super fan of both of us they knew about this plasma generator stuff and they knew about the case or like I don't know I just don't know man it's getting weird um so then they have this generat tube and wait till we get to the the conclusions here guys so it says the plasmo are vacuumed into the tube moving in a count a clockwise Vortex simultaneously hot exhaust exhaust gases from the engine consisting

(17:50) of carbon dioxide and carbon monoxide enter in a counterclockwise spiral so that's where you see this reaction change chamber thing I think happened in here now this is where a little bit of the sacred geometry stuff comes into play where again it's just a matter of ratios right so the Spheres and tubes are based off the ratios of 432 so if you have an outer diameter of 24 the next one needs to be 18 and then next the inside one needs to be 12 right if you have three nested tubes the plasmids are vacuumed into the

(18:22) inner flow moving in a clockwise Vortex simultaneously hot gases from the engine consisting of both carbon dioxide and carbon monoxide enter in a counterclockwise spiral in the outer flow path so you've got one moving a clockwise you got the other moving a counterclockwise spin let me do it like this right inside and outside of one another the thunderstorm generator cools the intake air by using the rank Hill Vortex tube principle we may have to look into this and try to figure this out tonight as the air is cooled its

(18:54) density increases this is because the cooler air has molecules that are more closely packed together together than the warmer air so now this is the part where it's like you got to know your thermodynamics here to understand this so as the air is cool density increases cooler air has molecules that are more closely packed together than warmer air okay makes sense denser air or increased oxygen content so denser air contains more oxygen molecules per unit

of volume this is beneficial for the combustion process in an internal

(19:23) combustion engine as oxygen is a key reactant in the combustion of fuel that makes sense thermal gradients there's a sufficient a significant temperature difference inside and outside the tube when running the Collision of opposing vortices in uh initiates the fusion reaction disassociating Atomic bonds of carbon and allowing plasmoids to harvest energy now that basically sounds like magic we're saying that we're able to create fusion reaction from this whoa if this works and we're creating

(19:57) fusion reaction from this holy crap guys this is just weird I just all the connections between different people and all the small world that we're finding but it's going to get a little bit better guys by ensuring more complete and efficient combustion the ther thunderstorm generator significantly reduces emissions of pollutant such as um nitrous oxide I think is that what that is carbon carbon oxide and unburnt hydrocarbons so this is also basically creating a more efficient uh system where there's less exhaust the system

(20:36) contributes to a cleaner combustion although not eliminating emissions now I've been talking to people behind the scenes obviously you guys know I have connections now to some of these people and the stuff that I'm hearing is that this basically can reduce the emissions to zero it reduces it so much that it's essentially nothing like 99% like the claims are pretty bold the operation of thunderstorm generated here is the principles of fluid dynamics thermodynamics and electrostatics all the stuff that we've

(21:08) been thinking about now in terms of the fluid dynamics and thermodynamics it's a little bit new but not really it's important to note that the thermostorm uh thunderstorm generator improves efficiency but does not create or energy or eliminate the need for conventional fuel but it does increase the efficiency to a point where essentially is like magic now let's look at the principles at play here okay Vortex Dynamics the generation of controlled spherical Vortex motion within a fluid or gas medium to create

(21:40) zones of varying pressure and temperature analogous to atmospheric phenomenon observed in thunderstorms in fluids Vortex uh motion can lead to significant changes in the local environment of particles or molecules within the fluid so let's pull up where is my sorry I'm looking for my DOD links uh did I get rid of the dod links I think I got rid of the dod links but we have this so that's pretty close I wanted to pull up the dod fusion reaction um or doe I mean Department of energy I guess I closed

(22:32) it uh anyway because what I was going to point out here is that this is basically equivalent of a fusion reaction Fusion reactor in general a toroid that's spinning uh with Vortex Dynamics pretty crazy thermal gradients establishing sharp thermal gradients akin to those utilized in that rank Hill Vortex tubes to induce rapid cooling and expansion potentially leading to Quantum effects like coherence and entanglement at temperatures those typically associate above those typically associated with Bose Einstein

(23:08) condensate Bingo whoa what this is what I'm going to read it again chat potentially leading to Quantum effects like coherence and entanglement at temperatures above those typically associated with Bose Einstein condensate you guys thinking what I'm thinking uh uh is that how they're making this happen implementing mechanisms for charge separation and electron stripping which make contribute to creating macroscopic Quantum States and could provide a pathway for examining particle in tanglement and tunneling

(24:09) effects this is what Bob Greener was talking to us about not interested not interested standard standard uh theoretical physicist not interested just not this isn't interesting guys now I want to go back to normal basic uh standard uh particle physics guys what nothing interesting about macroscopic Quantum States in providing a pathway for examining particle entanglement and tunneling effects cavitation utilizing cavitation processes generated through rapid changes and local pressure leads to the formation of vapor filled cavities or

(24:47) bubbles when these cavities collapse they can generate extremely high temperatures and pressures locally albeit for a very brief moment high energy density states that may facilitate Quantum tunneling or other non-classical particle behaviors just scale it Up chat scale it up booya that's it the moment you start talking about macroscopic Quantum States you are and Quantum tunneling at the macroscopic level where you're able to create fusion and energy densities that are higher than the swinger limit guys that is salvator

(25:31) p that's what salvator p is talking about was breaking the swinger limit energy densities that are at a local level high enough that can facilitate Quantum tunneling if your Quantum States if you have your energy densities high enough you can break the fabric of SpaceTime that's what this is saying there's a military paper that talks about this yeah guys I think we found the secret and I have a feeling there's more than one way to accomplish this right like what we're looking at here now is

(26:09) there's at least one proven mechanism to achieve Quantum States at the macroscopic level this I can't really overstate this and now if you scale it up who knows maybe there's other ways to do it here but this is basically saying that we can achieve coherence super conductivity I think is simply a mechanism by which you achieve coherence dude the scientists need to be looking at this man the sun generator might be tapping into complex interactions between fluid dynamics thermodynamics electrostatics

(26:47) and quantum mechanics that are not fully understood or explored now why is this important because the realities of engineering is first it's not a matter of following the Theory it's a matter of showing what is possible and then trying to explain it the beauty of this is it doesn't matter what R uh Malcolm's credentials are right he figured it out however he figured it out doesn't matter this reminds me of my physics class where I remember there was a thermodynamics question I was able to get the answer

(27:19) right but the teacher wouldn't give me full marks because I couldn't explain how I got there but in this case it doesn't matter if you can prove that it works then we can figure out how

the math adds up right um for instance the dynamic conditions created by the setup May facilitate a Quantum unique form of energy transfer or particle Behavior complex systems in emergence from the in interactions of many individual components in the system new properties and behaviors can emerge that are not predictable from the

(27:50) characteristics of the individual Parts oh look Bob Bob's uh YouTube magnetic anomaly here we can observe the outside of the thunderstorm generator being elect extremely magnetic oh well okay it now I can lift this off here just by bring it here see this there I can lift it off whoa It's you can see the magnet who now that's a dimple and there's your high yeah that's where this this is impossible this is perfectly deformed in a in completely symmetrical which is impossible cuz it's imploded a

(28:30) sphere no wonder they're trying to silence him pretty strong yeah yes but more than that where did the other material go to cuzz now you've reduced the the uh diameter yeah right you mean this wasn't a smooth curve to this here yes it was AO curve so it's that in right yeah yeah so there's an electromagnetic force has bent that steel bent the steel pulling it off that moment there can't pull that I have not got the strength even with my fingers underneath it I cannot pull that off that thing let

(29:04) me let me give it a go holy man I rest my case you're onor oh no I nearly got it oh my God yes darling that's what they will [Music] say no I can't do it now roll it up to here I'm going to take it to the next move yeah we're posting that later we're posting that later holy crap chat the electro static field is so strong they can't even pull the ball bearing off of it right one two right no go keep going I can get it off there okay yes wow that's the vortex generator right there wow holy crap it's already been built

(29:55) it's already been built apparently it's actually pretty easy to build I wonder if we hit up uh Jeremy alien scientist tell him to build this apparently it's pretty easy to build like you can just like get get parts from like the pet store and you can make this because they're creating guys what we what have we learned about electrical engineering is that charged plasmas can create a magnetic field and they're Crea a magnetic field so strong that the ball bearing in the outside is sticking to it so strong that the metal

(30:25) itself is warping the steel is warping That's How Strong the magnetic field is from the plasma from the thunderstorm generator from just the vortex tube wow it's so strong and they're abusing abusing is that even the right word cavitation and the spinning uh opposite plasma charges holy crap during the analysis Bob Greener observed something unexpected the oxygen levels in the hot exhaust stream from the thunderstorm generator match the fresh intake take air more intriguingly spectrometry spect spectrometry spect whatever you guys got

(31:05) it hinted at the presence of new elements this discovery suggests that something within the tsg might be doing more than just tweaking temperatures it might be alterate altering the very nature of the atoms whoa too that's too long we're not going to watch that one okay well uh guys I suggest you follow Malcolm bendal on Twitter uh whoa okay let's watch this roof uh

just above the sample point that I showed where it comes directly out of the engine which is a Perkins 30,000 cc motor uh driving a uh you know 300 Kow

(31:52) generator uh so here is where the uh exhaust comes up and comes into the uh the sphere which is so the exhaust is coming up in here so that's I don't know if that's on the outside or the inside I have to we have to look here let's look at the the graph where's the thing so the water comes through here and the exhaust comes out here okay okay so when he's pointed at the exhaust you got to flip this upside down in your mind the exhaust is pumping up okay actually a uh a 24in sphere with an 18in sphere

(32:40) inside it which directs the flow in fact we can come around probably the other side there uh later and we'll show that directs the flow in an anticlockwise Direction it's anticlockwise so this is the reason why it's not going directly into it's going to the side is cuz it's going to direct the anticlockwise flow similar what my mouse is doing right now is how explosion exploding U uh energy goes in the universe there's no straight lines everything that moves is moving in a curve every curv part of a spiral

(33:15) everything's moving in a curve that's true yeah we need to I need to talk to this guy and every spiral is either imploding or exploding and so there every spiral is either imploding or exploding that's interesting thought for you have two distinct uh events uh is that you either have the life force which is imploding and bringing every everything together for life and planets to exist and then you have the death Force which is designed to redistribute that and you don't want to be redistributed while you're alive

(33:52) obviously uh and even if you're a planet you don't want to be redistributed back into the Galaxy why am I all of a sudden super worried for Malcolm bendall guys all of a sudden I think this guy needs to be protected see so basically then the uh the death Force death and destruction is a spin that is exploding and tearing things apart now when you counterpose those two Primal forces of the universe you create a disruption which is going to create some unique geometry in your plasma that's developed if you have the right geometry

(34:31) and the right inputs so basically in this sphere I can tell just from listening to him that he understands it intuitively even if he doesn't like he can't speak to it probably from the level of scientific papers right but he understands intuitiv he's like a a theoretical engineer right as opposed to if you were to uh say like a theoretical physicist compared to like a mathematical physicist he's like and compare that to the engineer side right where I would look at someone like Dave rosi right and I would say he's more of

(35:01) the mathematical side although he understands it theoretically as well um vers and this is why I think that people have been able to discredit Malcolm bendal right because this is why we have to be very careful when we talk about this stuff about avoiding like the the death forces and other forces you just want to coun you know counteracting forces right it's really what he's talking about we're forcing the air to spin uh in an anticlockwise Direction which creates it's automatically on the inside sphere a clockwise Direction and

(35:32) one is coming into a vacuum of the engine and the other is leaving the engine and in this connecting pipe which is a 6 in and a 4 in you have that same uh mechanism happening we've got here is our transition uh 51.84 de into this pipe and that transmittion uh ensures that we don't lose the uh the stored energy there's an episode of Fringe about this whoa so M no Randall Carlson was brought up on the weird video to me and then Randall Carlson leads to this guy Malcolm bendal who's just hanging out

(36:18) with Bob greener in some videos like what and and George Howard knows everybody he knows all of them George Howard went with them to Joe Rogan and I was talking to George Howard and he's just blowing my mind I don't want to talk too much about this because I'm actually worried about these people's safety and like I don't even know I feel like one of these things we like I shouldn't even be too close to Malcolm Bendle because I'm sitting here talking about teleporting airplanes and giant

(36:50) conspiracies and this guy is like basically creating free energy devices I mean that's not technically what this is but I think it has the capability to be one that from the plasmoids that have been developed in the bubbler and grown uh and charged grown inside and charged uh within this thunderstorm generator so you can think of it it's lightning that there's discharges between uh the positive side charge and the negative side charge there's also you can view this sphere as a net positive charge and the other sphere as

(37:24) being net negative charge so therefore there's a particle accelerator effect between the desire he's creating a particle accelerator effect holy chat holy crap this is what I guys I went on alien scientist and I said I want to create a particle accelerate and shoot it through a toroidal magnetic field that's what he's done that's exactly what this is the guys for everything to I'm trying not to freak out this is so weird man two I only Now understand this from the science that we've been learning over

(38:05) the last few months attract and the charges to equalize where you discharges between uh the positive side charge and the negative side charge there's also you can view this sphere as a net positive charge and the other sphere is being negative charge so therefore there's a particle accelerator effect between the desire for everything to to attract and the charges to equalize where they equalized uh we postulate a uh an event horizon that is like a mirror plane that everything on one side if it's

(38:45) positive then on the other side will be negative and vice versa so at that point uh there is no movement because there's a zeroing out of the spin cuz as I said everything's spinning it's either imploding or exploding so an implosion is clockwise explosion is anticlockwise and that is what I postulate as being a time uh on the exhaust side it's an acceleration of time on the inside it's a reversal of time and that has to meet at a point on an event horizon where those uh disparate progressions of

(39:29) Time Zero out the frequency so there can be no matter on that zero plane and that's basically the theory under which this thunderstorm generator works so malcol what I've done

here is I've added some encapsulated 400 ASA black and white film and uh you can see the distance there is the Mount that's part of two hands what's he what's he talking about here what is this is this this looks like a a phone thing there so we can get that Dimension and then I've got one oh so we can see the size of

(40:11) [Music] it don't get it man I feel uncomfortable standing this close to this Missions at these distances what kind of temperature are we expecting this to get to uh we'll have that on a thermal camera uh but as I said we've just changed this out it was had to have a te piece before we're losing a lot of heat uh so I do expect around  $400^{\circ}\text{C}$  here  $350$  to  $400^{\circ}\text{C}$  okay and down the other end here what have you got down here so there's a second one so this is where you're getting the two opposite uh charged

(40:48) forces and this is what's causing them to attract to one another oh yeah that's where the camera is going to be okay yeah good so here we have the uh the exit of the exhaust and the again you have a 24in sphere with an 18in sphere inside it to create the resonance on a 432 basis the ratios 4 to3 between the 24 and the 18 so this is all on sacred geometry and ratios and I think that that's part of what our society is lost you know has Amnesia over the the importance of angles and ratios in design whoa well that's pretty damn

(41:37) weird uh we better save this somewhere okay chat I'll put in this in chat if you want it what is this what the hell was that yeah so now wow well well well well okay um h thunder storm generator okay it's pretty wild close this that's pretty warm yeah what's Revelations 143 is that Alpha and Omega and they sung as it were a new a Song Before the Throne and before the four beasts and the elders and no man can learn that song but the 144,000 which were redeemed from the

(42:44) earth okay okay um well this is pretty wild let me see do I have this in my science we better we better save this in my science sence uh section Vortex Fusion tsg I better write this out okay guys I I don't know I think we need to listen to part of the letter to me one more time uh I'm going to post this in the chat I'm going to pin this real world creepy this is a submission sent to us the 8th of January of 2024 it's a letter to does not matter if the object is a and as we do we regret as soon as we

(43:49) knew what plane was the last leg of their Journey we plan for a long burn right in front of their ey are the Chinese officially newspapers as after the show the time and at the same time could accept that the people they had convinced to deflect did they wanted it was us that stopped them the deflectors had a good but with a new understand more than another Friday at the 1500 million speculate our problem the person responsible for the leak was identified and taken care of not by us not our problem then came you hi Ashton

(44:28) impressive this is what I want to leave you with there was a guest on The Joe Rogan podcast that was talking about sacred geometry and some new technology his friends had discovered on some Island somewhere he did record another episode but it never been published doesn't the wording sacred geometry remind you of something if you choose to

spend time on this which I think you should instead of maul aliens keep in mind that your cas is one product of the technology what happens on the other Island you will understand this if you

(45:03) pursue it is another more rudimentary product what if those in combination could lead you on the right path to the actual technology the gray bearded man is the key hi my name is and I'm aunte with Martin Memorial project finally I want to say this is Hutcherson effect Magneto Toro electrogravitic scared the hell out of me okay sor about that oh my God finally I want to say this how do you defeat someone who can turn skyscrapers to dust completely erase whole neighborhoods in an afternoon and steal a burning Boeing Triple 7 midair

(45:44) someone who when needed has the complete control of all media and crafts the perception of events and has most of humanity eating from its hands after almost a full life in their service I think I know the answer you talk about them and you don't stop talking yeah well that's pretty damn weird chat it's pretty damn weird chat uh yeah so uh you want to you're actually asking where Malcolm bendle's island is apparently it's somewhere in the Maldives can you believe that can you actually believe that Malcolm Bendle has

(46:21) actually been somewhere in the Mal Dives for seven years hiding the letters even talking about it there's only two options right whoever came with that letter is some kind of super stalker fan of both of us or it's some kind of scop or something or it's just real I don't know could that letter really be real man I don't know this is from the Department of energy that we're looking at right here fusion power using a toroidal shape very similar a little bit different not completely spherical out here uh it's

(47:04) not using the the Dual like inserts here but you've got this magnetic field that's being produced around the charge spinning um matter here I believe it is the plasma and I think there's more than one way to create coherent matter waves but I think that's one of them here's the paper that uh was referenced in this here at the top water can trigger nuclear reactions that produce energy in isotope gases now this makes a lot more sense let's read this again this paper reports the discovery

(47:47) that water can trigger a a particular nuclear reaction and produce energy cavitation May induce unusual reactions through implosion of water vapor bubbles many of uh many of This research has been published formally or informally we have conducted experiments using two reactor types made from multiple pipe heater exchanger and found that the heat exchange process of water produces particular excess heat and abnormal abnormally high pressure leading to the rupture of the reactor he's talking about the thunderstorm generator how did

(48:20) I not piece this together before recently we have tested another eight reactors interestingly these reactors produce non-condensable gas we suspect that they include neon and carbon dioxide we used a Max spectrometer Ms to analyze 14 gas samples collected from eight reactors including 10 samples showing a coefficient of performance cop greater than 1.

(48:50) 05 with excess heat does that mean it's producing more energy than it's taking in and

four having cop less than 1.05 without excess heat I think that's what it means several methods were adopted to identify the gas content so it's producing Fusion it's producing fusion power for CO2 identification two methods are employed for neon 22 I think is what it is identification three methods are employed all the results confirm that isotope neon and regular CO2 really exist in the output gas from the reactors determined to have excess heat

(49:33) we can conjecture a possible mechanism to produce neon and CO2 um and find out that carbon and isotope oxygen oh that's neon's just 22 I get it uh although I guess Oxygen's with one extra electron or something like that are intermediate they finally form isotope gases containing oxygen including in h217 heavy oxygen water isotope O2 and isotope CO2 in the excess heat producing reactors all of these gases were detected by mass spectrometry and absence of oh it's neon 20 neon 21 and neon 22 okay The observed isotope gases produced

(50:17) from the reactors have excess heat verifies that water can trigger a particular nuclear reaction and produce energy whoa okay what he guys green year calls it the monopole think about that as the center of the whirlpool yeah I want to see green Year's unreleased podcast you got an ad with creepy Dan's voice on my YouTube channel that's pretty damn weird the what would the wording of sacred geometry remind you of it reminds me of a plasmoid of a toroid that's what it reminds me of I'm pretty sure that's

(51:10) exactly what it is pretty sure that's what it is now I I do think it's possible that MH370 was annihilated but I still think it's more likely that there's a fourth orb that teleports to plane what we're looking at is something much more advanced than what we see from the plasmoids that um Malcolm Bendle puts out there this is much much more advanced but it's potentially the same concept the monopole we need to understand the monopole here when we look at these orbs here what exactly are we seeing right

(52:05) here why is the Heat Signature like this if we look at the thunderstorm generator are we going to see a heat signature like this the heat signature is the key right here I think this is why they **leaked** it The Heat Signature how could anyone have faked this the science predates this is 2014 the science on display here predates known science even in 2024 like it's we're not even to this point yet understanding what we're seeing here we could never even understand this before now I don't think the papers that we're reading here came

(52:43) out in the middle of this investigation any other thoughts guys okay should we look at the conclusions of this so I think this is mostly like the spectrometer and the pipe here Mass Spectrum Tre concentric pipes the buckling they're seeing similar stuff talking about the thunder this is just the thunderstorm generator I think basically yeah very similar multi-stage resonator it's basically the pipes that have the 432 geometry right yeah sick puppy it's I think the next clue is we look at we figure out

(53:41) the Heat Signature we need to understand the Heat Signature fractal toroids right that's what Malcolm or what Bob says maybe we really have to go back to Bob's graphs to really understand it the flat top of the tornado becomes a point haven't quite figured it out you point

the tail where you want to go I think William intuitively understands it as well the orbs pointed them into a cone that opened up a bubble yeah that's similar that's mean that's what Bob basically showed us the shape of the heat signature is a

(54:36) half Taurus is it I guess not sure the alchem Science Channel what what particular part of the channel do we want to look at I I need something I need a better visualization of the heat signatures being produced where's the conclusion let's read this conclusion cavitation May induce implosion of water vapor bubbles using various techniques in the previous study we found that the heat exchange process in multiple pipe heat exchanger Pro uh produces anomalous excess heat and nuclear transmutation recently have tested

(55:19) another 8 reactors and found they also produce non-condensable gas excuse me we suspected That Neon and CO<sub>2</sub> may exist and is from nuclear reactions of water 14 gas samples were collected from eight reactors to perform Mass spectrometry carefully using various methods two different methods used for identification of CO<sub>2</sub> were employed while three different methods were employed for neon all the results confirm that neon and CO<sub>2</sub> do exist in gas samples from reactors Having excess heat in answering the question how neon

(55:54) 22 and CO<sub>2</sub> 2 is produced in water we conjecture a possible mechanism and find out that carbon and isotope oxygen may be the intermediary intermediate they possibly produce some other isotope compounds and gas from reactors Having excess heat using isotope ratio analysis we found out that they are okay and this is the Isotopes we also find that the reactions are the most probable reactions as Appo gas contain continents contents Co side with our observations detected CO<sub>2</sub> and Isotopes neon although the detailed

(56:30) mechanism is not known this needs further basic research since the chances of getting all the Pres uh present conclusion is so remote particularly the presence of neon without neon 20 or 21 this work may lead to a new research topic in nuclear science and energy technology of true John Hutchinson yeah guys I I don't really have a ton of time time to be listening to like multi-hour podcasts I think I've been pretty clear but if you can send me clips and stuff that you want me to listen to that helps a lot uh

(57:04) I work eight hours a day and then I do podcasts and then I jump on and do streams with you guys so there really is not a lot of excess time for stuff I spent a few hours last night going over my emails um it's a it's very time consuming h what was the person who was sending me the channel alchem science let's let's take a look at that let's close this let's see if there's anything interesting on the alchem science YouTube channel which one do you think he's talking about alchemical

(58:05) oh plasmoid power how long is this 18 minutes introduction of plasma ball relating in thunderstorms that this is relevant this is very very relevant yeah okay this dude's on it is this the I mean this could be the guy that made the videos if somebody was obsessed with the MH370 stuff alien maths and physics deciphering the plasma unification model part one how long is this 170 minutes carbon emission solved whoa this dude's way ahead of us um welcome

tochemical science let's listen to this a little bit mythology oh look wow this star in a

(59:16) jar is made when a soundwave is passed through a small bubble inside a flask of liquid and this sound wave makes the bubble do something remarkable first it expands then it collapses and this collapse happens so violently that Vapor molecules trapped inside the bubble slam together like a miniature Sun for these reactions is a trans SCE the input of the plasmoid generator to the output of the engine's exhaust and the output of the generator back into the carburetor of the engine um then the Pistons of the

(59:54) engine act like precise measuring cups applying equal forces of pressure and vacuum cyclically at high speeds within the chambers of the thunderstorm generator so during the vacuum phase air is pulled through the first chamber where it's ionized by a UV light bulb with a wavelength of 100 so the light UV light bulbs that's ionizing it nanm and this preionization with a UV light induces a positive charge in the Air Gases so that's how you get the positive charge huh interesting yeah I see it guys we're not

(1:00:31) going to dig I'm not going to go too much in the sacred geometry this is Stellar rotators that does interest me also it's kind of like drinking through the fire hose right now there's just too much information right yeah I see the chart back here oh yeah so you got the plasmoid over here which is the same from wait is this the the guy that made the is this has to be the same guy right is he the guy that made the the thing the link that we were just reading has to be right has to be if it's not like what the hell is

(1:01:10) this it's got to be this is this the same guy no this a different guy wow oops okay doesn't matter let's see so and yes I see the chart up here guys I mean come on uh which then is the glue which holds the plasmoid together using Malcolm's words there so thiso selfcontained field and so this is really just why does everybody have a New Zealand accent employing precise geometry here to make all of this happen so now that we have our tiny plasmoids we can use them to facilitate the transmutation or

(1:01:44) reconstruction of matter by passing it through their zero point where there is no frequency so to dismantle the matter to pure energy and then store it in the plasmoid using it self-generated Magneto dielectric containment field so when the water Vapors pass through the zero point or the dielectric portal of the plasmoid it causes the separation of hydrogen and oxygen from the water but it also simultaneously causes the atomic disintegration of hydrogen and oxygen into their H plasmoids cause the separation of the hydrogen and the

(1:02:20) oxygen plasmoid absorbs all the protons and electrons within its immediate sphere of influence okay plasmid's fully charged state has a diameter of 100 microns that's pretty big plasma causes disintegration of hydrogen and oxygen into their component parts yeah their component parts so it'll also rip apart the bonds of the dissolved gases which we contained in the bubbles so nitrogen is one of the strongest chemical bonds and the powerful energy release from the disintegration of water gases will all

(1:02:51) be absorbed by the plasmoid the plasmoid in its original size of  $10^{-12}$  microns absorbs the energy or the free protons and electrons from the disassociated hydrogen oxygen nitrogen and other gases when in its yeah this is pretty complex science that we're dealing with here takes a lot to kind of understand it this is why we're not going to dig too much into the sacred geometry aspect we just need to understand how it works from an intuitive perspective sphere of influence and it grows to 100 microns in

(1:03:24) size are around okay so this is why it's growing so when the cavitation bubble pops the uh plasmoid here grows the size of a point of your hair so the Mard plasmoids are both a catalyst and an atomic battery and being a catalyst the plasmoids will allow reactions to happen at much lower temperatures than usual which is how this is all occurring and how the next steps are going to be occurring too and a couple last notes on so this is why the reactions happen at lower temperatures than like what we'd

(1:03:57) see in the sun on the plasmoid generation chamber malcol suggests that efficiency can be further improved by altering the properties of the water so a designer gas can be added to the water to fundamentally change the properties of the water and if so designer they say designer gas interesting if you remove the cover gases the nitrogen and the Argon then water could burn uh the same as our atmosphere would without Nitro so if the cover gases are removed and hydrogen is also added uh this can increase the available energy per volume

(1:04:32) in the water and ideally the water should be at pH9 to um which can just be achieved by using chemical alteration or negative charge so then the plasmoids and any you want a pH of nine which is a base pH in the water interesting okay remaining water gases are pulled through into the next chamber during the following vacuum cycle of the Pistons a thermal couple placed at the outlet of the plasmoid generation chamber measures the temperature of this generated stream of plasma and gas to be at a very low temperature around-  $84^{\circ}\text{C}$  and the water

(1:05:10) remains in its gas phase here even at the low temperature of -  $84^{\circ}\text{C}$  um just because it's under a vacuum all right so then the next chamber is the Thunderbolt generator reaction tube itself and the tubes designed to be at a certain resonant specification made either from stainless steel or ideally tungsten Malcolm says and so tungsten or stainless steel huh this is probably the hardest thing to make right you got to make this bubble inside this other bubble must be 144 in or and I think these pipes here are going to be like a

(1:05:45) pipe inside of a pipe and it's got to be at the right ratios right or an exact Octave of this in length and he says tungsten's a better choice here um just because of the way it distributes heat or Energy Applied to its surface very uniformly throughout the body of the metal so the plasmoids are vacuumed in from the the previous chamber and they proceed up the tube in a clockwise Vortex meanwhile at the other end the hot exhaust gas is released from the engine in the form of carbon dioxide and carbon monoxide and it's sent uh in a

(1:06:17) counterclockwise spiral into a sphere which is sized to be optimal for the output of the engine it's being retrofitted to and due to the geometry of the Thunderbolt generator although

the exhaust gases might only be a few hundred degrees when they exist the exit the exhaust uh the outside of the sphere of the thunderstorm generator while it's operating has been measured at about 750 to about 1500 degrees CS yeah so it's pretty warm on the outside okay interesting um skip ahead a little bit like with our

(1:06:50) hydrogen and the other gases in the earlier phase the atomic bonds of the carbon are dissociated the plasmoid itself then harvests and stores what energy it can and the remaining free protons collect and reform um reconstruct as oxygen and hydrogen and so oxygen increases in temperature in a vacuum and hydrogen drops in temperature uh so in the next vacuum impulse of the Pistons the warming expanding stream of oxygen and any other unreacted remains which there aren't much it's primarily oxygen um they're ejected out of the Thunder Bol

(1:07:24) generators the sorry the thunderstorm generators exhaust while the colder stream of hydrogen and the charged plasmoids are pulled through the carburetor and into the engine and so when this is all drawn into the combustion chamber the plasmoids are ignited along with the fuel by the positively charged plasma from the engine spark plug um which instigates an instant discharge of the plasmoid in a plasma burst and so that's how the engine works then right so you get your plasmoid and you send the plas into the

(1:07:55) engine into the combustion chamber and then that's what's now uh making this the system more efficient right so you don't need as much fuel anymore right this is pretty wild plasmoid discharging its so this does seem like a rudimentary approach to something that we're seeing at a larger scale to be utilized as fuel reduces again in size back to 10 the power of -2 microns in size from its 100 Micron charged St and from the stories I've heard so far from other researchers and inventors who've been able to trial the

(1:08:29) Thunderbolt generator retrofit in person uh these discharged plasmoids don't disappear either um they just continue to do their thing so reportedly the engine will continue to run with reduced carbon emissions and increased fuel efficiency even when the plasmoid Thunderbolt generator removed so it's pretty bizarre and pretty cool weird and I'll verify the claims about that personally in a couple weeks when I get to see in action um okay last thing for tonight let's take a look at this bookmark guys I think I'm going to watch

(1:09:06) this too real quick what do you know that you're a musician that's why I'm interviewing you today so I can get to know you so I'm a musician mm what the that mean make magic or something what is musician I think that's I think you're confusing not yeah I'm not no musician I make music I make music and that's not all I do I make music I act I'm a TV star too a young M just really quick I think I'm a TV star too I'm a young Mogul guys I just want everybody to know I'm not a

(1:09:35) musician just heads up you're confusing I'm not confusing nothing because you you don't know you thought that all I was was a magician or whatever the you thought all I was was a magician thought you say it see that's what I think you think I said I said musician not magician

I don't think baby I don't think what is that that's ghetto I don't what what I don't think I don't think baby what is that that's ghetto think I know I don't think I know so you you think I didn't say I

(1:10:06) like how she looks inside think she talking about thinking over here magician Suki I said musician and I think I don't think I know you are a musician no baby I do music so you just really just really quick for the record could you say you don't think you're a musician not none of that but then after that you just said I do music yeah I do music so in other words you're a musician no I'm not okay what do you what do you know how is that real chat how I watched this like 20 times yesterday I think I

(1:10:47) was just sitting there thinking the Tik Tok generation is doomed just straight up I don't even know who these people are guys I don't even know who these people are but we definitely live in Idiocracy I'm starting to wonder if it's even a good idea to reveal this technology between this and all the videos of people on their like Bizarro glasses like I don't know if I can take this world anymore chat I really don't know I don't know if I have any connection to this world anymore I don't know if I have any

(1:11:20) connection to this world anymore um okay let's see best science live stream in history Intrigue is this recent 10 days ago this is recent where physics is powerless and this a little bit in it were the notion of current is with this hydrodynamic m Shear remember what I said in hydram Shear of the source uh system two I might have to watch look through this on my own time here Rogue they they for me the absolute boom I'm probably going to watch this later tonight okay here you guys go if you want this yeah but gez man that one was that

(1:12:23) that Tik Tok it's just hey Bernie now Bernie I'm starting to understand when you were doing your your chemical um experiment why it might be important everybody who's in there make sure you check out crypto Alchemist he's a good guy one of the young scientists of Our [Music] Generation yeah the only problem with Bob's videos is very long then again so are my uh my streams um Jordan on the thunderstorm generator are any of these short well it seems like we can finally take transmutation of the is this the same dude yeah

(1:13:01) elements off the scientific bucket list I've used here let's start the maybe up to four proposed process Bob collocated and reminiscent phenomena they can discussed earlier and in some cases very interesting okay what else does he have on here Jeremiah one and two the presses that are needed we've then got another tube which inside has a UV light apparently you can use the same UV light B that you can buy at a pet store for like reptiles and what that's going to do is ionize the water and then the water will go

(1:13:41) into the flux capacitor it will be filtered through uh it will what looks like an apple where in the similar way that apples pull in at either end of the core the nor you go William this is for you now at the South Pole of it you can see a kind of like skirt shape it's wearing like a kind of Angel dress so at the top of the lemon it's sucking in the matter and at the bottom of the lemon it's shooting out the matter and you can see a little excrement of matter coming out of

this diagram what's crazy is if we zoom in

(1:14:12) even more you can see that there are even smaller Donuts inside this main ring of dut yeah so you can have a dut inside of a dut right and the dut inside of the dut this is the part where I struggle with trying to understand it it is literally a spinning wheel within a wheel within a wheel where if we heard that before wheel within a wheel within a wheel H so this is spinning that way then this is spinning that way was this what the Bible was trying to explain when it recorded ezekiel's wheel within a wheel

(1:14:47) within a wheel look at the shape of this toy movement isn't that a gyroscope wheel within a wheel within a wheel feels pretty similar used for measuring or maintaining uh orientation and angular velocity seems relevant what does it look like to you it is literally the spitting image of the egypt I onk this one here this particular onk plate is from the first dynasty from very very early on in the dynastic Egypt literally like 3,000 BC you can see it all through the Coptic Christianity with the Coptic chrisan cross not only that you can see

(1:15:40) it in Thor's hammer the Viking hammer pendants that we have is some of this is dangerous for reasons other than oil interest look the modern Tesla logo again literally the same Dynamic now with the right elements and forces coming into this toy movement is scalable it can happen at tiny tiny tiny Micron sizes it can also happen at a huge scale like we're talking whack an airplane in the middle of that sorry what chat what did she just say uh what let's just go back second Dynamic now with the right elements and forces

(1:16:34) coming into play this toy rodal movement is scalable it can happen at tiny tiny tiny Micron sizes it can also happen at a huge scale like we're talking whack an airplane in the middle of that lemon scale or even bigger there is a theory and I'm not going to get into it now about how the plan of the entire Great Pyramid literally fits to scale exactly what you would need for the positions of a toy movement inside the Great Pyramid including exactly where you would pull matter from from the space and where you would deposit it and 10

(1:17:12) points to the guess where it would be deposited in the Great Pyramid Y in fact the granite box in the king's chamber is she following us oh yeah it's all coming together here we've got a little clip of Bob Greener who is demonstrating on this little machine thing here when the wheel spins a certain way which is vertically uh you don't move in the center when you flip the wheel on its side suddenly a huge amount of power blcks into this rotation pole I'm not even sure what's happening but this is a really good

(1:17:43) visual of what is going on plasmoids are also responsible for ball lightning but in a nutshell ball lightning is a phenomena that has been wow cute too that's a that's a double win wow okay uh this is interesting guys um I was there for most of this caring cart and you can see it being lowered down the clean room top of the clean room the the building rather is in View and that SRC is coming down to the ground slowly being lowered I I have no idea how this is relevant carefully planned out very slow the team is there ready to begin

(1:18:32) actually getting the SRC unwrapped and the sample return capsule to the clean room a couple more lifts here you see and they're going to remove that last layer of therm placing I've got my look at here this is how far I am this is sort of a coincidence because a couple weeks ago here I'm halfway through your book temp and then George and I'm recommending it to people and then George calls me or I get a text from him yesterday and says what you want to join me and uh Robert temple on a zoom meeting tomorrow and

(1:19:09) this is the first time that I've ever been invited to join an author on a zoom meeting while I'm just coincidentally happen to be reading in the uh effectiveness of it but what's really extraordinary to me though is what happened with the oxygen because 2097 as George Well knows I mean this talk about the oxygen there's theater right this is exactly the generator we were looking at capacity for optical technology and uh there wasn't a single person in the world at that time because I started looking into this in the late

(1:19:50) 60s um okay well we're not going to go through all that tonight chat I think uh probably going to call it there this is a pretty interesting science stream tonight we dug into some plasmoid stuff I think that we had some pretty big moments here in terms of check out the paper um that I linked the medium paper I think I'm going to make a post on it tomorrow uh in on Twitter we're going to post some science tomorrow yeah Robert Temple is I'm probably supposed to know who he is there's a lot of stuff there guys so

(1:20:25) you can check this out too if you want I'll post this link you can check my replies I bookmark this definitely feels like there's something important here going on they're basically I think just power they've plugged in the thunderstorm generator to the grid I think I'm not not 100% sure they're just letting it run wow okay chat this was a good stream tonight thanks everybody for jumping on I'm going to keep it kind of short tonight uh this is good we will check back in tomorrow see how we're going um

(1:21:05) and and do some more science stuff probably dig into some more basics of electrical engineering I think we need to I need to understand the basics a little bit more but this seemed like a pretty big uh pretty big find here in general guys this was good I'll talk to you guys tomorrow have a great night

(00:42) 370 contct 120 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] I remember remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed

(01:50) form and says now I am become death the destroyer of worlds hey what's up chat hello everybody we are here yeah thanks for being here um so right away in the chat we've got somebody mentioning that seems like a lot of people have swallowed the de buuny and I think that's true right I think that a lot of people have uh was somebody else clipped me some random noname podcast person as well they were talking about us it's pretty funny how many people are actually talking about me directly as well though in the case right I think

(02:39) that there's a lot of people that desperately want it to be fake uh and they're projecting their insecurities about it pretty hard um so that's why I made a little clip today about it we'll look at that um we may also even look at now that I think about it the letter Dash and forbs one more time because it's really interesting um let me make a couple notes here so what are we going to do tonight chat um first of all welcome back um I'm back from a couple day break here whoa that's my dog in the

(03:08) background she's she's angry she's angry um let's see you guys hear that just making some noises back there Lulu is um we're going to go over Tucker Carlson angry in the UFO Community has a little drama it's pretty weird how there seems to be all these connections we will go over uh very briefly we're not going to spend a lot of time on it we're going to take a look at Corbell we're going to look at all the recent posts out there uh we're going to take a look at a new **Reddit** rule that was posted today on the

(03:43) **debunker** sub**reddit** um we've got **foas** that were put in lots of new stuff out there guys um is Lulu even real yeah right uh what are your thoughts on the Peru Mexican body Discovery uh I don't know is that the new one or I'm not sure um I think it's really interesting I think that it could be legit uh and you know more to come it's not my investigation so my opinion means very little on that front did I look at the overhead shot of the antenna at the Howard e Holt station I have no idea what you're talking

(04:28) about just came from a live stream MH370 nonbelievers yeah I think that basically there's a liter like the irony is there's a literal cult built around **Mick** West like an actual Cult of people that look up to him for every answer for everything in the world it's super weird uh and it's been ongoing for many years he's built up his own little cult following of like complete people that would drink Kool-Aid for him 100% And for them everything thing is either a balloon or a Chinese lantern or whatever

(05:04) like they no matter what it is it's a balloon or a Chinese lantern like or what is it skydivers with rockets attached to them or whatever the like fireworks attached to them it's just it's always like the same nonsensical stuff um I generally you can email me at MH370 xpron I have I'm like two weeks behind on emails okay let's dig into it chat let's get started we got a lot of stuff to go through tonight I don't want to be up all night so let's start with uh Corbell let me get my headphones

(05:46) on oh yeah we're gonna talk about Chris Leto a little bit as well so man Chris Leto's been on one chat yeah and uh this this is a random comment pretty appropriate your real problem is

you're Norm you repelled himself onto the UFO Community you could say the same about anyone I think that the hate in general has gone down a little bit to be honest with you it's gone down a little bit from where it was before but this is absolutely it's all gatekeeping Behavior right and this is why I always reference **Reddit** because I

(06:17) would bet you almost anything that all these people that hate on us on Twitter are all **redditors** right some of them are moderators I think somebody was mentioning some Richard gelri guy or whatever his name is and he's for sure a **reddit** moderator like no question whatsoever you can just you can just tell right away you can tell right away so yeah we're going to look at Chris Leto stuff so we're going to look at a little bit of I don't know if you want to call it drama or news updates we're

(06:43) going to keep this thing a little bit more streamlined tonight I don't think AO is manic I think that he's just he's um kind of experiencing like a level Enlightenment is what I would call it where you you get to a point uh where you you realize that there's a bunch of stuff that's true that you didn't know about and it's really exciting like it happened to me when the MH370 stuff first revealed itself when I started first started to realize that oh this aligns with double slit experiment

(07:15) rebuilding the wave function all this stuff that seemed silly and then I want to talk to my parents about it my family and you know they're all CNN brain people so you know they're like oh you must be going crazy or whatever right but you know that's not the case right and that's why two post about uh that I made earlier and let's just watch that first actually because this why this this post is so important here here I want to go ahead and address some of the narratives that I'm seeing out there on

(07:42) social media um first of all I think that there's this perception that I'm an unreasonable person or stuck in my beliefs um and to that I would say you know if you just talk to me I think that you'll find that I'm a person who's very reasonable very logical and rational type person I have turned down zero podcast requests because I'm willing to talk to anybody out there anytime secondly you've got people out there saying that I have mental health problems uh that's really offensive in

(08:08) general I mean there's a lot of people struggling with mental health and I think it's really easy to try to demonize people with false mental health allegations it's one of the lowest things you can possibly do um so you know just don't do that in general there's also even people saying that I potentially fake the videos which is really bizarre like I don't even know where to begin with that level of absurdity um these are some of the same people saying that so just real quick you know

(08:33) a lot of people to demonize people say that they have mental health problems you can see them doing it to Chris Leto right now as well they're saying that he's you know had a psychic break all this stuff like that's really just toxic toxic Behavior it's honestly like the worst stuff you can say about people that are like even if it was true it' be terrible to say but you know in the

case for me for sure it's no there's no I don't have any mental health issues U and that's why too like the people

(09:01) sometimes I really rarely I get people message me and direct message me and say like I'm worried about your mental health or whatever like if you do that to me you're definitely being unfollowed uh and you might just get blocked as well because it's just absolutely disgusting Behavior to ever do that to somebody um worry about yourself is my opinion um and just because people like have beliefs that you don't agree with does not mean that they have mental health issues it's just one of the worst possible things it

(09:32) is offensive on so many levels because there's a lot of people out there that actually have real mental health problems that need help um and so yeah when you do that kind of stuff it's yeah really low brow I've fallen down the rabbit hole there's no feasible way what's yeah and then there's people out there so uh I don't really like naming people or giving them credit and stuff like that but um and and I message Chris Leto in general cuz I wanted to let him know that I think he's right that there

(09:58) is a unified field Theory out there there right um and and there definitely is I we our investigation has shown that probably multiple people have independently determined there is a unified field three out there um and so you know whether or not he's correct on it like I think he's reached the point where he's realized it's real right and he's just really excited about it it's probably my that's my current impression of how he is um so there's this guy who's been posting on uh his podcasts have been

(10:29) getting posted on **Reddit** it a lot his name's uh Pat I think from the vetted podcast he's been spamming his dumb daily little updates all over the **Reddit** all over ufo and stuff like that and um he went on somebody else's podcast and he was trying to say that he thinks that I made the videos like that's his explanation like to me that's the ultimate level of copium right where it's like you realize there's something to the videos and you can't explain how they can be real without me somehow

(10:58) being at the center of it it makes no sense at all like first of all I have no CGI skills whatsoever I've been in healthcare my whole life I can barely even edit a YouTube video what you see here is the limits of my technical capabilities when it comes to this stuff soever that I could have made these the irony there is that if I were to like people like they find the case so compelling that they and then what his argument was is like oh Ashton knows that no hoaxer will come forward yeah and here's my here's my

(11:28) challenge anyone who thinks that I made the videos okay prove it right prove it I'm I'm streaming like every day find some evidence that I somehow made the videos Good Luck right uh because it doesn't exist just like the hoaxer doesn't exist and the problem is they realize that there is no hoaxer so they're trying to figure out how there could be a hoaxer and this is the irony of like there's several people trying to say that like I fell down the rabbit hole or whatever which is really ironic cuz like

(11:57) I go out of my way not to like I get pinged about 911 conspiracies like 10 times a day now right I've got people who want to link the case to mh17 um you know and I don't and the reality is I'm not really a conspiracy guy right I just happen to be involved in this particular case uh for anyone out there I will not be doing anything about 911 or any conspiracies related to that whatsoever I may talk to other people that have their own theories but I will not be doing any investigation into it just so that's out of the way um

(12:29) and I think it's it's a bigger conspiracy that I would somehow be the one who created these videos 10 years ago to what cash in on them now and I'm not cashing in on any way shape or form pretty damn absurd also anybody who thinks the corridor crew are some sort of authority on anything you need to get your mind right man I mean wow if guys with stupid looking glasses on sitting on a couch splicing in cartoons into their like when they try to talk down to other people is your idea of high culture and

(13:04) that's where you're going to get your opinions you got to really re-evaluate your life man like really re-evaluate your life I mean that is just embarrassing just to be honest with you guys like I don't prejudge anybody but I've looked at several of their videos and it's stuff made for like eight-year-olds like people for people that have no capability to think for themselves whatsoever I was able to debug Nico on the spot taking half as much time as he took because every single thing he said was wrong like just

(13:37) objectively wrong like not a matter even of opinion like I honestly don't think those guys are even literally VFX artists that's how dumb I think they are I would happily do a debate with them on any topic out there on anything I'm m370 DOD Fleer Navy videos literally anything I would debate them on That's how little I'm threatened by them so let's move on to some other stuff uh videos I don't Malaysian government is covering up oh so here's the other part too is that if anybody says that they think

(14:13) that these videos are fake just ask them what do they think happened to the plane and then they're going to say oh well it crashed into the ocean with some suicidal pilot what the Malaysian government's covering that up like what what are you talking about like that's a conspiracy so you're saying okay this conspiracy is not correct the one that's supported by 14 pages of evidence but the conspiracy that the Malaysian government didn't want people to know that it was a suicide why there's no

(14:39) evidence for it literally none whatsoever no evidence everybody has said he's passed all his mental health screenings he had no issues with his wife his wife is supporting him they're like oh well it's Asia they're trying to save face that's not really how it works in like Malaysia maybe if it was like Japan but even then it makes no sense at all right just completely bizarre and for other people to say that we are going down a conspiracy will you believe a literal conspiracy that has no

(15:05) evidence that none of the reports have stated is accurate like that doesn't that just kind of like make you a hypocrite a suicidal pilot when there's no actual evidence for it that all these

officials are covering up for it next I want to address the UFO community in the way that both sides seem to talk past each other from the skeptic side to the believer side where everybody just makes little videos about one another but nobody ever engages one another I think it's a big problem with the community

(15:30) and I see it firsthand when I see these YouTubers and what have you making posts about me but they're too afraid to come into interview and podcast request and talk against me including one that happened the other day where the host was telling me they were getting little emails from one of these **debunkers** out there telling them what to say like little child stuff like be a man and come and face me face to face and let's talk out the arguments I'm willing to go out there and talk to podcasters answer

(15:53) any questions uh no matter if they're on my side if they're hostile or what have you so if if you're confident in your **debunks** then you should be willing to do the same thing and if you aren't then your ideas don't stand up to scrutiny and just lastly I want yeah so you know one thing I think you guys have probably noticed it as well in uh especially the UFO community in general is everybody's just talking past each other nobody ever interacts with the other side it's just and this is what Keemstar brought up

(16:21) that I've been thinking about more and more and he's so right about it this is why Skyfire news and having Keemstar in the UFO Community is the best thing to happen in the UFO Community cuz you just have sides talking past each other nobody ever interacts they ignore one another they make little YouTube videos about the other one then they just Gaslight the other side like I can't even tell whether or not Louis Zando is part of a tip because you got Stephen **Green Street** and claiming adamantly that

(16:46) he wasn't doesn't exist and you've got the other side saying no he's a liar and that it's just like man can we just get people in the room where we can just hash out the details I mean it it's a verifiable thing like shouldn't we just be able to figure it out out right um and then what happened the other day on the podcast is **Mick** West dodged another podcast with me this is the third podcast he's dodged now **mcwest** has dodged three podcasts but it's not like he wasn't available he sent a bunch of

(17:12) emails to the host trying to get me trying to get him to have me address like the VFX **debunk** have me address the jittery contrails or whatever but he won't come and do it himself because presumably he's afraid because he knows that he's not going to have any rational AR he's going to look like a fool you know it's like come on man like come on like at least be a man man up dude seriously it's getting embarrassing at this point um I want to say that I've had several opportunities to walk away from the case

(17:46) but it wouldn't have been **truthful** and it wouldn't have been true to myself and that's the reason why I haven't uh I just want to keep in mind that I'm just a normal person with my own opinions on everything that's going on in the world and I'm covering some of those things that I find interesting in general but the case is not going away until we get a resolution from the US

government I think that we need to hold ourselves to a higher so just I and just like it was said there I'm just going to repeat this

(18:09) again like I could have easily walked away from this case probably had people going you're so big for walking away kind of like Jimmy coretti in the interview on the same day the cloud **debunk** came out I could have said yep it's all fake guys blah blah blah you know whatever we're moving on and people been like Ashton is so so brave for stepping up many is a that moving on to the next thing and I had him.

(18:32) com going I you know **I want you** to help out with this thing that I've got going on blah blah blah but the reality is like I would have been a fraud if I did that that would have been a fraud and I wouldn't have been able to live with myself in that situation that's why I didn't that's the reality of the situation right and standard in this UFO Community if you want to prove the disclosure is real then we need to move away from everything being balloons or Chinese lanterns or all these other lazy **debunks** that are out there

(18:59) if this conspiracy of UFO disclosure is real then some of the stuff that's out there is real and it's being **debunked** under false pretenses so everybody should Elevate their standards a little bit and if so maybe we'll get what we're looking for and then the last part is probably the most important part right um man the Skeptics and the bunkers they are Lamer than everybody else like it's always a balloon they just they basically they just use confirmation bias to fit into one of their three

(19:27) things it's either a balloon Chinese lantern or uh skydivers with jetpacks or whatever every single time right like literally no critical thinking whatsoever ever used just lazy nonsense and I say that as somebody who's happy to help **debunk** but like it's got to get it's just the standards are so low right and then you have the people who are the Believers who just go along with it like yep **Mick** West said this one's a balloon too let's move on right you're never ever going to get what you want if

(19:56) that's the level of your discourse like **Mick** West never addressed anything but he made a video about it where he talks past everyone and claims that we're going to move on guys so we're all going to do it and it's like the cultist go yep that's my hero he told me what to think and then the other side goes well this **Mick** West spoke on this I guess we'll move on to the next one so it's like I can partially sympathize with where we're going to be going here with Corbell and corbell's attitude so let's

(20:18) take a look at corbell's stuff I think this is it have come kind of intellectually they they've come to the defense of **Truth** and I I've really really liked that there's a dude named Lester online and I think he lives in La so where's the Corbell I don't even know where it is maybe look up Tubac Cabra so tuac Cabra made a funny clip we'll just post that it's close enough it's close enough where is it oh there's a oh we missed that we go be myself yours look man uh from zero to Jeremy what's

(21:09) my freedom to speak here George go for it yeah be myself you always say right cool it's your birthday thank you birthday we wish [ ] hor [ ] and katrick is a piece of dog [ ] total [ ] horeshit he's a suit is a liar is a piece of dog [ ] total [ ] horeshit he's a suit is a liar is a piece of dog [ ] so let's get into the lies he's a liar he stuck a shiv right in the ribs of his own organization you omit information that's still a lie so check this out there's an information

(21:49) War this is disinformation this is a disinformation tour total [ ] horseshit is a suit he a liar is that piece said dog [ ] I don't know if I was forceful enough George I don't think we're going to be we're going to hit the sensors on that one um but yeah Tupa that's a great Jam Tupa if he's out there uh but yeah I can kind of sympathize with okay so obviously this is just little child stuff yelling and talking crap about one another right but you can kind of sympathize with Corbell and why he

(22:19) doesn't address a lot of the people as well because he sees that all his lazy stuff out there it's not even worth him addressing half the stuff if everybody's just going to say everything's a balloon it's just super lazy right okay did he name drop a lot of people in that that's fine uh okay next thing uh okay are we on to Chris letto yeah um okay Chris Leto so Chris Leto has been man he's been on a he's been on one huh so Chris Leto believes he's found unification Theory so he's been posting pretty rapid

(23:03) fire in general um I watched part of his clip his video that he put out there which is I don't know somewhere out here did he not even post it on his YouTube or post it on his Twitter I don't think he did boy he's been he's been going at it though so here's the reality man I I we've already independently figured out that there is a unification Theory out there I don't know if it's about love but um I think he's just using that as an analogy in general uh and there has to be a unification Theory I mean there

(23:30) has to be a way to connect quantum mechanics with general relativity and hey everybody who's out there nice to see you guys tonight by the way I didn't say hello so Chris let's probably figured something out where in his mind he's realized he's achieved some sort of Enlightenment related to some of this and I'm happy for him in that respect you know I think that once you reach this level you'll start to realize that stuff like teleportation is possible but like a lot of people say you want to be

(23:54) sure not to fall into the rabbit hole of every single thing in the world connected like and because even if it is and I've said this multiple times it's not really like you're going to lose too many people when you start digging into that even when I think you start to talk about some of the sacred geometry stuff even though it may be correct probably is at the same time if you get too much into that people are going to start thinking oh you're out there in the woo right it's more important that you just simply show how

(24:18) it works and if that's because it's toroids or some other sacred shapes then great but once you start digging into everything's you know connected you you start to lose lot of people so um I support Chris Leto I don't think we should be calling him crazy or whatever Disturbed all

this stuff that people are saying out there just let let the man cook just let him cook folks let him cook um he's not saying anything that would lead us to believe he is going to hurt himself or anything like that so

(24:45) let him do his thing man okay I'm gonna try not to breathe too much into the mic too apparently I've been doing that uh let's see what else we got I want to keep this keep this flowing okay I think we're moving on to some of the more recent posts here hey tragon welcome welcome tragon okay we talked about that um money Penney did this post that like basically shows that El uh spoofing hacking and jamming are all capabilities that have definitely been out there so it's kind of like wait a minute we've got all this

(25:24) stuff that's out there that you could like spoof the signal you can and take control of the plane like this basically proves everything related to all these investigations that are out there guys pretty wild um one real quick thing as well like I don't even care like okay no we're going to wait and talk about that after this let's go on to the rest stuff okay so I made this post about the Tucker Carlson thing this might be one of the first things I really report on outside of MH370 I just think that war in I'm

(25:55) anti-war in general I don't think there's any need for for it I also think there's a huge amount of propaganda related to **Russia** in general in the western media like a just ridiculous amount and you don't even have to look that far to see it like the the people basically prove that by the people responding some people sent me some links I got blocked by several people just for posting this like what listen to my messages end the war in Ukraine no more proxy wars no more needless death no more propaganda by the Western media

(26:24) Free Speech not censorship how how are you going to block somebody for that what what is there to disagree with no I need more propaganda more anti-**russia** propaganda in my uh in my media like yikes guys come on man come on it's it's a little ridiculous like Tucker Carlson's a journalist he can talk to whoever he wants and if you're trying to gatekeep the type of people he's allowed to talk to that only shines poorly on you that's just that simple absolutely ridiculous do you think that we it's too

(26:53) dangerous to even have somebody talk to Tucker Carlson and to have **Putin** be allowed to speak so that we can actually hear the words from his own mouth directly instead of all this indirect [ ] this is directly related to the post I made later like later on about people are like making all these false statements about me but they won't talk to me directly it's the same problem this is what we need less [ ] in terms of people talking past each other and making up fake narratives and more people do talking directly to uh one

(27:22) another and and to Kathy's point in the chat I've independently also determined especially part of this investigation that United States our media is no better than **Russia** or **China** we are being fed misinformation and disinformation on a daily basis if you're watching cable news doesn't matter which one you're watching you are just you're getting programmed by nonsense simple as that it is it's exactly about message control it's an information War 100%

it's about message control absolutely and under I

(27:51) think a lot of people have been saying too under old uh leadership at Twitter this whole thing would have been censored that's then it just proves the whole point right this whole conversation would have been censored under old Twitter and that just proves exactly and that was because the Twitter files showed that the FBI was literally controlling what was on Twitter the FBI paid Twitter \$3.

(28:13) 5 million for the privilege of censoring people on Twitter it's actually ridiculous that that did not get more attention \$3.5 million for the right to censor people paying from the FBI to Twitter what unbelievable guys um I reposted the Steve quas thing earlier as well this was making the rounds um you know in terms of him talking about transporting a human being from one place to the other place uh and talking about Wireless power and all this stuff like reality is guys we just have to listen to the people out there

(28:52) telling us the advanced technology is real all we have to do is listen they're out there they're telling us advanced technology is real they're talking about stuff like teleportation or stuff that's basically the equivalent they're talking about all these Advanced science Concepts that we've been bringing up and we've just been ignoring them I mean that's that's the crazy part you all we have to do is listen the information is all out there um then we had Paul Henry Nar naral I'm probably butchering his name

(29:20) this is crazy this guy died in the submarine in the Titan sub he actually died in the Titan sub this guy that we're looking at right here on the screen and he sits here and explains the exact thing that we independently figured out which is that a plane cannot land in the ocean it is going to rip apart in a thousand pieces and he just says that and he ends it with such a huge Point basically just saying that if we didn't find a debris field the plane didn't crash there that's really really simple guys

(29:53) hey thanks my my channel I'm going to take a look at that after the Stream uh I'm about 100 200 emails behind so I'm going to take a look at that after this stream uh so yeah I mean it's simple guys if the we did not find a debris field plane didn't crash there simple as that right and then the CNN guys even like where's the debris then how have we not seen a cushion right let's just use common sense Common Sense look at all this area that search and this doesn't even really account for the

(30:23) aerial I mean you can see for hundreds of miles if there was a debris field somewhere we would have found it 100% it's also pretty damn weird this guy died in the Titan sub I mean I hate that word synchronicities is that what it is but whoa that's weird this guy was literally talking about the plane couldn't have crashed without a debris field and he even talks about this part two is misunderstood but the um those black boxes they transmit on a very specific frequency that cannot be mixed up with anything else there was some

(30:55) misinformation that there were some pings that they thought might be the black boxes

and they knew they weren't the black boxes they knew because the pings literally transmitted on an extremely specific frequency so they would have known right away if it was that I think it's like 35 megahertz or something like that or kilohertz I don't really know but or 3.

(31:13) 5 khz I can't remember so there's so much bull nonsense related to like the stuff that came out these random pings that the media is running with like oh maybe they found the plane like they knew there was no chance the media just lies non-stop uh um somebody had made a post Randy one Cora whatever said they wanted to apologize for me this was I don't this is probably the first apology I've ever seen on Twitter in general related to the case so I felt like it was important to highlight something specific which is that nobody needs to

(31:47) apologize to me I as much as I appreciate the sentiment uh Hey UFO chick hey William hey everybody who's jumped in the chat as much as I appreciate the apology sentiment it's not what I'm looking for all I'm looking to do is Enlighten people have people who are open-minded realize that there is advanced technology out there that is being kept hidden from us um so I appreciate that but I I don't need people to apologize I don't need the bunkers to apologize either if they ever even they never would but uh I don't

(32:16) need that either I'm not looking for that in general so I did post this thing on so uh Sono luminescence that we're probably going to get to tonight if we have time uh there is some science I want to go over if not we're going to go over it tomorrow now that's a good question James which I will address in a minute because I like that question in general I'll write it down okay let me see what else we got to address though before we get to that okay and then I think the last one is the letter to Steven Greer actually the

(32:46) Muhammad Ali if you guys didn't check out this Muhammad Ali uh clip Muhammad Ali was a great man I wish I would have met him he's on is this Jimmy Carson I think right this is like the the biggest late night show at all in like the world and Jimmy Carson's like basically ridiculing him and he does not conform guys he does not conform like he is just like no I've got videos of it it's it just reminded me a little bit of our case where it's like Ashton why won't you give it up why won't you move on right well it's

(33:18) because I'm looking at the evidence man like your ridicule and your you know Silly weak **debunks** don't do anything they don't address the evidence right man Muhammad Ali was this is my favorite clip from Muhammad Ali oh it's Johnny Carson sorry uh I don't know why I said Jimmy um this is my favorite clip from Muhammad Ali ever really love this clip it's great man I mean Mike Tyson was also great as well we we might do some Mike Tyson stuff later as I love Mike Tyson and yeah people I find interesting

(33:47) you can check that podcast out I've got podcast set up tomorrow Thursday and Friday it's going to be a busy end of the week chat um we've got quite a few requests coming in as well and I'm trying to take all of them but I got to have breaks here and there okay letter to Steven Greer as well I'm not going to read it all out just because we I don't want to spend too much time on this but um wrote this letter Steph Greer I think it got oh yeah lots of attention 120,000

views wow um you know and I think that this

(34:16) letter can also be used as like getting people back on board with the facts around the case out there and why it's so compelling I think the biggest one that came up recently is that we oh there is one more that we need to go to um the biggest one is this one here the Telemetry data was not made public until May 27th 2014 what May 27th 2014 we're going to do a followup on this tomorrow I'm going to retweet this tomorrow because it's such an important detail the the videos were received March 12th this CNN post right here is dated

(35:05) March 14th this was the first time that they began to consider that the plane even went into the South Indian Ocean this post dates the supposed received date on the videos the Telemetry data the 47-page report was published a week after the videos were published the videos were confirmed published by May 19th the Telemetry data wasn't made public until May 27th how would somebody know what coordinates to put in the bottom left of this video right here chat how do I make it go away there's video there's coordinates in the bottom

(35:41) left how do they know how did they know a week before it was available they just guessed what did they just guess or what it makes no sense so this is pretty damning evidence to me this is as damning as any of the **debunks** by far like **debunkers** now have to explain how this person who made these videos who doesn't ever show themselves doesn't want \$150,000 now they're a Bitcoin billionaire with VFX skills better than Marvel Studios and the people who made top gun Maverick that knew science better than Eric Weinstein and a bunch

(36:17) of phds understood engineering of the plane in order to get the plane to be accurate in two different videos at two different distances oh and they're precog they have precognition they see the future as well it's like I mean come on guys the requirements are huge for these to be fake now so I'm guessing they're they'll say like oh well I was thinking like what what could they even possibly say about this like I'm guessing they're going to say that they just guessed on the right location cuz if people were there years

(36:58) ago we were so confused to what was going on like we didn't think that we thought the plane was in the South Indian Ocean or South **China** Sea till like March 14th if I read this report that the CNN links in here and it says they're moving the investigation moving the search on March 12th so for six days they're still searching sorry in the South **China** Sea and then people are thinking like well why would it make this weird turn up and to the nicobar islands it should just go straight over Indonesia if it's going to the South

(37:30) Indian Ocean so people don't realize like there was no Community public understanding of where the plane went right it wasn't until weeks and weeks later so super bizarre um so anyway I wrote this to steven Greer I think that there's enough evidence linked together here that people should be interested now the big push back from the higher ups is like well I want firsthand accounts right well the guy went to freaking prison man Edward C went to prison for six years if you want a firsthand account go talk to

(38:04) him go find him I don't want to harass him I really don't want to harass him I'm not sure he can even legally talk about it to people right but if you are one of these big UFO people with clout or you are the government like the AO who I've talked to or if you are Jeremy Corbell like go use your resources man talk to Edward C Linn figure out what he was sent to prison for it's not public is it the videos cuz if it is game over that's the best videos you're ever going to get in your whole life we're probably

(38:35) never going to see videos better than this unless another Edward cing comes out and really and goes to prison for a bunch of years right okay uh oh where's that CNN thing I can't lose that oh no there we go okay what else we got thanks for being here with us tonight chat appreciate you you okay somebody asked me what my opinion on cloning is I guess we're talking about cloning so cloning was outlawed I believe under the Bush Administration in the early 2000s and my impression was that it should not be outlawed that we should

(39:13) push the limits of science that's out there and it's weird that it got cloned because it makes me wonder if people are afraid of studying it kind of like when you study twins identical twins like you know you would definitely not have the same Consciousness but if we we look at dogs and we see how we can pass down hereditary traits and dogs and like even my dog has weird behaviors that are definitely passed down it does make me wonder how much of our personality is inherent and how much of it is uh related to the environment

(39:43) psychology would teach you that it's 50/50 and that's just a guess they're just guessing they don't really know um so I I do think that cloning is a very interesting topic and I think it should be open uh yeah Lex fredman I think that a lot of the big podcasters have been turned off by the **debunks** that's my opinion is that a lot of the podcasters don't want to be embarrassed talking about something where many people think that it's fake which is kind of weird to think about because these people talk

(40:10) about stuff like psychic powers and remote viewing and lots of esoteric stuff and I'm just sitting here talking about literal conspiracy so it's it's pretty bizarre um but again like I'm not really that worried about it what did he just say about imet yeah the we've got some imrat stuff to look at too later potentially we've got a lot of stuff to go over guys I'm trying to go through it quickly so the thing is guys I'm not in a rush for any of this stuff um the reality is I'm very

(40:43) very confident that the science is going to check out and that more and more scientific papers are going to come out that are going to prove that this type of stuff is real and when teleportation gets proven to be real on a macro scale boom there will be a sea change people are going to go whoa maybe we should go look at those MH370 videos again right how does a plane crash into the ocean without leaving a debris field right the thing that's holding people back is their own preconceptions of what's

(41:11) possible in science and their own preconceptions of what's possible from reality and when that changes I think that people will be a lot more open to the videos and I'm not really worried about it right and uh what I'll say is I had somebody else who was pretty big um reach

out to me via DM and kind of talk to me about what it would take to get people back on board with a lot of this stuff and my Approach was well like I don't really care that much right like I'm I'm a little bit glad that some of the heat is off from

(41:46) the respect of this we've already made our impression right people know when they talk about MH370 on Twitter they know who I am they know about the case they know the stuff that we're been doing right um and I I think that my true opinion is that that most of the world's not ready most of the world's not ready for this that's that's my true opinion on it I think that we've got many more years to go before people are going to be ready for this type of thing because it is so Earth shattering in terms of uh reality

(42:16) being a construct that there's some underlying Matrix to our reality even though it's basically proven by science already holographic principle in my opinion is already proven holographic principle leads to the unification theory of quantum and macro um but you know people just aren't ready for it hey Bernie welcome buddy appreciate you yeah feel free to hit that like button appreciate you guys um okay so I think we've talked about that we talked about that okay um next thing **Reddit** yuck so new **Reddit** rule I have to a

(42:56) comment on this uh pretty weird so there's a new **Reddit** rule on the **debunker** sub**reddit** now why am I commenting on this due to increase in mockery on this sub we have introduced rule number five mockery or insults based on an individual's belief in the video legitimacy will result in a ban repeated violations of the rule will result in a permanent ban this is literally the thing they banned me over this this is what they banned me over so if you guys are not familiar you haven't been following along since I

(43:31) think I was banned from this sub**reddit** back in like October early October or September or something like that and there was all this drama because the sides started fighting a lot and people were just everyone was putting everybody else down and uh and so then I made a post saying that if the admins are listening and watching I'm willing to become a moderator of this sub**reddit** and what I would do is Institute a new rule that you must attack the argument and not the person that's literally what I posted I can probably go find it right

(44:02) and you know what happened everybody said that I'm trying to take over the sub**reddit** and ban all the **debunkers** they just trying to Gaslight I'm like literally I just want to Institute a new rule that's literally this rule the best irony is the moderators that posted this rule are the ones that were literally doing this every single one of my posts they would immediately tag with speculation or potential **scammer** or all this [ ] and everything where people are like even recently ones where people are just literally insulting me

(44:36) that the whole post is insulting me they had multiple threads or posts about how Ashton's uh you know whatever crazy kind of stuff they let all those go even though they're not even related to the topic at hand now they're doing a 180 okay well maybe I'm going to change my mind about accepting apologies I think that the the moderators of this sub**reddit** if they want to apologize maybe I will accept that cuz what the hell I mean it's I'm glad they're doing it we're

about like four months too late for it right like

(45:07) now the the **debunkers** have already convinced all these people that these videos have been **debunked** now they're going to go ahead and Institute this rule but you know before when it was literally a propaganda War just trying to convince people not to look at it they didn't care at all just weird man really weird Butters Kennedy checking in Butters Kennedy has the best dog videos I like him actually there's a person named Eve I don't know if it's the same Eve that's in our chat but she has really good

(45:42) animal videos too I it's one of my guilty pleasures is sitting there and watching dog videos and animal videos that are cute cheers me up I love animals um my channel that's not the appropriate terminology I think we use regarded they are very regarded just kidding guys was just kidding um people ask me this a lot were the videos **debunked** if I thought the videos were **debunked** I don't think I would be sitting here reporting on them still guys so whether or not you want to think the videos are **debunked** I'm I'm really

(46:19) not interested in trying to convince people in general um what I'll say is that we had \$150,000 Bounty that nobody collected and all we needed was the hoaxer to come forward with the videos with the source work they never came forward so do I think they're **debunked** no oh yeah and that's the other point I wanted to bring I'm glad somebody mentioned that so uh going back to all the negative comments about me and the YouTubers and all this stuff saying like oh why won't he just move on move on

(46:47) like I've been 100% clear about the stipulation since the beginning you don't decide when I move on I said that you needed to come forward find the hoaxer find the hoaxer have them bring the source files of their work there's no way they would have got rid of these masterpieces and all the work they put into it right if somebody still had cloud pictures from uh 13 years ago right then the person that made these videos 100% would have that work somewhere so find that person collect \$150,000 then I'll move on right or better yet

(47:25) let's get statement from the government doesn't everybody just want to find the answer one way or another it feels like the **debunkers** don't really want the answer they just want people to stop looking at it why aren't the **debunkers** finding the hoaxer I've been asking for like four months why are the **debunkers** not asking the government to issue a statement if if you think the videos are fake like don't you want the government to come in and and shoot me down like why don't the government just come in

(47:47) and say that that's not our mq1 C Great Eagle that's not our cers system shouldn't that be very very easy for them to make that statement shouldn't we all agree that that's what they want to do Kim did not put any time limit he his was only about \$100,000 so Kim put in \$100,000 and then two people put in a 20 and 25,000 and then I threw in another 5,000 which rounds it to 150,000 uh nobody has been paid out no hoaxer came forward that had any evidence of it there was I think two or three people that lied about potentially

(48:19) making them that had no evidence for it and weren't believable at all their Post history kind of showed that they they were not definitely the people that hoax the videos um so I just want to get that out of there make sure that that's clear um any other questions I need to address this was pretty funny though I just thought huh also uh boy these guys really hate Punjabi Batman they really hate Punjabi Batman a lot how come it's not going back to the subreddit um oh also there's some I don't know man

(48:56) people are going back and forth about exf data and it's all way over my head um I mean I'm already we already showed that the clouds are moving and evolving so it doesn't really matter to me about this Cloud debunk that's out there but there's been people doing friends like analysis on these photos showing discrepancies in the exf data and I'm just not technical enough to really understand it um and again everybody's just kind of like talking past each other so I I don't know I may look at

(49:24) that later probably not don't really care uh let's see so and one thing I did post while I'll say is that people think that it's a conspiracy theory that the CIA might have tools that can make a fake Cloud picture like we posted that the Wikileaks the The Vault 7 Wikileaks they 100% have access to everybody's computers out there they have back doors into everything they have back doors into my Smart TV and your smart TV and if you have any devices plugged in like they can access that like they probably

(49:56) been watching they probably can listen to my phone anytime they want right like people got to realize like what the capabilities of the CIA is is pretty good now you might say okay well you're being a conspiracy theorist well yeah I mean I'm literally talking about the biggest conspiracy ever I feel like they would do literally anything to hide this um one last piece of irony oh is this is this Punjabi Batman again I think it might be he I like how he just keeps making new accounts they keep Banning him and he just keeps

(50:28) making new accounts it's pretty funny I think he was trying to line up the satellite pictures I don't think it's really going to be possible they're not the same angle it's we have no idea what the angle of satellite pictures is either so uh and I'm talking about the Chinese satellite pictures it's going to be tough but somebody I don't know where it was um there was I think it was that Tony Adams guy the irony is they make fun of Punjabi Batman for like doing these uh cloud images and stuff like

(50:54) this and I want to say a few days ago the Tony Adams guy was trying to he was like imagining lines in the in the satellite video that weren't there and imagine like this is where they spliced together the the pictures and stuff like that and he's just literally like making up stuff that's not even there like I just thought it was so ironic that they were doing the exact same thing that they argue that Punjabi Batman does which is like supposedly like imagine stuff in the pictures that aren't there

(51:20) uh pretty funny man okay I think that's enough reddit reddit bores me chat okay what else we got at least now with the new rule I don't think they'll be making any more uh

defamatory like off the deep end uh posts about me I hope we'll see though we'll see okay um foas okay so I did some new foas today guys I'm not messing around anymore chat I am not messing around anymore how many foyos did we do today uh what I'll do is I'll take a screenshot let's do a little screenshot

(52:15) action okay uh nine new foyer requests today guys nine new foyers we have foed uh so I foed Homeland Security and the CIA for anything they have related to me uh since the beginning of this investigation from August until now because I want to know if they're monitoring me at all or they're watching any of my stuff and I think this is a big brain move because I expect that I'll get back that they don't have anything right that's what if they're not monitoring me that's what I would

(52:45) hope uh I really hope I get back nothing in this case now the part about Homeland Security the reason why these are a little bit odd because I don't know exactly how these agencies work but homeland security has like 20 different sub agencies so I Foy like the some kind of intelligence version of them which I think is where the information would be if they have it CIA I think um works out of it's supposed to be International but I'm not really sure if they have limits uh so I don't know I just to be

(53:16) safe I foed both of them I foed Homeland Security for anything about MH370 from December through March oh no December through June just to be safe because I wanted to make sure I covered the time span where the videos emerged as well so I foed the homeland security for MH370 I Foy and all the rest of these are all the same exact foer so the wording was I'll tell you guys the wording so the first one for myself was I'm requesting all documents related to Ashton Forbes a private US citizen who's been investigating missing flight MH370

(53:52) from August 7th 2023 through February 6th 2024 and then for the other ones they're all the same as well um the agencies that I foed were Homeland Security CIA nro NSA Dia which is the defense intelligence agency um the Air Force and the Navy I fyed all of them and I said I'm requesting all documents related to MH or Malaysian Airlines flight 370 also known as MH370 from the dates of December 1st 2013 through June 1st 2014 Malaysian Airlines flight 370 is the plane that went missing on March 8th 2014 I foed all of them I probably

(54:37) should foyer the FBI as well good call we'll probably send that one in later tonight let me write it down anybody else you guys think I missed oh yeah maybe I'll fo them for myself as well good call good call I think they can take a long time I mean I expect most of them to get rejected all the MH370 ones I expect to get rejected but we'll see uh anybody else I need a foer so what I want to do is I want to collect foyers that are being rejected in the interest of National Security CU why would there be any national security

(55:19) stuff related to this right what am I the problem with Department of energy is what am I going to Foy them about they're not going to have anything related to MH370 Department of energy we would foer for like um oh well maybe we will you know maybe we will just to be safe maybe we'll add them in there as well because maybe if those orbs are Rel related to

Department of energy somehow even indirectly uh yeah I just told you what it is you guys so there's a website um I think I have on my favorites hold

(55:54) on guys it's super easy to Foya stuff no I think it's just Navy uh but here you can see let's check so they have this website that lets you foyer any of the agencies so you just look up yeah there's no Naval intelligence it's just Navy and if you get one like Homeland Security you'll realize that there is like all these sub agencies underneath it as well so I did Office of Intelligence and Analysis what if I should in do the Inspector General for Edward C Lin maybe I think we're going to do

(56:44) Inspector General as well okay yeah I'll probably do those as well it's really easy to send foas in so once you click on one of these uh I'll show you how easy it is so let's just say I were to do the Inspector General you it tells you how long it normally takes depending on the complexity of your request here and you do continue request start request and then you fill out your personal information which I'm not going to do right here and then you get down here and you type in your request here right so if I'm doing this

(57:18) template I just copy and paste this in there and then uh the rest like the reality of this other stuff is they've every single time I've asked for a waiver for the the fees they've always rejected it every time I asked for expedited processing they always reject it so I've stopped even requesting that I don't care how long it takes and normally for the amount I just put in \$250 they've never made me pay a cent so I don't know if it's really complex they might try to charge you Edward cand is

(57:47) not incarcerated uh you will not get anything for satellite imagery so what I want to do is I want to get information I want to foa stuff that we should be able to get or shouldn't exist if you try to Foy a satellite imagery it's going to we know it's going to exist and we know they're not going to give it to us no matter what so it doesn't give us any answers right but if we Foy MH370 and they reject it now we know they have information related to MH370 right and why are they why is it hidden

(58:13) why would there be any hidden information it should just be straight up right so that's what we're like learning information by using these foas I'm collecting them like Pokemon cards chat I never had any cards just in case you're wondering uh I know I've said I've played Pokemon before but I never played the Pokemon cards or whatever okay okay let me check what else I was going to go over here tonight we are going to post some science as well we're probably going to be posting some uh Roy

(58:41) D Herbert science from Martin I think his last name is Gibson I could be wrong and that's going to probably be tomorrow and we are also going to post uh I think royy Herbert has some or not um sorry Bob Greener I think has some stuff for us too that we want to go over so probably some science is going to be coming tomorrow it's a little sad that the science gets the least amount of views but it's probably the most important stuff sorry I'm looking through my notes um man I had questions for I was I was

(59:23) asked by the podcaster the day um it was the people I find interesting podcast with uh Tony and I was a he asked me if it's okay if Steven **Green Street** or **Mick** West join and I said sure I actually had questions ready to go and uh they didn't show up Stephen **Green Street** I think I can get along with step **Green Street** no problem right uh **Mick** West not a big fan of I will say this for **Mick** West I'm sorry that I said he's gonna go to hell that was probably a little rude of me um but I will reiterate that **debunking** a

(1:00:01) video that's technically May implicate what happened to 239 people um to me Rises the level of seditious conspiracy right if you are hiding that and you are some way any way even indirectly being told to do anything related to that then to me that's hard prison time that's hard prison time um and I mean we've already got the precedent January 6 the precedent was set on terms of seditious conspiracy so I would just say tread lightly tread lightly okay let's do some more stuff um oh I think we have one more

(1:00:42) **Reddit** post we're going to look at here and then we may dig into some science here we're making good time I'm trying to keep these streams pretty streamlined here and I'm probably not going to do as much work on the stream just cuz I think at this point you guys know I'm transparent about it and it seems a little bit boring I don't want you guys to be bored while you're watching um okay two pretty weird things that happened here this must have been one of punjabi's accounts because it's

(1:01:12) deleted uh but whoever did this they found some interesting information which was iMat announced that the lead satellite operator working on MH370 had suddenly died of a heart attack okay where is the heart attack part I think it was this guy who wait who was it what was the Heart Attack One let me find it inm Marat heart attack oh wow this is going to be hard to find huh they scrub this so somebody died and then I'll have to find that I I thought this had it in

(1:02:16) there but maybe not hold on oh here it is quote from this article here it is here we go wait what key member doesn't say oh here it is okay uh as ersat put all its resources at the disposal of the international investigation team to try and narrow the search area personal tragedy struck Dickinson and his team Dickinson and her colleague flew to qual lur to brief the investigative team at the end of the first week on his way back Dickinson was meant to fly from qualm P to Los Angeles via Heath early in the second week as he landed he found

(1:02:53) out a key member of his operations team one of the satellite coordinators had suddenly died overnight the team was already working overtime and being uh in such closely NE group the tragedy hit him hard Dickinson abandoned his plans to go to Los Angeles and went back to and went back to work here Flex back saying it was unusual and sad time that's weird that's pretty damn weird yeah and then Bill we're going to get to that part too so in addition to that which is pretty damn bizarre then uh some OB uh retired

(1:03:35) General Robert clear from the United States gets appointed uh as an additional non-executive director of iMat on March 20th 2014 what one week after the plane went missing so the imats directly connected to the US military directly connected to the US military they've got

a retired General that joined the board look at the date March 20th 2014 what oh we're definitely posting about this tomorrow chat oh you're in Lanka right now Lanka is beautiful I also need to correct that I used to be saying that it was panang

(1:04:16) Lanka but those are two different places easy to confuse two islands pretty close to one another Lanka is a little bit further north uh I've actually been to both of them I've been to Lanka and I've been to panang before uh panang is the place where I stayed at a hotel that was literally slanted it was the scariest Hotel I've ever been in in my life when you get into the open the door it felt like you might roll out and fly out the balcony and we didn't stay there though uh my parents were like no we're not

(1:04:43) doing this yeah so iMat shady as hell chat super super Shady let's read this General clear retired from the Air Force in January 2014 with over 38 years of service so he retires right before the plane goes missing so he had just retired two months before now remember back to the letter to Ashton Forbes that they said that they knew about the defectors in December of 2013 pretty weird man pretty weird prior to his retirement he served as commander of the US strategic command from January 2011 through November

(1:05:23) 2013 in that position he was directly responsible to the president and secretary of defense for the plans and operations of all US forces conducting strategic deterrents what does that mean and Department of Defense space and cyber space operations prior to that assignment he served as commander of the Air Force to space command from October 20 2007 to January of 2011 so this was like basically before space force was a thing man maybe we should be looking into this guy as commander commander of the Air Force space command General

(1:05:56) clear am I saying is Right name right Keller oh Keller probably right Keller General Keller was responsible for the development acquisition and operation of Air Force Space and missile systems man maybe we need to be looking into this guy he oversaw a Global Network of satellite command and control Communications missile warning and launch facilities he he's the cers guy and ensured that the command Readiness of America's intercontinental ballistic missile Force over his career he uh Keller served as a

(1:06:28) in a variety of important operational staff assignments successfully LED large operations with global responsibilities chat this is weird now that I know more about cbers he would have been the guy who was in charge of it cbers got turned online 2013 NRL 39 came online in December of 20 2013 I think or early 2014 cbers came online fully operational in in 2013 as well uh no um my channel we we can't Foy anything related to private companies probably not uh yeah I guess you can for Naval intelligence um I'm not sure how that

(1:07:17) all works goes onto the board of imet right after wait somebody else died did somebody else die when you replaced him Oh you mean the random iMac guy I don't think the imack guy was on the board of directors though the iMac guy was just a controller right lower level guy oh yes okay so steuart James uh furn is the one who died he dies three days that that's

when he died March 17th wait he died March 17th damn this is wild dude I'm actually surprised I haven't reported on this yet yeah yeah we're definitely going to

(1:07:55) report on this tomorrow guys we're definitely reporting this uh I don't know about the AIDS virus stuff I think that's nonsense so one thing as well that there was a weird forchan post that claimed to know what happened it was talking about Diego Garcia and the plane getting stripped to parts of there and one of the comments that claimed to be that same person was saying that intelligence communities know how conspiracy theorists act and so they'll throw out reding conspirac theories to get people to think about

(1:08:26) that like I really think that the whole AIDS researcher thing and the patent thing that's out there I think those are maybe even put out there by intelligence communities because if conspiracy theories focus on that then they're not focusing on the real conspiracy and they're going to get ridiculed as well because they make it something that's silly that can be easily **debunked** right as opposed to the **truth** which is a lot harder to **debunk** h just something to keep in mind guys so especially for my conspiracy

(1:08:57) minded followers and I know there's a lot of you out there you need to be extra skeptical in terms of is the conspiracy that you're following something that has a lot of uh evidential support for it or is it something that's really like a he said she said thing like dig into it because when you dig into the patents you realize that the individuals do not own the patents the company does right and s23 I will say I don't like to talk about pizza gate or other conspiracies but it's a little bit like that right

(1:09:28) where they they ridicule it they distort it so that it doesn't you know it doesn't address the facts that people make I think even the 911 conspiracy theory people as well will say like oh it's you talk about the Jewish space lasers or whatever uh as opposed to people talking about like the control demolition or stuff that's a lot more grounded in reality right um and yeah so we want to be very skeptical if you're going to be a conspiracy theorist you should still be very skeptical of all claims um and

(1:09:56) what have you yeah but that's why I only believe in Ripple Moon a little bit you know it's a little it's jokingly right when I talk about Ripple Moon stuff I just think it's pretty funny right uh conspiracy like that's harmless right like the idea that there's a weird Ripple on the moon like so what right am I'm not saying that the Moon is fake or something but it's it's a harmless conspiracy theory it doesn't hurt anybody it's pretty fun um yep so Ripple Moon let's let's attack Ashton Because

(1:10:26) he believes in Ripple Moon everybody honestly ironically enough they're apparently are uh space lasers you guys want to see this uh somebody found the video and they posted it on **Reddit** earlier today um one of the only subreddits I actually track I think it's strange Earth let me see oh here it is look I think this is really I I remember seeing this several months ago I tried to track this down on Wall Street Apes it must have been from a while ago but I remember seeing this they're actually using look this is a

(1:11:03) real laser system look at that this is the anti-missile system the Iron Dome I think it's called they're actually using lasers oh yeah it says right there Iron beam they're actually using lasers to shoot down Rockets this seems completely plausible to me look at that that's crazy that looks pretty real to me I kind of want to strip this video I feel like this is a good video to have I'm actually gonna I'm gonna steal this I want to make sure I put this somewhere where I can get back to it at

(1:11:40) some point in the future I'm going to put it in my conspiracy my conspiracy uh section that I have for stuff that's not related to MH370 I also have another video chat that is pretty wild a UFO one um I'm going to show it to you guys if I can find it oh yeah here we go I need to strip this one too I wonder if this gets disappeared this this is probably one of the crazy I think this got debunked as being a flare but you can tell this is not a flare it doesn't even move are you guys ready for this this is over

(1:12:22) Tron and Iran is shooting air defenses surface to air defenses at this object in the sky this is July 13th 2023 this is before the case or anything like that I remember seeing this going oh I'm saving this can you hear is there sound there's no sound look at it does that look like a flare to you it's not moving you can actually see some of the missiles hit right next to it here or whatever they're shooting there like you can tell these things some of them are going past it some of them are in front of it this is one of the

(1:13:00) craziest videos I've ever seen in ufology it looks like they're shooting at a UFO like that Munitions is definitely real and if this is a flare how come there's no smoke like it's it's illuminated so you should see the smoke Trail pretty clearly and then it just disappears like and here's the thing too why are they if this is a flare why are they practicing over the capital city this is tyan this is the capital of Iran they're shooting active Munitions over the capital weird man is that pretty crazy anyway that's a

(1:13:36) fun little video two fun little videos for you guys tonight yeah people probably saw that back over the last summer yeah that and this is the thing too so it goes back to my my points earlier about we need the bunkers need to step up their game right like nothing you got to have have a logical argument like why are they shooting at a flare are those skydivers with with uh fireworks coming out of them too yeah isn't it it seems dangerous right could the Munitions fail and then fall and blow somebody up so this is where like I'm all on

(1:14:14) board with debunking stuff but like let's set the bar a little bit higher so I'm going to let's let's real quickly let's criticize both sides real quick guys I think we can do that both sides hate the hell out of us anyway so let's start with the debunkers and the uh Skeptics debunkers and Skeptics need to come up with some new explanations and not just new explanations but I want them to also come up with actual stories as well like oh Iran was shooting a flare up because they were practicing their uh

(1:14:47) anti-missile stuff on in in their capital city that night right at night as well like you know give us a full story that's all I'm saying give me a full story maybe come up with some non

incoherent arguments uh come up maybe some new arguments as well like it gets a little tired when we just keep going back to the same three things over and over and over again right okay now from the uh UFO believer side are ufologists can some ufologists do some actual work it I feel like 99% of the ufologists do no work whatsoever no

(1:15:20) research whatsoever it's literally just posting other people's stuff and then opining on it like that's just it's like either the drama or they just I'm just going to give my opinion on this or on that right how about go do some actual work in investigation at least John greenwalt's doing foas to people I mean he might be getting fed information and stuff like that but at least he's doing some actual work out there right um at least Stephen green Street's putting together some debunk stuff that's out

(1:15:47) there right I feel like we're like the only people in ufology actually like putting a case together for Content that's out there right everybody's just been waiting around to be told what to think so those are my criticisms for both sides uh let's see so now they can both equally hate us okay should we do a little science I think we're we still got a little bit time left I think how long have we been going where's my list okay yeah definitely not going over two hours I might post those videos later

(1:16:22) but I I don't know also just for the record I'm not pivoting to anything else I just am interested in other stuff as well I'm probably going to make at least one more post on the Putin interview I actually can't wait to watch that because I I think it's very very important that we listen to both sides of every argument especially in ufology but everywhere else as well and I want to hear from Putin's mouth what is his rationale for invading Ukraine I don't think a lot of people realize that

(1:16:51) Ukraine was actually part of the Soviet Union I think that that interview might be coming out like tonight or tomorrow um but Ukraine was part of the Soviet Union us us like helping out Ukraine is like if Texas broke off from the United States and Russia was helping out Texas like that's like the equivalent like Ukrainian people are like basically the they're Slavic people like they're closely related to the Russian people like it's it's kind of absurd that we're like intervening in the war to begin

(1:17:23) with and it's clearly a proxy war like can we all just agree that it's clearly a proxy war right I think can't we just make peace with people like why do we have to be against Russia why do we have to be against China like can't we just all be on the same team and make the world a better place like I just don't I don't know why that's controversial it's crazy um let's see okay I think we're ready for science let me look okay so you can see here I posted about star in the

(1:18:05) jar okay let's see if we what should we look up here we got a lot of stuff lot of stuff yeah I I feel like it's all about money selling weapons yeah you guys get it distracting people like people are D I want to know how many people are dying too we we have we're so misinformed in the United States about the wars like they don't tell us anything about how many people are dying it's like all just misinformation disinformation okay I think we want to look a little bit at

bubble cavitation

(1:18:47) maybe we want to look at Vortex tubes so what I want to know is I want to know more about plasmoids and probably evos uh so if anyone's got any good stuff on that I think I want to take a quick look at that before we close out tonight and then we may do a more Science Focus stream tomorrow the star and the jar stuff was really cool like really cool um I don't know if I Vortex tube is even going to find what I want oh okay I stand corrected what is a vortex tube used for okay that doesn't I get what I want

(1:19:27) to get to well maybe what do you guys think any smart smarts in the chat tonight where's Hermes we haven't heard from Hermes in a while man a Vortex tube easy engineering oh boy that looks like a hi welcome to easy engineering we're going to continue with the vortex 2 uh let's look up plasmoids did that say Minecraft oh look at this look who it is Randall right there well that's weird huh first hit there's the guy right there Randall Carlson I really respect Rand Carson and sacred geometry in preious history but this is

(1:20:27) outside as can huh plasmid vacuum bubbles plasmoid technology could have been used by ancient cultures first successful build out of a plasmoid engine plasmid engine how this technology will affect the world uh I would watch but I don't want to give Danny any extra clicks and views so we might have to figure something else out they monitor plasmoids which form Earth's streamlined Magneto sheath Downstream from our planet in the solar wind whoa okay interesting yeah this is the great beard man by the way pretty weird

(1:21:10) uh find right that's the gray bearded man right there from the from the letter actually you know what maybe we just maybe we'll save the signs for tomorrow let's let's read through the rest of this though I also I think I watched this one the thunderstorm generator this guy's like an engineer I don't I think he's famous I watched this as well where he basically says like the the engineering works but he thinks that it doesn't work in the way that it's being made out to be not

(1:21:47) sure have I done research into Bendle yeah yeah Malcolm Bendle yeah I have yeah um oh yeah here it is right here I have I think he's legit guys I I think that bendle's legit um I I don't want to go into too much detail but I am planning on being at a conference this Summer that he might be at as well as some other people and uh yeah I I think he's legit is what I'll say to you guys I don't really want to divulge too much other stuff but I've been talking to people and I think he's like legit legit like I

(1:22:23) think the devices have been checked out I think there's very powerful people that are looking into these types of devices and what I'll say is supposedly these devices can uh completely reduce or eliminate the emissions from a gas powered vehicle completely eliminate the emissions not just not just reduce it by a lot but like completely gone you can take the CO2 pump it back through the system and it not only I think increases the efficiency but also reduces the emissions entirely this is like the level of like the what's it called the

(1:23:01) waterp powered cars type technology pretty huge apparently these are already being in use like plugged into the grid kind of stuff pretty wild man some pretty bold claims but it's verifiable stuff so again like a lot of this stuff and the other thing too is that there's a lot of different implications for this technology so what I'm really wondering is is this the uh framework for the technology like the base level meta structure or not or mono structure that's being talked about in the letter to me I don't know seems like

(1:23:41) a good candidate if there is a if there is a a mono structure yeah Cosmic Summit I'm a little worried to talk about it there's going to be a lot of a lot of smart people in all the right place I don't want any planes to beginning orbbed guys um if you add that stuff to water injection ethanol based fuels hydrogen power you have zero emission and totally efficient yeah pretty weird man pretty weird oh yeah so it says the person explaining the diagram states that pre-ionized air goes into a diffuser bubbler which contains tap water the

(1:24:17) bubbles cavitate to create mini plasmoids star in the jar anybody then they go to the thunderstorm generator or Vortex tube which has a special geometry the plasmid's go to a conventional engine which can generate electricity or mechanical Power the exhaust apparently comes out clean and has some special per properties it's pretty bold claims but apparently people have uh researched some of this stuff uh I don't have any plans to redo the corsetti interview the the the time the Jimmy coretti interview was really

(1:24:54) bad cuz it was like the same day that the cloud **debunk** came out so we didn't even have time to address it uh but I felt like I left my opinions pretty open-ended on that one so I'm not too worried about it so I think my question is I want to know more about plasmoids and I want to know about I I don't let's let's see if we can read any more stuff what's up medium whoa this was recently okay maybe we are doing a little bit of science here chat first peer reviewed publication water can trigger nuclear actions to

(1:25:32) produce energy this was this is Bob greener's paper I can already Rec this is Bob greener's paper right here chat watch watch this Bob Greener is gonna be listed on this paper there he is Bob greener holy crap chat whoa guys wow uh yeah we are really honestly we are on we are talking about science that the public has no idea even exists out there and people wonder how can you keep it secret well look we literally Google the thing and we get back to a paper from Bob Greener first peer-reviewed publication there it is

(1:26:24) water can trigger nuclear action to produce energy and isotope gases we might need to read this better I just took a summary that Bob Greener gave me and it's like I'm just catching up to the science right like just catching up to it and understanding it and I didn't even understand this like a couple like a month ago this was what a little over a month ago and I was like hey Bob can you send me a summary and so I I kind of edited the summary a little bit just to fish finish some uh fix up some of the syntax

(1:26:53) but basically kept it I think this basically shows that over Unity is possible as well that's the thing that's why this paper is so important but you look at this and you're like how's a

normal person going to be able to understand this right we might have to check this out yeah here you go does anyone know why I can't pin stuff why can't I pin stuff or is it just my own post that I can't pin oh okay yay I can pin me chat I'm unbanned from pinning messages it was only like a three months of not being

(1:27:34) able to pin messages I pinned it to the top so you guys can check it out later um I think we we might end there actually let me see how late is it let's guys let's listen to the letter to Ashton Forbes one more time I want to listen to it one more time with you guys uh We've never been copyright strike for for watching it which is weird and I haven't checked the channel out in several days and then I'm going to end a little early I'm going to try to address some emails but here's the paper on this

(1:28:08) let's actually check this out first real quick um let's see this post delves in the phenomenon observed within the thunderstorm generator device based on the rank hsh Vortex tube which unexpectedly exhibited signs of potential nuclear transmutation and coherent matter phenomenon coherent matter phenomenon study of coherent matter phenomenon typically requires Ultra cold temperatures and precise Quantum State manipulation however recent experimental setup suggest that similar phenomenon may be accessible through alternative

(1:28:46) means involving fluid dynamics and thermodynamics we explore how the C energy of extreme temperature gradients cavitation Vortex Dynamics and electrodynamics could be creating conditions conducive conducive to atomic changes and potenti and possibly to coherent matter phenomenon wow um okay I think we're going to S uh let's save this for tomorrow let's do some science stream tomorrow okay guys if you want I'm going to post both these in here we're going to review this tomorrow a little bit more in depth

(1:29:28) guys um so if you guys want check that out we are going to listen to the letter to Ashton Forbes one more time on YouTube and then we're going to close it out after that tomorrow we'll dig into science and I want to I'm going to understand all this I'm going to read through it tonight see if I can wrap my brain around it figure out how this works I have a feeling this might be a secret secret to what we're trying to figure out yeah What's creepy is how this channel went dark I assume it's

(1:29:54) still dark let's find out real world creepy yeah it just completely went dark that's what's weird that is very weird because it rules out that they were trying to piggyback off of us right they just went dark this is a submiss I also agree it does feel like so I was talking to some other people too they're potentially connected to these videos and the growing opinion is that it's either a Super Fan like one of you guys that somehow knew about R Malcolm bendal and knew about Randall Carlson and stuff

(1:30:35) people that I didn't even know existed before this video um or it's some kind of weird Intel op could be a foreign country could be our country I no idea right either way it's a great damn letter it's a great letter this is the creepiest [REDACTED] I've ever had in my life I it's is weird here

we go sent to us the 8th of January of 2024 it's a letter to an Ashton Forbes telling a new story of what happened to Malaysian Airlines MH370 that disappeared back in 2014 and as always don't trust what you read on

(1:31:08) the news trust your own capability to see the world for what it really is it's weird he says as always uh don't trust what you see in the news also we found out the voice as well there's other videos that people have found that have this exact voice which is pretty weird I don't know if they used AI as well or if the other ones are the real guy or not um there's two different videos as well here we go I work or have worked at a military base in the Maldives and I know exactly what happened to Malaysian Airlines

(1:31:40) MH370 this is also a letter to Ashton Forbes you are not wrong and what you do are much bigger than you even can imagine don't stop what you are doing I I won't tell anything about myself more than that I currently or in the past has spent time at a military base in the Maldives so for the people who said how did I find this I've said it multiple times but uh somebody pinged me and you can actually find in the MH 370x Community someone pinged me on it and said have you seen this video and I watched it and I went what the f uh I

(1:32:15) mean once I saw the name of it I was freaked out but not like a bad way it pretty damn weird so that I have done this type of work since I joined the military when I was young and that was many decades ago still in the game but the years are starting to get to me I write this because I want the world to know that most of the trouble on Earth are created for political reasons United States or at least a covert administrative Elite of the US has at will complete control and this has been true since the 60s Flight MH370 arrived

(1:32:51) at our base by our hand at 1856 UTC after we picked it up midair outside the island of great nicobar just one of many many things we do we can pick up anything anywhere and deliver it in an instant like a magic FedEx some facts about why it happened MH370 had defectors on board they were running to China with American Technology they are Chinese by Blood and had gotten themselves into a situation with the Chinese regime who got them to choose to defect the whole play everything and I mean everything about it was a political

(1:33:35) play to show the Chinese who's their daddy that's us some facts about how it happened all passengers are dead all but the handful of defectors the plane did not crash the plane was on fire we know because we started it the plane was picked up by us on fire midair right in front of the Chinese the Chinese regime knows exactly what happened and that was the whole point of the operation okay this is what I want to share with you as I said I have been doing this for a long time I know the technology and have been a part of

(1:34:17) hundreds of operations so let's start with the tech the foundation is not superconductivity superconductivity is a product of the technology we have had this since the 1960s and from that first day we have used it to make sure that no one else can have it the big breakthrough to apply the tech as we do today came in the beginning of the 2000s with quantum computers and by this the Paradigm for AI technology what we had to do

programmatically before we Now can do with something akin to machine intuition this lets us operate in

(1:34:57) fast-moving environments where event-based logic in linear programming was very limited as I said what you have found is not the technology itself it's just one of many derivatives of the technology I encourage you to keep on with what you are doing but you should also be aware that there is a deeper layer that you could focus on instead of the Miami aliens that I see you have been posting about I will give you some pointers for this at the end of this letter the products or application you are now working on is correctly based on

(1:35:31) super conductivity the number of orbs you've been speculating about is correct the fourth orb decides where the object ends up the technology is based on structures simple and beautiful structures that lets us use the unlimited power that is everywhere and step outside what I would like to describe as perceived reality the structure that is used for what you are looking at is a meta structure that creates a low complexity and relative low energy phase transition the beauty of this technology lies in its elegance and simplicity the

(1:36:08) structures are inherently stable and self-regulating and the earlier challenges to conduct operations were 100% based on the limits of man with the same technology just a slightly AI Ed mono structure gives us an infinite power generator that without maintenance can run forever combine structures to a meta product again and you have the propulsion for a transm medium object moving faster than light it's the definition of magic there are endless applications and the **truth** is that it would change the world in an instant but

(1:36:46) that won't happen I bet yourself or at least most of your audience have heard a version of the story that the aliens are here and they want to bless us with new clean and revolutionary technology but we are a too young and Rowdy civilization and would not be able to be responsible enough with the gifts from them that's probably made up but that is at the same time completely true it's just not aliens saying this it's us again the technology is infinite in its power and if two rivaling parties had

(1:37:20) access to it this World wouldn't last a day the same technology with a combination of mono structures makes a terrifying weapon that turns any matter into dust and that dust turns into air it does not matter if the object is a small bird or aircraft carrier it cannot be stopped it does not miss and when the object has been hit the phasing cannot be stopped okay so back to MH370 we knew about the deflectors as soon as they made their decision well before that but then they weren't deflectors anyway we knew when how and

(1:38:01) why back in December and as we do we made it into politics we let them go we took them back and sent the Chinese a clear message of who is in control and we did this with a brilliantly produced show that is fit for a Hollywood production any good movie has fire desperation regret and drama and every movie villain should see their plan fall apart and in really good movies just when the villain has accepted that the plan has failed the heroes of the movie steps in and makes it worse this is what happened as soon as we knew what plane

(1:38:41) was the last leg of their Journey we planned and delivered so the plane was loaded up with lithium ion batteries built by us for this occasion lithium ion batteries cannot be put out has a predictable burn rate and we made sure that the volume was just right for a long burn that would allow for a fulllength show the Chinese were following the plane since it was on the tarmac and got to see their most close to success operation go up in flames and just as all hope was lost we made it worse right in front of their

(1:39:16) eyes 2 hours and 13 minutes in they saw the plane get phased out of there by the same technology they were trying to get access to and 5 days later the Chinese officially made a gesture of submissiveness by publishing a frame from the satellite of the phase moment via the state Administration for science the publishing was talked about in American newspapers as a possible debris field but when you know what you are looking at it's clear what the frame shows the aftermath that part's really weird about the

(1:39:52) um I'll look that up in a bit that's really weird about the whole like the frame thing from the satellite pictures that's just very bizarre that is like information that I feel like nobody like we first put that together we speculate on that like that's just really bizarre man B during the five days after the show the chines found out about the batteries that we both made and placed them on the plane they accepted that we have been playing with them the whole time and at the same time could accept that the

(1:40:26) people they had convinced to deflect did what they wanted it was us that stopped them the deflectors had a good corrective experience when it comes to staying loyal and were back on the job as usual but with a new understanding both of their importance and the consequences of their actions what was nothing more than another Friday at the office for the administrative Elite 200 people had the most confusing death experience you could imagine 1,500 people lived a tragedy losing family members in a mystery and 10 thousands

(1:41:02) spent months searching and millions speculating for years then in 2014 military footage of the event got published on YouTube not our problem the person responsible for the leak was identified and taken care of not by us not our problem then came you hi Ashton impressive this is what I want to leave you with there was a guest on The Joe Rogan podcast that was talking about sacred geometry and some new technology his friends had discovered on some Island somewhere weird he did record another episode but it never been

(1:41:41) published doesn't the wording sacred geometry remind you of something if you choose to spend time on this which I think you should instead of maul aliens keep in mind that your case is one product of the technology what happens on the other Island you will understand this if you pursue it is another more rudimentary product what if those in combination could lead you on the right path to the actual technology the gray bearded man is the key and he probably has no idea that he is finally I want to say this how do you defeat someone who

(1:42:20) can turn sky scrapers to dust completely erase whole neighborhoods in an afternoon

and steal a burning Boe 7 midair someone who when needed has the complete control of all media and crafts the perception of events and has most of humanity eating from its hands after almost a full life in their service I think I know the answer you talk about them and you don't stop talking this is that's the weirdest [ ] ever so uh like I always get worried when the debunkers say that they think it's us that made the videos the same way that

(1:42:59) they think it's us that made the actual MH370 videos cuz I didn't make either of those so that makes me even a little more concerned about it um guys moonwater do how is reality and is how is reality determined is it determined based on popular consensus or not right I'm trying to teach you guys think outside the box right so if we're going to think for ourselves then we're not going to ask questions like I thought it was determined this was a LARP or I thought it was determined that these

(1:43:30) were debunkers that's not thinking for yourself that's asking people to tell you what to think think for yourself right I wouldn't be playing it if it was somehow proven to be debunked right there's no way to prove it to be debunked if you guys want to go look up the person who pinged me in the MH370 Community go nuts man I don't know how that's going to get us anywhere but feel free um so sorry to be a little bit rude but that's the thing too and so here's the thing too to Amanda's question is

(1:44:00) the satellite imagery was supposedly taken in South Indian Ocean actually it was supposedly taken in the South China Sea but even so how would we know that it's not like China's like hey we took this in the South China Sea and even if they did that could just be misdirection they didn't find anything in the South China Sea so it was reported on as debris but they didn't find anything there right so we have to keep that in mind definitely we need to be thinking for ourselves I think that's the most

(1:44:30) important thing um again I don't know what the deal with it is like somebody else pointed out like moonwater pointed out though like it's either somebody who's following me that knows about Malcolm bendal and somehow came up with all these unique aspects that I would have never thought of or it's some kind of weird intelligence operation like that's pretty much what I'm down to at this point it's super weird um I don't know I'm not necessarily taking that face value but the some of the the pieces

(1:45:01) that they put together seem pretty damn compelling for the Espionage scenario we might even be able to Foya some of that and that's part of the reason why when I did my foyer request today I foed back from December of 2013 because I want to know if we can find anything from that right I do think that when they're talking about sacred geometry talking about toroids they're talking about toids and they might be saying that if you take a simple structure a toid and then you turn into a multistructure

(1:45:30) where you add another layer of toid so now you turn the donut into a donut and you keep layering that on now you can potentially you know change the properties of what it's producing hard to say uh I don't necessarily think that they're talking about 911 or the Maui fires

but you know I don't know I don't know what they're talking about could be that's the part where it makes it less credible to me is when you're trying to link all these conspiracies together it doesn't doesn't seem that

(1:45:59) good what I will say is that that that was not produced by an AI that is an AI voice 100% probably is a voice changer mixed with some type of translation software based on the follow-up video but that's not produced by AI and we know for sure because somebody tried to produce one with AI That's the other one that some of you guys talking about that's out there and it's terrible it's super super terrible it's you can tell right away that an AI created it when you do AI stuff like when we talk to grock it has

(1:46:30) a very specific way of laying out information and it's only pulling information from stuff that's already out there a lot of that stuff in there is not anything that we've ever reported on or or said specifically that's why that's not produced by AI just to be clear with everybody out there now I don't know that doesn't necessarily mean anything as to the authenticity or the fakeness of it I'm just trying to be clear clear feels like there's somebody uh who's really upset at what we're doing

(1:46:58) right now and having a complete meltdown on the spamming the the laugh emojis I think they're having a they're having a hard time right now like if he wanted to get a reaction there you go you got your reaction so I hope you get the help that you need person who's uh spamming the the laugh thing it's probably one of the **debunkers** who's having a complete meltdown feels bad the thing is I feel bad for people like that because I was somebody who was once a CNN brain who did not realize that the world is a lot

(1:47:25) more complicated than I thought and it's uh you know you'll wake up one day and you're going to realize if if you're one of those people who think the world's so simple you'll probably go through an epiphany at some point in your life and you'll realize how silly you were in the past and it'll be embarrassing for you um and that's another reason why I don't I don't need apologies from anybody or anything like that I don't really care what people think um it's every it's up

(1:47:49) to everybody else like one thing too is I have a lot of people they want to be convinced right they want me to con like you'll see people in my replies that want me to convince them that this stuff's real or whatever right and I go the person that needs to be you need to convince yourself right like you're a lot of people live in a prison of their own making where only what they see in their own little prison is what can be real right the only person that can break you out of that prison is yourself

(1:48:15) I can't do it right I can present the evidence and show you what I've come to determine and what have you but it's got the person who takes the first step has to be the person themselves like all of you guys have already taken that first step no doubt right um but the people that are out there they're thinking oh yep CNN's tell me the **truth** and we're never going to advance scientifically we've already figured everything out related to the universe like

those people they have to figure it out

(1:48:39) themselves man that's the **truth** just like I did Once Upon a Time just what I did oh I can see all the Emojis you can see them in the emojis in the in the chat right so somebody was spamming it like really hard for a long time so anyway um and yeah benador I saw your post man I I do think that toroids are probably the uh the mono structure that they're talking about that makes the most sense to me but I don't really know okay guys I think that's what we're going to call it here tonight I appreciate you guys here tonight uh so

(1:49:15) tomorrow I'm probably going to post uh get some of this content ready for tomorrow so that I can uh not have it interrupt my job but I'm thinking at least one or two posts related to this and then I want to do what was my follow-up going to be oh yeah so I've got three posts for tomorrow probably let me just make some notes I think we've got the uh person who died we got the person who was appointed person uh General appointed to imet and then the CNN Direction thing as a followup to the uh Telemetry

(1:49:55) data and then also the science we probably got so we might have like five posts tomorrow already lined up so we've got the science from Martin who works with Roy Herbert and potentially new science from Bob Green year as well so lots of stuff for tomorrow I'm probably going to get some of it prepared tonight so I don't have to spend much time on it thank you guys for being here I appreciate you and uh we'll see you guys later peace everybody

MH370x - A Letter to Dr. Steven Greer 2/3/24 - YouTube

<https://www.youtube.com/watch?v=3yMdX0xQxMw>

Transcript:

(00:51) 370 contact 120 decimal [Music] 9 news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed

(01:59) form and says now I am become death the destroyer of worlds what's up chat welcome good night every or welcome to the uh stream tonight guys appreciate you guys all for being here um we're going to do a pretty short stream tonight I'm wiped out from last night I did a little after space after I lost off last night um hold on a sec it's a little too loud there we go that should be a little better and uh yeah it was good it was pretty funny keemstar had me cracking up in the after space the after space was

(02:44) good because we were just talking about you know more light-hearted stuff related to

the drama what have you um let's do a quick recap of what happened uh last night today and then uh I'm going to jump into this letter I'm probably going to try to keep it short as I can what I want your guys help with tonight on the letter is any type of uh kind of things you want me to tie in to The Letter to Dr Greer um you know in terms of I know some people a lot of people honestly have sent me links to uh the Lost Century I think is what it's

(03:20) called one of his documentaries it's about the technology that you know um he thinks is out there um so we're going to appeal to him from that perspective not so much about the story of the plane as much as about the technology um and yeah should be pretty interesting Andromeda ambassadors yeah okay so let me pull up um we've got a lot of interesting stuff we're not going to get to tonight so probably tomorrow we're going to get to a lot more of the other stuff and I'll probably try to stream earlier tomorrow

(03:55) I've got a lot I got to do still though I'm so this has just been a just a lot lot in terms of um the correspondence with people trying to work through uh getting people on for hard truths um posting on Twitter going through the science all the stuff it's it's just a ton of stuff I I don't have enough hours in the day is the reality of it okay what is this what is this Michael Sarah with the mustache looks so sketchy um wow okay I don't know what I don't know what was going on with all

(04:36) that okay so the big stuff today was I first I posted I saw um Tom mon talk was in my replies from when I posted the scaler physics thing and so I used that as kind of a springboard to get more attention to this it's funny the science gets the least amount of views out of everything did I dox myself probably it's no big deal um the science by far gets the least amount of views over out of everything here uh tell Dr GRE about the night I called Jeremy Corbell baby and then I missed him that was actually one of the better

(05:26) streams honestly but the science here was pretty cool uh um and then I I dug through my replies and all of a sudden I was like wait that's Tom mon talk some one of the replies down here I think it was in this one yeah I'm like boom I'm like wait it's like montalk.net I'm like this is literally the dude who made the YouTube I was like this is the dude whose work I stole I mean it didn't steal it I edited it up it takes a long time to edit this stuff chat just to like cut out all the small talk stuff and to like add the um

(06:00) the close captions on there takes a lot of work man um but yeah so and I I posted the whole link so no one's getting hate on me or whatever uh but I saw his replies in there I looked at him a little bit and his stuff you know one thing that I'll say on some of this is and I I don't mean this to be um disrespectful to anyone at all but I find that once you start and I've said this before is like once you start to open your mind up to the science and what's possible it kind of like opens it up to everything

(06:32) right and that's why I'm very particular about not going into a lot of the esoteric aspects and even why like I don't I don't really talk too much about the idea of aliens and stuff like that just because as I've always said like personally I think there's probably aliens out there

somewhere whether or not they're visiting us I don't know reality is I just don't really care that much doesn't doesn't impact my life at all um but you'll find that a lot of the people this start to dig into the

(07:00) science and stuff like that also then start to dig into a lot of the more esoteric aspects because it's the reality is once you realize that we live in some type of construct it opens the door to all kinds of stuff that's out there it really does right and it's a big question in terms of like where do you want to draw the line now for me there is a certain aspect where like I want to draw the line in a way where we can reach normal people without them thinking that this is all in the woo because the reality is the science is

(07:28) not the science is verifiable much like a lot of the parts of the investigation we've been doing um and so you know I would say that for people that are trying to reach a broader audience that that's definitely an approach they should probably be thinking about even if you know people want to say their own opinions as much as they can you know I think they should probably also be thinking about like okay well how do I reach the CNN brain people you know like a lot of the science like this will reach them when

(07:57) they learn about scalar physics but if you start trying to equate it to like medical healing type things like that's where it starts to get to the line where like yeah maybe it's possible but you know this where you're going to lose a lot of people in general out there um so for me it's like and I'm trying to keep myself really grounded because also it's like I don't I don't know where the damn line is with terms of what's possible what's not out there um but what I do

(08:21) know is I want to get answers for the families of the victims of M3 MH370 as well as to try to get this technology out into the public from these special access programs and the government makes it really or it's really easy for the government to hide this stuff um by discrediting people so you have to keep that in mind that it is always an information War for sure now the true **truth** reality of it is that I when we're looking at the MH370 videos I do not think it's aliens I don't think it's aliens I think that it's actually

(08:57) our technology from locky Martin that's my true 100% opinion it's not me watering it down or anything early on I actually thought it was aliens and then the more I investigated the more I learned about the science the more I learned about what's possible and what our third party contractors are doing the more I realized no it's it's just us so just to let you guys know that that's my true opinion now wow 167,000 views in 8 hours now this is because Eric Weinstein actually replied to this I tried not to

(09:33) be rude in this post at all to him um but I thought his response was really flippant for sure and we got we got a response on why so let's take a look at this last night we were in a stream a space a really huge space that uh had about 900 people in it at one point nearly with Jesse Michaels who Jesse Michaels super impressive I was not just uh sing for Jesse Michaels yesterday like he's actually really impressive he's a history major we found out but his understanding of the science is you know probably better

(10:13) than mine is I would say and that's mine's not saying that's not really saying too much I guess but I've definitely come up far away from just November to where we're at now 3 months later cuz I was looking back through my Salvatore Pas uh interview uh this morning and I it was crazy how much more I understood from what Salvador Pas was saying compared to me in the video I'm going wait wow like this is like from all the science that we've done and researched already like we like I I was

(10:43) even kind of cringing at some of my own questions like what is super conductivity I'm sitting there asking I'm going oh God zero resistance Ashton don't be an idiot anyway that's besides the point so I thought the answer was strange about the question that I asked him about room temperature super conductivity because he said not interested and that is a really really weird thing to claim because how can somebody who's a let's I think that Eric Wein is a physicist I mean physicist is is a title you know in terms of what

(11:18) science you is your major like he's actually a PhD in mathematics but you know the being a theoretical physicist doesn't require that formal education it's more about thinking about our reality the nature of our reality so um somebody who's interested in physics why would you not be interested in room temperature super conductivity to me that's just completely unacceptable room temperature superconductivity is possibly the largest discovery of our entire lifetimes that's just based on what it

(11:53) can unlock what it can enable most people I don't think realize the concept that electrical engine engineering is the basis for almost everything in our entire lives including the computer that I'm using right now the camera that I'm looking into the internet that we're communicating through WiFi everything that is out there right and room temperature super conductivity will change everything about our entire planet it doesn't even I'm not even talking about ufology with respect to this right now why are they

(12:25) mixed together that's pretty apparent because when you look at this video right here UFOs we're talking about things that are hovering without any visible propulsion and we're looking at rocks hovering by the M Miser effect here right room temperature rocks hovering around it now from the other perspective as well is that the big issue with superconductors is how much energy it takes to cool them down in order to achieve super conductivity when you take that away now you open up just from a logical

(12:57) standpoint a capability where you can imagine a scenario where you might be able to produce more energy than you're putting in or at least a very high degree of efficiency right to me it's hard for me to take any scientist seriously that does not think that room temperature superconductivity is uh one of the most important aspects of our entire lives with respect to Scientific achievement it's huge I think that if a physicist a physicist or an engineer goes is excited about room temperature super conductivity then I'm

(13:31) going to be listening to them a lot because they understand the implications of what this all leads to right and here are some of the ones that I wrote out here and I kind of watered these

reasons down because I didn't want to freak anybody out but portable fusion power green energy computers a thousand times more powerful than we have now a thousand times more powerful hoverboards it can explain how UFOs can float freely now that's kind of simplifying it there's more to it than that but this is a lot of stuff that

(14:00) like puts us into the world of Back to the Future right and this is important because we're going to talk about we're going to be writing a letter to Stephen Greer here in a minute where we talk about a little of this stuff right um so to me this is like you know how are you dismissing this seems wild so let's see what his answer was he replied to us today it's why we have so many views that's not at all my intention the answer was hyp specific to a ubiquitous problem in UAP discussions I wasn't

(14:36) General it wasn't a general uh technology space or physics space it's kind of a copout right um it's just a space where somebody's asking you your your question like people want to know stuff about the science right in those spaces I would have said I have nothing to contribute but it's a fascinating area that's also a weird answer right it's like are you if you are even uh what we call the science influencers like Neil deGrass Tyson out there you should be read up on room temperature

(15:10) superconductivity and you should be ready to have an opinion about it 100% right because of what I just said before I mean it's that's like being like oh well you know fusion power or I mean what's a good what's a better thing it's like oh well computers are neat but I don't have uh I have nothing to contribute to to a of computers or nothing to contribute to the idea of AI let's say that's a better analogy it's like yeah AI is neat but I have nothing to contribute you don't have an opinion

(15:36) on AI I mean everybody has an opinion on AI because they can think of the implications of it right so for Eric Weinstein to say I have nothing to contribute on the idea of uh room temperature superconductivity has he never thought about what the implications are seems pretty seems pretty big the problem in UAP disc discussions is that they have this bizarre fascination with metamaterials and the like you cannot metamaterial way around the cosmos physics is a big field so I think he's making some pretty bold

(16:09) assertions there first of all I think you might be able to metamaterialize your your metamaterial your way around the cosmos again I just I think that he needs to look deeply into what room temperature superconductivity achieves because first of all from a metamaterial perspective now that's what we're talking about magnesium bismuth zinc right and the interesting thing about that metamaterial out there is that you can create a sort of barrier between the outside and inside of the craft where you have different electromagnetic

(16:38) effects happening on either side it's like saying well um airplanes don't really matter with respect to flying well of course they do like and or saying like a space shuttle doesn't matter with respect to flying around in space of course the materials matter significantly right and what we make out of it matters as well um what I will say is that there is a b our

fascination with met materials absolutely right um in the in the UAP Community for sure right um but at the same time I think there's a logical one because if you

(17:12) look at the conclusions there it's like well there needs to be a way where these things are able to do what they're doing right and Material Science is a logical way to get there um and condensed matter solid state Material Science are fascinating but as long as Einstein is the law of the land we are far away from everything worth visiting and it is all but pointless to talk about engineering ships limited by the speed of light so this actually makes me wonder if he understands physics that well at all now

(17:43) that's going to come off a little bit rude but has he never heard of er equals epr Leonard susin and Juan Malina um Einstein Rosen bridge is consistent with physics einsteinian physics as well and the whole point is that in order for UAP phenomenon or aliens to be visiting us from another solar system we have to be able to travel faster than the speed of light exactly for the reasons that he just mentioned right here so I think that if you're going to jump into the UFO field the very first question you need to be

(18:15) asking yourself and this is true of anyone any scientist out there is how do we travel faster than the speed of light first question that's the very first thing should people should be thinking about if you can't wrap your brain around that then respectfully you shouldn't be in the UFO field at all you shouldn't even don't even come into the field right if you're the type of person that thinks there's no way for us to bend the rules in such a way where we can't travel faster than

(18:43) the speed of light then your voice doesn't really matter in this field because you've already ruled out everything right and this is what I've told people who uh you know are people that think that aliens are visiting us but they want to hate on the idea that you can't teleport an object right well it's kind of kind of a mandatory step if you want to be able to have a spacecraft go from one star anywhere in our galaxy to another you got to be able to move faster than the speed of light

(19:09) 5% of the speed of light which is still really really fast is going to take you 80 years just to get from alpha centuri to us that's not a reasonable amount of time um so I think that that's a this is a weird statement to say right here right is that if it's pointless to talk about engineering ships limited by the speed of light well first of all you have a false premise there we're not talking about engineering ships that are limited by the speed of light The Meta materials are what's allowing those

(19:39) ships to travel faster than the speed of light or equivalent to the speed of light or anything even close to it right um and that's what the whole point of ufology is is try to explain how these things might actually be able to get to us so more or less the physics and science uh discussion in UAP science u space is always about the wrong science topics in my opinion so I'm perhaps overly brutal when I talk to people about the following things endlessly so here's the thing that now really makes no sense

(20:13) right um it how can those be the wrong things I mean I think we just presented the case that those are the only things from a Scientific perspective the most important thing should be talking about how to travel the speed of light or beyond the speed of light because if we can't do that just like Eric Weinstein said then what's the point how can you how can aliens be Vision us at all right everything's really really really far away so because what that does then is if we say that there's no way to go fast

(20:46) as the speed of light now you've limited your capabilities for non-human intelligence now you said that it must be an ultraterrestrial hypothesis AKA they're from here or it must be a situation where they're from somewhere very close by like Europa or something like that even that's pretty damn far away um so I think it's a little weird and presumptuous and a little bit egotistical as well to rule out all the stuff in this paragraph up here and then come here and say oh well they're they're talking about the wrong stuff

(21:16) I'd argue the exact opposite these are the things that we need to be talking about Material Science metamaterials which is materials that are beyond our current Material Science capabilities and F faster than light travel those are the things that we need to be talking especially from the physics perspective guys don't s on me too much in the chat it's getting awkward um now he says these are the things that they think people talk about endlessly that he is kind of brutal about supposedly meta materials relativistic

(21:46) time dilation to evade the speed of light okay sure uh I mean time dilation is 100% real uh wormholes we definitely talk about that high temperature superconductors yes we talk about that interdimensional beings sure I'm with him on that I think that the idea of interdimensional beings is uh it's a little too mystical a little too um esoteric and there's no point even talk about it at all the universe is made of Consciousness uh yeah I mean sure it's also esoteric I mean I still think that absolutely

(22:19) there's an element of Consciousness as a singularity um generation ships yeah not interested Angels and Demons agree I'm not interested that's just an interpretation of what aliens might be Element 115 we don't need Element 115 at all is what our investigation has found about us found out about uh gravity wave B I don't even know what that is and remote viewing I don't again remote viewing you guys know my opinion on it I'm not going I'm not going there with respect to that you know listen to what I was saying

(22:47) before yeah only simp about Lulu chat okay so why is this and so here's where I think he's misunderstanding me cuz now you kind of Poison the Well when you include all these things together I would argue that the first four here have nothing to do with the the last like seven meta materials time dilation rosen Einstein Bridges and high temperature superconductors are absolutely straight up science straight up evidence-based reproducible science engineering they're not inconsistent at all with Einstein

(23:30) physics uh time dilation is 100% real and it's not a matter of evading the speed of light it's a consequence of two objects moving at different speeds especially when you approach the

speed of light you're going to have a time dilation effect period uh again we've talked about ER equals  $e$  and high temperature superconductors this is not mystical science in any way shape or form the rest of these are interdimensional beings universe made of Consciousness generation ships now the reason why this one's probably

(24:05) borderline generation ships because now you're talking about vanon Numan probes and reproducible probes things like that uh and then the rest of them are are definitely more esoteric except for maybe Element 115 the thing about Element 115 is sure Element 115 is a real element but can you is that what you use for um you know producing these effects that we see above that's that's the part that's a little bit more esoteric okay why is this because if we are going to take the possibility of interstellar

(24:32) travel seriously it will require new fundamental theories to plausibly Traverse the cosmos and this kind of stuff crowds out that discussion so this is where I think he's completely he he misinterpreted me because this is literally what I'm talking about that's what the first four things on this list allow and this is part of the reason why I think that my comment about the scientists uh come on man Tom come on the scientists of the current generation of the old the old Legacy um they are completely uh just

(25:14) disconnected from the younger right where you know they they're taking they are taking whatever they think they've been told to be true the idea that everything is too far away and they're not using real science here to those questions and ask those questions because what he's saying here pretty much is that none of these things here are going to reach the new fundamental theories to Traverse the cosmos the answers the first four are how you're going to how you going to do it and that's what I was trying to get at with

(25:43) Eric Weinstein when I asked my question so this tells me sadly that I think my I'm completely on base with respect to the Clos mindedness of the current crop of physics physicists that are out there the influential ones and the theoretical ones that are out there we need people that are looking at the same physics through a new lens hey Ellie how's it going everybody um so the Fuller answer is I want to talk about making this field meaningfully more scientific then you need to be talking about the first four

(26:18) things ruling out the first four things on this list is not scientific in any way shape or form these are proven science without any doubt materials are proven science that's talking about making elements or making materials that use different elements at the atomic layer that have different properties and structure or different properties than what their Baseline element is capable of that's straight up Material Science that's um you know stuff that's really important if you want to be if you want

(26:48) to repeatedly and endlessly discuss wormholes or meta materials in the absence of hard data and in the LIE of fundamental physics beyond our current picture which would make visitation possible I'm not interested in crowding that out I want to ask where the scientists are where the hard data and what theories would be needed Beyond Einstein and the standard

model to justify focusing on engineering questions this is literally the thing that I'm asking him about and trying to achieve but you're free to spend your

(27:18) time on that if you think is a Way Forward go for it best of luck I mean I I don't I guess he just doesn't get it because that's exactly what I'm trying to do exactly what I'm trying to do E equals e that is the theory needed Beyond Einstein and the standard model to justify focusing on those engineering questions so sadly like I I think that this is the kind of response that I feared um from people that aren't thinking outside the box we do not need to break the laws of physics as we know

(28:00) them we don't need new theories the theories are out there it's already been solved we just need to look at them and consider them and consider the implications meta materials time dilation wormholes high temperature superconductors absolutely important huge I'd like to see him respond to Bob Greener here who I ended up retweeting so my response we don't have to get approval from anyone what we are doing Egon is we are challenging the status quo so this I'm glad you asked this Egon because I think this is the next

(28:46) important part that we talk about here we have to look at what's going on through the lens uh through the broader lens of um what do I want to say like the the layout of the battlefield itself we are in an information War revealing this technology is not as simple as just saying some words we have to be challenging the old guard with disinformation uh we have to do so in a respectful manner to them knowing that they are you know uh encrusted with their current beliefs like we just saw with this post and you can keep this in

(29:31) mind Eric uh Weinstein is potentially one of the people that could be sympathetic towards this information right so what we have to do is we have to get him to look at the data we have the evidence he asked about where the evidence is and where the physicists are they're out there we've been talking to Roy Herbert we've been talking to uh Salvador Pas Bob Greener Dave Rossi the scientists are out there who are literally working on this stuff we just need people like like Eric Weinstein to look at it because when people like Eric

(30:00) Weinstein look at it and open their minds it's going to open up the minds of millions of people that are out there it's going to open a lot of their minds up guys so why then uh my response then includes salvator Pas I went back through and I found hard truths number one I found the part where he's talking about super conductivity where he references another doctor Dr Victor Iachno who basically argues that you can achieve high temperature superconductivity without meta materials right that's there you go and

(30:37) I gave him the paper go ahead and read it please Dr Weinstein please go read this because this is extremely important so I basically gave him I I read that response and I gave him every single thing that he wants I humbly believe you may have misinterpreted my intentions I not a person who focuses on aliens or crash retrievals I am a person who wants to understand the science behind advanced technology that can change our world for the better that's my goal this is why I started a podcast to interview people like salvator Pas who

(31:06) told me we don't need meta materials to induce room temperature superconductivity physics and electrical engineering can accomplish the task without it. This is why I wanted your opinion on superconductivity in the clip below from my first interview three months ago when I barely understood any of this. He quotes Dr Victor Loeb and the way from high and room temperature the way from high to room temperature superconductivity. I will admit that I became 100% convinced that ER equals EPR and a unification theory of quantum

(31:36) mechanics and general relativity has already been discovered and it does in fact lead to a conclusion that our reality is a construct and wormholes are indeed possible via manipulation of GRAVITATIONAL forces. This is exactly what he was talking about that we need a different approach to Einstein physics. Not really all we have to do is unify what we already know about the double slit experiment in quantum mechanics with general relativity. I believe Halut who you interviewed with on Jesse's podcast is fully aware of

(32:13) this is pretty important. Halut is a physicist and engineer with the DoD. He works for the government. Eric Weinstein is sitting right next to him being told that all of this stuff is real. Right he just needs to open his mind to it. The moment he realizes that you need superconductivity that worms can become possible that we can manipulate gravitational forces then you'll start to realize why meta materials are so important because the craft have to be built a very specific way in order to produce this to make

(32:50) this happens as for evidence of these claims please see my replies below. I have been advocating for what I think is the best evidence in human history for superluminal relativistic speeds. You'll find that the science of these videos is consistent with the laws of physics. We simply need to bend them a little right. Exactly the answer I think that we needed to give to Eric Weinstein now. I don't necessarily expect him to respond to this. Um but I do hope that he reads it and considers the words very carefully because the physicists

(33:23) that are out there the older ones let's say the ones that are 50 55 years or above they've been living in a world where they were taught that it's not possible to go faster than the speed of light that there's no way to do that that it breaks the laws of physics and that is not true that's not true. We this is wholly consistent with the laws of physics the math checks out as well it's simply a matter of throwing away our preconceived notions and biases and thinking slightly more outside the

(33:56) box in my opinion this video is the best evidence in the history of the world for advanced technology kept hidden from the public as filmed by an MQ1 C Great Eagle on March 7th 2014 at roughly 1840 UTC. Not only can we see the orbs ignoring gravity with some type of field around them we see gravity manipulation and their propulsion and where they induce a singularity via quantum entanglement what we have speculated is a fourth orb somewhere I think I'm missing a word there but you guys get the point so you want evidence that's not

(34:29) going to get better than what we're staring at right here this is the best evidence this is exactly what um Eric Weinstein wants now the only thing that they could ask for that would be

better is for the government to declassify this government declassifies this there you go it literally does not get better evidence than this we're looking at it not even through a normal camera but an actual camera built in order to give us the most possible information about what we're seeing here on this video and we have a second video

(34:58) in perfect alignment as well from a different angle now if we have this imagine what the government has we have this a government must have some crazy videos man these videos are only like a minute long and the reason why it goes beyond is because then it goes and shows it in slowmo any physicist that's not interested in this pretty wild and I don't mean any disrespect to the people that are older guys and let's not disrespect them as well I think that there of course there are always people who are older that are

(35:39) open-minded but I'm talking about the science influencers out there the Neil degros Tyson the Lawrence krauss's that are out there these guys sadly as it is to say they're obsolete their way of thinking is old it is not uh going to get us anywhere anytime soon we need people that are thinking more more forward thinking thinking outside the box and realizing that we do not need uh to reinvent physics uh everything that we are discussing here is consistent with physics as we know it pretty crazy right

(36:18) okay now after that I saw Bob greeners reply so I decided to uh promote Bob Greener here as well because he deserves it this guy has been out there researching a lot even if I don't 100% agree with everything Bob Green you're saying I think he understands the underlying framework of this science um possibly better than anyone Maybe not maybe not necess better than anyone but better than a lot of people so um I'm gonna put the headphones on this is Bob Greener who I met after he made a video called fractal toal

(36:53) moments and the clip Bel the clip below is from that video I later interviewed Bob for hars number two after my interview with Salvador Pius evidence of gravity manipulation exists and experimental researchers confirm is consistent with theoretical physics I would respectfully request that Eric and or any other scientist answer his questions in the retweeted reply below Eric and and you can tell what he's getting at right here right he wants to force Eric and the other scientists to think outside of their

(37:22) Paradigm what is static electricity what is it how come remember the needle the needle experiment from space creates static electricity and all of a sudden you're seeing gravity how is that what is ball lightning what is it what is special about the phase Singularity at the center of a fractal n uh entor hyper super toroidal moment bearing structure right what's going on in the center there is it is it a magnetic monopole I think that's what he's getting at there we'll see see so let's

(37:58) let's listen to his uh they seem to be tumbling the the monopoles so it's not going forward it's starting to rotate itself and okay do they align do they start to get into alignment this was a crazy moment for me to watch this chat for the first time because what you want is the the monopoles to have their their own azoth uh to produce a ring to create a another tour

above and then you pull these in and that creates the uh unification of forces uh at the at phas Singularity of the minus one uh tours look okay so

(38:43) that's they're pulling in at that point right that's exactly what you want right right before so they're rotating and pulling in this point they seem to be tumbling so I remember watching this going holy crap once you start to have dudes like Bob who are looking at your video without you even asking and trying to understand it scientifically like that's the part where pretty incredible right um so hopefully they take that stuff to heart um I think that's Catches Us up to speed chat if you have any

(39:15) questions throw them out there next thing we're going to do is we're going to work on the letter to um to Dr Steven Greer now why am I working on a letter to Dr Steven Greer the answer is that I several people have uh acted as intermediaries to dror Greer for me saying that he they want to bring it this information to him um but they want it in a more digestible format um so I need to find where's the the link to my **truth** high frequency gravitational waves blah blah delete this um so the plan is to retweet my **truth** post about what I

(40:00) think happened to the plane and then to make a try to make a short letter probably five or six paragraphs enough where it's not going to go to be too long um because here's the situation guys and there's going to be people who are going to say oh Dr Greer is a grifter or whatever right and all the negative stuff people say we need powerful allies like Dr Greer right we need people like him who have the connections who can get the information in front of other people and not just that I think that what we've been

(40:36) exposing what we've been showing and discovering and revealing is 100% consistent with what Dr Greer has been talking about I I it actually surprises me I think I've been clear in the past that I wasn't sure about Dr Greer before all this investigation and as the investigation has proceeded we've realized we're talking about the same exact stuff that he's talking about from a scientific perspective at least we saw him on Shan Ryan we've seen his documentaries we've seen him talk about uh how you a lot of

(41:11) this uh uaps Are UFOs are our technology we've seen him talking about teleportation we've seen him talking about overunity devices free energy I'm just sitting here going I mean dude's got it he's directly got it it even makes me wonder about ambassador beu from the Andromeda galaxy because I'm going he's right about he's saying the exact same stuff with his us about everything else everything else so you know maybe maybe they are visi I don't know like the reality is he definitely has seen some stuff he's seen

(41:45) some stuff that has changed his worldview on everything right that's the **truth** of Dr Greer he's seen some stuff that's changed his view of everything he's mentioned orbs teleportation he was on Kim Iverson when I went on Kim Iverson she was telling me that he's saying the same stuff that we were saying he's like she's like have you watched Dr Stephen my interview with Stephen Greer I'm like okay I'll watch it I watch it it's like yeah he's saying all the same stuff

(42:13) so and and the the part that's compelling is that we came to the same conclusion independently the conclusion that we came to is exactly the same as Dr Greer from an independent perspective I not think that Dr Greer is a grifter I think that he's been getting discredited by the same people who call us a grifter it's a matter of disinformation right he saw information is revealing information that they don't want people don't want to be credible they want to make him non-credible right and you know the other interesting

(42:47) thing is this guys he's not really aligned with these other UFO personalities right like Dr Greer is not aligned with Jeremy Corbell you've got Dr GRE you've got Jeremy Corbell you've got David grush who's kind of in the middle and then you've got the luzos who's 100% government total government guy right and Chris melon is over there with Lou alzando for sure no doubt whatsoever um you've also got Hal POF who we were talking about and I don't know where Hal pof's motivations lie but he's

(43:20) definitely in there with the Tom delange the Chris melon the Lou alzando right we they made this to Stars Academy together so the real question is what is everyone's motivations I think that they all have their own motivations and their own intentions and they are probably somewhat aligned but a little bit different but Dr Greer is over here completely separate from all the rest of those guys right he's out there going doing things uh you know testifying in front of Congress about all the stuff that he's seen he's known having these

(43:48) people like Michael Herrera come on um I would say that the biggest strike against Dr Greer is that he's been guilty of the thing that I mentioned at the beginning of this stream tonight if he just focused on the technology I think that he would be held in much higher regard and considered by a broader range of people but because he focuses so much about the alien species that are visiting us and what their intentions are and the interdimensional aspects of the uh non-human intelligence and the Consciousness aspect it moves

(44:24) too far into the woo it might even be true I don't know but if he just focused on the technology side of it I think that he would be lot people would think of him as a lot more credible or a lot let's say that be a broader range of people would consider him credible let's say um so our appeal to Dr Greer is going to be mostly based on the technology I'm not going to appeal too much about the case of the plane but I do want to mention the the PL because the reality is guys we're doing this for

(44:59) the families of the victims the families got no answers whatsoever that's why we're doing it but what comes along with that is the technology and that's how we reach Dr Greer the technology I'm going to make some notes real quick um now how are we going to what are we going to talk about with respect to the technology now the thing that I think we need to do and here's the other thing is that Dr Greer what we realize from the Shan Ryan podcast with him is that he has not taken the liberty of himself to

(45:48) understand the science instead he goes the route of finding the witnesses the people like the Mike herreras right he finds those people and has those people speak what my

Approach has been is to try to understand the science myself so that if I'm on Shan Ryan I don't have to say oh overunity is possible teleportation possible and it's just based on the double slit experiment I want to be able to explain it in a level where I can quote the scientists and the uh people that have come before the Maxwells the pointing vectors um you

(46:30) know the uh even Max plank um I'm trying to think all the other scientists were off top of my head obviously I'm not that great at it but I want to try to be able to do that because I think that that's the only way where we're going to be able to reach the a lot of the normally people one thing I've learned as well is that you can't a lot of people don't want to go down the scientific route right it's too complicated they think they think it's not possible for a normal person to learn it that is not

(47:00) true every single person watching this stream and listening to this stream right now has the ability to become a scientist on the same level as all of these people who are the famous scientists the ones that are currently out there as contractors if I can do it you guys can do it and I believe that I can do it as well it's just a matter of applying yourself and learning it in a way that is conducive to how you learn yeah yeah I think that we can do this and so that's the reason why I think it's super important so that's how we're

(47:33) going to follow now guys I need to step away for just a couple minutes so that I can grab a coffee and some water so uh it's like 5 minutes to the top of the hour guys um go ahead and chat about whatever you think we need to add uh in terms of Concepts if you have any of them I'll come read these messages in a few minutes I'm going to grab water uh I'm going to grab a quick coffee uh I'll be right back here in less than 5 minutes okay chat sorry about that I'm back okay

(52:26) I've got some ideas here while I was getting coffee I was thinking about it I need to write these down before I forget um it's going to be related to what we asked yesterday what is disclosure uh okay okay let's let's talk through this a little bit guys let's see what we got we got some coffee late night coffee not going to be sleeping tonight um yeah whether or not C5 is real I don't know I would say though that going the

(53:30) C5 route as Dr Greer has done has probably taken away a little bit from some of his credibility with a BRI a wider range of people I mean look at the Eric Weinstein of the world right like Eric Weinstein's not even open to the idea of super luminal travel and you're talking about Consciousness and summoning interdimensional aliens you're never going to reach people like that right Dorian what crack me up bud whoa that's that's a rude message John come on John we can be above that John yep he's drinking coffee it's late

(54:19) I got to get I got to get in the right mindset for this [Music] chat caffeine doesn't really keep me awake though guys it'll keep me awake for like an hour and then I'll crash hard okay let's see what we got here um yeah guys okay whoever watched The Lost Century what aspects of the Lost Century documentary do you think were the most important and William we're going to science stuff I have listed down here uh we're going to talk about that probably tomorrow uh

I don't think we're going to

(54:52) get to it tonight fortunately there's a lot of topics to go over and we don't uh have time to go over all of them tonight so science is probably going to be tomorrow uh oh guys let's see if the uh the agents the see if scarjo is uh messaging me guys where's our scarjo CIA man have they not cloned Scaro yet did you guys notice that um that one Nico uh contractor that was talking about teleportation also mentioned cloning guys where are the scarjo Clones where they at hey WP genl light appreciate you man I was watching some

(55:51) of your videos the other night get some pretty good videos on your YouTube channel yeah I would say that what I am is an ambassador an ambassador for disclosure is Advocate right the right word uh H sorry I'm just thinking here thinking about how to frame this this letter here okay so my name is Ashen Forbes and I'm an advocate for disclosure a lot of people believe various negative things about Dr Greer but I am not one of them I believe he an honest man whose opinion is based on information he has

(56:54) personally seen being close to powerful entities for decades I'm writing this letter to him because intermediaries have told me that he may be interested in what I have to say about evidence of advanced technology kept hidden from the public I think that's a pretty good starter right so we start there here's some of the key aspects that we need to talk about in this letter okay what is disclosure everybody in the chat **I want you** to think about what is disclosure for you is disclosure aliens is disclosure crafts that can

(57:26) travel between the Stars so that you could go to another planet is disclosure the technology that can change our world for Me Disclosure is the technology that will change our world to answer the question that Nomo poo Nomo Pomo put in the chat didn't Ashton already talk to Greer yes I did I talked to him on a space and I asked a question I think we may even bring that up as well I don't think I'm going to evoke kim.

(58:00) com but the thing is kim.com in a space I asked Dr GRE the question of can this technology yeah maybe not the maybe you don't even need that what we don't need this part maybe that's just we don't even need to mention that good call whoever said that Wesley appreciate you I agree we don't need all that let's keep it let's keep it high and tight um I asked him can this technology lead to Doomsday weapons that's what I asked Dr Greer on the space um I didn't need to ask more questions because the reality is he as

(58:43) he answered almost all the rest of my questions from either other people or just stuff that he said but one of the other big ones was what kim.com and him got in an argument over kim.com argued why won't the aliens just give us the cure for cancer why don't they put it on the blockchain or whatever else right somewhere on the web cuz it's not that easy guys remember if you guys were watching the stream last night you know what I asked to Jesse Michaels I said what is disclosure and how do we get the technology out without

(59:18) revealing the Doomsday weapons I don't know that there is a way it's a Pandora's Box

the moment you show there's a unification theory of quantum and macro and that uh inertial Mass reduction is possible now you've opened the door to weapons that make our current arsenal of publicly available weapons look like little toys there's no closing that box no once you've opened it up the moment you've told the world that we can achieve uh technology that's essentially magic the terrorists are going to figure

(59:54) out how how to make the weapons with or without us Ellie hi and tight did Ashton just discloses dream girl persona it's kind of an ongoing joke the scar Joe clone I don't know if you were here for the beginning of that that joke Ellie I said that one of the ways to get me to shut up is that CIA makes a scar Joe [Music] clone you know an intelligent confident woman who's talented and good-look all those things yeah that's my weakness chat that's my weakness um here's one other thing guys that I

(1:00:38) want to mention I think I talked about it last night you'll see this a lot I especially in the conspiracy communities you will see people talk about controlled opposition um and people that are you know uh uh disinformation and that kind of thing reality is I think everybody's a little bit compromised everybody has a price and for the most part people are doing what they think in their mind is noble and just that's the thing that's tough and that we have to realize right it's not any individual person is not good or bad

(1:01:17) everybody is following the beat of Their Own Drum and they're going to you know they're going to be people that are going to be diametrically opposed to one another that are both in their own minds and their own frames of reference the main character who's doing the right thing and is on the side of good that's the **truth** of it so this is the reason why I am not attacking people personally and directly unless they come after me directly and that's just the nature of the kind of guy I am but uh you know

(1:01:48) it's just it's no point because I think that everybody thinks that they're the good guy so it's no point of me trying to battle against all these other different people that are out there um and this is the criticism that I would uh respectfully um tell Jeremy Reese about who I think Jeremy Reese is a guy that absolutely wants to get to the **truth** no doubt alien scientist uh but the way that he just constantly attacks everybody um just it takes away from his message right you want to make it about

(1:02:19) what your message is and not about tearing down the people that you think are not doing what you want them to do right that's the hard part it's hard that's a hard lesson even for us right we've got a lot of people out there that are you know detractors that are telling literally telling podcasters not to talk to us like going so far is not just to ignore us but like to actively tell people lies about us and tell people not to talk to us right um Jeremy tears down Jeremy Corbell all the time Bob Lazar J George

(1:02:55) knp today I saw him trying to tear down Tucker Carlson and someone else as well where it's like you just you don't need to do all that right just do your own investigation and let your evidence stand for it he's doing really great investigative work from the scientific

standpoint he has amazing people on his on his shows Jeremy does right I love going on there talking with them even though I've had people tell me I should be careful about going on his stuff as well um reality is chat I talk to

(1:03:25) whoever the hell I want to talk to that's the **truth** um and I'm not afraid of talking to anybody about any of this stuff no matter what people say about them that's just that's the kind of person that I am and that's why I don't care about what people will say about me if I align myself with Dr Greer or Jake Chanley or Jeremy ree or anybody else that's out there right because I have no enemies what do I mean when I say that when I say I have no enemies I mean that I believe in a non-confrontational type of

(1:04:06) disclosure I mean that we even the Lu aloos of the world I would like for Lu zando to unblock us because the reality is I think he's doing what he thinks is the right thing in his own mind is the just thing slow disclosure I 100% believe that um that Lu Alando is you know a pawn let's say maybe that's not the right thing to say let's let's call him a knight he's a knight for the government to advocate for a slow disclosure process that will wake people up and that's Noble that he's doing that

(1:04:41) it's not the approach that I'm going to take but I think it's Noble that he's doing that and uh I have nothing against him nothing against him at all I wish his trolls would stop attacking me but I have nothing against him personally uh Jeremy Corbell right he wants to show weird alien videos or whatever right disclose that kind of stuff he wants to he wants to be a weapon as well that's getting classified videos unclassified and out there into the public I'm almost 100% sure that he is being given videos by the

(1:05:14) government that they are ready to disclose because otherwise people will be going to jail for the stuff that he'd be doing and this is the reason why we only see the videos that are not that anomalous right it's a slow drip disclosure process that's fine and if he wants to make a living off of it or whatever and sell sell his whole thing up I'm going to switch over to full screen face for just a second if Jeremy Corbell wants to make a living off of it with this weaponized podcast and all that you know what great as well

(1:05:42) you know what that we live in a capitalist Society you should be able to do that if you want to do that um everybody's got to eat that's the reality of it I have nothing against him as well um I wish wish that he would look at our situation as well and um you know look to see if this is something that can achieve a disclosure now if he's on the side of slow drip disclosure then I can see why he would not be able to report on what we're doing because ours is not slow drip disclosure ours is catastrophic when you are talking about

(1:06:13) the disclosure of a teleporting a plane you're talking about there's no there's no going back to that the moment you admit we can teleport a 777 everything's coming out right so all the technolog is coming out you can if you can teleport a plane then again like stuff we've talked about remote controlling airplanes is Child's Play force fields cloaking all this other stuff is on the table uh aliens visiting us from Andromeda Galaxy's on the table like it's all on the table chat so

um let's think about what what

(1:06:47) other stuff here so I think the only thing I want to mention about the MH370 case is maybe slight bit of background related to Our intention about it and then I think we talk about what disclosure means for us which is the advanced technology side I think it's important we talk about how our approach of understanding the science I think we probably have to explain why we think that the science is important that we're seeing here trying to think this if this message will reach him in a way that will resonate with

(1:07:28) him yeah disclosure is a concept bigger than we can imagine who sleeps on sofas and who's hating on people that sleeps on sofas guys I've slept on some sofas before it's no big deal hizzy don't troll man I feel like the **redditors** are starting to get unhinged here again guys um there was actually speaking of **Reddit** real quick there was quite a few actual posts that weren't total garbage in the last couple days we're going to give you a 30 minute **timeout** um let's see so we may highlight some of those as

(1:08:27) well um but I I also don't want to focus on the **debunk** stuff and the um negative aspects of the Social Media stuff and the people that are you know kind of like have this some weird coordinated campaign against us I prefer not to talk about that stuff in general it's just not productive so we're going to not be doing as much or the stuff where we do the troll hunt and stuff that stuff's fun whatever the sad music I do like doing that but I don't think we are going to uh we're not going to be doing

(1:09:00) that every day uh Sean that's a little over the top a little over the top uh we have a sub**reddit** out there called three orbs where I'm a moderator somebody else started up uh originally had nothing really to do with me but they invited me as a moderator um it's a private sub**reddit** you can ask for permission if you want to join um I if I am reviewing I'm going to look through your post history though uh just to see because there's not going to be any of the weird **debunker** people we had one of the people

(1:09:38) that had the subject matter expert title in the **debunker** sub**reddit** ask if they could join the Discord I said no if you have a subject matter expert title one of those fake subject matter expert titles on the **debunker** sub**reddit** that you have no chance of join my Discord um that's ego people try to say that we're narcissistic or egotistical like no egotistical and narcissistic is having a fake flare of subject matter expert they only give it to the people who are like the most out there in terms of their weird views like that lawyer

(1:10:14) guy we were talking about the other day who like bases all his opinions off chat GPT and however whatever people he pays to tell him what to think it's weird okay I think it's time to start typing yeah so Jack trading I I would respectfully tell I'm not g to I'm not Banning you or anything like this but what I would say is that we need to change as well early on in this investigation I realized it's not a matter of changing other people's opinions only it's a matter of US changing our own

(1:10:51) opinions and this is where I've come to learn from people like Jake Chanley we have to look at other people out there and we have to realize that our opinions have been tainted by disinformation in a confirmatory bias standpoint as well right even I was fed into some of the negative aspects that were being told about Dr Steven Greer because it's easy to put up disinformation and fall into it right but the reality is so what let let if people want to go out to Joshua tree and go uh summon beans who cares man it's their money it's their

(1:11:28) lives let them do whatever they want to do it doesn't take away from the other stuff that he mentions regarding the technology you know what I I like the generation that I'm from because I'm old enough I'm I'm still young enough that I don't have full CNN brain but I'm also uh old enough that I've seen all of social media from its inception to where it is now and I've seen when it's been good and I've seen when it's been bad and on that on the after show yesterday

(1:12:10) uh that we had after the space uh we had after space and I and I told keemstar this as well as I told him that I think that he and I are in some aspects Kindred Spirits because we both grew up in the social media media age and so we know the kind of toxicity gaslighting trolling and it doesn't really phase us like both of us have the same kind of uh like just Shields to it in general he's better than I am because he's more quick witted and and that's what I think is just I find hilarious about him is how

(1:12:43) he can just flip it back on people so quickly and for me it's more of a situation where people can troll me all day and you know I I maybe they can get me worked up it's really really hard H but either way I wake up the next morning and it's whatever I forgot about it for a lot of people that trolling and stuff wears on them because if you're the type of person that cares about what other people think of you then all these negative messages that come to you can really wear down your psyche but I'm not

(1:13:13) the kind of person that cares at all about what people think of me not even a little bit everybody in the world could hate me and it wouldn't change my Persona even one tiny bit okay here we go okay we're going to start typing chat so you can ask questions I'll respond in the in a little um kind of as I'm going here um but I'm going to be doing a little bit of heads down typing here I want to get you guys opinion on some of this now the point is we want to skirt the line here between um we don't want

(1:13:58) to be sing too hard but we do want to try to reach people it's a very fine line between the cringe and pushing it over the top there's going to be an aspect of cringes to any letter like this because you have to try to reach people emotionally um but at the same time you don't want it to be too dramatic and too gushy you know you just want to focus on the points that matter got it okay okay and we may move the paragraphs around here a little bit I'm just going to let the ideas flow real quick um

(1:15:01) oh there's a different paragraph I on to write here as well You've Got Mail it's three underscore orbs that's the subredit guys uh is it okay to say gravity is not

(1:16:05) a force um I would say I don't know I don't know what gravity is the answer I would say that gravity is a property of nature but that we can manipulate it probably is how I would describe it right know for

(1:17:52) okay we're almost certainly going to move these around yeah Alex unified theory seeks to unify the four identified forces more recently Quantum and macro has been brought into that equation yeah it's correct the doct Greer space was back on December 15th or 16th I don't remember which somewhere around there if you go

(1:18:54) back you'll be able to find the the link to it if you want to listen to it I have not heard of antibubbles but on our science list is cavitation and star a jar which we're going to look at once again because we're going to dig back into the thunderstorm generator we may even do a separate piece on thunderstorm generator the orbs are the Epstein technology how come everything's getting linked to Epstein guys for for

(1:20:35) I'll read out this out loud for the people who are just listening along and it's kind of boring um no I think the question is what is disclosure right so that's what we're getting at now then I think the next paragraph and we'll work on these paragraphs is I think what the technology shows so we do what the technology can change the world is how do we achieve technology without destroying ourselves and and the Pandora's Box I think that's really what our what our thing is here right

(1:21:25) I don't like this that's my motivation part too over the top um let's say Okay Dash now I'm thinking about this I destroyed you on my podcast man yeah great destruction somebody actually posted uh the concrete podcast uh like the the names of the

(1:22:31) podcast and it's like you got all these people talking about psychic powers and stuff like that and they've got all these like oh this person summons UFOs and all this stuff and that mind it's like guy gets exposed blah blah blah it's like so contrary to every other thing that he's put out there it's just it's bizarre man the reality is like people like Danny Jones and the other people who have come out against us they have skin in the game now right because the reality is if they if

(1:23:04) these videos end up being real those people's whole careers are destroyed they'll never live it down for the rest of their lives for the rest of their lives people will be telling them you attacked a guy who is trying to give you actual true disclosure and you were wrong about it it and you were confidently wrong about it and you didn't do that with anybody else ever on your podcast and the only person that actually told the **truth** to you and had verifiable information you tried to attack them right and the

(1:23:36) reality is for people like Danny Jones the **mick** west of the world they should have skin in the game because absolutely if these videos end up being real their career should be destroyed 100% should be destroyed it's not I don't mean that in a vindictive way I just mean that in a way where if you're the kind of person that's going to confidently come out and try to

poo poo on multiple videos and 19 Witnesses and 14 pages of evidence to present a story for what actually happened to a plane that nobody knows

(1:24:14) what happened to it that had 239 people on board you deserve to have your career destroyed if you end up being wrong why would you come out so harshly against something like that where someone's just trying to find the **truth** that's really bizarre and I've said this before did you know poo pooing on the idea of aliens or some UFOs or something like that that's out there is one thing right it's harmless saying oh these flying object out there silly that's pretty harmless right poo pooing on I don't

(1:24:52) know how many many family members there are for 239 people on board a plane where the official narrative is they don't know what happened to it and trying to cast doubt on what might be the true fate of that plane that actually Rises the level of criminal conspiracy so the reality there is that I people should think very very carefully about what their opinions are and what they want to put out there into the world cuz it can theoretically come back at you now so because of and because of the stances that those people

(1:25:26) have taken right even like what we've mentioned about **Jonas** as well if you want to get an anonymous email and then decide that you're going to come out super hard against these videos and all this evidence you better be damn sure you're correct because if you're not you've put a huge amount of legal liability directly on yourself if those videos end up becoming true your career is over your career is over you have now have skin in the game now you are invested in those videos being fake because those videos end up being

(1:26:03) true and that's no one's going to ever I'm no one's going to ever let you live it down simple as that that's just the **truth** guys so again heed the warning man heed the warning right I'm just telling you the **truth** man and this is what people hate people hate hearing the **truth** they hate hearing the **truth** they want a comfortable lie that's not what you're going to get from me you're going to get the **truth** a lot of people argue with me and they get angry at me and they get angry at the things

(1:26:40) that I say because they think it's egotistical but I'm just telling them the honest **truth** and then later on they end up finding out yep he was just telling me the **truth** do they ever really admit it no and that's fine I'm not looking for apologies but you know I I hope people end up learning their lesson at some point but again Everybody's Free to make mistakes in this world and you know do whatever you guys want to do but you know I'm just giving you guys the same wisdom and advice that I've given the

(1:27:13) podcasters who've attacked me uh you know what I so you know this is funny like after the I think I've told you guys this story but especially the interview with Julian Dory afterwards he's sitting there raging about how the like the how the right-wing Rumble people are and he never wants to go on Rumble because he doesn't respect any of the the right-wing Rumble people right and he's raging at his at his producer about it and I'm going man like I kind of agree with the producer like you you

(1:27:42) know as a bigger audience you should try to reach it and this is when I knew that I had already known that Julian was full **Reddit** brain CNN brain you know whatever right and he's sitting there raging all the right-wing Rumble people and I just tell him and he's so concerned about what people will think of him if he post his content on Rumble because he cares so much about what the the CNN brain and all the Feds that he has on his show think of him right and I said I'm going to give you some unsolicited

(1:28:12) advice don't care about what people think of you that's the advice don't care about what people think of you people resonate with people who are honest and **truthful** right if you're out there and you come out with bias and you have uh you're letting your views be tainted about what people think of you that's going to come across as insincere and that's exactly what happened right and he made it worse on himself because he doubled down right that when I told him that just made him more Angry made him uh more silly you

(1:28:43) know when I told him too about that I was going to come out against the false things that he said he doubled down on that as well and then he uh you know came out harshly with a bunch of defamatory and false claims about me uh he put that weird video out where he defamed me even further um which were huge just he just kept making more and more mistakes right because he was like one of these like confident uh like spoonfed like loser kids who's never been told no in their life right like grew up probably in a home where he was

(1:29:15) rich and had his family never told him no you know and uh like it's just it's so pathetic when you when you meet people like that right and then they just keep like destroying themselves and imploding in instead of just listening to the advice right that they should have taken from the beginning and that's why then he embarrassed himself on this on the stream and on the space with us even further um just kept imploding and imploding and I kept just giving him honest advice which is he should probably just delete his podcast with me

(1:29:45) that makes him look terrible right and he's like oh oh you want to give it deleted and I'm like dude if you think that podcast makes you look good keep it up man he was the one profiting off of it while he was trying to say that I was profiting off of it as well and I'm like can't be any more hypocritical or Worse liar and then of course he silently removes it right and doesn't say anything about it just deletes it and I told him he should probably talk to uh talk to his lawyers right Parish the

(1:30:18) reason why I'm condescending is you deserve to be condescended too Parish I've seen you when the rep is Parish B you absolutely need to be condescended to a little bit it's not me that's **arrogant** it's you that's **arrogant** and that's the sad part right you don't realize it's your own **arrogance** that is leading you to be condescended the **truth** hurts man the **truth** does not make you feel comfortable this is the thing that **reddit**ors need to come to terms with your world view is not

(1:30:50) reality once you you've accepted that you will stop being so angry at people telling you the **truth** I find it so consistently people get so angry at being told the **truth** right and then they

double down as opposed to just rethinking of their own opinions might be incorrect they double down and then they get more angry and then they implode and we see it happen time and time and time again right Parish I'm going to give you a **timeout** for 30 minutes man you can come back in a little bit what I'm going to say is I suggest

(1:31:35) strongly for people like Parish B and the other CNN brains and **Reddit** brains that are out there think about your own actions think about the messages that you put out there consider that you might not be right about everything in the world right exactly being told the **truth** is not being you're being spoken down to but the reality is some people do need to be condescended a little bit right uh in certain cases people really just don't seem to uh be willing to consider that they might not know everything there

(1:32:16) is and you know those are the people we call the CNN brains and the reddit brains I think that if you've been watching me and the live streams and the investigation you'll realize firsthand that I never claim to know everything and I'm honest about the stuff that I know and that I don't know and I think that that upsets people right because for a lot of people if you do not go with the herd then they think that you are being **arrogant** or narcissistic and that's not the **truth** that's not how any of that works s not

(1:32:53) agreeing with the herd does not make somebody any of those things not at all that's not how it works because for a lot of people um it's not about what you tell them and how it's about how you tell them right that's the hard part for a lot of people it's not about what you tell them it's about how you tell them and that's why we call on **Reddit** they call it the post **truth** world that we've achieved right we're in a post truth world now anyway I want to get back to this letter here guys so I don't want to get

(1:33:30) too sidetracked with the the chat at the moment the last thing I'll say is that I don't fully go with either side or anything like that at all right I think that there's people in the conspiracy angles that take it too far that try to link everything together I think that there's people in uh um you know the people that think that nothing can be real that we would call the Skeptics or whatever that they take it too far as well is that one thing that my father told me is that everything you should

(1:34:17) take in moderation you really should question everything on either side the answer is generally going to be somewhere in the middle right and that generally makes you an enemy of everybody okay just give him a 30 minute time out let's do Greer stuff here guys the goal of the letter that's so that's finally we're back onto the topic what's the goal of the letter I want to tell Greer about the technology that we think we've uncovered that's consistent with his technology right so we talk about

(1:34:56) this I'm going to probably add to a little bit to this let's let's try to get this done cuz I don't want to be up all night doing this guys um we're going to add something about uh the families here for I'm going to say something like

(1:36:23) that's maybe a little over the top but we're going to go with that for a second um once I finish one or two more paragraphs we hey Diamond how's it going man appreciate you bud Diamond I've been seeing a lot of your posts out there uh appreciate the stuff that you've been doing um yeah this is going to be one where I'm going to be a little bit more quiet because I'm working on a letter right now but you can check out I've been I've been opining on lots of stuff for the last hour hour and a half I

(1:36:48) didn't think we'd be alive or online this long I was hoping this would only be an hour long stream but we've been going hard so I appreciate that advice Diamond also I appreciate the a lot of the stuff that you've been posting out there um check out diamonds Oppenheimer uh Ranch as well as uh what is it the magnetic magnetic resonance Diamond plug you can plug your channel if you want man uh magnetic can't I don't remember off top of my head uh but he's a good guy who is a **truth** Seeker for sure that's out there

(1:37:21) that's constantly broaching topics that make people feel uncomfortable but um that he he may actually be the person that I've talked to on any podcast that I feel is most connected with respect to the conspiracy community and the potential for advanced technology that's out there that's the **truth** when I'm talking about Diamond I feel like I'm talking to somebody who's in the no and he's done a ton of research around this kind of stuff for probably decades longer than I have been

(1:37:50) I mean I'm fresh into this stuff right it's been a journey um so the next paragraph is going to be about the technology and the implications of it I'm just trying to think of how we approach this um I think it's a matter of how okay so we need to align the technology that Dr Greer says exists with the technology that we've been revealing um I'm going say I've independently independ dle um yeah Diamond I think if you watch the

(1:39:14) earlier part of the stream I talked about how I think that one aspect of the investigation is learning that we have to push some of our own biases aside now and and for that reason I try not to make enemies out of anybody because I think that everybody can be part of uh can be can assist right in terms of revealing this type of stuff to the world the more doors we close the more difficult it will be to reveal this stuff so even with people that I think that are they think that you know they're you know uh with working with

(1:39:54) the government or whatever and we were we were talking about all of them earlier um there's different factions I think that everybody has their own concept of what's uh you know adjust motivation and what they're trying to achieve and the reason why I'm writing this as you see in my top here I'll go through this in a in a second but um we're not going to close the door to anybody out there especially somebody as well connected as Dr Greer is um and I think that I don't agree with everything

(1:40:22) that he's been saying um but I do think that he's right about the technology that's out there for sure that's my opinion and so that's the level I'm trying to connect with him on is the technology so that's why this next paragraph is going to be about the technology and then I

want to talk about the implications of disclosure and then I want to close out this particular letter I don't want it to be too long um I do think that he's a smart guy regardless of what people think about

(1:40:50) him yeah yeah Diamond I can understand how you definitely would think that's uh too hard to believe I kind of think it is as well some of the stuff I think is hard to believe but keep in mind look at like this diamond in terms of diamond says okay well uh that his peeps claim basically he's claiming that there's you know people that have been on Mars for 50 years Dr Greer also claims there's ambassadors from you know Andromeda galaxy a lot this stuff is pretty hard to believe right but keep in mind that

(1:41:25) he's basing his opinions off information that he's been shown right his own opinions so it's possible that he's also basing some of his opinions on some stuff that's uh disinformation or what have you as well but I think the underlying framework for the science that he's been shown is true and if you really think that you can teleport a plane it does kind of open the door up to some of that stuff now I'm keeping my I'm keeping my skeptic hat on with respect to a lot of that but with with

(1:41:51) respect to the science I think Dr Greer is a guy that can help us get the message out right for sure for sure okay um room temperature super connectivity over Unity maybe we just go with those three and super luminal relativistic I like super luminal relativistic speeds relativistic speeds super Lum relativistic travel um and man there's a lot of different words for it right like a lot of it is um the terminology right like

(1:42:56) transdimensional travel uh worm holes like it's all talking about the same thing and again science is a matter of the scientific method and then describing what we see in actual reality so when we watch these videos and this is the one we're going to pin to this I think the most important video is the thermal video first of all it's the least **debunk** of the two of them there's no matching cloud images on this one but also when we see this event here happen I mean look at this this looks pretty damn

(1:43:31) real um but this is the one where you see all the details right oh the gravity engines maybe we have to include that because we see these this part right here look at that this is wild man you see the gravity engines um over Unity gravity manipulation super Lumin Rel yeah I like that gravity manipulation we definitely need to include that I I'll read this all out here in a

(1:44:38) second I just need to let my thoughts go um wall cre okay [Music] um path uh

(1:46:20) okay I think we're going to read this out let me let me know what you guys think yeah diamond we can do another show as well I always like talking to you man I'm I'm getting better at the science and the lore and all the stuff in the conspiracy world and the UFO world as well um and I like talking with you about this stuff so my horizons are are getting broadened a little bit here in there uh okay so so far here's what I've got let's see how this sounds so far we only need like a couple more paragraphs I

(1:46:57) don't want this to be super long right A Letter to Dr Steven Greer my name is Ashen Forbes and I'm an advocate for disclosure I believe that or I believe Dr Greer is an honest man whose opinion is based on information he has personally seen being close to powerful entities for decades that's where I'm kind of leaving it open-ended right because people are going to say oh he's a grifter other people going to say no he's he's spewing the **truth** right but reality is my view is somewhere in the

(1:47:23) middle where I think that maybe some of it is uh true and other of it is maybe not but I'm going I'm keeping my open mind um my opinion of him though is that he's he's he's saying what he believes I've I've sat in spaces with him I've uh asked him questions my opinion of how I've judged him is to be an honest person um I'm writing this letter to him because Inter medors have told me that he may be interested in what I have to say about evidence of advanced technology kept hidden from the public

(1:47:50) we are also going to mention the locked Martin connection yeah we need to mention that as well um I'm gonna write this down before it uh coherence okay okay let's keep going

(1:49:01) [Music] um disclosure means different things for different people for some disclosure means not we don't maybe even need this disclosure paragraph for some it means non-human intelligence for other it means crash reveals for me true disclosure is revealing technology that can help change the circumstances of millions if not billions of people for the better we might even just incorporate this into other paragraphs I've been a citizen journalist I'm actually going to pull this down I think I don't think we even need this

(1:49:25) paragraph I've been a c journalist for the Malaysian Airlines flight 370 case for the last 6 months the investigation began with two videos that are filmed by United States military assets from two different perspectives that are in perfect synchronization showing a 777 being surrounded by three orbs and disappearing in a singularity while seeking the **truth** for the families of the victims of the plane is my highest priority the technology Reed change the course of our entire civilization I've independently learned

(1:49:55) through the course of the investigation that the advanced technology hidden from us includes such things as room temperature superconductivity over Unity gravity manipulation and superluminal relativistic travel the MH370 videos show orbs with a non-rating barrier displacing them from SpaceTime allowing them to Flo float freely while creating their own geodesic path uh I may even say um we see a 120° sinusal pattern with clear purpose uh before the plane gets phased out by an induced Singularity when the orbs converge in the plane in

(1:50:37) the final moments uh trying to think if we if we evoke salvator Pas and Bob Green you're here uh I think what we say is these findings [Music] imply a unification theory of quantum and mechanics and general relativity these findings imply a unification theory of quantum mechanics and general relativity has already been discovered my investigation has found

(1:51:42) evidence that this technology is connected to third party contractors such as Lockheed Martin who Pat who has patents such as coherent matter wave beam that can enable super conductivity enable the super conductivity required to phase out the plane in the videos uh I believe special access programs are how the government hides this technology and why Congress is [Music] unable to learn about its existence right something like that okay what do we got going on in the chat um could be Nazi stuff oh I don't think I

(1:52:39) mentioned somebody yesterday was asking about my opinion on Antarctica it wouldn't surprised me if there was some shadiness going on in Antarctica anytime that you find that the Public's not allowed to go somewhere I think that there's got to be a reason for that so I I think that there's definitely the possibility that Antarctica's got something going on there I just I don't know right we need more evidence even just people's coming out and saying stuff isn't enough we need a hard

(1:53:03) evidence to come along with it yeah maybe we don't even need room temperature superconductivity another way to put is high temperature superconductivity it doesn't even need a be room temperature just a journalist I like citizen journalist I like the James O'Keefe style of it right in in a way people hate James O'Keefe but in a way I feel like I've taken a similar path where I'm just a self-proclaimed journalist right I've I'm just following the stuff that uh my own uh the stuff that I want to do right

(1:53:39) and that titles or titles you can call me whatever you want I'm certainly not you know aligned with any media entities or anything like that I just do do what I want to do look at the things I want to look at um okay we have to write a couple other paragraphs and then we'll we'll flesh this out a little bit um let say when we spoke I'm going to call it Twitter better

(1:54:57) so when we spoke on Twitter back in December I asked you if this technology has the capability to be turned into a weapon and you agreed that it can be my biggest hesit my largest uh trying to think about how to how to phrase this this is gonna I can see this is going to end up going a little bit later than I was hoping for guess we won't be playing any po world tonight chat um

(1:56:34) okay um I not sure how we can reveal the reveal the foundation for this technology without opening Pandora's Box my concern is that this technology is so Advanced that we may destroy ourselves and I believe this is the reason and I believe that this is the reason it is kept secret in the interest of National Security and this is where I think let's see okay I think that we kind of can close it out after this paragraph with one more right we don't we just want to entice Greer in with what we're

(1:57:20) promoting and what it means and and what our intentions are right as honest as we can oh you Oppenheimer or uh Diamond you think that Antarctica stuff is can you elaborate on that why do you think that I'm honestly I honestly don't know I'm curious I want to know what your opinion is while I finish this next paragraph and then guys what are you guys opinions on what I've been putting so far I'm not seeing a lot of opinions about what I'm typing here but I

also want to know what your guys opinions are on the Antarctica

(1:57:56) stuff we're almost done here um oh I would like to become an ambassador for disclosure of advanced technology that can change the circumstances of billions of people on the

(1:59:06) planet yeah James is awesome James O'Keefe is who Diamond's talking about because he actually just gets people to tell the **truth** right un the unfiltered raw **truth** that's what I just I love about him and I used to be somebody that thought James O'Keefe was you know one of these people that was dishonestly editing videos or whatever but the reality is he just tells people the **truth** they don't want to hear right from the from the horse's mouth whether or not those people that are saying that

(1:59:32) **truth** are you know what they're just saying their own opinions right and so you have to look at it through that lens but he gets people's unvarnished opinions I love sting journalism sting journalism we need more sting journalism hey gry owl how's it going take the first sentence of the second paragraph and put it in the first paragraph of the content is similar yeah probably think put it up here yeah maybe yeah I think you're right that's probably a better way to put it good call who is my Alex thank

(2:00:20) you on my editor Alex in the chat appreciate you on that am I taking a crack at the smoking hot alien space babes n I'm not trying to clap those alien cheeks I'm trying to get my scar Joe clones the CIA is not listening to me they still haven't reached out to me they still haven't reached out to me to tell me to stop but if so if we believe what Amy says if they don't tell you to stop then they're giving you the approval to keep going chat trying I probably need to rephrase this h

(2:02:27) I at a Crossroads where I am a patriot who does not want to harm my country's military Advantage but I also want to reveal the **truth** about the missing plane which had 239 people on board let's say maybe I don't know about this whole paragraph Maybe for I think maybe that's the way to do it um let's go back to this

(2:03:29) paragraph my investigation has found evidence that the technology is connected to third party contractors such as Lockheed Martin patents matter wave beam blah blah blah I believe special access programs are how this the government hides this technology from its citizens and why Congress is unable to learn about its existence I've come now this is kind of doesn't really flow here yeah I want to make it short I think we're we're closing the letter up here pretty soon Yeah Tim read if you go back a

(2:04:06) little bit you'll you'll hear my stuff like I think that there's a lot of people um out there that will say stuff like you know I always think of the Game of Thrones statement where they say it is known it is known right that is the same terminology that people have who have really closed minds it's like people that just want to be told what's true are the type of people that say oh it is known isn't it known that so and so is a grifter isn't it known that Pujabi Batman is a

larger that's the

(2:04:38) kind of people that are basing their opinions on what other people have told them as opposed to coming to their own informed opinion there's a lot of people out there that are uh you know they they just base their opinions on what other people say and that's a shame that's not how people should think people should come to their own conclusions on how things work this is why unfortunately you have this uh like the ash Conformity experiment right it's a matter of conforming to other people's opinions

(2:05:06) isn't it known that so- and so is a grifter isn't it known that so- and so is a liar that's not how **truth** Works **truth** doesn't work based on consensus **truth** Works based on facts man Tom man we warned you bud you got to come back in 30 minutes man guys please do not uh say weird creepy parasocial stuff in the chat it's not what this is about man like it wouldn't it wouldn't fly if you were saying stuff like that if it was a girl streamer it doesn't fly if you're saying stuff like that for me as

(2:05:48) well there just focus on the content man appreciate it uh Joseph you can come back tomorrow don't Gaslight me man gaslighting like I'm I'm trying to be nice but not permanently Banning people but if you Gaslight me in my chat you can have whatever opinions you want but if you Gaslight me in terms of what I think and try to get me to believe whatever you want to think I've already been 100% clear first of all we've already addressed every **debunk** that's out there and we've shown why they're not credible

(2:06:33) second of all there's literally nothing you can say that's going to get me to stop no matter what I don't care what your opinion is I don't care that you think the videos are **debunked** does not matter to me whatsoever there is literally nothing you can say to me that's going to get me to to stop so please don't even try actually there is one thing you could find the person that supposedly hoax these videos who does not exist you could find them and figure out how they're going to show their source

(2:07:12) workor so they could collect the \$150,000 Bounty guys anything less than that is not acceptable I've been clear about that for months and months and months and months so that's the hinge point right the reason why you're not able to find that person the reason why that person hasn't come forward is not because there's some mystery uh Bitcoin billionaire with uh super master VFX skills that can do the work of a whole team without making any mistakes the answer is because they don't exist because what we're looking at are

(2:07:49) real videos and if you can't understand that this is a real video then that's on you man if you can't look at this and realize that you're looking at a real video here from an mq1 C gy Eagle and that there's no way somebody could have created this given the requirements of the huge list of requirements that we put forth then that's on you man I hope that for the people that are out there I hope that you can come around and realize that what we're looking at here with the accurate camera shake and with

(2:08:18) the zooming where the camera Shake increases with the 3D parallax clouds in the background no discrepancy with the manual tracking of the plane where it goes off the screen if you can't realize that we're looking at a real video here that I mean that's just on you you don't need to try to convince me I don't care and I'm not going to sit there and try to convince you I'm just going to keep presenting the evidence in my opinions I mean look at that man I think the reality is people need

(2:08:55) this to be fake more than they have evidence of it being fake the the person that made this is also some kind of physics expert and Engineering expert and Mathematics expert like who do you guys what who is this mythical super person who you think has VFX skills that equivalent that are better than major Studios and entire teams that have a better understanding of physics than PhD even people like Eric Weinstein that has a better understanding of engineering and what the capabilities are of a 77700 and that has better mathematical

(2:09:27) understanding of sinusoidal patterns and perfect wave functions in circling around the plane who who is this mythical person right like there's one thing one last thing that I wanted to say regarding this before we go back and finish this letter is that the thing about the Skeptics is that they don't put themselves up to Scientific scrutiny that that's the irony of their statements is that they claim to be for science but they don't even know what the word science means I probably need to be saying this more on

(2:09:56) podcast science is the scientific method which is proposing a hypothesis and then following that hypothesis up with evidence and determine if it matches up saying that okay here's your hypothesis is that somebody added a portal effect from a Pyromania VFX okay well why do then the first the first hole that you point into it is okay well why does only one frame similar why is this why is this the only similar frame and how did they change this and why did they change this now you need to develop a story for that you

(2:10:29) can't just say oh well they just did it's too close that's not how science works and then you need to explain why none of the other frames are even close and then you need to explain well who's the person that did this and why you need to develop a whole story and how does this fit in with all the rest of the evidence as well you know the problem with this Skeptics is that they think that they don't have to put themselves to the same level of scrutiny that they put other people to you need

(2:10:54) to develop a whole comprehensive story and I've always said this if you're a skeptic who's watching full comprehensive story for how the video was faked who faked it when they faked it and why you need to build your 14 pages of evidence for how they did it and when they did it who did it and why they did it what their background is the reason why you can't do that is because your story falls apart the moment you try you can't even get past the first part which is why did regicide say that

(2:11:21) they received this video on March 12th 2014 and the reason why they can't do that is because now you'd have to link regicide and non to being the person who faked it which is

going to fall apart of itself as well right okay Danny Jones you're gone okay so this is this is what the scientific method is right and that's what I am doing as well is that and you can tell the course of the investigation how it's changed and the reason why we're now so strongly opinionated on the fire scenario is

(2:11:56) because we've got huge amounts of evidence for it huge amounts of evidence if we had this much evidence and it wasn't related to something anomalous we would easily be able to win in a court of law unanimous jury jury uh opinion the only thing holding people back is the idea that anti-gravity they don't think can be real the fact that this all implies that there is construct in our universe and that we haven't been told this by the physicists that we trust and that our Academia and that our television that's the only thing holding

(2:12:26) it back right okay we're getting it's getting pretty late um you know what I may just finish this up tomorrow I think we've got the framework for it here but I kind of want to sleep on it it's getting pretty late uh I think that I'm going to edit it up a little bit and this is probably the framework for it but I want to sleep on it a little bit just make sure I I don't think of anything else and then I what I think I may do is I may post it in the morning for Dr Greer and then what I'm going to

(2:12:59) do is I'm going to retweet this linking to uh the post I did about **truth** which goes through my theory of what happened in the plane so that if any he or anybody else wants to read it they can click on that link they can read about what I think happened to the plane based on the evidence that we put forth and that um this is kind of like my my appeal to Dr Greer because reality is even like what Diamond says a lot of people don't trust Dr Greer that's fine the reality is he has huge connections he can get this in front of the people

(2:13:30) that we want to get this in front of which is Congress that's what we're trying to get in front of Congress right yeah the letter to Ashton Forbes guys gets more and more credible which each day it's getting kind of scary in fact I want to go look back at at that real quick is that did that channel just literally go dark apparently wait one sec I think this apparently this this one's coming out with a new video I think this channel I don't know if it's going to be against us or for us I have no idea I

(2:14:16) have no connection to them I just happy that people are posting about the case in any way shape or form yeah so this this whole Channel just went dark completely went dark isn't this super weird it makes three videos about the Miami aliens then sends me the creepiest letter I've ever received in my life and hopefully will ever receive in my life this was three weeks ago then it does this New York City tunnels thing and then it does the glitter one which was really weird and there was a message in there to us in the first part

(2:14:53) of it then it does the follow up with the glitter thing which the whole glitter thing is like a real conspiracy but the way they present it is like some kind of kind a little too out there with this idea of they can manipulate people's emotions through these like tiny end drers or whatever it is and then they do the um the chant Thomas the magnetic reversal stuff and then it

just goes dark completely dark the thing that's weird about this is if I was imagining a scop like another intelligence community

(2:15:28) that wanted to send me a message this is how they do it you would bookend it with some stuff that's not related in the front and at the end right oh yeah we should look on Twitter we should look on Twitter what was it what was his his name wasn't it scary Dan are they gone what was their name guys you guys remember what their name was I thought that they posted it somewhere on Twitter and then they just went dark they just completely disappeared because people were arguing well they were trying to use it to

(2:16:07) promote their Channel but they obviously weren't because they just completely stopped yeah it's just gone it's just not doing anything anymore so obviously this wasn't for money they never copyright tried us even though we played the full videos on my streams and everything else gets copyright tried is it creepy Dan I don't know you guys didn't it say in one of these posts what their name [Music] was this was also just the weirdest man the AI in this and the production value was way too

(2:16:52) high way too high it's bizarre you are my for like some random dude doing this I thought that they said in one of these posts and they had some weird copyright thing in here I I don't remember where I found the the name anyway you think this is the Men in Black telling me to stop I think it's the opposite I think this is somebody telling me to keep going I want to listen that letter again tonight before I go to sleep no it was something Dan I saw it I thought it was in one of the oh password is **truth** it literally

(2:17:35) says right there huh yeah then they said where is this this is weird man anyway okay guys I think I'm going to go to sleep I think the letter so far is pretty good um I've just got to fles it out a little bit I was going to post it tonight but there's no point posting it this late anyway I should post it first thing in the morning when I wake up so I'm going to read through it one more time I'm going to flesh it out just a little bit more edit it a little bit more and I'm going to post it I think

(2:18:10) this hits all of Greer's high points guys what are you guys thoughts on this hitting the high points of Greer stuff if anybody's watched his one especially about about the technology that was hidden from us the Lost Century or whatever it is so we talked about what stuff does Dr G talk about he talked about the technology he talks about the third party contract oh there there are orbs I think I mentioned that though do I mention that that it's our orbs yeah okay I think that that

(2:19:38) yeah okay I think that's good to add that in there so basically I'm saying I do not believe the orbs and M37 videos are showing non-human intelligence the scenario seems like a military operation I'm not going to go into all the depths of why it's military operation but I think that's a good starter for that yeah that's probably good for that paragraph so see I got to add a few more things we have to make sure we're talking about the US military night Liam also just want to thank everybody who's

(2:19:59) been following it's been really good yeah I want to hear creepy Dan again too but I don't want to go over it tonight I'm too tired I think we may go over the creepy Dan thing tomorrow um yeah the letter is looking pretty good here for Dr stepen Greer but as you can tell there's still a few things that I'm missing that I just need to think about for tonight so I think tomorrow's stream we're going to go over the creepy Dan thing one more time very quickly we'll just listen to it again

(2:20:24) and then we're going to go into science most likely as well there's also a couple other things that we're going to go into tomorrow but um I've got some pretty interesting science stuff that I think I want to dig into even more okay guys I think that's going to be it for tonight thank you guys for following I know it's late thank you for being here on a Saturday night with us everybody have a great evening thanks for following Along being part of m370x you guys are awesome have a good

(2:20:49) one

(00:37) Malayan 370 contact 129 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed

(01:46) form and says now I am become de the destroyer of worlds hey what's up chat how are we doing tonight appreciate everybody already being here getting in quick appreciate you yes Dorian you got in first welcome buddy welcome everyone cheers blue cheese ol of Martini KN I had to get some new uh new olives the other ones were not working they were not working um yeah that's fine cat a lot of people don't know anything about the case it is what it is uh uh uh I I was actually on with Alex Jones so he probably knows about the

(02:40) case if you tell him about the missing plane uh literally did a whole piece with Alex Jones so I'm pretty sure he knows about me I was on Infowars um he may just have forgotten so let's see what are we uh why is my sound so high today h weird oh that's why turn it down a little bit that should be better okay um yeah appreciate you the below hey everybody what's going on okay so what are we doing tonight um we're going to go over little the new cers information that's going on we're

(03:22) going to look at some Fleeer footage that was posted and we're going to talk about Malcolm bendal uh a little bit we're going to write a letter to step Greer today we got a lot of

stuff to do here and uh we're going to jump into this space in a minute as well and we're going to talk with Skyfire news and keemstar and red panda koala in a few minutes so that's the plan we should probably just get right into it because we got a lot to get through so let's get started okay why does this always become

(03:57) smaller okay um let's start with uh this Fleeer footage I haven't posted yet pool request on [Reddit](#) I'm happy to see the people have actually done a little bit of investigation now um he found uh he or she I don't know found a pallet that is similar to the Drone video that's in blue where people had said that they they don't they don't look like this well here you go there's the blue palette for you folks I'm not sure why this is actually controversial statement but they definitely have the pallet that we see

(04:32) in the Drone video I think some people some [debunkers](#) try to argue that's it's not like that I think there was even a Fleeer supposed Twitter Fleeer expert who didn't realize that this is what Drone footage looked like now of course when I asked that person I think their name was David Falk or something like that just complete loser like just pretended like they were an expert when they really weren't an expert at all just because they have a a commercial grade Fleeer footage Fleeer video at at their home as

(04:58) if that's going to be equivalent to military and I remember when I asked them if they had any experience with mq1 C drones they didn't say anything cuz these people on Twitter everybody wants to pretend like they're an expert when they're not it's it's really embarrassing so absolutely no question whatsoever they drones do have the capability to film in the blue uh palet rainbow palette that we see in this uh MH370 drone video you can't listen to random pretend experts on Twitter they

(05:25) have no idea what they're talking about same with the fake experts on [Reddit](#) as well you there had to be half a dozen people on [Reddit](#) pretending like they don't have uh color footage like this they're just all literal Liars right Gatekeepers and Liars who pretend like they have expertise when they don't um several of them especially are like some of the people that are like the biggest trolls on the [debunker subreddit](#) all literally just yeah I mean another loss for [Reddit](#) I mean it's they're just the

(05:52) most embarrassing honestly how much they lie about stuff like this and they the thing is they confidently lie about it too right they just confidently lie li like there that doesn't look like that they don't have any footage like that blah blah blah just literal just lies upon lies upon lies it's ridiculous so absolutely this exists um I think these are the sources yeah okay I mean look at this come on man what do you mean they don't have rainbow pallet ridiculous man ridiculous so pool request good job good

(06:25) investigation not not bad appreciate you bud okay um next thing cuz I want to get into this here as well um let's go to the cers stuff so man a lot of cber stuff today whoa so I posted well the scaler thing is really interesting as well that this seems to be the secret scalers so if you want to watch the video uh I posted some uh whatever captions over it so you can watch this

video about scalars and what scalars are um but really this is like how you explain the toids and what the toids are doing pretty much to create a scalar

(07:05) wave which can create a gravitational wave I mean we're we're really close to figuring it out um I did a followup on this so I'll give um some partial credit to tacky eni who I don't know we just this dude's off the deep end unfortunately but I still going to give him some partial credit this is somebody who put in some early on investigative work and they seem to have come back to life a little bit recently but for some reason like because I refused to like this is one of those people who DMD me early on and

(07:38) like insisted that it has to be aliens in the videos even though there's literally no evidence whatsoever for it and got super upset when I told them to stop and they wouldn't stop dm'ing me and they ended up getting blocked and then they like had a total meltdown over it and like that's how you get permanently blocked forever you have little fits thinking that like you I owe you something to listen to you to listen to you in my DMs I do not owe that of anybody um and the worst part is like they're they're 100% sure it's aliens

(08:07) and their logic is just completely flawed it's like their logic is well doesn't it make more sense for it to be aliens because aliens could be more capable of something like this it's like dude that's not how any of this works like you don't know what the capabilities of aliens would be so you're just like it you have to follow actual science and logic and reason could it maybe be aliens maybe but it's not worth trying to fight people over in general right so despite all that oh yeah and then they posted on the other

(08:34) the three orbs subreddit and started calling me grifter and stuff like that and then they get surprised when they get banned which of course you're going to get banned if you start literally defaming the moderator in your replies like takeni like get the help that you need my man because then right after he gets banned the very first thing he does is go to the debunker subreddit and sit there and whine about it and of course not like point out the fact that he was sitting there defaming the moderator he

(08:59) makes it sound like he got banned for no reason it's just like these people are just so [ ] pathetic it's ridiculous man so of course then I permanently banned him after that like I banned him for only seven days at first to give him a chance and then he immediately goes to the other subreddit and cries about it it's like okay you're definitely getting permanently banned after that like it's just it's so sad and the worst part is how they Gaslight and seek validation from the other losers on Reddit like no

(09:27) Ashton unbanned me unfairly like dude you literally are called me a grifter for no reason at all like you didn't even have to include that in your in your comment but like you obviously have some weird thing for me and you can't get past it right just you know if you can't be a normal adult just don't post online man it's a private subreddit too what do you expect dude you know I'm a moderator just present the facts exactly like Robert Romero's saying so anyway I'm still giving you partial credit for

(09:54) having found um some of these links here anyway so we found this link or he found this link and in this link it mentions that the cber system is constantly scanning the Earth every 10 seconds the whole earth continuous view of all the Earth's surface which it images every 10 seconds the entire Earth now this is a giveaway because we're looking at something in six frames per second this is going to be important wait for the next post guys because now I can see the debunker saying oh well this says every 10 seconds but we see

(10:27) something in six frames per second right so how can that be that doesn't line up don't don't worry we'll we'll get to it the other part is that people a lot of these people just been lying about the cber systems not online this is the same as the fake Fler experts who are like I don't know why so many people just make up [ ] and pretend like they're experts no the system system wasn't online there was no satellites in range blah blah blah like why do people make up all this

(10:53) [ ] why do they pretend to be experts and make up all this [ ] the cber system reached operational capacity in 2013 end of debate s CER system was online it was mapping the whole globe when MH370 went missing also as we're going to find from the next post it operationalized old DSP satellites in its constellation as well so it's not just made up of only the satellites that we know of it's made up of other satellites not necessarily launched directly related to cers we know that as a fact now and it enables

(11:28) them to detect and characteriz a wide range of infrared phenomenon why is this important because people argue why is it white in the in the satellite video and black in the thermal video because they're using different IR visual capabilities in the cber system than they use for a p rainbow pallet thermal drone uh layer okay in addition to that can detect any significant infrared event on the globe including explosions fires and plane crashes okay so how did it not detect MH370 guys how did it not detect MH370 literally the system detects plane

(12:06) crashes so where is it we literally have them on record saying cber system helped solve the mystery of MH370 how where where's the plane man how could you not see it you're scanning the globe every 10 seconds every 10 seconds a catalog of signatures electromagnetic and IR of aircraft literally proof that it can scan for aircraft right here 100% proof cber system absolutely 100% would have seen MH370 no question whatsoever this is absolute proof okay next one Wall Street Journal four days ago made this video

(12:56) does it look familiar chat does this look familiar hold on I'm going to put my headphon sound on look at this it's the cers video they actually added a couple Graphics to it there it is look at this Chad there it is the cers video they didn't even credit oh they did locky Martin right up there in the top left so they have a stare and a scanner so the question why is in six frames per second because it's using the stair now I think it might actually be staring from the GE stationary satellites so why

(13:31) the angle because it's going to be in the geostationary satellite angle from the earth it might actually be staring from the geostationary satellites it might not actually be using USA 229

even though we have a literal satellite pair staring flight right over it that's a naval ocean surveillance satellite pair staring right down at the spot at 1840 UTC so the answer is we got multiple satellites staring at it we might have geostationary ones staring directly at that spot using the stair or it could be

(14:02) our USA 229 which has a sister satellite that could even take 3D stereoscopic imagery that the whole purpose is literally Naval ocean surveillance and it's and this one goes around the world every 90 minutes so every day these two satellites are basically mapping the entire planet by themselves so absolutely no doubt whatsoever United States government knows exactly what happened to this plane it goes on to say not only do they have stairs that can search at specific locations and widespread locations to

(14:34) scan the whole planet every 10 seconds It also says that their quote unquote future plans which you know who knows when this actually happened include utilizing low earth orbit satellites and midar orbit satellites what are your low earth orbit satellites boom right here these are your low earth orbit satellites so how would the cber system use low earth orbit satellites guys if it's going 16,000 miles hour how I'm going to repeat that for the **debunkers** they are on record saying that cbers uses low earth orbit satellites on

(15:07) record that's what that Wall Street Journal piece says but everyone wants to know well the satellites are moving too fast how could they take images well it's pretty damn simple because they're scanning the Earth and they're sending the data to a computer system that creates a 3D or just not maybe not 3D but video Google Earth playback we deduced it it's real we have all the evidence we need to prove it so how could we have produced all this evidence if those videos are fake how would we have figured all this

(15:38) out just from two videos if the videos are fake so which hoaxer knew about all this stuff to make all these details line up 10 years ago nobody videos have to be real simple as that **debunkers** are going back on the suicide watch folks back on the suicide watch okay next thing can we **foyer** the satellite imagery no we cannot it's classified you can't **foyer** anything that's classified we can try but I've already foed USA 229 I foed USA 229 back in September along with MH370 to the nro I got a technical

(16:18) rejection saying it would take over 20 days that was four months ago and I've gotten nothing back so I mean we can but we get rejected for everything but yes I did **Foya** uh USA 229 so anyone who doesn't who now continues to make the false claims that satellites can't work like that or whatever it is we have absolute proof they're wrong now no more [ ] about satellites moving too fast no more nonsense about any of that it's all been disproven 100% **debunkers** balls in your court okay um Malcolm Bendle uh I got in touch tou

(16:59) with George Howard today who is knows Malcolm Bendle as well as Randall Carlson had an awesome talk with him situation uh this is just going to be a brief intro to this discussion I'm not going to dig too much into it but it's a small world is what I'll say and it's even smaller when it comes to this technology I'm now 110% sure that there's technology that can change the

whole planet and it's just simply people don't realize that it's real and they people get dis credited for nonsense

(17:30) it's not true and that's how the stuff gets kept hidden it's not even a matter of proving the stuff's real it is real it's a matter of uh getting people to wake up that's really just the reality and uh I'm looking forward to potentially talking with people like Randall Carlson Malcolm bendal Etc in the future um you know I just don't even care at all about what the detractors say anymore it just doesn't matter if people want to go back to sleep and live in their world world of uh you know

(18:00) cable news and [REDACTED] politics go nuts man uh just it's completely irrelevant to me at this point yeah a lot of people got to see it to believe it well reality is you're seeing it on two videos right if you expect that you are going to have a front row seat to watching a plane disappear uh bu some orbs uh you're going to die unfortunately without ever knowing the truth that's I don't mean to be rude but that's just the reality of the situation right not every single thing that's out there are you going to

(18:28) be able to see firsthand now when it comes to stuff about the thunderstorm generator which somebody just mentioned that kind of stuff you might be able to see yes because it's public information it's not uh it's not classified or whatever else it's actually public information I would say here's my advice I'm not going to go into depth on it you probably want to check out the thunderstorm generator guys probably want to go check it out I think it's legit that's what I'm going to say uh Yousef ask Ashton how do

(18:56) you discover this footage why did it only get discovered in the last few months genuinely curious actually it has been out there for 10 years I did not Discover it I'm not the person who discovered it I'm just the person who has been promoting it I'm just a person who's been promoting it um back in August I saw these videos and I had seen the the Drone one the thermal video I had seen this back in 2014 and back then I was I was a CNN brain back then I had looked at it one time and didn't know

(19:22) what I was looking at I just thought this was some weird fake corny video game right back then and I looked at it again in 2023 in August and I went oh wait wait a minute that's a drone I went this is a Fleer footage but it's got blue on it and then I saw the second video which was this one actually I saw the side by side one and I went wait a minute there's two videos in perfect synchronization and then somebody posted this one you can see them in both perfect synchronization I went holy crap these might be the best UFO videos in

(19:57) the history of the world and so I started following the investigation I started posting about it on Twitter and now we're at where we're at now I had you know in August I had 30 followers on Twitter most of them were fake um and now I've got almost I think 79,000 followers right now um and that's how I the reason why I became this person is simply because I chose to be somebody who put myself out there that I gave out my person my my name my real identity I chose not to be anonymous because I realized that

(20:31) there's no way to disclose this with while being anonymous you have to be somebody who's willing to be attacked and of course that's exactly what has happened but it's fine I knew that's what would occur now I didn't know this would be I didn't know I would get attacked as hard as I've gotten by people and including like podcasters and stuff like that who've just come after me um but it's a learning process for me as well I'm just a normal person who's trying to figure this all out like you

(20:55) guys are yeah it's crazy how this has been in the public for for years never picked up but the reality is if you look at it of course you can see why right it's unbelievable it's unbelievable when I stared at it I went wait a minute like how can this be real it took me two weeks to come to terms with this potentially being real where we might actually be able to teleport an airplane two weeks for me to come to terms with it and I'm the guy telling people it's real so I don't blame anybody for thinking it's fake or

(21:24) whatever but it's too many small details man and all the physicist and engine that I've been talking to at least say that it confirms what they've seen what they what their theories are and that's the probably the most some of the most compelling Parts about it so um okay we can talk more about this stuff a little later I want to jump on this space and listen in to the Skyfire news stuff that's out there yeah the moment I saw two different angles like rotary says that's when I was in but the time where I was

(21:57) really convinced as when um people put together the fact that what you're seeing here with this mouse that comes on the screen right here in the top right this mouse this mouse is consistent with the citric session this means somebody's actually logged into a database while they're recording this and it's not the full screen this is a cropped screen recording which is why you don't see the Drone when I saw that detail I went holy crap this is a real person that **leaked** this and it's probably a US military personnel cuz I

(22:24) knew that probably like the US government just like big companies probably use Citrix and if they use Citrix then this is consistent with how you would pull satellite data from a computer in like Utah while you're on an airplane or in Iraq or anywhere else right is you log into a remote session a citric session and when I saw that detail I went okay nobody's faking that into their fake video nobody's faking that right so pretty wild mirror has a metal metal met samples analyzed by senior IBM S I don't know

(23:01) what that means I don't know what that means man yeah Don Lemon the it is kind of a black hole but it's also not it's technically not a black hole but it's really weird that Don Lemon talks about the black hole thing very very weird th when I saw this flash accurately illuminate the clouds as well that's another indication that what we were looking at was real here I mean look at this some you think do someone do you think really think this is a graphic that accurately illuminates the clouds n man no CGI videos of this

(23:34) quality period not even the major Studios can make videos that are this high quality okay okay let's jump into the space we can do more questions and stuff like that in a little bit where's

the Skyfire here it is totally agree I think it would totally be used as like a way and that's what Jessie know the book Chains of the sea when Lou Alando was on his podcast tour he was asked what fiction book does he feel represents the phenomena well and he said this book called chains of the sea which not many people or talked

(24:08) about at that point and basically one thing that it has that other UFO books don't have is that there's a really big AI component and a quick thanks to to skyline news and all you guys that are associated with it um and thanks to Jesse and Kurt see for lot the excellent media work they've been doing for the last few years tackling UFOs and you know wider phenomena and science topics um yeah on the AI and Aliens AI in Alien techn signature research there a couple of things that touch some of you probably

(24:42) know Gabrielle dor and his team over in Spain and they they've they've been do some really cool work with like AI like applied technal research particularly the study they did with using an AI uh tool that was learning from astronomical images and that they you know they run through through the learning and then it was applied to images from series and the dwarf planet series and what it found was an anomaly in the oor crater which is this area where got this luminous area in the ocor crater which is very weird anyway but

(25:20) inside of one of these luminous spots in this crater there appeared to be geometry so they had this like it's a triangle with a square and a circle inside of it B basically like the alchemical symbol which is like super weird and so anyway he found this and then they had independently they had volunteers look at these images to see you know what does what the humans think compared to what the AI thinks right and so the humans also saw geometry now the interesting thing was the push back on that from s mream scientist was that

(25:53) well yeah you know but it's a kind of paradia that's being programmed in because humans have that failing that our AI tools will have that failing given to them by us so there's a kind of a like you know closed door there of accepting things the AI might bring out and one of one of the points he kind of makes as well that Gabrielle makes is that you know the AI may find that we aren't ready for and that we aren't ready to and you know he's gone on to do more work with siries as well what they found

(26:23) like a there a an anomalous kind of heal there which again may not be natural so it's found you found other things but I think it's a really interesting point that you know even if the eye does find things if we're not ready to see those things we have you know easy to jump to kind of explanations for why the AI is is hallucinating right because it's made by us and that we are flawed right so I think that's kind of interesting and even without the see the similar thing with you know the work I've done

(26:52) obviously with the you know my paper on Tech ties and stuff that saying that you know suggesting that we have fragments of a alien AI Craft on Earth you know the counter arguments haven't really come in to dispute that rather there's the inability for scientists to expand their mind to even consider that as a serious hypothesis they prefer to stick with that we don't

understand this material but one day we will but it can't be what he's suggesting because again aliens aren't here they haven't

(27:24) come here so again you have these kind of closed doors ready to see something doesn't matter if the AI finds it it doesn't matter if you know humans find it that there's there's always going to be that kind of cter the doori very quickly on separate talking ear about the disinfo I think it was very interesting that when ttsa got going there was a an interview with Tom dong I think it was with okay I'm gonna mute this for a sec trying to Major platform they were first kind of setting up and he was um explaining you know his

(28:00) insiders he'd be able to bring out load of Secrets and stuff but on the condition that he mixed I thought it's kind of funny not really s seeing that you're basically saying up front that yes I'm going to be sort of running a kind of misinformation campaign for these insiders you know what I mean it's it's kind of wild that that that wasn't really pushed back on and challenged a lot more at the beginning because you know that's really the problem that we have in the field hit the like button watch

(28:30) this so often people are given a kind of a mixture of what is lik true facts but just mixed in with just rubbish and then so in the end it s poisons the well so badly because you can't figure you know do I keep some of this do you throw it all away you know because you know some of it's bad and so that that's been part of what's been happening since 2017 and the whole kind of you know I guess Reawakening of the UFO topic think so right right from beginning there that was kind of upfront told to us that we

(29:01) were going to be getting this mixture of a story and some kind of Revelation so yeah you know so that's kind of yeah that's a great Point real quick J I wanted to say something brought up something that reminded me of something that was said today in Jesse and CT's uh episode and that was like uh the idea of hallucinations or we might not be able to see something reminds me of okay I'm to answer the question why am I allowed to talk about this so if you go back to what Amy uh in her stream was

(29:36) saying uh the one stream that we posted the reality is if they're letting you talk about it then they probably want it out so that's the most likely reason the other reason is most likely because what we're doing with this Grassroots movement like this has never been done before so they don't know how to react to this the what they're trying to do is they're trying to send the **debunkers** out there to make people stop paying attention that's what they're doing about it right now if you expect them to

(30:01) kill me or something how does that solve the problem that just makes it a 10,000 times worse if I were to disappear this thing is going to go mainstream right too many people would know so that's the answer to your question why why are they allowing me the answer is they're not but they're not also stopping me other as well and if you can figure out in some hypothetical future a way to uh manipulate them like right now you can use neurons to do super basic computational tasks like stabilized inverted pendulums or like

(30:38) play Pong and if in the future that progresses um I think you could end up with like these like biological drones and then maybe it is like the Mike Masters thing where you're like weo they're not going to be explain Lines by like sending I think they're letting us wake people up um question Tupa I think like I do think we have an interface through which we sense reality it's a a very limited scope whether that be like the you know 400 to 700 nanometers of the electromagnetic wave spectrum or you

(31:10) know auditory you know the analog to that or whatever the decel range you know there's there's all sorts of stuff fig outside of that don't DM a lot if the Penrose like microtubules thing is is is right I I think maybe what we're doing is we're constantly picking sort of igen States like we're we're we're collapsing like the wave function like like all the time and which is a maybe somewhat heretical thing to now say in quantum physics but like every initial Quantum physicist you know to

(31:47) Schrodinger himself entertain this stuff and then maybe when you're in a heightened State of Consciousness you are in this more literally like probabilistic world where like Zeno's Arrow of time does not apply or something and so like maybe maybe if you if you think about us as having a limited scope in terms of you know sight and hearing maybe we have a limited scope in terms of time too and I have no idea Hof if Hoffman at all talks about that but that would be my my strong Instinct well very interesting something

(32:21) else that happened this week we'll just kind of go through some more of these happenings of the week and I'm curious for and CT's take on this as you guys both do like science separative UFO type content as well there's been this kind of growing Schism I feel like with Gary Nolan publicly calling out Neil degrass Tyson so he did that like last week and he did another one this week that James Fox posted I'll just play it and then I'm curious what you guys think about how we address mainstream science and

(32:48) what people like Mass Tyson's role how do God these these got to go away man um uh keemstar keemstar is I look there it is this way we can put our hand up I don't think he should be respected I don't think he's acting in the best dude do we really have to listen to these clips man can we just talk about everybody either knows or they don't know about the situation of could you take away somebody's PhD anyone listen to him don't ask me there we go hands alien in here Logan he should be stripped of his

(33:42) PhD wow so there you go and everything tribunal I think he said at one point yeah that's the tribunal got me that one bro every time I hear that clip I just burst out laughing because it's so like brutal right like I I I get Gary uh Nolan's point right um you know Neil uh doesn't even come to the stage to have the argument whether or not you know what are we seeing in the sky he doesn't even have the conversation he immediately shuts it down like aliens are thousands of light years away there's no possibility he he won't even

(34:15) have the conversation so I understand the frustration but Gary went way too far way too far yeah right like why is he saying to like strip his PhD doesn't seem like Middle School level

drama like it seems like a little too much for me I'm kind of curious to what people like Kurt think about that I unfortunately am going to not comment on this who knows if I'll be hosting a debate between them and so it's just best for me to stay out of this situation well played well played Kurt well played Kurt between them as

(34:49) consenting adults yes right and they should be able to have that debate too on neutral ground um I remember one time I collected a series of clips of science scientists uh kind of mocking the UFO field and it was it was ended up being a compilation of Neil deGrass Tyson and Bill N the Science Guy and I will say that after watching it I was like you could kind of rally on that because they were there so dis but I think some of the times they're giving these talks they're almost like doing bits right they're they're performing a little bit

(35:18) on stage and they're they're getting laughter out of the crowd and they're really playing to it and I think that that you know that has to be considered as well um but yeah the idea of him bloviating like that's yeah really Jesse what are your thoughts maybe I'll be a little more controversial and just say like oh yeah here we go I I don't I mean Gary can be a little spicy kind of you know he can be the dramatic but like wish I make this full screen I agree with the sentiment like the guy shouldn't be

(35:44) necessarily stripped of his PhD but like he doesn't do any fundamental science he hasn't contributed to he's literally just a like an establishment spokesperson who does not push the field forward at all and I actually because grush challenged um him to a debate on my show and so I tried to make that happen through like an intermediary no chance and you know what Neil deGrass Tyson's response was it was like uh I I cannot debate about I can't have a debate about anything where the data is

(36:15) classified and a that's so lazy because there's tons of Open Source data there's a lot of Open Source data that you can discuss like you're just closed off like you you just don't you're just not open to it like you're a priori just completely skeptical of this thing which is fine you can say that but like to say that there's nothing you can debate I think is absolutely ridiculous and it's also the purpose of science to speculate and to debate the speculative you're you're literally like

(36:45) serving no societal function if you're just going to wait like the average citizen waits for full government disclosure you're like you're just abdicating your position and then the final thing I'll say which is kind of a weird fact but I think Neil deGrass Tyson is like a Freemason in some Lodge in like Albany New York and so like somebody who can be like that involved in like that you know kind of kooky and esoteric whatever I'm you know I'm interested in a lot of that stuff it's

(37:15) like I'm not criticizing it but it's like you're into that and then you're like in total denial of like the reality of UFOs I just I just don't understand that that feels like there's there's some cognitive going on so and there's a direct line back to uh you could go what Neil Tyson Bill NY Carl San heik Menzel like there's always been a prominent **debunker** on your TV and there's literally like a direct line that you could like they all the people like within the line knew

(37:45) each other and Mentor the next one kind of thing um we got deep pad up here he's been on Jesse Michael show I think he's been on Kurt too Ai and Science deep what is your take on the Gary Nolan Tribunal for yeah do you support that before you speak deep firstly like high deep I sorry that I got it I gotta get going Jesse and oh no and and Sam and I I appreciate everyone being here and I I think you all should check out Jesse's Channel and check out Deep's work and check out red panac koala's Channel and

(38:20) alien girl is here I see check out all these people and oh Jesse next time I'll sit on your couch proper you sat on it perfectly that was hilarious man I just kept laughing or reading the comments people are like you're sitting like Spider-Man at the edge of a building you know what you did you did better than Martin scy who was trying to hide his ankle monitor the entire time so I don't know why I was like that I think I needed I did need to use the washroom maybe I don't remember I I thought you crushed it man and I I

(38:53) was an honor to do it and yeah vampire it's the couch dude I was thinking about that actually I was watching today too because I was like I sat on the couch too it has really big cushions but like the back support is like far away you sink into the couch so you got to like lean forward to kind of start being so quiet but and also at the same time you have to think about how you're oriented toward the camera and simultaneously Orient yourself toward the guest and so balancing all three was was it was a great conversation man and

(39:26) next time we'll have an even better one I look for to it thank you oh no worries brother you good much love all right take care good night everyone bye bye awesome good night um yeah red I was just gonna say I haven't yet been on Kurt's show uh but certainly with Jesse and that was man plenty of fun um uh yeah you know regarding uh Neil's tribunal um I think Gary's on to something at a meta level so I love like this idea like humor me this for a second imagine if not just for Neil but for anyone who has a PHD there was a

(40:04) rule where if you stop practicing science for let's say five years right you get stripped of your PhD I feel like that would like keep people in check um if you go back even a hundred years during like the Richard Fineman era you know Fineman got his PhD in three years uh of course part of it was uh you know sort of Fast Track because of the war time times and so on but back then having a PhD was the ultimate sort of academic show of scholarship uh and uh you had to be so dedicated to get one and it meant you know your entire life

(40:40) what this guy doing is he outside somewhere you know by this book right and you absolutely fought uh with the sort of science well there's a lot of haters in second that you know after a while you become more of an Entertainer to Gary's point and let's say we're on the other end of this and these people are the ones who right I feel like there is going to be some kind of like lowkey tribunal people will want from someone right that's why they're doing the whole amnesty stuff uh yeah what about you Ashton what

(41:11) do you think are you gonna go to the tribunal sorry what tribunal you lost me what what how do you think uh the current scientific establishment should be treated oh that there is this

kind of cover up in place as we go through disclosure yeah I mean you know and this is funny people are going to hate on me but I uh go back to the person who's become my friend a guy named Jake Chanley I think some of you guys know him as uh the Q Shaman but he surprised me in his interactions with me when I first talked to him which was

(41:46) that I I I said that this is an information war and we have to treat it like that and he came back and said no I don't want to have it be adversarial the way that we should treat it is like the new guard is simply obsoleting the old right and we can't make it an adversarial relationship like that I think it's just a matter of there's going to be a handoff from the old guard of ufology and physics to the people who are younger who look at the same physics the old physics through a new lens they

(42:14) look through the same ufology through a new lens as well I think those will be the ones to bring into the future I even look at people like Jesse who's in the chat right now and the people he's been talking to and just how much Jesse impresses me in general with his knowledge science and I kind of look up to that I'm trying to emulate that a little bit myself in terms of figuring out how the science works that's my opinion uh sounds like it sounds kind of like cancel culture to me I don't like

(42:38) it at all stripping people of their degrees and whatnot I think uh you you simply win by um you know Gary Nolan bringing more and more uh data to the to the public which he has vowed publicly to do and to get to the bottom of this that's how you win uh no one needs to be stripped uh and at the end of the day if Gary Nolan does that then Neil looks uh pretty bad in front of the entire public and uses loses a bit of his credibility credibility is on the line I would say I agree with kear here he's got some

(43:11) pretty good takes the best ideas and the best evidence win 100% right somewhat Keem I would just caveat that with like I doubt his credibility will get hit that much um because um look at if we look at like other you know gurus who have been wrong Robert uh kosaki right Rich Dad Poor Dad has famously called the last 80 recessions right in the last decade but people still look up to him um yeah I like what uh Ashton brought up with what American Shaman said and I agree I've expressed a sentiment of like there's this animosity

(43:47) people have and I get it because they've had experiences right and when people are like ridiculing it makes sense but uh I feel like there should be a sense of compassion for for these people like Neil even who like he's going to take I mean it's to the Skeptics we sound like we're coping right but he's going to take a a pretty big L it seems like coming up here soon um in similar ways that maybe some of this these covid scientists did and whatnot and uh try and have empathy for them and especially

(44:15) all the people who like look up to them and view them as a reliable source of information it's like disclosure has so many different uh mind like where it breaks your mind uh and one of them is just like that information is allowed to like be controlled to AE where believe AR what are the what are the chances that the answer post disclosure world the answer is

Stranger Than even the Believers have ever thought especially for someone and like you know what are the chances that like uh we all have a kind of come to

(44:48) Jesus same you mean like kind of a moment where we're like oh uh we were all a little off there you know what I mean because if it's aliens an egg on you know Neil deGrasse Tyson's face right but if it's more akin to something like which is what he said is if these are aliens from the planet I'm going to be disappointed because I think the **truth** could be much more interesting and what is more interesting you know the idea that these like entities or things or or forms are around engaging in

(45:18) interaction with us to to affect our culture that's very strange why what's their motivation how long have they been doing that uh you know what what is a goal like when will they be satisfied with their efforts like all these things kind of come out from it where if it's just aliens visiting for another planet uh kind of we all figured out resources or something uh but yeah I think that's a great question about like what what does this look like in a postdisclosure world what do all these Skeptics do what

(45:45) do all these entertainment scientists do um but yeah again we have to kind of prepare as Believers or people who think there's there's a there there we got to prepare that we don't have all the questions even to have asked to look for the right answers uh but real quick we got Bruce and then Logan and real quick too remind everyone follow Skyfire news for updates on news and all things UFO on every platform Bruce thanks um yeah I was gonna say in terms of the way scientists interact and debate you know because of having

(46:17) followed particularly anthropology and of course Tech science you know following a number of Sciences quite closely and number of debates closely what going to accept as though science moves forward with discoveries you know and interesting questions but but also it moves forward with aggressive internal debate and even attacks between different scientists with opposing positions and that sometimes may look kind vicious but at the same time in destroying their opponent's position you know even if aggressively they are

(46:51) furthering science and you know so we had said the part of this human nature of sometimes the one academic wanting just to prove the other guy's wrong because he doesn't like him you know that if he fails to prove it wrong he strengthens that opponent's position right if he does prove it wrong he shows that we need to move forward in the science right so although that can look kind of nasty and maybe we prefer to see just the friendlier interactions you know I don't think it's a part s we can

(47:21) just sort of say like let's get rid of that I mean because that that can be an important Drive in moving forward kind of animosities between great thinkers and if you look at the history of science that's actually kind of normal so I'm not saying I wouldn't say strip anyone's PhD but the provoking each other to debate you got to do science you know the sparring and jousting the gentan combat you know that kind of side of science is important it's part of us and you know we're not robots just doing kind of

(47:51) logical analysis type stuff all the time right we have emotions and that that those come into the you know the academic community and you see that if you follow in any particular areas of scientific you know kind of Cutting Edge science that that's how things move on and um so I don't I don't think that's a bad position I know as well somewhat show you know playing to the crowd of course what gets people's interest into a topic and again say Neil Tyson is a very public person so obviously

(48:18) provoking him somewhat to uh join in a kind of a you know bit sparring you know I don't think it's necessarily a bad thing you know obviously it's kind of encouraging that to happen and you know we'd all love to see great minds sparring on these topics so it's not just a case of scientists picking on outsiders say these scientists are dismissive to the uh UFO Community or the Paranormal Community they're also dismissive to each other that's what I'm getting so they can also say you know

(48:45) what that guy might PhD but I think he's an idiot right that's part of it too yeah yeah I was going to say the conflict is important right I mean we conflict's important and even if you look at stuff like this is somewhat controversial about wars in general a lot of the wars is how we've had such huge amounts of advancement is when you have this like force of uh like kind of requirement to evolve or get better now I think that where you have to draw the line of conflict is that it's not just

(49:14) name calling right where you're actually producing evidence where you're having reason debate um and that's actually just thr a little uh kind of a praise to Keemstar honestly I think Keemstar a lot of people you know see him as this drama person but he's actually really good at moderating debates with people getting the ideas out there and letting them kind of float on their own with respect to Gary Nolan it feels like and I'll let you jump in Keemstar in a sec but um like you said about playing to the crowd

(49:39) it feels like a little bit like that a little bit of pageantry involved in it as well which I think you know sure maybe get some views on you but it doesn't really Advance the discussion very much yeah like uh you know I see this happen every day in this space but just for an example today Matt Ford and uh **green Street** we like going back with Petty insults back and forth and I love that stuff don't get me wrong but let's get these two guys in a conversation and let's get real let's have these real

(50:07) ideas and real theories and real journalism battle each other to to find **truth** right like that's what this whole movement's about right finding the **truth** and it's really hard to get these guys to to come talk to each other you know it's a lot of blocking and it's a lot of like the access game I'm in this space right the the the bonkers the Believers they don't actually speak to each other it's so frustrating that's great I love that like I remember um I had like a uh a disagreement with somebody um I think it

(50:41) was O'Fell is his name and I invited him into my space and it turns out you know we really didn't disagree at all that's what makes space is so great like everyone should just be able

to communicate that way yeah just very quickly if you're not familiar with Thomas Coon's um work on par paradigms and the way they interact it's actually normal that people in opposing paradigms talk past each other not with each other so what looks like them having some kind of debate to to many onlookers isn't really it's one

(51:09) essentially telling the other one he's wrong while screening out what they're saying back to them and the other one doing the same thing and that in the end paradigms rarely change because one of those people bests the other and he admits he's wrong and joins the other side that that's not really really you look at the history of science that's a super rare outcome and that's what if you look at really it's more that you know loses power as people die off and it's the younger people have

(51:36) already accepted the new ideas and those new ideas become more prevalent and the old God kind of basically die off or there's a vested interest for them to change sides you know it's very rare that someone who's held dear beliefs in their field and has built their whole career on a premise uh will then listen to a complete completely different paradigms View and take it seriously and look to see whether they're they're actually wrong um it does happen but you know look at the history of Science and

(52:03) again look at Thomas Coon's work on Paradigm shifts and how they occur and yet talking past each other's normal I don't think you want to get **Green Street** and uh you know people that essentially are believers you know like pretty hardcore Believers that you know in the in the belief that there's this progress happening this process from the government they're going to release a sorcerer at some point you know if you're sort of in that Camp then **Green Street** is not going to be able to hear

(52:29) you any more than that person's going to hear him that's just just reality yeah I think we have made a mark in the community yeah this is a great segue about this uh NE grass Tyson stuff there was a Skyfire news exive this week where we asked him about what he has planned with the soul foundation and whatnot right and I feel like this is one of these concrete tangible things we see people trying to do and credit to them right trying to mainstream science ify this subject uh here's what Gary said in the Skyfire news exclusive he

(53:01) this is red for Skyfire news uh congratulations on making the soul Foundation my question is does the soul Foundation have any projects a nerd though I love them for 2024 I am and also what is it like working with grush David grush and Carl Nell and what are your guys's roles within the organization um well let's see I mean I think our goals in the near future um I Peter skafish is running let's say the academic arm of this which is to uh basically instigate a number of papers uh and uh basically policy papers

(53:40) uh that will be coming out and we hope to get them out I want get some more out of good drum beat um and they're you really these are aimed at again like I said before about littering the I didn't watch the Jesse Michaels thing yet so I don't have any good questions let dry chat if anyone watched the Jesse Michaels Kurt jangle thing what questions do we have

what they talking about later and they also get you know served Congress is it Ashton on the stream um and so uh that's really the most immediate thing Dave and I are

(54:15) working um on uh basically hope bringing together volunteers and putting together a little volunteer army I got to get contacts because we can't do everything um and so uh we're we're still organizing that we want to organize the organizers uh so that's probably the most immediate future um you know Dave is fantastic to work with I mean there's I I just you just got you just got to know theity of the man I got to get my uh when you get thing um it's just like dle someone like this spend so basically his

(54:58) whole life PL in down there uh doing this uh because it has so much detriment to him if he were the curtain stream was good yeah Kimberly give us some Cliff Notes what should we ask about what were the topics um and Carl as well I mean Carl's just the two of them R spacular possibly my favorite person plan I I actually feel kind of strangely blessed to be associated with people and we're all learning from each other mostly what I'm learning are all these acronyms you know when Carl and Dave get talking

(55:32) about all these programs and policy things that just like just the acronyms fly like I've never seen before but I mean know their stuff love to see the three of them or them and Sean kirpatrick in a room uh and buttons I think it would be somebody would be left in a in a puddle of goo kind of intense there I want to shoot it to deep and Jesse because you guys both were at the soul Foundation conference and there wasn't any uh they still haven't put out those videos yet so they're kind of like there's all this

(56:07) mystery around it so what was it like actually going there before we get into talking about Soul as a bigger thing that's saw Jeremy just retweeted us honestly it felt like a bit of a family reunion uh and you know how you can have sometimes a strange family members Dave can't VP canadi two people here are definitely blocked or have blocked at some point um but uh no dude it was great to like uh see you know the homies uh you know Jac pH was out there um and uh of course Gary and uh it was nice to meet Peter as well um I I really learned

(56:40) I think one of the biggest takeaways was Carl Nell's uh talk right and um oh Ross re speaking this goes back to what Jesse was talking about earlier about how um it's one thing to wait on you know Uncle Sam and the government to sort of get their [REDACTED] together two scre literally spoon feed us right um the most technologically and scientifically valuable breakthroughs on the planet that's never happened if we look at current trends and trajectories like what open AI has successfully done with artificial intelligence or spaceace I

(57:14) join space force Technologies and so on so forth It's really as for disclosure charge of um being able to develop science and a frontier you know engineering on top of that still Wally that's what's probably going to have to happen here too where um it's civilians that have to come up with a solution and literally hand it to the government on a silver platter that was my personal takeaway uh but uh I'm just glad I didn't get kicked out before accidentally you know slides so yeah yeah that's worth that was the

(57:48) rumor about you right what what actually happened there let's get the Skyfire news exclusive what happened said I would sell out got kicked out of SC sure I've been waiting for the government to call me what was the **truth** there yeah so first of all you know I will preempt this I did not get kicked out you maybe I shouldn't say that aloud yeah so I was actually at Star jemy like checking out the Starship uh you know rocket Factory and so on and um I just made a last minute decision to you go to Star I was actually going to

(58:20) go to Soul the whole time for the whole weekend um but you know I missed the day as a result uh took a Redeye flight um came back uh reached soul and I showed up late right by like at least like half an hour or so um and I totally missed the announcement the second day that you weren't allowed to take any pictures um so uh the funny part is like when I went to sit down I blatantly because I had again no **[redacted]** idea right that you're not allowed to take pictures took pictures um and no one said anything

(58:51) that's the crazy part like there's random people claiming oh yeah sat behind yeah it wouldn't be selling out I was like **[redacted]** like someone would have said something you know if you were actually that like interested trying to get the information out there it's not easy most people aren't going to believe it no matter what and then about an hour later uh Jay King right or Jay Christopher uh he comes up to me and he's like you know kind of like the vibe was kind of like you're in trouble right

(59:16) like you're a kid on the podcast are picking up again lot of requests that type of deal um you know so um like look there's a policy it's the only policy that we had that Soul had right which is not trying to only do like three a week I can avoid it media social media uh so oh you're Dan he said the organizer wants to talk to me uh spoke to organizer he was super chill about it explained the policy um and I started uh you know profusely apologizing um and Gary walks in right and uh right before Gary walked in by

(59:54) the way he had literally said to everyone in the crowd that he had just been told made aware that someone **leaked** the photos um right of some of these things and that uh stand for security is going to escort that person out so I was like yo mentally I was like dude this is what I took a flight for like I'm about to get kicked out of St for campus you know just like this is so not worth it you know like there's so many other things I could I could have been doing that are this bad uh in ter out but anyways uh was all good dude Gary walked

(1:00:26) out um I explained I would love to be an advocate for disclosure and I would go about it a different way than everybody else I was like yeah I did not know he like assuming that they allow you to don't worry about it and uh dude yeah he was so sweet about it it was chill consider myself an ambassador try to make a big deal of course and try probably proper the story dude deep got kicked out of Soul Foundation by Gary Nolan was what was going around but yeah drama I mean I guess when I start giving announcements for

(1:00:59) announcements you guys will know Jess how was it for you and I'm curious what you think of the whole kind of secrecy because it we're meaning about but it is kind thing right no

pictures are allowed that's kind of uh another little spooky seems yeah for sure well I I think it was they could be plasma solar awesome to have all these Bob GRE thinks they plasma I think I mean there's definitely a field invalidating of the field and like this really I'm not one for credentialism I'm kind

(1:01:28) of anti that but it was cool to like Stanford University having like a UFO analism you have all sort of legendary uh figures uh I think it was yeah I don't understand why sort of think I think if you were like a fly on the wall giving your knowledge red like it might have been somewhat you would have been maybe maybe you know proud of how far the field is was gone you know as as I was but it might have been slightly anticlimactic or something as far as actually learning incrementally new glass but the way in

(1:02:04) which I think it might have been slightly spooky go back to the eye do I don't know some people might have slipped in there that uh were were from various you know uh deep deep organizations uh was was my sense and so that you know that's that's an interesting Dynamic always I think the you know the best parts of conferences like that are like hallway conversations where you can get really you know water cooler conversations or whatever you get really deep with like a specific person and you're not kind of drinking from a

(1:02:33) fire hose in the like main room and uh I don't know like I got to like know I got lunch with Ross colart and like o he has like a specific Style on on camera and uh so I I honestly didn't know it to make of him kind of from afar and I was like wildly impressed by by his historical knowledge um so yeah I don't know I thought that was pretty cool 99% sure Ross Kart is part of the slow disclosure process you know I think yeah I think 9% sure I guess we can we can discuss this because because because it came out that

(1:03:09) like the the You Know Carl Nell's sort of timeline and Deep's point is a really important one which is like even from like a defense standpoint like you have this like really unstable multi-polar world if the US government housing any technology where like not that much progress has been made yeah I think I'm 99% sure Ross you can't really have like it St in these like sort of super uh compartmental TV all the Departments influ various private corporations that aren't like the source of the last 20 15

(1:03:48) to 20 years of like you know uh Frontier uh uh you know Defense AR D like they're just like new companies you know it's you're not talking about like SpaceX and andil like these new it's it's like these like really old stodgy primes and so yeah I mean I I sort of hinted at it in my uh documentary with grush but I personally think and I haven't gotten like confirmation on this but I I personally think that's part of the push for uh disclosure is like there's your Cloud mov right there

(1:04:18) progress on this like people have to be aware this is only seconds monological **truth** here right yeah Jesse you in the interview today you mentioned the uh Four Horsemen of like religion right with Richard da you know I mean and whatnot I'm curious do you person ask about Cloud movement you have the Four Horsemen of like skepticism like what scientists what

research are going to you know what I mean put an end to the debate yeah that's funny that's so interesting well see I think like the four horsemen like you know Dawkins

(1:04:52) Harris denn and Hitchens those guys were all actually kind of probably interesting healthy correctives in their time to like religious dogmatism and then now I would say like their sort of rationalism is like super insufficient in like in terms of providing meaning for your life but like I I would actually like rank Neil deGrasse Tyson and I'm not saying this as like an ad hominem attack against him maybe sort of it ends up being this de facto but it's like the problem with this is like I'd love to say like get everybody

(1:05:26) in a room it'd be awesome he won't get in the room he's the guy who won't get in the room with any of these people and it's he's snobby and like you need an agreement on the underlying fact pattern like where it's like fighter pilots are saying this in the dozens electrical engineer with no incentive like sort of stigma for like coming out with this stuff um you know presidents have admitted that you know know there **Truths** Behind this and have even seen you know UFOs in various cases and so I

(1:05:59) think yeah it's it's kind of to Bruce's point where like it's like having a conversation about God it's like you just never convince the person on either side when you when you have that when you have that debate what frustrates me is like I don't view myself as like a UFO believer I I just think there's some there's an anomaly here that's super worthy of investigation and you have to agree on that as a starting point for any conversation and a lot of these people I guess Neil

(1:06:27) deGrasse Tyson being like the the main one I think the others sort of fall into line and it's they're just a little more close-minded but they're not as like may maybe maybe what what red is sort of implying which I'm somewhat partial to is like maybe Neil deGrasse Tyson actually knows more than he lets on and like is cynically like closing off the thing because he's so reflexively angry when the topic even comes up but you have to agree on that initial like this is worthy of exploration and investigation and I think get you know

(1:06:59) kind of get your ego out of the way so I I don't I don't know in terms of the other the other horsemen or whatever but no that was man he's he sucks yeah no do you think he's like that because he's been attacked so bad like the alien things like the harder he gets attacked the more he resists you know dude he he pushes back too much I think he's doing a bit to be honest I have I have another question for Jesse real quick and I want to get to the hands um in the episode you did with how put off uh and Eric

(1:07:28) Weinstein there was a a moment and I don't know when this was in real time but in the edit uh hell put off had mentioned like listen like we we we did make breakthroughs in physics and fundamental physics after the after World War II and we tucked those away and like you weren't supposed to look and if you know we have systems in place yeah then there's this brilliant cut to you and Eric in another room discussing that That and Eric says something like um if there were fundamental breakthroughs you

(1:07:58) know since World War II that would be crazy but in my when I'm watching it I'm thinking like Rolls-Royce something's clicking I've got a lot of like something clicking like might in dark here like did I see something there for real do you know if he's like yeah well okay yeah I think you did you did and so like the context here is like Eric has his own sort of quote unquote Theory of Everything and it's really like he's attempting unified field Theory which is the marriage of electromagnetism and gravity which

(1:08:33) Einstein spent the whole latter half of his career trying to figure out uh mathematically and the actually really interesting part of like that interaction is he says Eric goes you know there is fundamental physics being housed in deep black Aerospace and then how says yes and then Eric shocked and then how qualifies it and says at least topological physics and my understanding of that exotic physics is actually things were figured out mid-century and I have I mean we talk a while about this because I think they're

(1:09:10) like specific experiments that might involve the marriage of those two forces but like you don't actually end up with this sort of top of the pyramid Theory of Everything You just end up with something that's AI useful and then that can turn into like all sorts of Novel comms applications novel propulsion applications Electro gravitics that's yeah yes that's what I think and we can we can get we can talk about that for a while but yeah based yeah and we'll get to some hands let's keep it kind of brief and uh on

(1:09:49) topic and whatnot but uh who is it Melo then Bruce then Ashton uh thanks yes just a quick question it's great to be among such experts and friends um yeah you guys are talking about Soul Foundation interview Panda uh he mentions Army of volunteers which you know makes me think that perhaps they don't have enough funding not surprisingly so I kind of now that we have like Jesse and deep and all kinds of knowledgeable folks here I was wondering if uh you could help educate me about um you know what are their

(1:10:16) funding sources and strategies uh generally speaking how do we get the public sector to fund and finance This research technology as well as activism ye yeah I can uh maybe take that uh real quick so you know I can't speak to the actual direct structure um I'm gonna make another drink I've got these questions you guys ask me in the chat written down so I'm going to get back to you guys uh Foundation uh I support their work and an actual tangible prac funnel between Capital right strategic intelligent capital and meaningful steps

(1:10:59) that can be taken to sort of accelerate and push the ball down the field when it comes to disclosure um and you just need to squeeze a nonprofits in a system uh that works uh yeah Jesse I don't know if you have any other thoughts on that or thoughts of about the funding yeah even separate of knowledge because you do come from like the VC world yeah I I think we need the right we need and this goes back to I mean the conversation we were just touching on where it's like like Electro gravitics like if there is anything there it was

(1:11:38) figured out by a guy named towns and brown in the 19 [REDACTED] 20s and yes I think a lot of this stuff leads to like dangerous applications but most of them most the applications are just

civil side good stuff that like makes the world a better place and that's just one example of like a framework that is UAP adjacent it might not be like coming from the UAP stuff itself synergize with like you know you have you have these crash material or you have these observables in terms of the propulsion and like it

(1:12:11) probably works with some sort of SpaceTime metric engineering and that's how you get to it or something but like the the the the point is is like if um all of Academia is like being led like sheep to slaughter into like these just dumb Frameworks like like string theory uh which I know we bash all the time but it it really it's just like not usess it's like this massive brain drain sup Stefan I think uh we have we have a huge problem we have a huge problem as a world like in a more kind of idealistic

(1:12:41) sense and then even if you're like worried about like our national competitiveness it's like that that's a huge problem too like just in sort of like a game theory sense or whatever and my My Hope Is this stuff sort of breaks open you know this decade and and it's like what grush says where it's like the the 0.

(1:13:04) 5% that is weaponize should of course be classified like I don't I I don't want like uh you know uh CL spuk style you know revelation of like of like some tech that could look make a you know a thermonuclear bomb look like a firecracker like that would I'm not down with that but to the extent this stuff can be used civil side and the the we the weaponization of it is more esoteric like people just have to understand the broader Frameworks and and I think that's a precursor okay we got questions for Jesse now you need that first and then I think you need you

(1:13:37) need Capital that's open to it Dorian is 100% correct chat Dorian well said uh Bruce you have a any thoughts real quick about this Soul Foundation stuff um was I was going to put something else to Jesse but on the soul Foundation I mean yeah I think that we're looking at a a time where we're going to see a number of the independent organizations kind of stepping in getting funding from you know the finance and Tech world and doing the kind of science that institutional kind of academic foundations won't do because again

(1:14:14) because the Paradigm issue and the the fear around that I mean I don't go into a long Vi about it but just take one example Dr Milton way who's a microb olist in the UK who became involved with pans spermia many years ago he he basically went worked with Wickam singer and I guess L people here will know Wickam singer pretty much the man in pania and right when he when he found out about that work he was like Well there must be people like knocking down Wickam singer's door to work in this exciting field looking alien life that's

(1:14:44) raining down from the upper atmosphere and that you know maybe in our solar system and of course what he found out was that no everyone was scared to do it nobody wanted to do it that it was considered a career killer and that you would almost certainly get no funding and that there was this this this whole problem you think that's just around something as fairly tame as pans spermia the idea you know that life could have begun out in the cosmos and come here so what's your chances of getting fun more esoteric controvers the idea

(1:15:14) that maybe aliens are here whatever way you want to go with that or with the UFO field you interdimensional you know a mainstream academic working in a un his chances of getting anything for that is basically zero and I you I've talked to some people that are doing the UFO kind of networking within the academic uhi certain the UK and they say that you know yeah even just talking about what's happening in the US and you know that is enough for most their colleagues to say well you know you got okay um couple quick qu answers I'm

(1:15:46) gonna answer some questions from the chat um I think that the orbs must have something inside them because we see these gravity engines in front of them I don't think that those orbs can be all plasma to answer some of the questions from earlier um why has this not been disclosed because I think the answer is it breaks too many people's minds I think that's the reality is that a lot of stuff breaks people's minds there's huge socio economic impact why is MH370 not disclosed the answer there is that

(1:16:14) it's too much on line too many too much money on the line too many people's careers on the line Etc oh who would I James O'Keefe as well um I would James O'Keefe somebody like locked Martin or one of the media people in general that's probably who I would James O'Keefe Heather or following the craft and and they think you know there's a number of types that are part of this UFO story now when you said ear about getting scientists at least say that there's something there there that you

(1:16:47) know what do you think in terms of how I'll talk about as a community you know should be better than kind of admitted anomalous plasma phenomena in our atmosphere that nobody's really serious investigation of and that has come up before in like the project conine documents which was the UK's UFO research which which was a freedom of information request revealed that the conclusions were basically that some of the UFOs were plasma phenomena and that there was military applications likely from studying this phenomena I mean what

(1:17:21) do you make yeah I'm tempted to say that I don't even really believe in Dark Matter like it's sort of super stupid scientific heuristic where the universe would fling apart if you have you know just normal cosmological gravity and you don't have dark matter love Jessie empty Place age with on everything what comprises 95% of the universe is a lot of this sort of plasma phenomena and then I also think if you think about plasma itself it's sort of the fourth energy state and it's maybe like a more

(1:17:56) fundamental um state of reality um that is more kind of probabilistic like if you look at like a plasma ball it's like this fundamentally erratic random event generator or something dark matter is not really a thing it's just a property if you think of like a discret solid object like we would have found dark matter if we knew it's obviously more predictable liquid gas plasma just an explanation and so I I do think if you just look at the observable phenomena deep talks a lot about you know Quantum macroscopic stuff

(1:18:26) within the context of UAP and then if you think about all this [REDACTED] Greer says which I

don't know if that's true but like talk about Quantum microscopic stuff you know stuff you know uh as far as like retrievals um you know like all that all of that somewhat comports that like we're just in this like uh you know more more dense State uh and so throw is it's just plasma that's sort of undetected and there's there's something about being able to um no it's not a matter of creating Dark Matter

(1:19:04) frequencies that actually different a different aperture into that world and I think a lot of that stuff was figured out H fation yeah midcentury along with kind of the atomic programs you do have a lot of consider the possibility of plasma based life as well good question solar yeah yes yes plas not sure why I do I do my own podcast I just haven't done it in a couple weeks um you referenced the idea of the plasma ball being kind of like a probabilistic state almost like the uh what we now refer to as or what science refers to as the

(1:19:37) electron cloud as opposed to this like model of I didn't use social media this uh uh nucleus they're actually they're in a cloud state they're they're not anywhere but they're all over where they could be um is that kind of the idea that the plasma might represent a probabilistic state where it hasn't been solidified yet right cont social or what have you or it represents something in every place yeah it's it's it's fundamentally erratic and have a woman with me like a secondhand person right

(1:20:11) like you got to have a guy and a girl that's how you I think get the real num people watching you know is that got be able to reach out the both **sexes** for scale civilization or whatever is is is that actually just you know manipulable like you that's not a word but you know what I mean I I don't know you know deep might be a better person for talking about this stuff well real quick remind everyone to follow Skyfire news for all the latest updates we'll get Deep's response on that and over to

(1:20:41) Ashton yeah sure um you know I think Jesse killed it uh it's not improbable maybe we're dealing with like a wak here where you really did recover right some secret branches around the world recovered Advanced Technologies let's say minimum conservatively thousands of years Advanced my fourth generation like life forms um and if that's the case whatever it may be uh then there might have been uh significant breakthroughs um just observation of like wak localized principles Like Jesse was think so they

(1:21:24) may be my dog that would be good would imply that understanding of a unified field Theory but in fact it's really observation and replication and then maybe right there's some sort of wall that you hit where there's only certain amount of information you can gain in reverse engineering this stuff but yeah those are just like theoretical right speculative comments uh who knows what the **truth** is um but when it comes to like uh you know plasma and so on um it's a really interesting uh point it certainly is uh one of the phases of

(1:21:58) matter um and there are other phases of matter however right that are also intriguing so for example you have the entire class of phases of matter which topological insulators and topological conductors and you know how mentioned that that's one of the sort of uh insights in

the private Aerospace industry uh that ex right regarding this topic and you know topological materials are really really interesting because it comes down to that very essence of being able to control electrons to create these really beautiful immersion

(1:22:35) patterns that allow you to you know replicate phases of matter and really interesting uh States really interesting materials that aren't actually you know tied to their specific chemical composition per se or any one crystal structure so yeah really interesting stuff Chad she's been sleeping on my lap hell yeah Ashton hey hey I hope you guys are ready I took some notes here first of all deep totally just stole my wakanda theory I'm just kidding but I love that people use the wakanda theory because I think that

(1:23:08) it really does describe like a breakaway civilization level technology that might be out there um one quick other thought and then I have some questions uh unified field Theory I personally think that it's probably already been discovered multiple times if we have had craft since the 1920s and the Nazi stuff in general uh in terms of unification of quantum and macro I think it probably had to have been discovered potentially it's classified under saps those special access programs to me that would explain

(1:23:37) why nobody has it out there um and then a few quick questions for Jesse or I guess whoever else as well but I'm curious Jesse who what you think about halut in general um you know I think there's a lot of disinformation around I'm curious if you find him credible um and then kind of follow questions related to that is you know what does disclosure mean to you and I guess that's an open question to other people as well and what do you think we would have to do to achieve disclosure given whatever however you want to kind of um

(1:24:05) Define it what do you think the main roadblock would be and then the last part is you know I think we both agree that there's potentially the ability to make weapons of essentially mass destruction with the T type type of technology that would allow for objects to float or to move faster than the speed of light but how do we disclose all of this without disclosing that like that's I think that might be the roadblock right I don't see a way to do that so I'm curious as to what Jesse your thoughts and everybody else's are

(1:24:34) as well yeah for sure so I guess the first one put off yeah I uh I love Hal and uh he's usually very very open with me and and uh even when I think I'm hitting on like possible third ra she was just choing down you guys heard that right he's you know pretty pretty uh helpful in uh you know exploring various kind of very very heterodox Avenues of science so I'm a big fan of of his I'm curious to hear what you've what you've heard there and then um what was number two and number three I guess yeah I guess

(1:25:11) weapons Mass yeah weapons mass destruction was three what was two yeah well so first of all I'll say that I personally think the how putut off is legit I didn't want to spoil your opinion by letting you know what I thought ahead of time but I was just curious um but then I guess it's a matter of what do you think disclosure is to you and then what would achieving disclosure look like to you what do you think the made roadblocks would be for for getting

disclosure and I guess is the idea of weapons of mass destruction

(1:25:36) coming from them one of those roadblocks um yeah go ahead yeah yeah I mean this is all based on a bunch of hypotheticals but I think you know we have the same underlying assumption that like the US is in possession of these sort of craft which I you know that's my base case I think man I mean and actually R and I spoke about this on the show it's like we live in such a visual society and at this point a large majority of the population actually believes in UFOs themselves so it's like in some sense may love is here

(1:26:08) the the the intended effect of a lot of you know maybe even the some of the false narrative stuff is like it's like taken taken play and like people people actually believe but but I think for for it to be like a big sort of wake call of like you know definitively we are not alone 80% plus people understand that AC Academia accepts it you know how many follow for that to happen we'd need to like see a craft full scale flying or like high reses you know imagery of like a you know an alien being I mean I know

(1:26:44) I know this stuff you're doing with like uh you know MH370 and the reason I've talked to you about this you know offline is like I won't touch it is because of what we started the conversation off with which just like I you know you seem like a nice guy I don't [REDACTED] know you know I'm not I'm just not a VFX person and I just have no I have no idea and I think you end up in this Lial space with a lot of the video stuff and it's the reason I don't even talk about some of the videos like like

(1:27:12) I I barely touch on like the nits and I get stuff but I I actually don't think I could like debate you know I'm I'm like like the nimit stuff I I'm pretty sure I could debate Mick West on it pretty well given all the you know the other the other uh sensors and and like the you know the the uh the the Visual Evidence like the firsthand eyewitnesses like there's just so much there but like the other stuff it's like I don't know that's that's really tough like you're getting into kind of more esoteric uh

(1:27:41) territory so I think you're going to need like a t like the bar for disclosure is like way higher than I think people realize and then on the weapons of mass destruction front yeah I uh I mean I I have no idea you know from like broader framework that's like could be super productive on like the Civil the Civil front to you know like 100x the Zar bomb or whatever I have no idea like what work is required there and I and I pray to God that just opening up the initial Frameworks doesn't inevitably lead to

(1:28:18) the the ladder uh you know knowing human nature and like where it is now I might be concerned about you know reasonably concerned about that and um yeah it's why I I I hope the world is also just waking up I mean we already we live in an apocal apocalyptic time with thermonuclear weapons and could destroy the world many times over with the just the Earth's Arsenal and so uh I yeah I don't I I don't know to answer we I think we're almost facing multiple apocalypses like Academia you know the

(1:28:49) idea of what AI is about to do for you know what we used to think was possible versus what is about to be possible um I have a quick question for you Jesse regarding how up real quick on that uh then oh please sorry actually go ahead so because one last thing I say is that my my opinion is that it's kind of a Pandora's Box where like you just kind of get it all or you get nothing right is you know once you've unified Quantum and macro it's like oh well you know I'll take the medical healing and the

(1:29:13) force fields and maybe teleportation and all this other stuff but like oh I just I don't want the the you know the Doomsday weapons well it's not really that simple right and I think that might be one of the things holding it back and then last little thought as well and then I'll let you just jump into but is that um I personally think that in order to get past that it may be a matter of not proving the technology is even real but it's almost goes to the esoteric aspect like Dr Steven Greer mentioned

(1:29:40) which is like raising our Collective conscious to a point where we're we feel comfortable that we're not going to destroy ourselves just some thoughts go ahead T well said um and I was actually wanted to go off a point you made earlier right which was this idea of of how put off as a topic and uh I kept coming across how put off in a lot of different research fields that I would look into and his name would come up and one of the more recent ones which is kind of we're here talking about plasma possibly plasma cosmology down um

(1:30:13) I had a couple interesting lunches with a man named David talbet who started something called the Thunderbolts project and it's a very interesting idea about you know theide of berkin currents and these filaments of plasma and electromagnetics kind of governing uh the formation of everything and how Jesse like you said dark matter is kind of a farce and it's there to uh make up for the missing forces of gravity which if you include electromagnetics into that you're kind of like you solve a lot of stuff well in after that he

(1:30:41) introduced me to um something called the sapphire project and they were trying to create something called like a star in a jar which was again confirmed by a man named um Eric Dollard electrical engineer very interesting guy but yeah this idea of a star and a jar and I came across the sapphire project and on the board I saw a photo on the board of the sappire project was Hal put off like how full circle is that right and I'm curious have you ever talked to Hal about this idea what this plasma is and has that fed into your idea of what what

(1:31:10) this kind of thing could be of uh electromagnetics and whatnot that's fascinating uh no I've heard Eric dollard's name come up before and uh a star in a jar is basically you know creating Fusion we were going to look at star of the jar later would obviously be massively transformational we were actually later knows a lot on my list guys I mean I think he uh he's still like super highly you know he's very very very highly cleared I just added it again my list it again you know kind of uh uh formulating

(1:31:45) his words accordingly and so yeah I I I agree with I guess the assessment I think he has his hands in a lot of different thoughts and uh you know I don't know where he sits on the

proverbial you know pyramid but uh I do think now at this point in his life he feels pretty pretty broadly Pro disclosure um and obviously he's working on this kind Quantum sensing company but um yeah he's a he's an interesting I I know if I could download the contents of his brain that would be awesome looking for dramatic

(1:32:22) Skyfire we covered a story this week about the moon shrinking does anyone have more details on that because we just did like a flash report yeah so uh yeah no there it's a it is shrinking and they they did the study through the geology of the moon right so they're looking at it and they had to actually because it's causing landslides moonquakes and it's also like they had to uh readjust or calibrate their Landing site for their next moon mission um and I think it's unmanned I think it's going to be be a robotic

(1:32:52) Mission I forget what it's called but they've had to replan it there's something going on now obviously is it shrinking like honey I shrink the kids no I don't I don't think so something's going on with the with the you know the geology of the Moon and it's having an effect and another big story that kind of happened this week that we could listen to this clip for it's kind of a good little topic changer but still within obviously the realm of UFOs let see where's this at we had Trump

(1:33:21) thinking well first we had Robert Bigalow uh who was a DeSantis backer right he was big Ron DeSantis guy for the room Robert Bigalow is the the person who's probably the single individual who spent the most of their own money researching this stuff he was very active in the 90s kind of when he got activated and he's made all these different organizations nids Moon which got some of that government money and like oap was somehow intertwined but um he was backing to sandis and now he's backing Trump and he's helping him with his

(1:33:50) legal fees and Trump thaned him at a rally this week very special guy one of the best developers you'll ever see he's big he's rich but he's a high quality man builds some of the most beautiful things you'll ever look at Robert Bigalow Robert please good looking stelf thank you he's Rich he's Rich I'm curious what Jesse and deep think about that and also in terms of um I feel like a lot of the disclosure people uh like melan right and whatnot they're kind of like Democrats and Biden I'm not trying to

(1:34:28) make this like a politically divided thing but to me it seems like Bigalow has kind of been separate of that group and I feel like this would be another he's not just R in disclosure and whatnot I know T pretty well um yeah I mean uh I think Trump has look i' i' I've none of us in Skyfire are important enough his personality but like TR out kind of death by Thousand Cuts style and uh maybe maybe we'll you know I think uh resort to more drastic measures if his popularity and fame continues I I I

(1:35:08) think the establishment will do anything to see him not elected and then on the flip side I think they've almost created a monster where getting political in here he's felt so kind of getting political in here uh kind of uh you know categorize or miscategorized is like this fascist dictator type that I actually think if he does win this time he will turn into a def like he's gonna

try to like reorganize the CIA and like you know maybe try to take it out or something and like I some you know maybe

(1:35:39) maybe the his when he brings up John Trump it's like his Uncle you know from MIT that that you've talked about done great episode on the uh red is like uh you know maybe it's like a dog whistle or something it's like a little a little threat um and we a little in disclosure could we got to get it this stream or this space the Trump Administration and if if you get if if you get like the typical you know uh you know if you get if you get the DNC I think you'll just end up with this like scopy soft

(1:36:13) disclosure thing that like has already been tried at best yeah that's it goes kind hand in hand here because you know obviously you know who's the enemy of trump the Deep state who's the enemy of disclosure the Deep State like all this stuff kind of goes hand in and and um Trum uh if you're gonna bet on who's gonna be the next president sorry choking right as I'm talking I'm choking on something but um if you're gonna bet on who's gonna be the next president according to the polls it looks like

(1:36:48) Trump's got it so you know I think uh Bigalow made the The Right Move um to back Trump uh thinking that he's gonna try to clean up the swamp the next time he gets in there and this might be the path to disclosure through Trump do you guys think that really though because I mean he had four years and he didn't do it and I think there was even he said some weird stuff like when he did that interview with his I think his son where he said as well yeah or yeah oh yeah like look into it or there was some interesting stuff

(1:37:19) there right like he had a lot of oport so I'm just curious what you guys yeah he tried to get he tried to get the JFK files out and Pompeo stopped him and I just I don't know you know I have an insight into his psychology but I think at this point he's just like [REDACTED] it and he's pretty close with Tucker and Tucker's like all in on you know uh I don't know what the gradient is between soft disclosure and catastrophic disclosure but I think he's more on the like full full let's disclose as much as

(1:37:49) we can side and uh I'm vo for whoever get gets this stuff out I think if if if that's the issue you care about I think I think Trump's like the rest of stuff doesn't matter to me bet and then obviously he has he has other issues I I'm I'm net Pro Trump for other reasons but uh you know like like more praic reasons but umic Reas kind of tertiarly in the episode Jesse right you you mentioned that John Trump his Donald Trump's uncle was the one who got the files from Tesla right after Tesla died that that's like

(1:38:24) that interesting connection I got I got that from red so I can't take any credit for it um so yeah no 100% it's a fascinating I'm a simple man I see and Ashton to speak to your point I think Trump's first four years post like our own government has been trying to like you know **Russian** collusion like they've been hitting him with everything the entire time he was in office right um and there were a lot of people that betrayed him or what whatever that weren't really that loyal um so I think

(1:38:54) the next time he gets in there like what Jesse said and what many people are saying what Trump himself is saying is he's gonna clean house last four years he's G come back so he's got nothing to lose didn't he help with the MH370 uh didn't he accidentally like uh there was a satellite system or something he accidentally showed off oh the one satellite picture he did show that satellite picture honestly I mean I'll just be real to because I'm going to vote forever I think it's going to

(1:39:20) give us disclosure as the best ch chance I'm one issue voter at this point but I'm just curious to hear you guys' opinions on it all I think it's all very enlightening I vote for whoever is GNA help the economy and keep us out of War that's the only two things I care about deep what were what were your thoughts you started sorry oh yeah uh thanks red I was just gonna say that I um I I guess I'm the contrarian in the room um I think that disclosure the idea of a precedent Le disclosure is a

(1:39:49) misnomer um it's the same idea of a president leading the next breakthroughs in transform architectures and AI right like it requires so much uh knowledge inside trust inside trust and so so forth um yeah I think it has to be some we have to go back to the 50s right like we have to pull off essentially uh what general uh Bernard scriver did um who's kind of technically the father of the space force more Trump supporters in here than I would have thought um we have create a really powerful I think collaboration between uh in the middle

(1:40:26) not giv the industrial IND Academia and the government um and I think that's the only way so a pres probably Trump in a role like that but I I think deep like to just push back a little bit yeah I agree that the the actual like Frontier science progress is from the president but like in admission of uh an entire counternarrative of the last 70 years possession of exotic material you know white collar crime that's happened like all of that coming from the symbolic leader of the Free World Is A massively power powerful thing and it

(1:41:11) opens up the for conventionally high IQ and smart scientists to be open to this stuff in the first place so I do think we some B up here it's not zero good point yeah no I I completely agree it would um be massive would they convert millions of uh engineers and scientists overnight who could actually move the ball forward I imagine yeah one that's kind of I'll go for a dash so one last thing I want to say is that but there's a lot of influential people up here on the speaker panel you know I'm not going to

(1:41:44) call you guys out by name but you know who you are and I would say that we definitely need to be pressing uh you know in the interviews that we have have you know even bringing these topics up to force the candidates to address these issues right because I think that these are things that are really important and try to figure out who are the ones who are going to you know give us that disclosure that's out there and the more we talk about it as people who are doing podcasts Etc the more pressure it puts

(1:42:08) on them that's all thanks yeah go ahead Ren we should get yeah well that's kind of it for the news I had a question for D it's kind of a sidebar it's um it kind of ties in the mummies

but uh I don't know if you want to rec you talked about your publicly you feel like what you saw was similar to The Mummies trag GH that's hilarious but thirsty no that it's a good question TR ghost is thirsty for attention I would say there was practically no overlap outside of the fact that some form of

(1:42:42) hieroglyphic language was involved Commander cor comment welcome to the chat as well no um yeah I would but probably uh and I can always go deeper uh later you know an offline call keemstar like when there's more time I don't want to take up the oxygen in the room uh with this experience but I think red panda is like referring to a really sort of strange uh anomalous experience I had uh way back February 1st 2019 and um yeah I think uh you know was one of what one would call Canon event if you guys are familiar

(1:43:25) with that right something that really changes uh the trajectory yeah I don't want to get into it too much at the moment let's keep it let's keep again I one of those like uh you know like experiencers who go on and on about their stories but well it is interesting though and there is a similarity to keem's experience because I went back and watched interesting yeah yeah well there's I'll dumb mine I I tell my story relatively fast first it feel more comfortable but sure um I was a child I was on my way to

(1:44:00) school I was about 10 years old um I was looking out the window of the school bus there was a field and then there was a patch of trees and then another field and right before when I was in the first field right before I got to the trees I could feel myself like kind of like focusing or meditating or whatever you want to call it by the time I got to the tree something was speaking to me saying you're going to see you know a UFO you're going to see this thing in the sky and don't freak out and don't tell

(1:44:30) anyone right and it's gonna be you're lucky that you get to see this right by the time I get to the open field and it's you know a clear sunny day not even a cloud in the sky it's a silver dot right in the sky I'm looking directly at it the sun's reflecting off of it didn't move or anything and it was like a really calming like I'm lucky and blessed that I get this experience and I didn't tell anybody on the bus and it wasn't until I'm like 5 minutes from school that I start freaking out but at

(1:44:59) that point I can't tell their kids look out the window like that was like 15 minutes ago you know um so yeah that's my experience that is amazing wow well first of all thank you for sharing that and I see your point red there's definitely some overlap uh there damn no doubt um yeah you know in my case I was a bit older than you I was um uh 2019 I was uh 23 years old um and uh you know it was uh in my room in Toronto so if you want to imagine the setting this is on the 30th floor of a condo uh right by the harbor so and on top of

(1:45:36) that you know the crazy part is this happened in the daytime my blinds are open there's sunlight streaming down the room into the room and so on so forth and I had spent the you know first part of my morning just like reading papers and sending emails and I uh remember putting my laptop down and I had the exact same feeling you had uh which is what I

think part of what read uh what inspired his comment um because I had a distinct sort of what I now call a download right but I had this distinct knowing of um what's

(1:46:12) about to happen but it wasn't it was yes yes it's hard to explain right like there's no words it's just mental like data exactly yeah I think that's the best way to put it and I bet uh first people who have like a neural link to neuralink communication will probably experience something similar to that where you're like right experiencing thought or thought transfer um so so you know I felt this experience kind before I could even properly process it and react to it I was uh completely

(1:46:46) paralyzed and uh you know in my case um within short order I ended up seeing about three different humanoids materialized right there was one and then two more that came right next to it um in these sort of humanoid uh objects things whatever life forms apparitions whatever you want to call them um they were kind of like the classic phenotype of Grays however the crazy part is that in you know this case um two things these white Su that literally looks like she's super nice to me I join a space like beautiful golden symbols in

(1:47:25) the center that kept changing um and uh one of the odd things about experience right is that um they somehow communicated with this like notion of like VR or ar combined with like telepathy plus hieroglyphs is best way I can say it so like imagine seeing these massive subtitles floating above these things heads and uh they're in like these sort of blood red dark red uh hieroglyphs combined with like Japanese like it was this weird strange writing um it uh totally changed my life though uh in in many many ways um but uh yeah

(1:48:04) you know the whole experience it doesn't make sense um the crazy part right is that when people draw these things it doesn't do the actual experience these weird anomalous experiences that D level 30 in power world I'm like level 22 or something wait 26 I saw it it I don't see anything close to it you don't see whether it's communion or some other book right um there's no art that truly captures the essence um so yeah just a random comment yeah you know what else you guys have in comment not to derail too much

(1:48:37) you guys have that weird like pre experience thing and you guys both also had a certain group trying and say you guys faked your experience it's pretty interesting uh correlations the the people that came in and said that I'm like bro I've been a YouTuber for 15 years like I've said that on podcasts like you know exclusive deals on Spotify like I've shared my story a lot throughout the years I'm not making it up dude yeah and in my case it's like bro I literally put my entire [REDACTED] future and current scientific

(1:49:10) reputation on the line like morally spiritually you know like there's zero incentive in fact there's negative incentive uh but yeah it's just uh I've actually learned to ignore like the trolls in fact I'm grateful for you for Twitter for like thickening my skin it's actually kind of hilarious because when you go to other communities the amount of like trolling is far less so you're like bro this is chill bro when I came over here I was in shock I was like what is going on like there's squatting and

(1:49:41) doxing and like there's disinformation and like even the grownups like most of these people are grown-ups and they're acting like kids on Call of Duty what is happen I'm like I love this like that made me like it even more because obviously you know I'm pretty toxic myself but that that's hilarious yeah it is like a duty not like this guy fuing hilarious who who's the group who tried to tell you guys that you faked your experience uh we refer to them as the UFO hate group they're like uh they all

(1:50:18) have one thing in common they like wor up Lou Alando they're like big Lou fans like one of these guys which is like one of the leaders I'm not even joking like makes AR art with like Lou with like paintings like it looks like it was painted by Michelangelo and it's Lou naked and he's like I love you Daddy like it's some weird stuff bro oh my God thank you for the visual it is bizarre okay let's get over to hands dude I can't thank you guys enough for being here too we got be then

(1:50:54) Arthur then we're gonna get up to Maize thanks for being here Mae uh ma host some pretty cool spaces so if you don't follow her you guys should go ahead B good evening guys thank you so much space it's just it's amazing uh refining the power of these spes that we can have for the community as and I want to thank every single one of you for what you you're putting into this it's it's legendary um I do want to kind of bring it back a little bit to the beginning of the conversation when we were speaking

(1:51:19) about the news this week U between the interview of Project Unity with repres with bersett and I think it would be Folly on us as the community to try to narrow down who he's speaking to to just one person anyway because I have to bring it back to Pula um and a quote from her is what kind of world is it that I live in when it's orchestrated by people that I never even knew existed hard and if I I will be labeled a conspiracy theorist end quot she doesn't want recently stated on somewhere Skies when

(1:51:52) she came out and the talk that if you have a platform if you are a content creator or if you start making a voice in any way you will be approached by disinformation agents and also the the epistemological shock that she had from the phenomena wasn't realizing that piing up but realizing the depth and gravity management aspect the phenomena stating that there has been agreements made between church and state and that this goes back forever right on this perception management of the phenomena um so I just I wanted to bring some some highlights

(1:52:37) to that that we should never think that it's it's only going to be one person and I would like to to ask uh Jesse you if you've had any experience with what she could be talking about because I I find you amazing content creator oh thank you I appreciate that um I have had one experience actually with her oh that I can't talk about with just purely out of respect for her um but get spicy yeah I don't know I don't know how much more I can say but um yeah they're [REDACTED] weird people in this uh in this

(1:53:18) world that uh they I mean there's the there's the group love you guys are referring to um red and Keem and stuff but uh I think there's there's other there's other stuff too and I think

she I feel bad for her because she's an amazing person and I think she hit some hit some third rails and uh experienced some bizarre bizarre blowback and people inserting themselves into her life and stuff she talked about it on Rogan and uh I have one kind of corroborating EXP experience that uh again I'll say [REDACTED]

(1:53:53) anything but just out of respect for her I wouldn't want to volunteer it so you haven't been approached by anybody ever and asked Jesse what's that I think the world wants to know have you ever have anyone from the government tried to talk to you and convince you or said that they'll pay you some money if you uh come out with a certain opinion there are people who've approached me and I I've gotten lunch with or emailed me and I I think I have a decent BS detector where I'm like you're just trying to sell me on some

(1:54:29) some like fake idea or whatever uh and at this point I feel like I have enough good people around me even people who were forly on the inside like grush where like uh I I can kind of triangulate the truth before like and like my stuff is so like you know like I I Tred to make it like as deep as possible and like just strike strike once but strike really hard in terms of like putting out the stuff and not doing like this like high Cadence output thing I mean a lot of the issue is like the microeconomics of like UFO journalism

(1:55:05) where like it's like I need a I need a story I need a story or whatever and like I'm really lucky in that like I kind of transitioned from like another day job where like I I don't really have to like engage in that rat race and so I I do my best I'm sure I've [REDACTED] spouted some [REDACTED] without knowing it but like I really do my best to like go really deep on I I just don't take I I treat everything with like a priori skepticism and I really really don't try to not take anything at face value

(1:55:36) because you can't it's like in I think there's a line in visible College um by jacqu ble where he's like trust absolutely no one and he tells I think Diana Pula that too and I think makes it its way into American Cosmic and I think that has to be your unfortunately your uh your your uh kind of mental model here thank you thank you so much Jesse hey um just I just wanted to end that by saying thank you and I would love to see you and Keem and all of you guys on the UFO intro One Day by the way just saying

(1:56:08) thank you right wait I'm down great yeah for sure and good questions I'm curious you know it raises more questions of when will this end you know when will has become less of a Minefield just straight research I think that's one of the the things that we one of the reasons why we absolutely need disclosure it's not just that we don't have the right answers is that there's this we probably only have so many viewers because the bunkers aren't here this is not de bunker right now let's get over to Arthur and then

(1:56:39) we'll get up to Maize go ahead Arthur yeah thank you I just wanted to bring this back to the whole Bigalow in Trump uh topic I that was interesting Trump put out this um 10 point plan to dismantle the the Deep State there's a couple interesting Parts on it one was establishment of a truth and Rec Reconciliation Commission to um like expose Corruption of the

deep St State another one was uh make every Inspector General independent of the the office that they oversee so I think those those two points could have direct

(1:57:13) implications for the UFO cover up and and this whole non-adversarial approach that we've been seeing from like tsa and that whole group where they they're kind of trying to work within the system I don't know if that's going to work I I have very low hopes of this soft disclosure let's let's be nice to these people that have been lying and manipulating and breaking the law for 70 years I think we really have to catastrophic disclosure fight back and fight hard so that that's just my my

(1:57:42) point that I wanted to make catastrophic disclosure yep uh I'm not going to fight back and I'm not trying to make a joke but it bombed I'm with you Arthur all right let's get over to maze we'll get up the Keem uh we got melow and Bruce back in here too so I'm glad you guys are here go ahead ma hi guys um love the topic I love you know anything uh UFO and I see all my buddies in here so just shout out to you guys um so I you know Trump has all kinds of mystery just wrapped up in him right we have

(1:58:18) somebody already hit on his great uncle we got some amazing working with Tesla one of the things that was really interesting about that is if up here in the speaker let's just say some potential I don't know time travel technology um that would have enabled like the the whole writing do you guys know about the 1890 trilogy there was like three books that were written about him 1819 Trilogy um like literally named Baron Trump well his son's name is Baron but the books were about Trump oh so you've heard of those okay so then on

(1:58:53) top of that you have um you guys brought up the Bigalow thing and then you have the Q drops which is really weird it's like some sort of mystery there and then Simpsons um they actually made a prediction about the 2024 um elections do you guys know that so they basically say that he's going to win that and then um his daughter is going to be running in 2028 so I thought those are some fun facts to um let you guys know about and then also another political thing real quick and I have a question um when

(1:59:26) Hillary Clinton went against him she ended up having like this huge research group that went out and did all these polls and tried to kind of find out what it would take for the Trump supporters to not come out and vote and there was all kinds of things on this list okay and they were going to come out a majority of them um and all they're called the L then comes the question uh you UFO alien invasion and 38% said that they would not go out to to vote but the rest of them did I thought that was funny and then that

(2:00:00) also I don't know we've been kind of talking about what that might look like with Project Blue beam so I guess my question is all these disclosures I've been on this roller coaster I'm curious to know what you guys do you have an expectation for what it looks like it just feels like she that's the same question I asked has come has just kind of fallen so short but what would make it real to you like what would you believe and how would it how would it be a real disclos ask the same question I

(2:00:29) asked that we're meant to be together great question no absolutely I think what disclosure looks like is always going to be you know what I mean in our imagination and now and we get little steps and incrementally we get closer to it looks like at the same time we're getting further from you know these main Concepts I I did not expect to have uh the conversation you know UFOs AI but but it's these worlds are mixing sometimes and so I think you know Terence McKenna said it best when he was talking about the

(2:01:02) eschaton or the uh the end of all things when he said like that's disclosure back in the day it was easy to imagine what the next 50 100 years would be um the changes were so incremental were so spread apart but now disclosure you know even then this was like in the '90s I think he said this uh changes are happening so imagine what it's going to be in 50 let alone 100 I mean there's no way like it especially with it with what we're seeing with AI now too so that's a great question what does disclosure look

(2:01:29) like um I'm I'm curious to hear your guys's thoughts on that we got uh Bruce then Melo and then uh oh we actually keep's next sorry about that go ahead Keem uh I have something else that I want to bring up but um I don't think uh I I think it's like impossible to answer that you know the only way I think we get real disclosure is from the aliens not humans I don't trust any humans like what like it it okay let's imagine right uh the president of the United States you know leaders of all CIA the FBI

(2:02:05) everyone right the whole cabinet's there and they say okay look aliens are real this is the species Ste instantly people are going to be like what are they hiding what else is going on what are they doing like no one's going to believe like I exactly Keem is stealing my thing for the record that's my analogy just kidding I just want to s real quick for you Maz just because I appreciate you every time I go to your spaces you always call me out so I just want everybody's in the Stream should uh

(2:02:36) follow ma she does a lot of Hosting she's awesome person so thank you uh can I can I bring up this thing real quick um we had uh you know David Crush came out he said like you know uh the US government has you know um uh UFOs uh you know he alluded to the fact that we have you know aliens and all that in our possession um and it made major news but John leir like said this alline years ago so we Adit the S can you guys go back and watch the John le interview and then watch everything he's saying and it's like these things link

(2:03:17) up but they're like 37 years apart yep I told Bruce that you remember Bruce I brought that up that they were they were so similar yep now maze was been like super nice to us like I would join SP we probably get through the rest of the hands and then I think what we'll do is we'll have Tupa do a space after even before know we do we used to do a lot of spes we've been so busy lately and we can't bring everyone up you know what I mean um we're trying to keep little more streamin sounds dope uh Jesse did you

(2:03:44) have a response to that I I did I I I don't want to defend my buddy too much but it's like I do think there's a stepwise difference between like bringing 40 people directly to the

intelligence Community Inspector General who who like worked on the stuff 300 people and John le who was had the widest filter of all I was just saying all sorts of you know there's like a soul Square on the moon that like you know harvested souls and was talking about 36 different races and um yeah I mean I I have a whole theory on Lear and

(2:04:18) his bizarre alterior that's all that's all I want to interject we get a quick summary of that theory because like this is something I've been looking at recently and you know I'm not an expert by any means but I would like to know your theory on that yeah and I've talked to Red about this but it's like so uh at the same time as like the Lazar store stuff was coming out uh Paul benowitz had seen was around the same time like mid 80 mid to late 80s saw like bizarre craft activity going on

(2:04:52) at Kirtland Air Force Base and Linda Molton how was taken to Kurt Kirtland Air Force Base and was shown a lot of the same weird like origins of humanity you know humans are containers of souls like bizarre kind of disinfo that I think Lazar was shown it's this weird thing with the whole Lazar story is right like do we think Lazar am prop guy do we think Lazar this super compartment but then he also shown alls of crazy [REDACTED] about like the origin of humanity and those two things are like completely contradictory right like you have this

(2:05:28) like really stove piped program but then you're also showing this guy like vot the secrets of everything like matters pyramid so to speak really like make sense I think there are a lot of like Aviation a lot of people are ask a lot questions about those Aviation breakthroughs at specific bases so I think a guy like John Lear who held all sorts of Aviation records whose father invented the Lear Jet and you know was involved in I think some interesting breakthroughs was kind of playing uh flood the zone defense and uh spreading

(2:06:04) some disinfo through people like Lazar and through Linda Molton how and I think Dodie was involved in all this stuff as well this vote matters CH make sure you get your votes in yeah that's that's kind of the theory and red and I have talked about this as well but like if you think about it like just take miss it like if you if you just take like the instead like the the really like high like 3,000 level foot View and like it's like okay look at the forest and not the trees like just think about

(2:06:30) like this if you had like a super secret UFO program and you were like hiring a guy like Lazar and it's like you have a guy his best friend is do has like an active UFO news letter at the time that I'm text Jessie after this do not find that out in a in a background check and then simult anous to that Lear leaked the lozar story put the files on George nap's desk and he nap even admits and has admitted in later interviews that Lear was flying you know cargo jets for the CIA into the late 80s and so like

(2:07:05) you have these two things it's like if you have amazing super secret program like are they not doing background checks on the people they're hiring like [REDACTED] obviously they are and then the second thing is like um you you have a guy you're actively the CIA is actively Contracting with a guy that's spilling all your core Secrets like that just doesn't make any sense

so I think Lear to me is like clear disinfo agent witting or unwitting that's where I'd be open like I don't know you know he might

(2:07:34) have been like useful idiot I'm not quite sure there but like that's my theory on Le very interesting and real quick your friend Eric Weinstein is in the room to come up maybe Jesse could help prod him we'd love to hear your's getting ER about um kind of some of the science going into this UFO topic and kind of how Erin come if not no worries stay listening but um we'll get to some hands I don't know who was next to but I think Melo was next Melo sorry it might have been Bruce first actually oh

(2:08:09) okay thanks buddy though appreciate that ask I was I get mellow in there if you want me to go yeah I mean on the disclosure topic um a twoo kind of response uh in terms of the military disclos or the government disclosing yeah we got 350 people in here no matter what they know we can't know what they know right we don't have the access to then assess D Friday night they to reveal something we couldn't assess if that's all they knew right so you can never get to a point where you're certain that the you know the the inside

(2:08:47) world has revealed itself to you you so whether they give you nothing whe they give you a lot you basically can't assess that and say that's a full disclosure they've given us everything they've got we can't know that so we have a huge problem baked in to the way that system works okay also I don't really believe that we can do a lot to pressure them I know that people say you know call your Senators you know that's fine do what you want I don't see you're going to be able to put significant

(2:09:14) pressure and I think as people touched on ear the JFK papers we still haven't managed to get that there was more popularity around getting those out and more support in the inside getting those out than on the UFO topic and we still haven't got all of that so I'm not very focused on government disclosure I mean great if it happens it's great if uh you know gush and other whistleblowers bring out stuff great totally support that but for me and then speaking as again taking a different hat and as the kind of the

(2:09:40) director of you know the alien technics research group you know the first funded UK nonprofit doing research into uh alien techic signatures and seti uh that you know the focus that we have is on objective scientifically supported evidence of an interaction with a non-human intelligence in the past that can be publicly looked at the evidence can be publicly looked at by anyone um and it takes the stance in fact that Tom Delong gave which is he stated up front that everything had to be rediscovered in public that we were not he also said

(2:10:16) we're not really going to get all this stuff come out it has to be discovered in public and that's the position I take and that's what we're doing is that we have we can support it right s and we did have Eric sorry to the hands we did have Eric hop up here great points Bruce uh I want to remind everyone follow Skyfire news for all your latest updates in UFO news Eric how's it going how you feeling about UFO disclosure these days can you talk about interdimensional beings and uh the the term at least

(2:10:43) grush how's it going uh it's going well I'm in a car so I can't um get my mic on and off I'm really here is since it's a Jesse room as Jesse's hype man uh since he's the uh the guy who got I blame Jesse for quite a lot and my interest in UFOs uh Chief among my complaints the the the issue about the science and the history and how come we're only coming to this now and 30 no I think people don't understand that um even if the data existed don't you think the JFK disclosure probably Kimberly I think was

(2:11:27) related yeah uh fake data personally um you can't expect scientists to sort through issues in which you have an active player trying to make the data fake right so effectively the whole thing becomes an exercise and spotting faker and I don't think any of us are good enough given the amount of nonsense around this topic to feel that we have the right as scientists to say oh yes these 17 incidents are real um because there is no incontrovertible evidence uh to to my way of thinking um we if for no other reason then hey chat make sure you

(2:12:16) like this manufactures High strange for some reason around this topic and if you just think about how much we're talking about disinfo and scops and controlled opposition and useful idiots this was previously 20 years ago the language of a tiny number of people uh some conspiracy theorists who gained access to this lexicon and people who did this for a living inside of the intelligence community and Military Contracting and defense and so as a result of this everything that the CIA does or that the military does in a clandestine way

(2:12:55) sounds spooky and weird so what you're trying to do is you're trying to disaggregate the high strangeness of black projects saps Skiffs uh things that are way bigoted Etc from any residual Str actual phenomenon and um you can't ask scientists to do that the other thing I was to say just briefly is that if you imagine that that aliens uh and non-human technology and advanced civilizations that we know nothing about are on the table then you have to realize that there is no precedent for that and so all of your intuition

(2:13:35) prompts would be broken if the thing that you were considering were to be true so I've talked about this in terms of the doubly scientific method where normally we study things that are either non-sentient or less intelligent than we are we have absolutely no scientific protocol so far as I'm aware for studying things that are more intelligent than we are that may not wish to be known to us and as a result you need uh a doubly scientific method which has never been set out something that looks both down the intelligence

(2:14:06) Spectrum like is if you're looking at a duck from a Duck Blind and looks up the intelligence Spectrum um as if something is looking at you from a Duck Blind viewing you as the duck and as a result uh the public in particularly the UFO Community gets very pissy about uh scientists not accepting what everyone in the community knows to be true and and the reason is that it's very easy to get rid of scientists you just flood your data with nonsense and [REDACTED] and make it impossible to clean and then everybody who's dependent upon doing

(2:14:39) good science for a paycheck is going to run in the opposite direction thank you for that uh Jesse Keem any thoughts on that it made perfect sense to me yeah Eric what do you I know

we've talked about this a bit but like do I have to call him doctor I think increasingly like the deeper you get into the UFO stuff you have this weird interweaving between possible physics breakthroughs and then like stuff that's dropped out of the sky like whole pieces of EXO things the use of which we don't know and then you know

(2:15:25) possibly those two things there's like a Confluence of them where they like come together or one is a cover for the other I guess how how how do you sort of think of those two things kind of probabilistically uh you know the problem just it's like you and me talking as usual except with 500 of our friends um Don't Call Him mystery you know I think that the way I would look at it is you have to blow out the variances in what you believe to such an extent that you're not really saying much at all so in other words I'll give

(2:16:01) a very good example um people told me fantastic tales about a secret army with black helicopters no transponders no Insignia men with speaking uh North American accented English uh threatening them destroying equipment confiscating equipment uh it sounded like dest um you know Jason Bourne movie you'd ever heard uh but one maybe more of a James Bond where there was like a state within a state that doesn't exist and I didn't know what to make of it because there was no way of fudging it then we find

(2:16:38) out that the CIA has something called the office of global access and that it's tasked with you know using jck to go after um um oh I don't know satellites planes ours theirs nukes whatever that might be loose and you think oh I get it it's not even about UFOs it's about recovery and one of the things that it may recover might be UFOs if there are any UFOs to recover what should we ask so suddenly you take something completely the stuff of Science Fiction and you realize that it's on the org chart of the CIA that

(2:17:11) anybody can see but nobody knows what the office of global access is because it's like saying you know the office of speci situations or the uh the office of non-standard capabilities it doesn't mean anything and it's hiding in plain sight I would say that the problem is if you ask me to disaggregate this stuff I was assigning previous probabilities based on the idea that either somebody I knew who's not crazy about anything else a mathematician invented a ghost story uh maybe I was being pranked who knows

(2:17:45) or that you know there was a secret army inside of uh the country that went undetected by the fa good question nothing so interesting was going on it was just the CIA doing CIA things so as a result of that until we get better guesses um the scientific Community will look like monkeys uh because we're being gasolin and I think that it's just important to recognize that constantly asking people well what do you think is basically saying oh please will you destroy your entire credibility this afternoon uh in order to they're they're

(2:18:23) so much worried about what people think of them information and we've got to stop torching our scientists I'll just say this to the community if you want better people in the space if you want scientists to take it seriously stop threatening their ability to put their children through college by asking them these these questions well that's a great segue into a topic that's been

kind of hot in this community and I want to remind everyone to follow Skyfire news for those latest updates but uman has kind of uh come out semi heart

(2:18:54) against Neil deGrass Tyson and some of these other public scientific **debunk**ers and I do know you debated **mcwest** Eric and what are what are your thoughts on this kind of schism between this kind of like group of Academia and scientists that are willing to look at this subject and those that are kind of flat out uh **debunk**ing it well I really do want to be the hype man so I'm going to give that to Jesse first and then I'll uh I'll Grunt and say some stuff afterwards I I would so to walk my earlier criticism of Neil deg

(2:19:27) Tyson back I rather to to criticize him but not to say that there's no place for skepticism I would wholly separate somebody like a **mick** West from a Neil deGrass Tyson and actually give a rare compliment to **Mick** West and that at least he speaks on the layer of first principles considers these videos like may come in with some you know a priori biases and like you know issues in terms of priors or whatever but like analyzes the videos and then he shakes out that they're sort of **debunked** or whatever and it's you know in the case

(2:20:01) of uh you know nits it's just like a it's a it's like a small plane or whatever and then in the in in the case of the gimbal it's like you know rotational effect you know whatever like that's fine like that's like you're doing like real analysis I think the issue that I have is with people like Neil deGrass Tyson which you know I won't belabor the point because we already spoke about this but it's like you won't even acknowledge that there's something worthy of investigation here

(2:20:26) and to Eric's Point there's you know there are real reputational risks in admitting that um what do you think about Gary's point of removing his PhD uh do you think people should get their phds removed who are kind of uh putting out bad info or maybe I don't know preventing this top from getting forward Gary did say remove his PhD I mean I think that's a little hyperbolic but i' let I'll let Eric speak speak to this I I love Gary that's an outrageous suggestion uh I have a lot of problems

(2:20:59) with Neil but I also love him when he's doing standard science um the problem is this is sort of the uh the Shermer Sam Harris Neil deGrass Tyson mck West I'm make another drink while we listen chat I got my headphones on I can hear about the fact that people like tell ghost stories and create interest value in their lives when nothing much is going on I know that we all look for meaning and that one way we look for meaning is making stuff up uh I saw a really powerful UFO uh waiting for a Thai restaurant uh in

(2:21:37) Malibu and we all saw it and then I went across the road and it was a milear balloon at night glistening we thought it was some sort of weird light thing going on gone offshore and since everyone in line saw it uh I definitely know that if no one had gone across the road we could all have told that story so you imagine that any honest UFO person has to recognize that a tremendous amount of this stuff is myar balloons uh somebody seeing uh Aerospace stuff being tested that they weren't supposed to see Etc and the problem that you're having

(2:22:19) is that the energy comes from like the amazing Randy where you're going to say I know that a prior I don't need to worry about um fkn artists and there's a lot to suggest that this is all likely to be bunk now that bunk may be CIA it may be multi-billion dollar bunk uh I Operation Fortitude uh with and putting um false radio chatter out so that the Germans were were thinking that we were going to invade Norway rather than the beaches of Normandy um what's distasteful to me about this is it's perfectly fine to say I bet this

(2:23:06) is all nonsense but there is this kind of identity that goes around um just claiming oh we don't need to worry about that people are always seeing apparitions lock nest monsters and Sasquatch and by the way that was somewhat of my energy but even and Jesse can keep me honest Jesse feel free to say whatever is true uh even when I was shutting Jesse down constantly saying shut up about the UFO stuff I don't want to hear it anymore I wasn't saying I know this to be bunk I was saying I assume that this is

(2:23:39) not true but I didn't have this energy of like confidence and certainty and the smug condescension uh I've given the analogy we were pretty sure up until the mid 1950s or late 1950s that electromagnetism worked through the electric and magnetic fields and it doesn't it works through something called the electromagnetic four potential it was like a giant error in the heart of a very well established subject um the fact that Neil is not exhibiting what I would call epistemic humility in the face of something that's
